YEARLY RATES.								(*d*)	
1946 ..	10.76	10.57	10.70	10.55	10.49	10.51	5.96	9.88	10.65
1947 ..	10.11	9.95	9.95	10.32	10.50	10.02	11.39	11.30	10.09
1948 ..	9.96	9.59	9.01	10.18	10.07	9.18	9.03	8.25	9.71
1949 ..	9.23	9.38	8.92	9.27	9.29	8.88	9.65	10.05	9.23
1950 ..	9.31	9.22	8.74	9.40	9.73	9.07	9.65	10.53	9.24

(*a*) Number of marriages (not persons married) per 1,000 of mean population. (*b*) Included with South Australi prior to 1901. (*c*) Part of New South Wales prior to 1911. (*d*) Rates based on revised mean population estimates shown on p. 527 are as follows :—1946–50, 9.35 ; 1947, 11.21 ; 1948, 7.81 ; 1949, 9.06 ; 1950, 9.16.

3. **Proportion of Persons Married to Unmarried Population.**—As the marriage-rates in some international tabulations are based on the unmarried population aged 15 years and over, the corresponding rates have been calculated for Australia for the last seven census periods. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows :—

PROPORTION OF PERSONS MARRIED TO UNMARRIED POPULATION : AUSTRALIA.

Period.	Rate.(*a*)	Period.	Rate.(*a*)
1880–82	48.98	1920–22	56.22
1890–92	45.74	1932–34	42.88
1900–02	42.14	1946–48	71.33
1910–12	50.44		

(*a*) Number of persons married per 1,000 unmarried persons aged 15 years and over.

4. **Crude Marriage-rates of Various Countries.**—The following table gives the crude marriage-rates for Australia and each State thereof in comparison with the rates for various other countries.

CRUDE MARRIAGE-RATES (*a*) : VARIOUS COUNTRIES.

(*a*) Number of marriages per 1,000 of mean population. (*b*) Not available. (*c*) White population only. (*d*) 1949. (*e*) 1948. (*f*) Excludes Maoris. (*g*) Excludes full-blood aboriginals.

5. **Age and Conjugal Condition at Marriage.**—(i) *General.* Age at marriage in single ages and previous conjugal condition of bridegrooms and brides in 1949 and 1950 will be found in *Demography Bulletins* Nos. 67 and 68. A summary in age-groups is given hereunder for these years. There were 5,046 males aged less than twenty-one years married during 1950 while the corresponding number of females was 21,186. At the other extreme there were 89 bachelors and 43 spinsters in the age-group 65 years and over.

Information regarding the percentage distribution of bridegrooms and brides according to conjugal condition is shown for 1907–10, in five-year periods thereafter until 1950 and for each of the years 1948, 1949 and 1950.

(iii) *Average Ages of Bridegrooms and Brides.* The age at marriage of brides declined slightly during recent years to an average of about 25½ years, although in the period 1937–39 this decline was temporarily arrested and the average rose to almost 26 years. The average ages in years of brides for the past six years were :—1945, 25.93; 1946, 25.51; 1947, 25.60; 1948, 25.57; 1949, 25.65; and 1950, 25.73. For the following five-yearly periods the average ages in years were:—1911–15, 25.76; 1916–20, 26.05; 1921–25, 25.76; 1926–30, 25.57; 1931–35, 25.50; 1936–40, 25.72; 1941–45, 25.68; and 1946–50, 25.61. The average age in years of bridegrooms was 29.29 in 1945, 28.73 in 1946, 28.93 in 1947, 28.88 in 1948, 28.91 in 1949 and 28.99 in 1950. It follows, therefore, that brides are, generally speaking, a little more than three years younger than bridegrooms. The average age of brides and bridegrooms for the years 1940–46 showed the effects of war-time conditions. The proportion of young persons marrying during those years increased, thereby causing decreases in the average ages of both brides and bridegrooms. The difference in age between brides and bridegrooms was 3.36 in 1945, 3.22 in 1946, 3.33 in 1947, 3.31 in 1948, 3.26 in 1949 and 3.26 in 1950.

6. **Previous Conjugal Condition.**—The number of bachelors and spinsters, widowed and divorced persons, who were married during 1950 is shown in the table on page 578. The following table shows the relative conjugal condition of the contracting parties. Corresponding figures for 1949 may be obtained from *Demography Bulletin* No. 67.

PREVIOUS CONJUGAL CONDITION OF PERSONS MARRIED: AUSTRALIA, 1950.

Conjugal Condition of Bridegrooms.	Total Bridegrooms.	Conjugal Condition of Brides.		
		Spinsters.	Widows.	Divorced.
Bachelors	66,782	61,690	1,773	3,319
Widowers	3,642	1,624	1,346	672
Divorced	5,175	3,199	600	1,376
Total Brides ..	75,599	66,513	3,719	5,367

7. **Birthplace of Persons Marrying.**—A table showing birthplace of persons marrying in 1911, 1921 and 1940 may be found on p. 326 of Official Year Book No. 34. In *Demography Bulletins* Nos. 67 and 68, the relative birthplaces of bridegrooms and brides marrying in 1949 and 1950 will be found tabulated in detail.

8. **Occupation of Bridegrooms.**—The distribution of the 75,599 bridegrooms for 1950 amongst classes of occupations was as follows :—Craftsmen, 19,708 ; Operatives, 13,821 ; Commercial and Clerical, 13,195 ; Rural, Fishing and Hunting, 9,305 ; Labourers, 7,119 ; Domestic and Protective Service, 3,991 ; Professional and Semi-Professional 3,302 ; Administrative, 2,670 : and Not Gainfully Occupied and Not Stated, 2,488.

9. **Celebration of Marriages.**—In all the States marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar-General, or by certain civil officers—in most cases district registrars. Most of the marriages are celebrated by ministers of religion. The registered ministers in 1950 belonged to more than forty different denominations, some of which, however, have only very few adherents. A number of these have been bracketed under the heading "Other Christian". The figures for 1950 are shown in the following table. Corresponding figures for 1949 may be obtained from *Demography Bulletin* No. 67.

10. **Divorces.**—Chapter VII.,—Public Justice shows details of the number of marriages dissolved annually by divorce, nullity of marriage and judicial separation. The number dissolved by decrees for divorce and nullity of marriage made absolute and by judicial separation in 1950 was 7,357 or 9.7 per cent. of the number of marriages celebrated during the year.

Detailed tables relating to divorce statistics for 1950 and summary tables for earlier years are shown also in *Demography Bulletin* No. 68, 1950.

§ 2. Fertility and Reproduction.

1. Introductory.—Of the two elements of increase in the population, namely natural increase and net migration, the former has been by far the more important over the past few decades. The level of natural increase depends on the excess of births over deaths and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

2. Number of Live Births.—(i) *Year*, 1950. **There are various methods of measuring the fertility of the population by relating the number of births to the numbers in the population. In each the basic data are, of course, the numbers of live births.**

The number of live births registered in Australia during 1950 is shown in the table below. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only. Corresponding figures for 1949 may be obtained from *Demography Bulletin* No. 67.

Total Mothers	70,779	49,234	28,710	17,137	14,066	7,163	407	941	188,437

(a) Excludes 60 still-born twins. (b) Excludes 21 still-born twins. (c) Excludes 12 still-born twins. (d) Excludes 6 still-born twins. (e) Excludes 105 still-born twins. (f) Excludes 1 still-born triplet. (g) Excludes 3 still-born triplets. (h) Excludes 1 still-born quadruplet.

NOTE.—In States other than New South Wales, South Australia and Western Australia the registration of still-births is not compulsory and it is possible that in some cases where one child only of a multiple pregnancy is live-born the confinement has been treated as a single birth. This applies particularly to South Australia, where registration practice for twins, when one is live-born and one still-born, is to treat each child as a single birth, and for triplets with one still-born, to treat the two live-born as twins, and so on.

(ii) *Years* 1861 *to* 1950. The average annual number of live births in each State and Territory for each five-year period from 1861 to 1950 and the total number of live births in each State and Territory for each year 1946 to 1950 are given in the following table :—

LIVE BIRTHS.

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

(*a*) Included with South Australia prior to 1901. (*b*) Part of New South Wales prior to 1911.

3. **Crude Birth-rates.**—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth-rate. The crude birth-rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period.

Crude birth-rates for each five-year period from 1861 to 1950 and for each year from 1946 to 1950 for each State and Territory are set out below :—

CRUDE BIRTH-RATES.(*a*)

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

1950 ..	22.20	22.61	24.62	24.72	25.47	25.66	27.55	46.52	23.29

(*a*) Number of births per 1,000 of mean population. (*b*) Included with South Australia prior to 1901. (*c*) Part of New South Wales prior to 1911. (*d*) Rates based on revised mean population estimates shown on p. 527 are as follows :—1946–50, 37.89 ; 1947, 38.46 ; 1948, 37.77 ; 1949, 38.65 ; 1950, 40.44.

NOTE.—The birth-rates in the table above are based on live births registered in the respective States and Territories. Some years ago a large proportion of births in respect of which the mother's usual residence was the Australian Capital Territory took place in Queanbeyan, just over the New South Wales border, but with improved hospital facilities in the Territory the movement to outside hospitals rapidly diminished and has been reversed since 1939. The following rates, based on births in respect of which the mother's usual residence is the Australian Capital Territory and on revised population figures, are a truer measure of birth-rates in the Australian Capital Territory :—

Annual Average.		Year.	
1926–1930 ..	.. 22.45	1946	. 26.00
1931–1935 ..	.. 19.53	1947	.. 25.66
1936–1940 ..	.. 19.29	1948	.. 25.99
1941–1945 ..	.. 23.06	1949	.. 27.28
1946–1950 ..	.. 27.10	1950	.. 29.63

The variations similarly caused in the birth-rates for the States and Northern Territory by referring the birth registrations to the State or Territory in which the mother was usually resident are shown by the following corrected rates for 1950:—New South Wales, 22.22 ; Victoria, 22.62 ; Queensland, 24.77. South Australia, 24.67 ; Western Australia, 25.50; Tasmania, 25.72 ; and Northern Territory, 28.15, The preceding table shows a marked reduction in the crude birth-rate since 1861. The average annual rate, which for the five years ended 1865 was 42.44, fell to 27.67 for the five years ended 1900. In the earlier years of the present century the rate fluctuated somewhat but from 1912, when 28.60 was recorded, there was an almost continuous decline to the very low figure of 16·39 in 1934. The decline in the depression years was to some extent occasioned by the postponement of marriages, and with subsequent improvement in economic conditions the rate rose. Since 1940 the rate has increased quite appreciably owing to a continued improvement in the economic welfare of the community and the war-time boom in marriages. The latter resulted in an abnormal number of first births but investigation indicates that rates for births other than first were generally slightly higher than might have been expected from pre-war experience. The improvement in the birth-rate has been maintained since the end of the war despite some falling off in marriage rates.

4. **Crude Birth-rates of Various Countries.**—The following table gives the crude birth-rates for Australia and each State in comparison with the rates for various other countries.

CRUDE BIRTH-RATES (*a*) : VARIOUS COUNTRIES.

Country.	1908–13.	1921–25.	1926–30.	1931–35.	1950.
Egypt	43.6	43.0	44.3	42.9	48.8

England and Wales	24.9	19.9	16.5	15.0	15.7
Austria	(*d*) 24.9	22.2	17.6	14.4	15.6

(*a*) Number of births per 1,000 of mean population. (*b*) Not available. (*c*) 1922–25. (*d*) 1911–13. (*e*) 1949. (*f*) White population only. (*g*) Excludes Maoris. (*h*) 1915. (*i*) 1933–35. (*j*) 1947. (*k*) Excludes full-blood aboriginals. (*l*) 1948.

5. **Fertility-rates.**—The principal demographic factors affecting the level of crude birth-rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a high proportion of married women of child-bearing age will have a much higher crude birth-rate than one with a low proportion, although the fertilities of the two populations may be identical.

In order to compare fertilities, births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility-rate.

The following table sets out for certain periods, commencing with 1880–82, the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be 15–44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

CRUDE BIRTH-RATES AND FERTILITY-RATES : AUSTRALIA.

Period.	Average Annual Rates.			Index Nos. (Base : 1880–82 = 100).		
		Fertility-rates.			Fertility-rates.	
	Crude Birth-rate. (a)	Births per 1,000 Women aged 15–44 Years.	Nuptial Births per 1,000 Married Women aged 15–44 Years.	Crude Birth-rate. (a)	Births per 1,000 Women aged 15–44 Years.	Nuptial Births per 1,000 Married Women aged 15–44 Years.
1880–82	35.3	170	321	100	100	100
1890–92	34.5	159	332	98	94	103
1900–02	27.2	117	235	77	69	73
1910–12	27.2	117	236	77	69	74
1920–22	25.0	107	197	71	63	61
1932–34	16.7	71	131	47	42	41
1946–48	23.6	104	167	67	61	52

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth-rate. Thus while the nuptial birth-rate for married women increased by only 27 per cent. over the period 1932–34 to 1946–48 the crude birth-rate rose by 41 per cent. owing principally to the greatly increased number of marriages during that period.

6. **Age-specific Fertility-rates for Females.**—So long as customary ages at marriage do not change drastically, the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably and a clearer view of the fertility of the population can be obtained from an examination of what are known as its age-specific fertility-rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Age-specific fertility-rates are frequently expressed in age-groups as well as in single ages. The following table sets out age-specific fertility-rates for Australia over the period 1921 to 1950 in five-yearly age-groups.

AGE-SPECIFIC FERTILITY-RATES(*a*) : AUSTRALIA.

Age-group (Years).	1921.	1926.	1931.	1936.	1941.	1946.	1947.	1948.	1949.	1950.
15–19 ..	12.83	14.02	13.08	12.18	11.90	12.63	15.36	16.49	17.41	18.11
20–24 ..	65.45	60.23	53.08	50.33	59.42	73.52	80.68	79.14	82.11	84.32
25–29 ..	82.24	76.82	62.47	62.02	70.78	89.51	90.08	87.50	88.13	90.53
30–34 ..	68.50	61.90	51.25	46.33	49.72	65.03	63.76	61.26	59.30	60.34
35–39 ..	49.48	43.55	33.23	28.89	28.69	37.43	36.48	34.11	33.32	33.89
40–44 ..	21.66	17.63	13.61	10.19	9.52	11.87	11.44	10.92	10.24	10.35
45–49 ..	2.10	1.90	1.45	1.11	.80	1.03	.80	.76	.80	.73

(*a*) Number of female births per 1,000 women in each age-group.

The table above indicates that the most fertile age-group is 25-29 years. The decline in fertility between 1921 and 1936 was general but was more pronounced in the older age-groups. During the period 1936 to 1950 a rise in fertility occurred in all but the oldest age-group.

7. **Gross and Net Reproduction Rates for Females.**—A single measure of reproduction known as the gross reproduction rate is obtained by adding together the specific fertility-rates for each single age in the child-bearing group. This measure indicates the number of female children who would be born on the average to women living right through the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measure of this nature is obtained by multiplying the specific fertility-rates by the number of females in the corresponding age-group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase, if less than unity, it will ultimately decrease. The following table should be read in the light of the comment which follows it and of the index of fertility in paragraph 9 hereof.

GROSS AND NET REPRODUCTION RATES : AUSTRALIA.

Year.	Gross Reproduction Rate.	Net Reproduction Rate.	Year.	Gross Reproduction Rate.	Net Reproduction Rate.	
					(*f*)	(*g*)
1881 (*a*) ..	2.65	(*b*) 1.88	1940	1.100	1.004	1.042
1891 (*a*) ..	2.30	(*b*) 1.73	1941	1.154	1.053	1.094
1901 (*a*) ..	1.74	(*c*) 1.39	1942	1.156	1.056	1.096
1911	1.705	(*d*) 1.421	1943	1.257	1.148	1.191
1921	1.511	(*e*) 1.313	1944	1.289	1.176	1.221
1931	1.141	(*f*) 1.039	1945	1.337	1.220	1.267
1936	1.060	(*f*) 0.967	1946	1.455	1.328	1.379
1937	1.075	(*f*) 0.981	1947	1.493	1.364	1.416
1938	1.069	(*f*) 0.976	1948	1.451	..	1.376
1939	1.080	(*f*) 0.986	1949	1.457	..	1.382
			1950	1.491	..	1.364

(*a*) Approximate only. (*b*) 1881–1890 mortality experience used. (*c*) 1891–1900 mortality experience used. (*d*) 1901–1910 mortality experience used. (*e*) 1920–1922 mortality experience used. (*f*) 1932–1934 mortality experience used. (*g*) 1946–48 mortality experience used.

NOTE.—It is not strictly correct to assume, as above, that a particular age-specific fertility rate can be applied to a hyothetical group of women reaching that age, without taking account of previous fertility and marriage experiences. Reproduction rates are, therefore, somewhat unreliable when birth and marriage rates have been changing. The indexes of marriage fertility shown on the next page are also of doubtful reliability in similar circumstances.

Since 1881 there has been a substantial downward trend in both rates, but the gross rate has fallen considerably more than the net, showing that the decline in fertility has been offset to some extent by a decline in mortality. The net reproduction rate was below unity over the period 1932 to 1939, and if the low level of those years were to continue, ultimate population decline would be certain. The progressive rise in both gross and net reproduction rates from 1939 to 1947 has been due largely to abnormally high marriage rates. Fluctuations in marriage rates affect both gross and net reproduction rates substantially. When fluctuations in marriage rates are transient, reproduction rates calculated as above are not valid as indicators of relative fertility nor of the extent to which population will replace itself. The fertility of marriages is measured in paragraph 9 below.

8. **Gross and Net Reproduction Rates of Various Countries.**—In the following table a comparison is given of the gross and net reproduction rates recorded for various countries.

GROSS AND NET REPRODUCTION RATES : VARIOUS COUNTRIES.

Country.	Period.	Reproduction Rate.		Country.	Period.	Reproduction Rate.	
		Gross.	Net.			Gross.	Net.
Canada ..	1948	1.67	(*a*)	France ..	1947	1.46	1.31
New Zealand(*b*)	1949	1.62	1.51	Denmark ..	1947	1.40	1.27
United States of America(*c*) ..	1948	1.54	1.46	Switzerland ..	1946	1.29	1.16
Netherlands ..	1949	1.56	1.43	Sweden ..	1947	1.21	1.13
Finland ..	1948	1.67	1.40	Portugal ..	1949	1.55	1.13
Eire	1945–47	1.63	1.38	Norway ..	1948	1.23	1.13
Australia ..	**1950**	**1.49**	**1.36**	England and Wales ..	1948	1.16	1.07
Scotland ..	1947	1.50	1.35	Belgium ..	1948	1.19	1.00

(*a*) Not available. (*b*) Excludes Maoris. (*c*) White population only.

In comparing the reproduction rates of the countries shown above allowance should be made for any differences in years as the rates for any one country from year to year are affected by variations in the incidence of marriage.

9. **Fertility of Marriages.**—In issues of the Official Year Book prior to No. 35 estimates of the fertility of marriages were published. These were calculated by relating the births of one five-yearly period to the marriages in the preceding five years (*see* Official Year Book No. 35, p. 329). Since the publication of that issue, an improved method has been formulated for measuring current marriage fertility by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTILITY OF MARRIAGES : AUSTRALIA.

Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.
1936.. ..	2.28	1941.. ..	2.19	1946.. ..	2.55
1937.. ..	2.27	1942.. ..	2.12	1947.. ..	2.55
1938.. ..	2.22	1943.. ..	2.21	1948.. ..	2.44
1939.. ..	2.20	1944.. ..	2.28	1949.. ..	2.45
1940.. ..	2.18	1945.. ..	2.36	1950.. ..	2.56

NOTE.—*Se* Note at foot of p. 587.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. It will be noted that there was an almost continuous decline to 1942, but a pronounced increase from 1943 to 1946. Comparing this index with the net reproduction rate it is evident that the rise in the latter since 1935 has been caused by a rise in the marriage rate, due firstly to the postponed depression marriages, and secondly to war-time marriages, and only in the last six years to any increase in the fertility of marriages. The figures for 1949 and 1950 present a somewhat inflated index as many of the births which have been used to calculate the index relate to marriages of immigrants which took place overseas and are consequently not included in Australian marriage records.

10. **Masculinity of Live Births.**—The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, State totals), considerable variation is shown. For 1950 the figures ranged from 98.55 in the Northern Territory to 107.51 in Tasmania. The averages for the ten years 1941–50 were as follows :—New South Wales, 105.49 ; Victoria, 105.47 ; Queensland, 105.49 ; South Australia, 105.78 ; Western Australia, 104.27 ; Tasmania, 104.45 ; Australia, 105.38. The following table shows the figures for Australia for each ten-year period from 1901 to 1950 and for each year 1947 to 1950 :—

MASCULINITY(a) OF LIVE BIRTHS REGISTERED : AUSTRALIA.

Particulars.	1901–10.	1911–20.	1921–30.	1931–40.	1941–50.	1947.	1948.	1949.	1950.
Total Births ..	105.22	105.27	105.55	105.12	105.38	105.93	105.36	104.78	105.46
Ex-nuptial Births	104.08	105.25	105.16	105.36	105.34	101.75	103.55	101.20	105.38

(a) Number of males born for every 100 female births.

11. **Ex-nuptial Live Births.**—(i) *General.* Since 1901 the highest proportion of ex-nuptial births recorded in any one year was in 1905 when there were 6,545 ex-nuptial births representing 6.24 per cent. of total births. Since then the proportion has declined steadily. The largest number of ex-nuptial births was recorded in 1946 when 7,613 were registered, but this number represented only 4.32 per cent. of total births. The lowest proportion was 3.78 per cent. in 1940.

The variations in the proportions of ex-nuptial births as between the individual States and Territories for 1950 are shown below. Corresponding figures for 1949 may be obtained from *Demography Bulletin* No. 67.

EX-NUPTIAL LIVE BIRTHS : NUMBER AND PROPORTION, 1950.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Number ..	2,914	1,617	1,428	476	525	283	54	27	7,324
Proportion of Total Births	% 4.07	% 3.25	% 4.92	% 2.75	% 3.69	% 3.91	% 13.14	% 2.83	% 3.84

The number and proportion of ex-nuptial births at intervals from 1901 to 1950 are as follows :—

EX-NUPTIAL LIVE BIRTHS : NUMBER AND PROPORTION, AUSTRALIA.

Particulars.	Annual Average.					1946.	1947.	1948.	1949.	1950.
	1901–10.	1911–20.	1921–30.	1931–40.	1941–50.					
Number of Ex-nuptial Births ..	6,498	6,836	6,238	5,133	6,780	7,613	7,263	7,173	7,372	7,324
Proportion of Total Births	% 6.05	% 5.22	% 4.66	% 4.40	% 4.13	% 4.32	% 3.98	% 4.03	% 4.07	% 3.84

It is, of course, possible that the number of ex-nuptial births is somewhat understated owing to diffidence in proclaiming the fact of ex-nuptiality.

(ii) *Rate of Ex-nuptiality.* A further comparison is obtained by calculating the number of ex-nuptial births per thousand of the single, widowed and divorced female population between the ages of 15 and 45 years. On this basis the number of ex-nuptial births per 1,000 unmarried women of ages 15 to 45 has been found to be as follows :— 1880–82, 14.49; 1890–92, 15.93; 1900–02, 13.30; 1910–12, 12.53; 1920–22, 10.50; 1932–34, 6.96; and 1946–48, 11.56.

(iii) *Comparison of Rates.* The following table, showing the relative proportions of ex-nuptial and nuptial births to the total population, discloses a much greater proportional reduction in the ex-nuptial birth-rate than in the nuptial rate :—

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH-RATES(a) : AUSTRALIA.

Birth-rate.	Annual Average.					1947.	1948.	1949.	1950.
	1901–10.	1911–20.	1921–30.	1931–40.	1941–50.				
Ex-nuptial	1.60	1.39	1.04	0.76	0.90	0.96	0.93	0.93	0.90
Nuptial ..	24.91	25.18	21.40	16.47	20.98	23.10	22.15	21.98	22.39
Total ..	26.51	26.57	22.44	17.23	21.88	24.06	23.08	22.91	23.29

(a) Number of births per 1,000 of mean population.

12. **Legitimations.**—In the several States Acts have been passed to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who comes within the scope of their purposes, born before or after the passing thereof, is deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. During 1949 and 1950 the numbers of children legitimized in Australia were 867 and 922 respectively, compared with 883 in 1939.

13. **Multiple Births.**—Among the total number of 190,591 live births registered in Australia in 1950 there were 186,198 single births, 4,329 twins, 57 triplets and 7 quadruplets. The number of cases of twins was 2,217, triplets 20 and of quadruplets 2, there being 105 still-born twins, 3 still-born triplets and 1 still-born quadruplet. The total number of mothers was, therefore, 188,437, the proportion of mothers of twins being one in every 85, of mothers of triplets one in every 9,422, and of mothers of all multiple births one in every 84 mothers. Multiple births occurred in 1.19 per cent. of confinements.

The proportion of multiple births to total births does not vary greatly from year to year.

MULTIPLE BIRTHS : AUSTRALIA.

Particulars.	Annual Average.				1947.	1948.	1949.	1950.
	1911–20.	1921–30.	1931–40.	1941–50.				
Mothers of Multiple Births ..	1,387	1,420	1,220	1,844	2,030	1,938	2,037	2,239
	%	%	%	%	%	%	%	%
Proportion of Total Mothers	1.06	1.07	1.06	1.13	1.12	1.10	1.14	1.19

14. **Ages of Parents.**—The relative ages of the parents of children registered in 1949 and 1950 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births the relative single ages of parents are shown in *Demography Bulletins* Nos. 67 and 68. In the present work the exigencies of space allow only the insertion of a table for 1950 showing, in respect of all confinements, the relative ages of parents in groups of five years.

CONFINEMENTS: RELATIVE AGES OF PARENTS, AUSTRALIA, 1950.

Age of Father (Years), and Type of Birth.		Total.	Age of Mother (Years).

15. **Birthplaces of Parents.**—Tables showing birthplaces of parents of children whose births were registered during 1949 and 1950 appear in *Demography Bulletins* Nos. 67 and 68 respectively.

16. **Occupation of Fathers.**—Tables showing occupations of the fathers of all nuptial children registered in 1949 and 1950 appear in *Demography Bulletins* Nos. 67 and 68 respectively.

17. **Age, Duration of Marriage and Issue of Mothers.**—(i) *General.* The total number of nuptial confinements resulting in live births in 1950 was 181,182, comprising 179,015 single births, 2,145 cases of twins, 20 cases of triplets and 2 cases of quadruplets. The tables relating to previous issue exclude the issue of former marriages and still-born

children. On the other hand, they include children by the same father which were born to the mother prior to the marriage. Children born at the present confinement are included in the total issue shown.

The tables below are shown in summarized form, more complete details for 1949 being given in *Demography Bulletin* No. 67 and for 1950 in *Demography Bulletin* No. 68.

(ii) *Duration of Marriage and Issue of Mothers.* The following table shows that in 1950 the duration of marriage of mothers of nuptial children ranged from less than one year up to 33 years, and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1950 was 2.39 compared with 2.37 in 1949, 2.35 in 1948, 2.31 in 1947 and 2.36 in 1946.

NUPTIAL CONFINEMENTS : DURATION OF MARRIAGE AND ISSUE OF MOTHERS, AUSTRALIA, 1950.

Duration of Marriage. (Years.)	Total Married Mothers.	Total Issue.	Average Issue.

Total ..	181,182	432,574	2.39

(iii) *Age and Average Issue of Mothers.* The following table shows the average number of children born to mothers of different ages. In the younger ages there is, naturally, little difference in the average number of children to each mother from year to year, but with the increase of the age of the mother the number of issue has fallen in comparison with past years. The average issue of mothers of all ages recorded for 1950 (namely 2.39) is 26.5 per cent. below the average of 3.25 for the years 1911–20.

AGE AND AVERAGE ISSUE OF MOTHERS : AUSTRALIA.

Period.	Age of Mother (Years).							
	Under 20.	20–24.	25–29.	30–34.	35–39.	40–44.	45 and Over.	All Ages.
1911–20 ..	1.21	1.75	2.61	3.74	5.11	6.69	8.16	3.25

(v) *Previous Issue of Mothers of Twins, Triplets and Quadruplets.* Figures regarding the previous issue of married mothers of twins in 1950 show that 577 mothers had no previous issue either living or deceased, 653 had one child previously, 450 had two previous issue, 209 three, 125 four, 49 five, 39 six, 13 seven, 15 eight, 6 nine, 3 ten, 1 eleven, 3 twelve and 2 thirteen.

Of the 20 cases of nuptial triplets registered during 1950, 7 mothers had no previous issue, 2 had one, 4 had two, 4 had three, 1 had four, 1 had six and 1 had eight previous issue. Of the two cases of quadruplets in 1950, 1 mother had one previous child and 1 had three previous children.

18. **Nuptial First Births.**—(i) *Duration of Marriage.* The following table shows the interval between marriage and first birth for 1911–20, 1921–30, 1931–40, 1941–50, 1948, 1949 and 1950. In cases of twins and triplets, the first live born child only is enumerated.

The masculinity of nuptial first births in 1950 was 105.28 compared with 105.46 for total births.

(ii) *Age of Mother and Duration of Marriage.* Tabulations showing single ages of mothers of nuptial first-born children in conjunction with duration of marriage are given for 1948, 1949 and 1950 in *Demography Bulletins* Nos. 66 to 68.

(iii) *First Births Occurring within Nine Months of Marriage.* The following table shows for 1948, 1949 and 1950 the number of children born less than nine months after marriage to mothers in each age-group. For purposes of comparison details of births of ex-nuptial children and of all first-born children are also shown together with the number of brides in each year within the age-groups used. The analysis of the figures shown in the table is intended to indicate the extent of ante-nuptial conception but the data are subject to the limitations that premature births which are not the result of ante-nuptial conception are included among the births which occurred less than nine months after marriage and the proportion of first births among ex-nuptial births is unknown. Subject to these limitations the total of nuptial births occurring less than nine months after marriage and all ex-nuptial births may be taken as indicating the extent of ante-nuptial conception. The difference from the true figures is probably not significant, especially in the lower age-groups.

Three-fifths of first births to married mothers under 20 years of age are conceived before marriage whilst at ages 20–24 years the proportion is one-fifth and at ages 25–29 years about one-tenth. If all ex-nuptial births are included as first births then almost 70 per cent. of first births to mothers aged under 20 years are conceived out of wedlock. In the age-group 20–24 years the proportion is over 25 per cent. and in the age-group 25–29 years over 16 per cent.

(a) Age, in years, of mothers at birth of first child, age of brides at marriage. (b) Excludes 2 births, age of mother not stated. (c) Excludes 5 births, age of mother not stated. (d) Excludes 6 births, age of mother not stated.

NOTE.—In cases of multiple first births, only one child is included.

19. **Still-births.**—Registration of still-births is not compulsory in all Australian States. It has been compulsory in Western Australia since 14th January, 1908; in the Australian Capital Territory since 1st January, 1930; in New South Wales since 1st April, 1935, and in South Australia since 1st May, 1937. In Victoria, Queensland and Tasmania registration is not enforced but some information is obtained by notification of still-births for various purposes. Because registration is not compulsory in all States detailed statistics of still-births for Australia as a whole cannot be compiled.

The number of still-births in each State and Territory, as recorded by the means outlined above, during the last four years are as shown in the following table :—

STILL-BIRTHS.

State or Territory.	Number.				Per 1,000 of all Births (Live and Still).

(*a*) Northern Territory figures included with South Australia prior to 1901. (*b*) Part of New South Wales prior to 1911. (*c*) Excludes deaths of defence personnel and of internees and prisoners of war from overseas for the period September, 1939 to June, 1947.

2. **Crude Death-rates.**—The commonest method of measuring the mortality rate is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death-rate. This rate for a given period measures the numbers per thousand of population by which the population is depleted through deaths during that period. Crude death-rates for each State and Territory from 1861 to 1950 are shown in the following table.

CRUDE DEATH-RATES.(*a*)

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES.

YEARLY RATES.									
1946(*d*) ..	9.70	10.63	9.77	10.17	9.65	10.11	5.20	5.16	10.00
1947(*d*) ..	9.53	10.44	9.15	9.62	9.39	9.17	5.97	(*e*) 5.62	9.69
1948	10.04	10.44	9.31	10.25	9.10	9.55	5.99	(*e*) 6.33	9.96
1949	9.43	10.28	8.85	9.45	8.99	8.76	6.83	(*e*) 5.23	9.51
1950—									
Males ..	10.83	10.71	10.21	10.64	10.52	9.13	8.82	(*e*) 6.54	10.60
Females ..	8.36	9.56	7.37	8.61	7.50	8.32	2.36	(*e*) 5.30	8.49
Persons ..	9.60	10.14	8.82	9.63	9.05	8.74	6.43	(*e*) 5.95	9.55

(*a*) Number of deaths per 1,000 of mean population. (*b*) Northern Territory figures included with South Australia prior to 1901. (*c*) Part of New South Wales prior to 1911. (*d*) Excludes deaths of defence personnel from September, 1939 to June, 1947. (*e*) Rates based on revised mean population estimates shown on p. 527 are as follows :—1946–50, 5.30 ; 1947, 5.58 ; 1948, 5.99 ; 1949, 4.72 ; 1950, males 5.29, females 5.02, persons 5.17.

3. **Standardized Death-rates.**—(i) *General.* The death-rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death-rate of a community will be low if it contains a large percentage of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death-rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death-rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death-rate if the death-rates in each sex and age-group were as recorded, but the age and sex distribution the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their Censuses nearest to the year 1900. Full details of the "Standard Population" are given in Official Year Book No. 22, p. 962.

(ii) *Death-rates in Age-groups.* The following table provides a comparison of death-rates in age-groups in each State for the latest Census year (1947) in which the ages of population in each State were accurately ascertained.

DEATH-RATES(*a*) IN AGE-GROUPS, 1947.

Age-group (years).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Under 1 ..	29.77	25.83	31.59	23.68	30.66	27.31	47.62	30.30	28.45
1–4 ..	1.99	1.52	2.26	1.33	2.05	1.75	1.32	0.80	1.84
5–14 ..	0.67	0.73	0.86	0.68	0.62	0.81	..	0.77	0.71
15–24 ..	1.11	1.29	1.35	1.08	1.30	1.72	2.90	0.29	1.23
25–34 ..	1.63	1.64	2.14	1.74	1.89	2.13	0.90	1.92	1.75
35–44 ..	3.07	2.88	3.60	2.88	3.22	3.11	4.29	3.82	3.10
45–54 ..	7.86	7.37	7.72	6.65	7.56	6.84	6.65	4.87	7.54
55–64 ..	17.90	17.59	16.54	16.45	16.07	15.50	14.29	15.31	17.31
65–74 ..	42.07	41.46	39.62	36.96	39.72	39.76	38.30	48.65	40.88
75–84 ..	99.57	101.85	98.80	96.91	102.56	97.77	89.74	85.27	100.08
85 and over	223.61	229.26	231.10	221.42	229.68	243.56	200.00	375.00	227.22
Crude Death rate (all ages) ..	9.53	10.44	9.15	9.62	9.39	9.17	5.97	5.62	9.69

(*a*) Number of deaths per 1,000 of population at ages shown.

It will be observed that in this particular year, while the crude death-rate for South Australia was exceeded only by that for Victoria, the rates at most individual ages were lower than for all other States.

(iii) *Comparison of Crude and Standardized Death-rates.* The relative incidence of mortality as between individual States and as between the years 1921, 1933, and 1947 is illustrated in the following statement of crude and "standardized" death-rates. These years have been chosen for comparison because the Census data give essential information as to sexes and ages of the State populations. Crude death-rates are shown to indicate the degree to which they disguise the true position.

CRUDE AND STANDARDIZED DEATH-RATES.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Crude Death-rate(*a*)—							
1921	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933	8.58	9.59	8.84	8.44	8.64	9.60	8.92
1947	9.53	10.44	9.15	9.62	9.39	9.17	9.69
Standardized Death-rate(*b*)—							
1921	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933	8.52	8.74	9.10	7.66	8.74	8.86	8.62
1947	7.44	7.31	7.47	6.77	7.28	7.21	7.34

(*a*) Total deaths per 1,000 of mean population. (*b*) *See* explanation of standardized death-rates in par. 3 (i) above.

The comparisons above relate to individual years in which a census of population was taken and should not be used as the bases for general conclusions as to changes in incidence of mortality for other than those years.

(iv) *Standardized Death-rates, Australia,* 1947 *to* 1950. The standardized death-rates for Australia for 1947 and later years were as follows :—1947, 7.34 ; 1948, 7.41 ; 1949, 7.18 ; and 1950, 7.23.

4. **True Death-rates.**—The main objections to standardized death-rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. A correct measurement of the mortality of the population can be obtained, however, from life tables. A life table represents the number of survivors at each age from a selected group of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death-rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each

person will on the average die 50 years after birth, so that in the standard population one person in 50 or 20 per thousand will die each year. The true death-rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survivorship from each year of age to the next. The table below sets out complete expectation of life at birth and true death-rates for the periods covered by Australian life tables.

COMPLETE EXPECTATION OF LIFE AT BIRTH AND TRUE DEATH-RATES: AUSTRALIA.

Period.	Complete Expectation of Life at Birth. (Years.)		True Death-rate.	
	Males.	Females.	Males.(a)	Females.(b)
1881–1890..	47.20	50.84	21.19	19.67
1891–1900..	51.08	54.76	19.58	18.26
1901–1910..	55.20	58.84	18.12	17.00
1920–1922..	59.15	63.31	16.91	15.80
1932–1934..	63.48	67.14	15.75	14.89
1946–1948..	66.07	70.63	15.14	14.16

(a) Number of deaths per 1,000 males in life table or stationary population. (b) Number of deaths per 1,000 females in life table or stationary population.

5. **Crude Death-rates of Various Countries.**—The following table gives the crude death-rate for Australia and each State thereof in comparison with the rates for various other countries.

CRUDE DEATH-RATES (a): VARIOUS COUNTRIES.

Country.	1908–13.	1921–25.	1926–30.	1931–35.	1950.
Netherlands	13.9	10.4	9.9	8.9	7.5

United States of America	1939–41	16.2	15.2	Greece	1926–30	20.4	19.7
				Poland	1931–32	20.7	19.5

(*a*) Number of deaths per 1,000 males in life table or stationary population (*see* explanation on pages 599–600). (*b*) Number of deaths per 1,000 females in life table or stationary population (*see* explanation on pages 599–600). (*c*) Excludes full-blood aboriginals. (*d*) Excludes Maoris. (*e*) White population only. (*f*) Federal Republic (Western Germany).

7. **Australian Life Tables.**—(i) *Life Tables prior to* 1947. It has been the practice at each Census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. In 1911 the mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881–1890, 1891–1900 and 1901–1910. These compilations furnished a comprehensive view of Australian mortality in respect of sex, of time, and of geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1911. In addition, monetary tables based on the experience for the whole of Australia for the decennium 1901–1910 were prepared and published.

At the Census of 1921 Life Tables were prepared by the Commonwealth Statistician from the population recorded and the deaths in the three years 1920–22. Similarly in 1933 the Life Tables, which were prepared by Mr. F. W. Barford, M.A., A.I.A., were based on the Census population and the deaths in the calendar years 1932–34.

(ii) *Life Tables of Census of* 1947. On the occasion of the 1947 Census, Life Tables representing the sixth in the series were compiled by the Commonwealth Actuary, Mr. W. C. Balmford, F.I.A. These were based on the population recorded, in conjunction with the deaths during 1946, 1947 and 1948, as it was considered undesirable to take into account deaths occurring prior to 1946 owing to the possible effects on the civilian population of conditions arising from the 1939–45 War. Full particulars of the data used, the methods of construction and the tabulations of these Life Tables will be found in the report of the Commonwealth Actuary which was published by the Commonwealth Statistician in 1950. This report will also appear in Volume III. of the Australian Census of 1947.

The main characteristics of the Life Tables and the conclusions to be drawn from the following comparative tables are :—

(*a*) A further substantial reduction has occurred in the mortality rates in the first year of life ;

(*b*) A further marked improvement is evident in the vitality of both males and females up to about age 40 ;

(*c*) A less pronounced improvement is shown in the mortality rates of both sexes between ages 40 and 80 ; indeed, in the case of males, the rates between ages 60 and 80 are generally in excess of those recorded in the 1932–34 Tables ;

(*d*) Although the 1932–34 Tables disclosed that the mortality rates of females at the child-bearing ages close to age 30 were slightly in excess of the rates for males at the same ages, the differences in the rates on this occasion are slightly in favour of the females ;

(*e*) The mortality rates for females are lighter than those for males at all ages ;

(*f*) On the whole, the vitality of the female population shows a greater degree of improvement over the last fourteen years than does that of the males.

AUSTRALIAN LIFE TABLES: NUMBER OF SURVIVORS (l_x) AT SELECTED AGES OUT OF 100,000 BIRTHS.

Age (x).	Males.			Females.

8. **Infant Deaths and Death-rates.**—(i) *Australia*, 1901 *to* 1950. The universal experience that during the first few years of life the higher death-rate of male infants tends to counteract the excess of male births is confirmed by the fact that out of 466,673 male infants born from 1946 to 1950, 14,040 (30.09 per 1,000) died during the first year of life, while of 441,918 female infants only 10,472 (23.70 per 1,000) died during the first year. Still-births are not included in any of the tables relating to deaths.

(*a*) Number of deaths of children aged one month and under one year per 1,000 live births registered. (*b*) Not available. (*c*) Part of New South Wales prior to 1911.

These tables indicate the striking decrease in infant mortality in Australia since the beginning of the century, the number of deaths of children aged under one year per 1,000 births for 1950 being slightly more than one-fourth of the average rate for 1901–05. The tables above reveal the fact that this improvement was due almost entirely to the decrease in deaths from preventable causes, the mortality rate for children aged one month but under one year declining by 89 per cent. while that for children aged under one month declined by only 48 per cent.

(iii) *Statistical Divisions.* The total numbers of births and of deaths of children under one year of age for 1950 are shown in *Demography Bulletin* No. 68 for each of the sixty-five statistical divisions for which vital statistics have been tabulated.

(iv) *Various Countries and Cities.* Compared with other countries Australia occupies a very favourable position in respect of infant mortality. In 1950 only New Zealand and Sweden recorded a lower rate than Australia.

A study of the respective rates shows that a high birth-rate is often, though not invariably, accompanied by a high infant death-rate.

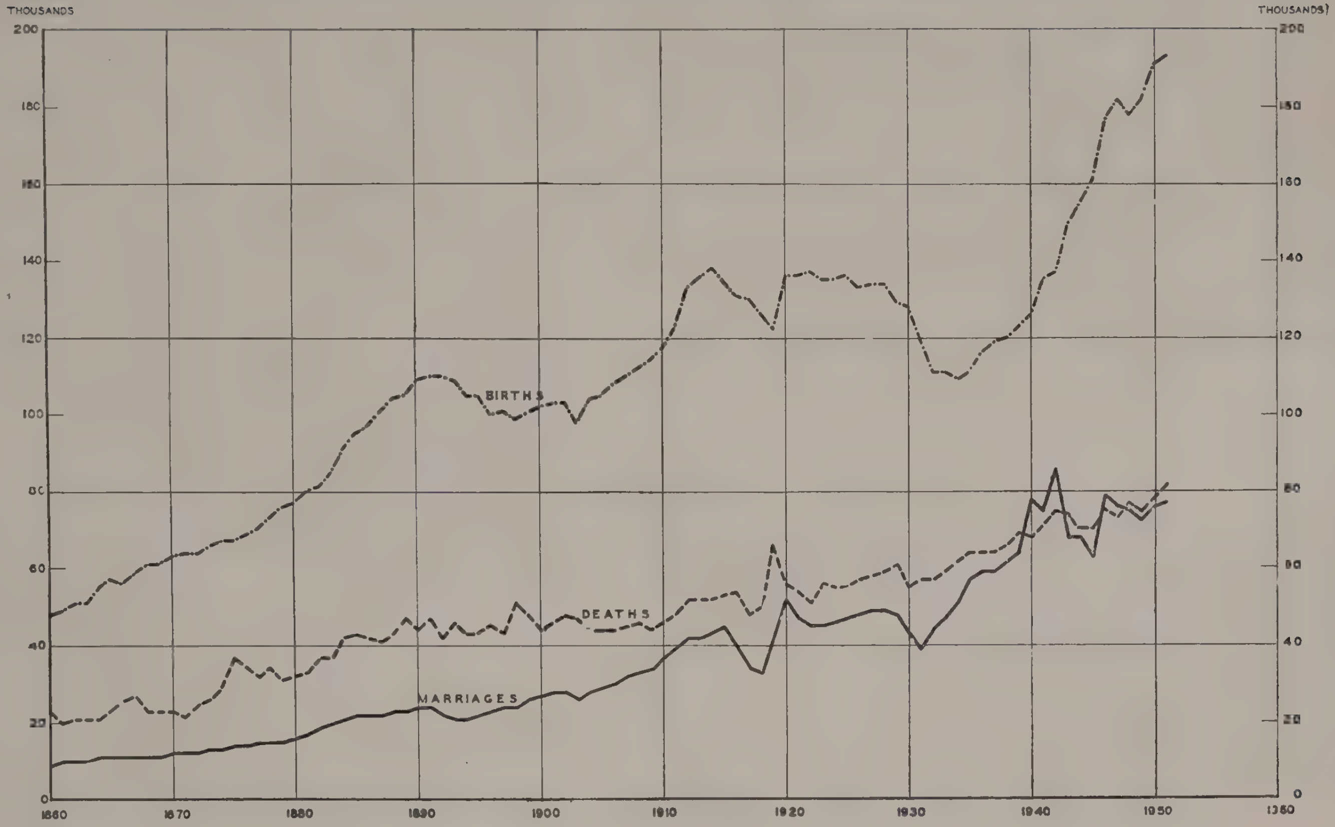
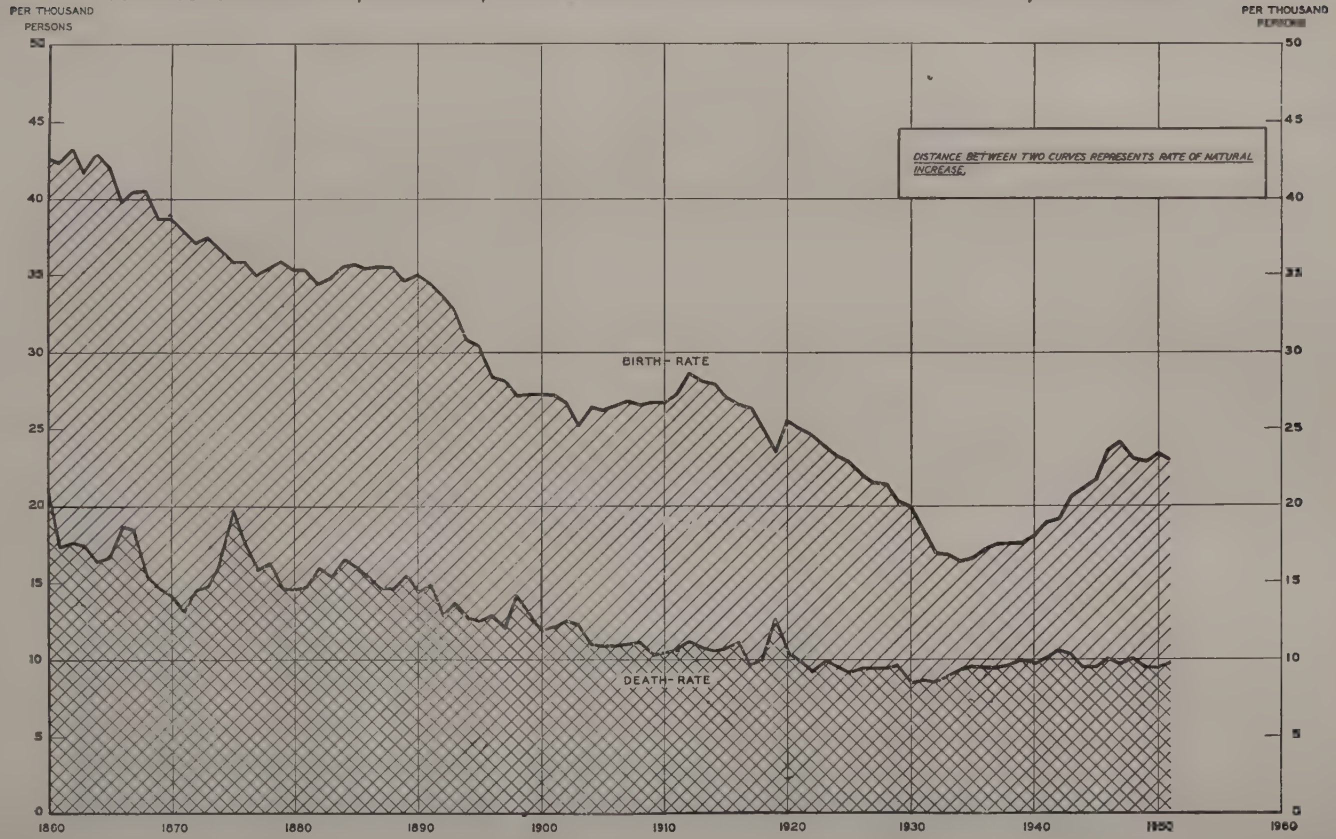
BIRTHS, DEATHS, AND MARRIAGES: AUSTRALIA, 1860 to 1951

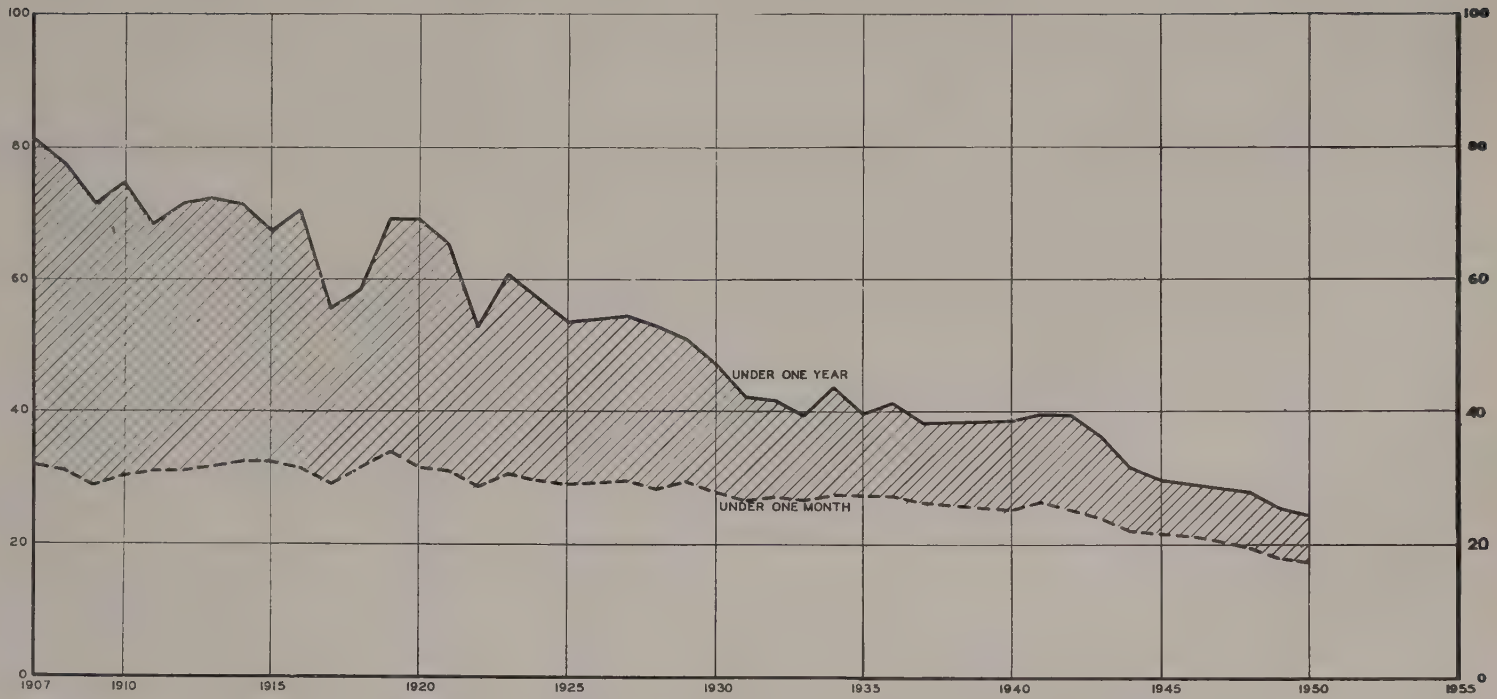


RATES OF BIRTHS, DEATHS, AND NATURAL INCREASE: AUSTRALIA, 1860 TO 1951



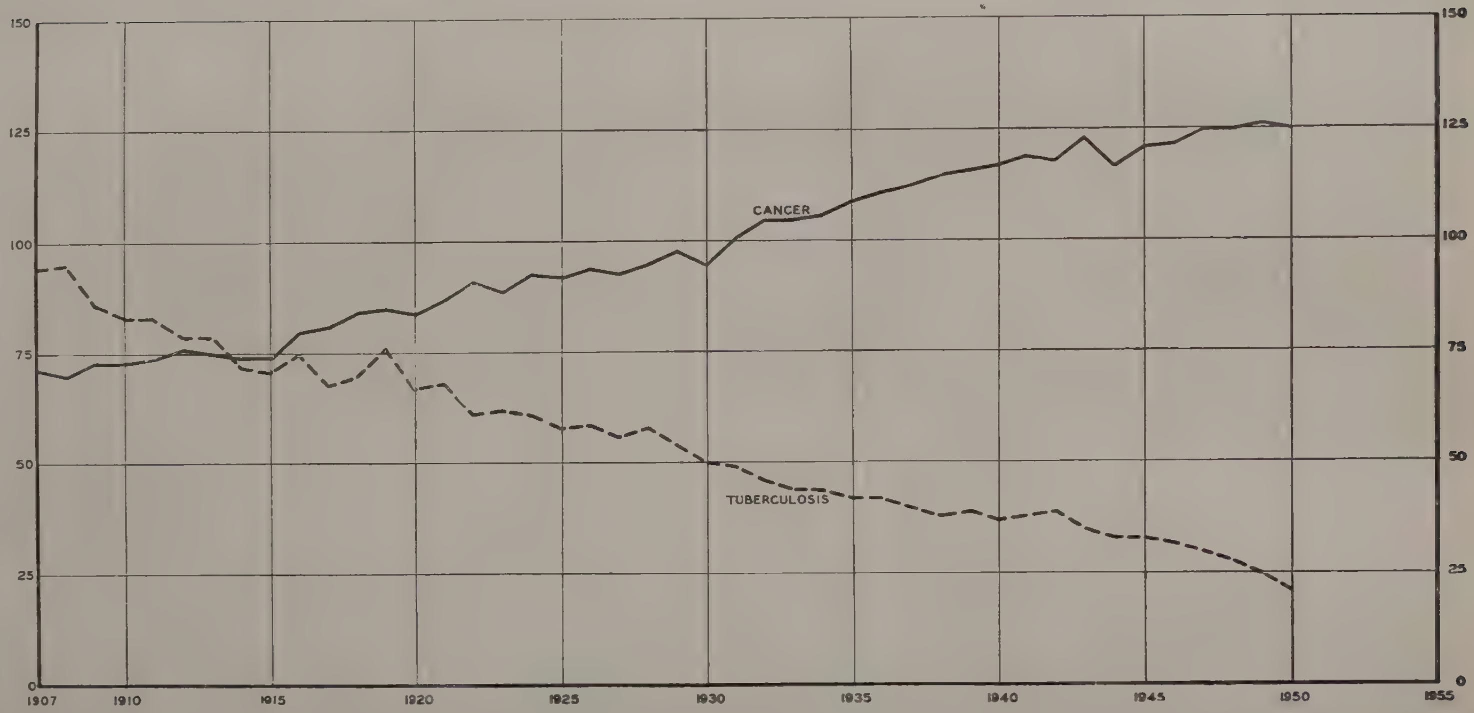
INFANT MORTALITY RATES: AUSTRALIA, 1907 TO 1950

(INFANT DEATHS PER 1000 LIVE BIRTHS)



EXPLANATION.—This graph shows the marked improvement in infantile mortality rates over the past 40 years. The improvement has been confined mainly to children over one month, considerably less having occurred in the first month of life (*see* page 605).

CANCER AND TUBERCULOSIS: AUSTRALIA, 1907 TO 1950
NUMBER OF DEATHS PER 100,000 OF POPULATION



(*See* page 631.

In 1950 the Australian cities, Melbourne, Hobart, Perth, Sydney and Adelaide were among the ten cities having the lowest rates in the following list. The list is headed by Stockholm (18), Melbourne (19), Christchurch (19), and Oslo (21), the next six cities being Hobart, Auckland, Wellington, Perth, Sydney and Adelaide. Of the cities listed, Cairo had the highest rate, 179.

(*a*) Number of deaths under 1 year per 1,000 live births registered. (*b*) Excludes full-blood aboriginals. (*c*) Excludes Maoris. (*d*) 1949. (*e*) 1948. (*f*) Not available. (*g*) White population only.

(v) *Causes of Deaths of Children under one Year.* The following table shows for 1949 the ages of all children who died under one year of age from each of twenty-three causes. These figures are presented on the basis of the Fifth Revision of the International List of Causes of Death. Similar figures for 1950 have been tabulated on the basis of the Sixth Revision and until further analysis of the effects of the change in basis is made it will not be practicable to show them in comparison with previous years. The infant mortality rates for all births are shown for 1911, 1921, 1931, 1941 and 1949 and for ex-nuptial births for 1925, 1931, 1941 and 1949. Full particulars of the causes of death of all children who died in 1949 and 1950 under one year and also of those under one month are given for each State and Territory in *Demography Bulletins* Nos. 67 and 68 respectively. These contain, in addition, detailed information for Australia as to the age at which children died from each cause of death.

In 1949, pre-natal influences, such as congenital malformations, congenital debility and premature birth, together with injuries at birth and other diseases of early infancy accounted for 3,280 or 72 per cent. of all deaths under one year; and of these 3,280 deaths, 2,674 or 82 per cent., occurred less than a week after birth. Among the survivors of the first week, broncho-pneumonia caused the greatest number of deaths attributable to a specific disease. This disease was responsible for 318 deaths, representing 7 per cent. of all deaths under one year, or 1·75 per 1,000 births. Diarrhœa and enteritis caused 198 deaths and other pneumonia 177.

(a) Age 4 weeks (28 days) and under 2 months.

(vi) *Deaths of Ex-nuptial Children under one Year.* The deaths of ex-nuptial children were tabulated by this Bureau for the first time in 1925. The numbers of deaths from various causes of these children in 1949 and the rates in respect of 1925, 1931, 1941 and 1949 are shown in the table on the previous page. In 1950 the rate for all children under one year per 1,000 total births was 24.47 and the death rate of ex-nuptial children per 1,000 ex-nuptial births was 30.17.

Corresponding figures for 1949 may be obtained from *Demography Bulletin* No. 67. Full particulars of the causes of death of ex-nuptial children who died in 1950 aged under one year and also of those under one month are given for each State and Territory in *Demography Bulletin* No. 68. This contains, in addition, detailed information for Australia as to the age at which ex-nuptial children died from each cause of death.

In 1949 pre-natal influences, such as congenital malformations, congenital debility and premature birth, together with injuries at birth and other diseases of early infancy accounted for 182 or 72 per cent., pneumonia for 30 or 12 per cent., and diarrhœa and enteritis for 12 or 5 per cent. of the total deaths of ex-nuptial children under 1 year.

Owing to the change in classifications, figures for 1950 on a basis precisely similar to 1949 figures are not available. Deaths of ex-nuptial children under one year from congenital malformations and "certain diseases of early infancy" (including immaturity where mentioned) accounted for 148 or 67 per cent. of the total deaths of ex-nuptial children under one year in 1950. These figures include deaths from pneumonia and diarrhœa and enteritis under one month of age. At ages one month and over, pneumonia caused eighteen deaths and enteritis sixteen deaths, representing 8 per cent. and 7 per cent., respectively, of the total deaths of ex-nuptial children under one year.

9. **Deaths in Age-groups.**—A distribution into age-groups has been made of the 378,415 deaths which occurred in Australia during the five years ended 1950, and the results are shown in the following table :—

AGGREGATE DEATHS IN AGE-GROUPS : AUSTRALIA, 1946 TO 1950.

Age-group (Years).	Number of Deaths.			Proportion of Total Deaths.		
	Males.	Females.	Persons.	Males.	Females.	Persons.
				%	%	%
Under 1	14,040	10,472	24,512	6.67	6.24	6.48
1–4	3,120	2,391	5,511	1.48	1.42	1.45
5–19	4,515	2,629	7,144	2.14	1.57	1.89
20–39	12,338	9,209	21,547	5.86	5.49	5.69
40–59	42,773	28,060	70,833	20.31	16.72	18.72
60–64	22,577	13,786	36,363	10.72	8.22	9.61
65 and over ..	111,177	101,223	212,400	52.78	60.33	56.13
Age not stated ..	82	23	105	0.04	0.01	0.03
Total ..	210,622	167,793	378,415	100.00	100.00	100.00

A table showing the corresponding percentages in periods of ten years from the year 1901 has been added to show the movement over a longer term. The most striking change is the substantial decrease in the group " under 1 year ". At the other end of the table, the group " 65 years and over " has increased considerably. The percentages in all age-groups under 40 have fallen since 1901, while those in all age-groups from 40 onwards have risen. These changes are due partly to improvement in the efficiency of medical science and partly to changes in the age distribution of the population. The latter changes are themselves in part due to increased length of life made possible by medical science, and in part to changes in the volume of migration and the falling birth-rate :—

10. **Deaths at Single Ages and in Age-groups.**—(i) *General.* The deaths registered in Australia in 1949 and 1950 will be found tabulated in five-yearly age-groups for each State and Territory and in single ages for Australia in *Demography Bulletins* Nos. 67 and 68, respectively. The deaths during the first fifteen years of life have been tabulated there in single ages and for the first year of life in shorter periods. A summary for Australia for 1950 is given in the following table :—

DEATHS AT SINGLE AGES AND IN AGE-GROUPS : AUSTRALIA, 1950.

(ii) *Rates.* The following table gives the average annual death-rates in age-groups per 1,000 of the population at 30th June, 1947, for the period 1946 to 1948, i.e., the Census year 1947 and the years immediately preceding and following. Deaths in the Northern Territory and the Australian Capital Territory are included in the total for Australia but not in any of the States. Similar details for the years 1932 to 1934 are given in Official Year Book No. 37, p. 778.

AVERAGE ANNUAL DEATH-RATES : AGE-GROUPS, 1946–48.

11. **Deaths of Centenarians.**—In issues of the Official Year Book up to and including No. 33, particulars were given concerning persons aged 100 years and upwards who died each year. However, while the Registrars-General of the various States verify the ages as far as possible, absolute reliance cannot be placed on the accuracy of the information, owing to the well-known tendency of very old people to overstate their ages, and it was considered advisable to discontinue publication of this table. In connexion with this question it may be noted that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically from 1874 only, the Act of 1836 having left many loopholes for those unwilling to register the births of their children.

12. **Length of Residence in Australia of Persons who Died.**—Since 1940 the tabulation respecting the length of residence in Australia of all persons whose deaths were registered during the year has been discontinued. Details for the year 1940 appear in Official Year Book No. 37, pp. 779–80.

13. **Birthplaces of Persons who Died.**—A table giving a summary of birthplaces of persons whose deaths were registered in 1911 and 1940 will be found in Official Year Book

No. 34, p. 337. More detailed information will be found in *Demography Bulletin* No. 58. Tabulations were discontinued for the years 1941 to 1945 inclusive, but were revived for 1946. Details for 1950 appear in *Demography Bulletin* No. 68.

14. **Occupation of Males who Died.**—A table showing occupations of males who died during 1950 appears in *Demography Bulletin* No. 68.

15. **Causes of Death.**—The classification of causes of death adopted for Australia by the Commonwealth Bureau of Census and Statistics at the inception of its mortality statistics in 1907 was that introduced by the International Institute of Statistics in 1893, reviewed by that Institute in 1899 and revised by an International Commission in 1900. This classification became known as the International List of Causes of Death and further revisions by International Commissions in 1909 (Second), 1920 (Third), 1929 (Fourth) and 1938 (Fifth) were successively adapted for use in Australian statistics.

Proposals for the Fourth and Fifth revisions were drafted by a "Mixed Commission" of representatives of the International Statistical Institute and the Health Organization of the League of Nations and the final revision was carried out by the International Conference for the Revision of the International List of Causes of Death. Preparatory work in connexion with the Sixth Revision was entrusted by the International Health Conference in 1946 to the Interim Commission of the World Health Organization. As a result of this arrangement the World Health Organization compiled the International Statistical Classification of Diseases, Injuries and Causes of Death, which in its final stages was unanimously approved by the International Conference for the Sixth Revision of the International Lists of Diseases and Causes of Death in April, 1948. This classification was adopted by the First World Health Assembly, which also issued Regulations to guide member states in its application. Australia adopted the classification, together with the rules for using it, for use commencing with the year 1950.

For the first time in connexion with the International List, international rules for a uniform method of selecting the main cause to be tabulated, if more than one cause is stated on the death certificate, have been laid down, as well as the new classifications of causes of death. Prior to 1950 the rules adopted in Australia for the selection of the cause of death to be tabulated were those laid down in the United States Manual of Joint Causes of Death, first published in 1914 and revised to conform with successive revisions of the International List.

The adoption of the new method marked a fundamental change in Australian cause of death statistics, with emphasis now placed on the underlying cause of death as indicated by the certifying practitioner. The introduction of this method required the adoption by all States of a form of medical certificate substantially identical with the International Form of Medical Certificate of Cause of Death as laid down in Article 9 of the World Health Organization Regulations No. 1. By 1950 all States had adopted satisfactory forms of certificate and it was possible to apply the new principles uniformly to all State cause of death records.

This change in principle affects the comparability of the 1950 statistics with those of past years. For convenience in assessing the extent of the change and in accordance with a recommendation of the Sixth Decennial Revision Conference, causes of death for Australia for 1950 were also classified according to the detailed classification of the Fifth Revision, 1938, on the joint cause rules current for that revision. A complete detailed classification according to both the Fifth and Sixth Revisions is shown in *Demography Bulletin* No. 68.

In the cause of death tables A to E which follow, use has been made of the Intermediate and Abridged forms of the International List (Fifth Revision), the origin of which was explained in Year Book No. 38, page 625. For convenience in compilation and to complete the five-year period 1946 to 1950 on a uniform basis, the 1950 figures used in these tables are those compiled according to the Fifth Revision.

The compilations for the years 1946 to 1950 will be found in full detail in *Demography Bulletins* Nos. 64 to 68. In the following tables A, B, and C, in which the intermediate classification has been employed, deaths are shown of males, females and persons, respectively, for 1950. Table D shows, in the abridged form, the number of persons who died in each of the years 1946 to 1950 and gives the rate per million of population for the last-named year.

Since death-rates are subject to continual fluctuation, it is unsafe to base deductions on the figures relating to a single year. In order, therefore, to furnish a valid basis for comparison, three five-yearly periods have been shown in table E, giving the number of deaths and the rates per million persons.

NOTE.—Cause of death statistics for 1950 were compiled in accordance with the rules for selecting the underlying cause which are an integral part of the International Statistical Classification of Diseases, Injuries and Causes of Death (Sixth Revision, 1948, of the International List of Causes of Death) and were tabulated in accordance with the list of three-digit categories of that classification. For the purposes of the table above, however, the causes of death for each year 1946 to 1950 inclusive have been compiled in accordance with the rules of selection formerly in use and are presented on the basis of the Abridged Classification of the Fifth Revision, 1938, of the International List. A complete detailed classification for 1950 according to both Revisions is shown in *Demography Bulletin* No. 68.

E.—CAUSES OF DEATH : PERSONS, AUSTRALIA, NUMBER AND RATES.

* No. 14 :—4–7, 11, 12, 23–27, 29, 31, 32, 36–38, 40–44 ; No. 20 :—58, 62–76, 78, 79 ; No. 28 :—104, 105, 110–114 ; No. 32b :—115–118, 123, 128, 129.

NOTE.—Cause of death statistics for 1950 were compiled in accordance with the rules for selecting the underlying cause which are an integral part of the International Statistical Classification of Diseases, Injuries and Causes of Death (Sixth Revision, 1948, of the International List of Causes of Death) and were tabulated in accordance with the list of three-digit categories of that Classification. For the purposes of the table above, however, the causes of death for all years including 1950 have been compiled in accordance with the rules of selection formerly in use and are presented on the basis of the Abridged Classification of the Fifth Revision, 1938, of the International List. A complete detailed classification for 1950 according to both Revisions is shown in *Demography Bulletin* No. 68.

16. **Deaths from Principal Causes.**—(i) *General.* In the preceding tables particulars have been given for each of the causes of death comprising the Intermediate and the Abridged Classifications according to the Fifth Revision of the International List. The more important of these causes are treated in detail hereunder. Comparison is made in total between the figures for 1950 on the basis of the Fifth and Sixth Revisions of the International List, but in the detailed dissections the 1950 figures are those compiled according to the Sixth Revision. The 1938 Intermediate Classification number used in tables A, B and C is indicated in parentheses for each cause or group of causes.

(ii) *All Forms of Tuberculosis* (6, 7). (*a*) *General.* The total number of deaths classified to all forms of tuberculosis in 1950 in accordance with the methods used in conjunction with the Fifth and Sixth Revisions of the International List were as follows :—

Basis of Classification.	Males.	Females.	Persons.
Fifth Revision	1,192	515	1,707
Sixth Revision	1,172	503	1,675
Difference due to revision	(—) 20	(—) 12	(—) 32

This difference is due to the fact that the former rules of selection gave a degree of preference to tuberculosis when in association with other causes which was not always in accord with the certifying medical practitioners' statement of the underlying cause. This experience is consistent with that in other countries. The figures represent a ratio of 0.98 for deaths classified by the Sixth Revision to those classified by the Fifth Revision.

(*b*) *Age at Death.* The following table shows the age-groups of males, females and persons who were classified under the Sixth Revision as dying from this disease in 1950, together with figures for 1921, 1931 and 1941, classified under former Revisions.

TUBERCULOSIS (ALL FORMS) : DEATHS IN AGE-GROUPS, AUSTRALIA.

(*e*) *Death-rates.* In order to show the relative incidence of tuberculosis in each State and Territory and the improvement which has taken place in recent years, the death-rates from tubercular diseases for 1931, 1941 and 1950 are given in the following table. The rates for 1950 are based on the causes of death compiled according to the Sixth Revision. Corresponding figures for 1949 (on the basis of the Fifth Revision) may be obtained from *Demography Bulletin* No. 67.

TUBERCULOSIS (ALL FORMS): DEATH-RATES.(*a*)

(*g*) *Death-rates, Various Countries.* The following table shows the death-rates from tuberculosis for Australia and each State in comparison with the rates for various other countries. In order that the rates may be presented uniformly on the basis of the Fifth Revision of the International List, the figures have been restricted to the latest available year on that basis up to and including 1949. The table indicates that Australia occupies a very favourable position as regards the death-rate from this disease.

TUBERCULOSIS : DEATH-RATES (*a*), VARIOUS COUNTRIES.

Country.	Year.	Respiratory System.	All Forms.	Country.	Year.	Respiratory System.	All Forms.
Denmark.. ..	1949	16	19	*Northern Ireland*	1949	47	58
Netherlands ..	1949	18	24	*Scotland* ..	1949	59	67

(*a*) Number of deaths per 100,000 of mean population. (*b*) Excludes full-blood aboriginals. (*c*) Excludes Maoris. (*d*) European population only. (*e*) Not available.

(iii) *Malignant Neoplasms, including Neoplasms of Lymphatic and Haematopoietic Tissues.* (*a*) *General.* Deaths classified under this heading in 1950 according to the Sixth Revision are not directly comparable with those classified according to the Fifth Revision, as deaths from Lymphogranulomatosis (Hodgkin's Disease) and Leukaemia and Aleukaemia, which are now embraced within the group of Neoplasms of the Lymphatic and Haematopoietic Tissues, were not formerly included with Neoplasms. Comparison on the adjusted basis is as follows :—

Category Numbers.		Cause of Death.	Basis of Classification.						Comparability Ratio.
			Fifth Revision.			Sixth Revision.			
Fifth Revision.	Sixth Revision.		M.	F.	P.	M.	F.	P.	
45–55	..	Cancer and other Malignant Tumours	5,214	4,984	10,198	..	..	..	(*a*)
44 (*b*)	201	Lymphogranulomatosis (Hodgkin's Disease)	51	39	90	*55*	*42*	*97*	1.08
74	204	Leukaemia and Aleukaemia ..	214	162	376	*209*	*160*	*369*	0.98
..	140–205	Malignant Neoplasms and Neoplasms of the Lymphatic and Haematopoietic Tissues ..	5,479	5,185	10,664	5,355	5,075	10,430	0.98

(*a*) The comparability ratio of the Sixth Revision group 140–205 to the Fifth Revision group 45–55 is 1.02.

NOTE.—Figures in italics are inserted for purposes of comparison, not for adjustment.

The smaller total on the Sixth Revision basis is due to the exclusion of Neoplasms stated by the medical practitioner to be a contributory cause of death only. Former rules selected some of these as the cause of death to be tabulated.

(*b*) *Type and Seat of Disease.* Tables showing the type and seat of diseases, in conjunction with age and conjugal condition of the persons dying from malignant neoplasms in 1949 and 1950 will be found in *Demography Bulletins* Nos. 67 and 68. A summary regarding type and seats of disease for 1950 (Sixth Revision basis) is given below. It may be pointed out that the significance of the number of deaths shown for the various types of neoplasms enumerated hereunder is doubtful, owing to the fact that, in the absence of a post-mortem, it is impracticable for the certifying doctor in the majority of cases to make an accurate diagnosis as to type in the detail required for the following classification.

DEATHS FROM MALIGNANT NEOPLASMS AND NEOPLASMS OF LYMPHATIC AND HAEMATOPOIETIC TISSUES : TYPE AND SEAT OF DISEASE, AUSTRALIA, 1950.

(*c*) *Age at Death.* The ages of persons who died from malignant neoplasms in 1921, 1931, 1941 and 1950 are given below. Inferences drawn from the great increase in the number of deaths from malignant neoplasms in 1950 compared with 1921 need qualification in view of the altered age constitution of the population since the earlier year. The number of people over 55 years of age, at which level cancer risks are greatest, more than doubled between 1921 and 1950, whilst those in the age-group 75 years and over more than trebled. It is only in this extreme old age-group from 75 onwards that the rate of mortality, as distinct from the number of deaths, has increased. For groups up to age 75 there has been no increase in mortality rates since 1921 ; indeed, in some age-groups the rates have actually declined. It is also probable that a proportion of the increased number of deaths from cancer recorded in recent years has been due to more correct diagnosis and certification on the part of medical practitioners rather than to any actual increase in the disease itself.

(*a*) Number of deaths from malignant neoplasms per 100,000 of mean population.

(*f*) *Proportion of Total Deaths.* While the death-rate from all causes has diminished substantially in recent years, the rate from malignant neoplasms has risen almost continuously, the result being that out of 10,000 deaths from all causes, 1,334 were due to malignant neoplasms in 1950 compared with 735 per 10,000 total deaths during the period 1911–20. The following table shows the proportions recorded in each State and Territory for 1911–20, 1921–30, 1931–40 and 1941–50. Figures have been compiled on a uniform basis throughout each decennium.

MALIGNANT NEOPLASMS: PROPORTION PER 10,000 TOTAL DEATHS.

(*a*) Number of deaths per 100,000 of mean population. (*b*) European population only. (*c*) Excludes full-blood aboriginals. (*d*) Excludes Maoris.

(*h*) *Comparison with Tuberculosis.* In recent years the death-rate from tuberculosis has shown a tendency to decrease, while that from malignant neoplasms has displayed an almost continuous increase. The table hereunder shows that for each of the periods under review the decline in the death-rate from tuberculosis has been accompanied by an almost equal increase in the rate for malignant neoplasms. Thus, in the fifty years comprised in the five-yearly averages shown below, the death-rate for tuberculosis declined by 62, while the rate for malignant neoplasms increased by 62 per 100,000 persons. This equal but opposite tendency may be demonstrated by stating that the death-rate from tuberculosis and malignant neoplasms, combined, remained almost constant in each period, the figures being :—1901–05, 152 deaths per 100,000 persons; 1906–10, 145; 1911–15, 152; 1916–20, 154; 1921–25, 153; 1926–30, 152; 1931–35, 150; 1936–40, 154; 1941–45, 156; 1946–50, 152; and 1950, 146.

TUBERCULOSIS AND MALIGNANT NEOPLASMS : DEATH-RATES(a), AUSTRALIA.

Period.	Death-rate from Tuberculosis.			Death-rate from Malignant Neoplasms.		
	Males.	Females.	Persons.	Males.	Females.	Persons.
1901–05 ..	100	77	89	64	61	63
1906–10 ..	81	69	75	71	70	70
1911–15 ..	84	69	77	75	74	75
1916–20 ..	84	59	71	86	80	83

1950.. ..	28	12	20	130	125	126

(a) Number of deaths per 100,000 of mean population.

(iv) *Diseases of the Heart* (42 *to* 46). The number of deaths classified to diseases of the heart for 1950 on the basis of the Fifth Revision, compared with the classification on the basis of the Sixth Revision, is as follows :—

Basis of Classification.	Males.	Females.	Persons.
Fifth Revision (Categories 90–95) ..	15,005	10,293	25,298
Sixth Revision (Categories 410–443) ..	14,687	10,256	24,943
Difference due to Revision	(—) 318	(—) 37	(—) 355

These figures represent a ratio of 0.99 for deaths classified by the Sixth Revision to those classified by the Fifth Revision.

Details for each individual category within the groups above may be obtained from *Demography Bulletin* No. 68. The sex and territorial distribution of the deaths (Sixth Revision basis) will be found in the table below. This class is the largest among causes of death, the death-rate having grown from 1,019 per million in 1911–15 to 2,705 in 1939–43 and 3,048 in 1950. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past sixteen years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners. Many deaths of elderly people, formerly attributed to senility or other indefinite causes, are believed to be now more frequently certified as associated with some form of heart disease, usually myocardial degeneration. The improvement in diagnosis has been particularly evident in the case of diseases of the coronary arteries. When first listed in the heart disease group in 1931, there were 1,139 deaths from this cause and angina pectoris, but in 1950 the number on a comparable basis (Fifth Revision) was 9,027. The number of deaths classified under The Sixth Revision as due to diseases of the heart, together with death-rates and proportions per 10,000 deaths in 1950, are given in the following table. Corresponding figures for 1949 (Fifth Revision) may be obtained from *Demography Bulletin* No. 67.

DISEASES OF THE HEART: DEATHS, DEATH-RATES AND PROPORTION PER 10,000 TOTAL DEATHS, 1950.

State or Territory.	Number of Deaths.			Death-rates.(a)			Proportion per 10,000 Total Deaths.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
New South Wales	6,239	4,081	10,320	385	254	320	3,552	3,046	3,333
Victoria ..	3,968	3,178	7,146	361	288	324	3,368	3,009	3,199
Queensland ..	1,869	1,167	3,036	310	203	258	3,034	2,753	2,920
South Australia ..	1,247	915	2,162	357	261	309	3,351	3,031	3,208
Western Australia	916	604	1,520	319	222	272	3,031	2,967	3,005
Tasmania ..	409	300	709	283	218	251	3,103	2,613	2,875
Northern Territory	19	..	19	202	..	127	2,289	..	1,979
Australian Capital Territory ..	20	11	31	151	106	131	2,857	2,115	2,541
Australia ..	14,687	10,256	24,943	356	253	305	3,359	2,976	3,190

(a) Number of deaths from diseases of the heart per 100,000 of mean population.

(v) *Diarrhœa and Enteritis* (*Children under two years of age*) (54). The number of deaths due to this cause at ages under two years in 1950 classified according to the Fifth and Sixth Revisions of the International List was as follows :—

Basis of Classification.	Males.	Females.	Persons.
Fifth Revision (Category 119)	156	117	273
Sixth Revision (Categories, 571 572, 764) ..	135	102	237
Difference due to Revision	(—) 21	(—) 15	(—) 36

The ratio of comparison of Sixth Revision to Fifth Revision figures for this cause of death in children under two years of age is 0.87.

The detailed inclusions in categories 571, 572 and 764 are more embracing than those of the former category 119, but it is unlikely that these would materially affect children under two years of age. The difference, therefore, is almost entirely due to the rules of preference formerly in use giving preference to diarrhœa and enteritis when this cause was not the true underlying cause of death.

The number of deaths under 2 years of age due to diarrhœa and enteritis, the death-rates, and proportions per 10,000 deaths for 1911–15, 1921–25, 1931–35, 1936–40, 1941–45, 1946–50 and 1950 are given in the following table. In order to complete the five-yearly period 1946–50 on a uniform basis, the figures for 1950 used in this table are those tabulated according to the Fifth Revision. Details for the Northern Territory and Australian Capital Territory have been omitted as limited experience makes death-rates from these causes of little significance. Corresponding figures for 1949 may be obtained from *Demography Bulletin* No. 67.

DIARRHŒA AND ENTERITIS (UNDER 2 YEARS OF AGE) : DEATHS, DEATH-RATES AND PROPORTION PER 10,000 TOTAL DEATHS.

1946–50 ..	154	115	269	4	3	3	87	34	36

(a) Number of deaths from these diseases per 100,000 of mean population. (b) Includes Northern Territory and Australian Capital Territory.

Reference to the last six lines of the above table reveals a general decrease in the number of deaths due to diarrhœa and enteritis (under 2 years of age). In view of changed birth-rates, however, the death-rates per 100,000 of mean population are not true measures of changes in the force of mortality. A better measure is the estimated number of children in every 1,000 born who died from these diseases before reaching their second birthday. These rates are as follows :—

Period—		Males,		Females,		Total,	
Period—	1911–15	Males,	24.6	Females,	20.9	Total,	22.8
,,	1921–25	,,	16.5	,,	13.3	,,	14.9
,,	1931–35	,,	3.7	,,	2.8	,,	3.3
,,	1936–40	,,	3.4	,,	2.7	,,	3.0
,,	1941–45	,,	2.7	,,	2.1	,,	2.4
,,	1946–50	,,	1.6	,,	1.3	,,	1.5

(vi) *Puerperal Causes* (68 *to* 72). The changes introduced with the Sixth Revision of the International List did not significantly affect the comparability of the total number of deaths from puerperal causes. The number for 1950 classified in accordance with the Fifth Revision was 209 and with the Sixth Revision 208. The 208 deaths in 1950 on the basis of the Sixth Revision correspond to a death-rate of 5.12 per 100,000 females. The rate is also equivalent to 1.09 deaths per 1,000 live births. The death-rate may be expressed in other terms by stating that 1 of every 906 women giving birth to a live child in 1950 died from puerperal causes ; the corresponding ratios for married women were 1 in every 959 and for single women 1 in every 382. More detailed information will be found in a series of tables in *Demography Bulletin* No. 68.

The following table shows the death-rate per 1,000 live births from puerperal causes in various countries. In order that the rates may be presented uniformly on the basis of the Fifth Revision of the International List, the figures have been restricted to the latest available year on that basis up to and including 1949. Care is needed in comparing the Australian rates with the figures for other countries. The figures have been taken from the Abridged International List in each case (Items 35 and 36). Item 35 comprises detailed categories 140 and 147 so that all abortion with sepsis, including criminal abortion with sepsis, is included under the heading "Puerperal Infection". Whilst this is in conformity with the International List it is not known whether the statistical assignment of deaths from criminal abortion is consistent in all countries.

CHILD-BIRTH : DEATHS PER 1,000 LIVE BIRTHS, VARIOUS COUNTRIES.

Country.	Year.	Rates per 1,000 Live Births from—

(*a*) Not available. (*b*) Excludes Maoris. (*c*) Excludes full-blood aboriginals. (*d*) European population only. (*e*) Localities having Health Bureaux.

A tabulation of puerperal causes for Australia according to age at death for married and single women separately will also be found in *Demography Bulletin* No. 68.

The total number of children left by the 189 married mothers who died from puerperal causes in 1950 was 488 an average of 2.6 children per mother.

Two of the mothers who died had been married less than one year, 26 between one and two years, and 14 between two and three years. The duration of marriage ranged up to 24 years. Tabulations distinguishing the ages at marriage and at death will be found in *Demography Bulletin* No. 68, which also includes a table showing in combination the duration of marriage and previous issue.

(vii) *Congenital Malformation, Debility, Premature Birth, etc.* (75 *to* 79). This combined group embraces two complete classes of the International List of Causes of

Death on the basis of both the Fifth and Sixth Revisions. Comparison of the figures for 1950 on both bases is as follows :—

Basis of Classification.	Class XIV. Congenital Malformations.			Class XV. Certain Diseases of Early Infancy.			Total. Class XIV. and Class XV.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
Sixth Revision ..	467	404	871	1,682	1,209	2,891	2,149	1,613	3,762
Fifth Revision ..	468	412	880	1,578	1,128	2,706	2,046	1,540	3,586
Difference due to Revision	(−) 1	(−) 8	(−) 9	(+)104	(+) 81	(+)185	(+)103	(+) 73	(+)176
Comparability Ratio ..	1.00	0.98	0.99	1.07	1.07	1.07	1.05	1.05	1.05

The distribution of these deaths by States and Territories on the basis of both Revisions will be found in *Demography Bulletin* No. 68.

The greater number of deaths in Class XV. on the Sixth Revision basis is due to the creation of the new categories " pneumonia of the new-born " and " diarrhœa of the new-born ", which resulted in the transfer of deaths from the general categories covering these causes of death. This transfer accounts for 142 without mention of immaturity, and about ten with immaturity. The remainder of the difference is due to the changed method of selecting the underlying cause of death.

Most of the deaths from congenital malformations are of children under one year of age, the number on the Sixth Revision basis being 670 or 77 per cent. Virtually all of the deaths in Class XV. are under one year of age, 2,890 out of the 2,891 being within this age-group. In both classes combined there were 3,560 deaths under one year, which represents 76 per cent. of the total number of deaths under one year of age.

The individual categories representing the causes of death which come within Class XV. of the Sixth Revision are designed to show the effect of immaturity in such causes of infant death. The 1950 experience was as follows :—

Category No.	Cause of Death.	Without Mention of Immaturity.			With Immaturity.			Total.		
		Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
760	Intracranial and spinal injury at birth	205	131	336	62	37	99	267	168	435
761	Other birth injury ..	57	35	92	58	35	93	115	70	185
762	Post-natal asphyxia and atelectasis	139	112	251	110	64	174	249	176	425
763	Pneumonia of the newborn	68	51	119	11	20	31	79	71	150
764	Diarrhœa of the newborn ..	14	9	23	2	3	5	16	12	28
765	Ophthalmia neonatorum ..	..	..	..	..	..	..	..	..	..
766	Pemphigus neonatorum ..	1	1	2	..	..	..	1	1	2
767	Umbilical sepsis	3	2	5	..	1	1	3	3	6
768	Other sepsis of newborn ..	8	2	10	..	2	2	8	4	12
769	Neonatal disorders arising from maternal toxæmia	13	14	27	43	39	82	56	53	109
770	Hæmolytic disease of newborn (erythroblastosis) ..	81	52	133	5	11	16	86	63	149
771	Hæmorrhagic disease of newborn	24	17	41	9	2	11	33	19	52
772	Nutritional maladjustment	23	11	34	3	1	4	26	12	38
773	Ill-defined diseases peculiar to early infancy ..	51	30	81	90	49	139	141	79	220
774	Immaturity with mention of any other subsidiary condition	..	..	..	11	5	16	11	5	16
775	Immaturity subsidiary to some other cause ..	..	..	..	..	..	..	..	..	..
776	Immaturiy unqualified ..	..	..	..	591	473	1,064	591	473	1,064
	Total, Class XV. ..	687	467	1,154	995	742	1,737	1,682	1,209	2,891

This table shows that 1,737 deaths in this class, or 60 per cent., were attributed directly or indirectly to immaturity. When classified according to the Fifth Revision basis, only 1,515 deaths were assigned to the category " premature birth ".

(viii) *Suicide* (81). (*a*) *General.* Deaths from suicide in 1950 numbered 760, compared with an annual average of 624 during 1911–15, 621 during 1921–25, 798 during 1931–35, 568 during 1941–45, and 674 during 1946–50.

(*b*) *Modes Adopted.* The modes adopted by persons who committed suicide in 1949 and 1950 were as follows :—

SUICIDE : MODES ADOPTED, AUSTRALIA.

Mode of Death.	Males.		Females.		Persons.	
	1949.	1950.	1949.	1950.	1949.	1950.
Poisoning	98	101	57	61	155	162
Poisonous gas	59	53	27	42	86	95
Hanging or strangulation.. ..	108	126	31	28	139	154

(*e*) *Occupation at Death, Males.* A table showing main groups of occupations of males who committed suicide during 1950 appears in *Demography Bulletin* No. 68.

(*f*) *Death-rates, Various Countries.* The following table shows the death-rate from suicide for Australia and each State in comparison with the rates for various other countries. The table indicates that Australia occupies a fairly favourable position as regards the death-rate from suicide.

SUICIDE : DEATH-RATES (*a*), VARIOUS COUNTRIES.

Country.	Year.	Rate.	Country.	Year.	Rate.
Eire	1949	2.6	Great Britain and Northern Ireland ..	1949	10.1
Spain	1948	6.2	*Northern Ireland* ..	1949	4.2
Netherlands ..	1949	6.2	*Scotland*	1950	5.2
Italy	1949	6.6	*England and Wales*	1949	11.0
Ceylon	1949	6.7	Portugal	1949	10.6
Norway	1948	6.9	U.S. of America ..	1949	11.4
Canada	1950	7.8	Belgium	1949	13.6
Australia(*b*) ..	**1950**	**9.3**	Sweden	1947	14.8
Tasmania(b) ..	1950	7.1	France	1949	15.3
South Australia(b) ..	1950	7.9	Finland	1949	17.0
Victoria(b) ..	1950	8.4	Japan	1949	17.3
Queensland(b) ..	1950	9.2	Western Germany ..	1949	18.8
New South Wales(b)	1950	9.8	Denmark	1950	23.3
Western Australia(b)	1950	12.2	Switzerland ..	1949	23.6
Union of South Africa(*c*)	1947	9.7			
New Zealand(*d*) ..	1949	9.7			

(*a*) Number of deaths per 100,000 of mean population. (*b*) Excludes full-blood aboriginals. (*c*) European population only. (*d*) Excludes Maoris.

(ix) *Homicide* (82). Deaths from homicide in 1950 numbered 85, which was thirteen more than in the previous year and the same as the average for the five years 1946–50. *See* par. (x).

(x) *Accidental or Violent Deaths (including Suicide and Homicide).* The following table shows the various kinds of violent deaths, including suicide and homicide, recorded in Australia for 1950. Corresponding figures for 1949 (on the basis of the Fifth Revision) may be obtained from *Demography Bulletin* No. 67.

DEATHS FROM EXTERNAL VIOLENCE : AUSTRALIA, 1950.

International Category No.	Cause of Death.	Males.	Females.	Persons.
E800–E802	Railway accidents	124	13	137
E810–E825	Motor vehicle traffic accidents	1,465	282	1,747
E830–E835	Motor vehicle non-traffic accidents	34	5	39

E940–E946	Complications due to non-therapeutic medical and surgical procedures	1	2	3
E950–E959	Therapeutic misadventure and late complications of therapeutic procedures	2	6	8
E960–E962	Late effects of accidental injury and poisoning	8	7	15
E800–E965	**Total Accidents**	3,277	1,109	4,386
E963, E970–E979	Suicide and self-inflicted injury	567	193	760
E964, E980–E985	Homicide and injury purposely inflicted by other persons (including legal executions)	54	31	85
E965, E990–E999	Injury resulting from operations of war	7	..	7
	Total Deaths from accidents, poisonings and violence	3,905	1,333	5,238

The following table of death-rates per million of mean population reveals a decrease in 1921–25 for External Violence, excluding Suicide and Homicide, but an increase in the rates for 1926–30 to which the growth of automobile accidents contributed very largely. A decreased death-rate was recorded during 1931–35, but the rate rose again during 1936–40. The sharp decline during 1941–45 may be attributed to the decrease in number of automobile accidents which resulted from the war-time restrictions of travel.

DEATH-RATES, ETC., EXTERNAL VIOLENCE : AUSTRALIA.

Period.	Death-rates(a) from Homicide.			Death-rates(a) from External Violence, excluding Suicide and Homicide.			Death-rates(a) from all External Violence.			All External Violence Proportion per 10,000 Deaths.

(a) Number of deaths per 1,000,000 of mean population.

(xi) "*Other Diseases*". The intermediate and the abridged classifications of causes of death used in Tables A to E in preceding pages differ from those used in issues of the Official Year Book prior to No. 25 in that no residue of "other diseases" is shown at the foot. The items are ranged in classes or groups of classes and each class or group of classes is made complete by the addition of an "other diseases" item for that class or group of classes. Details of these "other diseases" items of the intermediate classification expanded into their constituent causes may be found in *Demography Bulletin* No. 68.

17. **Causes of Deaths in Classes.**—The figures in the preceding sub-sections relate to principal individual causes of death, and are of greater value in medical statistics than a mere grouping under general headings. The classification under eighteen general headings used in the Fifth Revision of the International List of Causes of Death is, however, shown in the following table for 1950, together with the death-rates and proportions of total deaths pertaining to those classes. A further table furnishes the death-rates for the five-year periods 1936–40, 1941–45, and 1946–50. Figures for 1949 corresponding to the first table may be obtained from *Demography Bulletin* No. 67.

Total	1,069	856	964	1,088	905	997	1,080	867	974

(a) Number of deaths per 100,000 of mean population.

18. **Age at Death of Deceased Married Males and Females, and Issue.**—*Demography Bulletin* No. 68 contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married persons who died in Australia in 1950. Deaths of married males in 1950 numbered 31,330, and of married females, 26,583. The tabulations which follow deal, however, with only 30,827 males and 26,365 females, the information regarding issue in the remaining 721 cases being incomplete. The total number of children in the families of the 30,827 males was 106,811, and of the 26,365 females, 99,077. The average number of children is shown for various age-groups in the following table :—

AGE AT DEATH, AND AVERAGE ISSUE OF DECEASED MARRIED MALES AND FEMALES : AUSTRALIA.

Age-group (Years).	Average Issue.									
	Males.					Females.				
	1911.	1921.	1931.	1941.	1950.	1911.	1921.	1931.	1941.	1950.

20. **Birthplace of Deceased Married Males and Females, and Issue.**—A table showing the birthplaces of married males and females who died in 1911 and 1940. together with the average issue, may be found in the Official Year Book No. 34, p. 366.

21. **Occupation of Deceased Married Males, and Issue.**—A summary of the main groups of occupations of married males who died during 1950, together with issue, appears in *Demography Bulletin* No. 68.

§ 4. Registration of Births, Deaths and Marriages in the Australian Capital Territory.

To the end of 1929 the provisions of the Registration of Births, Deaths and Marriages Act of 1899 and the Marriage Act of 1899 of New South Wales applied to the Australian Capital Territory. Births, deaths and marriages occurring within the Territory were registered by the New South Wales District Registrars at Queanbeyan and Nowra, and were incorporated in the New South Wales registration records but excluded from New South Wales statistics.

In 1929, however, the Registration of Births, Deaths and Marriages Ordinances were enacted, providing for the assumption by the Commonwealth Government of the function of registration within the Territory as from 1st January, 1930. All registrations are made at the Registrar's Office, Civic Centre, Canberra.

Marriages within the Territory are celebrated in accordance with the provisions of the Marriage Ordinance 1929–1938. This Ordinance, which closely follows the provisions of the Marriage Act of New South Wales, which it supersedes as regards the Australian Capital Territory, came into operation on 1st January, 1930.

CHAPTER XV.

LOCAL GOVERNMENT.

§ 1. Introduction.

1. **General.**—The statistics on Local Government operations are not entirely satisfactory, as they are incomplete, and not sufficiently comparable and up to date. Those on Local Government financial operations were improved, prior to the 1939–45 War, through the use by the State Statisticians of standard forms in supplying information on their respective States to the Commonwealth Statistician. The presentation of the statistics thus made available was only being developed when the war made it necessary to discontinue the returns. However, since the war these returns have been recommenced, and efforts are being made, as opportunity and circumstances permit, to widen the range of information presented on local government activities beyond the purely, or primarily, financial.

2. **Local Government Authorities.**—In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, and covers such matters as the upkeep and construction of roads, streets and bridges, water, sewerage and drainage systems and health and sanitary services, the supervision of building and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions there are also a large number which may be performed by local government authority either with or without the consent of the ratepayers or the governor-in-council. These include transport facilities, electricity, gas and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths. libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the governor-in-council. Otherwise, within the scope of the acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers.

While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc., differ considerably.

The areas over which local government bodies exercise general control, numbering 929, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as municipal corporation areas and district council areas; in Western Australia as municipalities and road districts; and in Tasmania as municipalities. In New South Wales some local government authorities in an area have combined to provide services such as electricity supply and water, sewerage and drainage—e.g., the county councils. There are also some municipal units within shires known as urban areas. In Western Australia there are local health boards, whose personnel in most cases coincides with those of municipalities and road boards. Apart from the more thinly populated parts of New South Wales and South Australia and the Federal Territories, practically the whole of Australia comes within local government jurisdiction.

The financial statistics in § 2 following are classified under the headings of Ordinary Services and Business Undertakings. The former covers the obligatory and general functions referred to above. Business Undertakings include public utilities such as water supply, sewerage, electricity, gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

A description of the various systems of municipal governments in the different States, and their development from the earliest date, was published in 1919 by this Bureau in a separate work entitled *Local Government in Australia.* In this publication the systems in force at that time are examined, the development of local government in Australia is traced since its inception, and all available statistical information is collected.

3. **Semi-Governmental Authorities.**—In addition to local government authorities, there is a large number of authorities set up to control specific activities, whose forms of activity are often identical with some of those performed by either, or both, of the other classes of public authority—central government and local government—and a complete picture of any field of activity for a State or Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-governmental authorities differ primarily from local government authorities in that their operations are restricted to the specific activity for which they were constituted—e.g. roads and bridges, or water and sewerage, or electricity and irrigation, or harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct from the general services of the local authority.

Sections 4 to 7 following, dealing with roads and bridges, water supply and sewerage, harbours and fire brigades, include particulars of the more important of these authorities which operate within the range covered by this chapter.

4. **Roads, Bridges, etc.**—The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a Government department whose duties relate to the construction and maintenance of " main " and " developmental " roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Although roads and bridges constructed and maintained directly by the Government or by the central road authority do not properly come under the heading of " Local Government ", they have been included in this chapter for the sake of convenience. Owing to difficulty in obtaining complete particulars of receipts and expenditure by the various local governing bodies in regard to roads under their control, the details of receipts and expenditure given in § 4 are those of the Government only, relating either to the supervisory board or commission in the State or to direct activities of a department. In § 2 some information is given of the revenue and expenditure of Local Government Authorities in respect of roads.

5. **Water Supply and Sewerage.**—In the cities of Sydney and Melbourne the control of water supply and sewerage is in the hands of special Boards, while in Adelaide and Perth these services are under the direct supervision of Government departments. In most of the other cities and towns, the municipal councils, or, in some cases, water trusts, are the controlling bodies which either construct the works out of their own resources or take them over after they have been constructed by the Government.

6. **Harbours.**—The majority of the harbours in Australia are managed by Boards, the members of which are either elected by persons interested, or are appointed by the Government. In a few instances, however, they are directly controlled by the Government.

7. **Fire Brigades.**—In all the States, the management of fire brigades is undertaken by Boards. These Boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the Government. Occasionally volunteer or country fire brigades are represented.

8. **Other Local or Semi-Governmental Activity.**—The activities referred to above are not the only forms of local or semi-governmental undertakings. There are others, the most important being tramways and omnibus services and electricity and gas undertakings, which are not dealt with in this chapter, except to the extent that they are represented in the finances as shown in the following section. Chapter V.—Transport and Communication contains information on municipal transport services, while particulars of electricity and gas undertakings, although not shown separately, are included in the relevant sections in Chapter XXIV.—Manufacturing Industry. A special article on the generation and distribution of electricity in Australia is contained in Chapter XXV. of this issue.

§ 2. Local Government Authorities.

1. **Area, Population, Dwellings and Value of Ratable Property.**—(i) *New South Wales.* For purposes of local government the whole of the Eastern and Central land divisions and a small portion of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which embrace important towns). At the end of 1949 the area incorporated was 184,000 square miles, or nearly three-fifths of the total area of the State.

The Local Government (Areas) Act 1948 repealed the Sydney Corporation Act 1932 which had regulated the operations of the Capital City. It unites the City of Sydney and certain areas, constituting the united area as a city; unites certain other areas or areas and parts of areas, constituting them as municipalities; and reconstitutes the Sydney County Council. All local government authorities in the State are now subject to the general provisions of the Local Government Act.

Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g., electricity, water, sewerage. There were 33 county councils and the Grafton and South Grafton Water Board at 30th June, 1950.

The area, population, dwellings and value of ratable property in the incorporated areas for the year ended 31st December, 1949 are shown in the table below. The valuations relate to ratable property only and exclude Government and other non-ratable property, whose value is not inconsiderable in the aggregate. In this table, particulars of dwellings are in accordance with the definition used in the 1947 Census, and are the results of information collected on the Census schedules. Occupied dwellings include individual private houses, flats and tenements, and dwellings other than private (boarding houses, hotels, caretakers' quarters, hospitals, educational establishments, etc.). Also included are portions of shared private houses in respect of which portions separate householders' schedules were furnished. Unoccupied dwellings include "week-end" and holiday dwellings and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

LOCAL GOVERNMENT AUTHORITIES, NEW SOUTH WALES : AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1949.

Local Bodies.	Number. (a)	Area.	Population.	Dwellings.(b)		Value of Ratable Property.		
				Occupied.	Unoccupied.	Unimproved Capital Value.	Improved Capital Value.	Assessed Annual Value. (c)

Grand Total ..	246	117,777	3,153	742,936	17,155	396,842	(d)	(d)

(a) From 1st January, 1949, the Local Government (Areas) Act 1948 amalgamated eight suburban municipalities with the Capital City. This, with other amalgamations, reduced the number of local government areas in the County of Cumberland from 66 to 39. (b) As at Census, 30th June, 1947. (c) Nine-tenths annual rental value of land with improvements thereon. (d) Not available.

(ii) *Victoria.* Local Government is established throughout the State, the various divisions being termed cities, towns, boroughs, or shires. The only unincorporated areas are French Island (42,000 acres) in Westernport Bay, Julia Percy Island (650 acres) off Port Fairy, and Tower Hill (1,350 acres) adjacent to the Borough of Koroit. Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act. The law relating to local government was consolidated by the Local Government Act 1946.

As from 1st January, 1947, the metropolitan area for statistical and health purposes was redefined by the inclusion of the city of Nunawading, the borough of Ringwood, the Broadmeadows and Campbellfield ridings of the shire of Broadmeadows, the Doutta Galla riding of the shire of Keilor and the shire of Mulgrave.

The area, population, dwellings and estimated value of ratable property in the incorporated areas for the year ended 30th September, 1950 are shown on the next page.

LOCAL GOVERNMENT AUTHORITIES, VICTORIA: AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1949–50.

Local Bodies.	Number.	Area.	Population.	Dwellings.(a)		Value of Ratable Property.	
				Occupied.	Unoccupied.	Improved Capital Value.	Net Annual Value.

(a) Particulars of occupied and unoccupied dwellings are based on returns furnished by municipalities. These figures refer to number of units in all habitable buildings. They differ in basis from the figures published in the previous issue of the Year Book, which were derived from Census returns. (b) Includes the whole of the city of Heidelberg, the borough of Ringwood, and the whole of the shires of Braybrook, Broadmeadows and Keilor, whose parts do not all lie within the Metropolitan Area. (c) Excludes Yallourn area under the jurisdiction of the State Electricity Commission of Victoria.

Particulars of the unimproved capital value are not available.

(iii) *Queensland.* The whole of the State (except certain islands along the coast, the Dawson Valley Irrigation Area and the Somerset Dam Area) is incorporated into cities, towns and shires under the Local Authorities Act 1902 and its amendments. In June, 1949, the State Government rearranged the boundaries of the local authorities to the south of Brisbane, reducing their number by ten. The towns of Coolangatta and Southport were absorbed by the new town of South Coast; two new shires were created and eleven were abolished, being absorbed by the new shires and existing cities, towns and shires. The following table shows particulars of the area, population, dwellings and value of ratable property in the incorporated areas for the year ended 30th June, 1950:—

LOCAL GOVERNMENT AUTHORITIES, QUEENSLAND: AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1949–50.

Local Bodies.	Number.	Area.	Population. (a)	Dwellings.(a)		Unimproved Capital Value of Ratable Property.

(a) As at Census, 30th June, 1947. (b) City of Greater Brisbane.

Particulars of improved capital value and annual value are not available.

(iv) *South Australia.* The settled portion of South Australia is incorporated, being mostly under municipal corporations in the larger cities and towns, and district councils in the agricultural areas.

The following table shows the area, population, dwellings and value of ratable property in incorporated areas for the year ended 30th June, 1950.

LOCAL GOVERNMENT AUTHORITIES, SOUTH AUSTRALIA : AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1949–50.

(a) Particulars of unoccupied dwellings are not available. (b) Not available.

(v) *Western Australia.* In this State, Local Government is carried on by means of municipalities and district road boards. Certain functions are delegated to health boards, whose personnel, in most cases, coincides with those of the municipalities and district road boards. The following table shows particulars of the area, population, dwellings and value of ratable property in incorporated areas for the year ended 31st October, 1950 for municipalities, and the year ended 30th June, 1950 for district road boards.

LOCAL GOVERNMENT AUTHORITIES, WESTERN AUSTRALIA : AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1949–50.

(a) Particulars of unoccupied dwellings are not available. (b) Not available. (c) Includes part only (8,064 acres) of Swan River District situated in Metropolitan Area.

The method of valuation is not identical in the case of all district road boards, as in some the assessment is based on the unimproved capital value and in others partly on the unimproved capital value and partly on the annual value. The amounts shown are the totals for the areas rated on each valuation, and are not a function of each other.

(vi) *Tasmania.* The whole State is divided into municipal districts, Hobart and Launceston being incorporated under separate Acts. The following table shows particulars of the area, population, dwellings and value of ratable property in incorporated areas for the year ended 30th June, 1950.

LOCAL GOVERNMENT AUTHORITIES, TASMANIA: AREA, POPULATION, DWELLINGS AND VALUE OF RATABLE PROPERTY, 1949–50.

(a) Figures for New South Wales relate to the year ended 31st December, 1949, and are on an income and expenditure basis as distinct from those of other States, which are on a cash basis. (b) Year ended 30th September, 1950. (c) Year ended 30th June, 1950. (d) Municipalities—Year ended 31st October, 1950 ; Road Districts—Year ended 30th June, 1950. (e) As from 1st January, 1949, the Local Government (Areas) Act 1948 amalgamated eight suburban municipalities with the Capital City. This, with other amalgamations, reduced the number of local government areas in the County of Cumberland from 66 to 39. (f) Includes interest from sinking fund investments for debt redemption, £161,137, and sales of residue-lands, £18,844, previously credited direct to sinking funds. (g) Includes £291,274 plant hire. (h) Includes £17,879 reimbursements from Highways Department for work done. (i) Includes £178,431 for sewerage and drainage. (j) Includes £210,098 for sewerage, mosquito control and drainage. (k) Compulsory contributions included under Public Works and Services. (l) To Main Roads Department. (m) Includes £190,304 to Country Roads Board. (n) This deduction offsets duplications caused by the inclusion above of particulars of expenditure on (i) the purchase from revenue of assets and the depreciation of those assets, and (ii) the depreciation of assets purchased from loans and the repayment of these loans. The amount deducted cannot be apportioned according to the various headings.

(*b*) *Years* 1938–39 *and* 1945–46 *to* 1949–50. The following table shows the revenue and expenditure (excluding loan) of local government authority ordinary services for the years 1938–39 and 1945–46 to 1949–50.

§ 3. Local and Semi-Governmental Authorities' Debt.

1. **General.**—Statistics of Local and Semi-Governmental Debt for the years 1938–39 and 1946–47 to 1949–50 are given in the following paragraphs. Because of difficulties created by the war these statistics were not collected for the years 1941–42 to 1945–46. The information given covers all Local Government Authorities and those Semi-Governmental authorities responsible for the provision of the following services, viz.:—

New South Wales. Water Supply and Sewerage, Electricity Supply, Fire Brigades and Banking (including County Councils).

Victoria. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Tramways, Electricity Supply, Fire Brigades, Marketing (Buying and Selling), Grain Elevators, Banking and Housing.

Queensland. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Electricity Supply, Roads and Bridges, Trading Activities, n.e.i., Fire Brigades, Universities, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), Industry Improvement and Miscellaneous.

South Australia. Irrigation and Drainage, Tramways, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Improvement, Banking, Housing and Miscellaneous.

Western Australia. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Tramways, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency) and Housing.

Tasmania. Harbours.

A detailed list of the authorities included is shown in *Finance Bulletin* No. 42, 1950–51, and the previous issue of the Year Book contained a list as at 30th June, 1947.

2. **Local and Semi-Governmental Authorities' Debt.**—(i) *Year* 1949–50. The following table provides a summary of new money loan raisings, provisions for the redemption of debt, debt outstanding and interest payable of local and semi-governmental authorities for the year ended 30th June, 1950. For greater detail *see Finance Bulletin* No. 42, 1950–51, published by this Bureau.

Annual Interest Payable (*a*)	(*c*)	3,778	860	971	454	43	(*c*)

(*a*) Includes debt or interest payable in London and New York. The former is expressed in United Kingdom currency, the latter is payable in dollars which have been converted at the rate of 4.8665 dollars to £1. (*b*) Included in debt figures above. (*c*) Not available.

In this and the following tables, debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalized and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalized), trade creditors, amounts held in trust and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised to repay indebtedness to the Government, and interest capitalized. Loans raised and redeemed within the year, increases in overdrafts and loans raised for conversion or redemption of existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

(ii) *Years* 1938–39 *and* 1946–47 *to* 1949–50. In the following table a summary is given of new money loan raisings, provisions for the redemption of debt and debt outstanding of local and semi-governmental authorities for the years 1938–39 and 1946–47 to 1949–50.

§ 4. Roads and Bridges.

1. **Commonwealth Government Grants.**—The following table shows particulars of allocations to the several States from the Commonwealth Consolidated Revenue Fund, under the Federal and Commonwealth Aid Roads and Works Acts, for road construction, maintenance, repair and other works connected with transport during the years 1938–39 and 1945–46 to 1949–50. Allocations for the construction and maintenance of strategic roads and for the promotion of road safety practices made in the years 1947–48 to 1949–50 are excluded. The aggregate amounts payable under the relevant acts from 1922–23 to 1949–50 for the purposes outlined above are also shown. Further particulars of these grants appear in Chapter XVII.—Public Finance.

ROAD CONSTRUCTION, MAINTENANCE, ETC.: GRANTS BY COMMONWEALTH GOVERNMENT.
(£'000.)

Year ended 30th June—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
1939 (*a*)	1,199	747	815	474	819	213	4,267
1946 (*a*)	935	582	636	369	639	167	3,328
1947 (*a*)	1,350	841	918	533	923	240	4,805

1950 (*b*)	2,472	1,526	1,683	965	1,683	438	8,767
Aggregate, years 1922–23 to 1949–50	22,341	14,089	15,203	8,924	15,339	3,995	79,891

(*a*) Under Federal Aid Roads and Works Acts. (*b*) Under Commonwealth Aid Roads and Works Acts, except for £398,830 to New South Wales in 1947–48 under Federal Aid Roads and Works Acts, representing amounts not drawn by that State during 1943–44.

In addition to the foregoing amounts, financial assistance from loan fund has been granted by the Commonwealth Government to the States for road construction. Such assistance has not been granted in recent years. At 30th June, 1950 the aggregate amount was £249,686.

2. **New South Wales.**—(i) *General.* A central road authority was created by legislation early in 1925 for the purpose of providing improved and uniform standards of construction and maintenance of the principal roads, and to administer Governmental subsidies for work on those roads. This authority (now organized as the Department of Main Roads) exercises control over Governmental activities in connexion with road works, these activities embracing works on main and developmental roads throughout the State, all roads in the unincorporated portion of the Western Division, and proclaimed national works, principally bridges and ferries, constructed from Government funds. The department co-operates with the municipal and shire councils in the work of constructing and maintaining a well-organized system of main highways.

In the metropolitan district the whole cost of the construction and maintenance of main roads is paid from the funds of the Main Roads Department, while in the country districts assistance in respect of road works may be granted for any area through which a main road passes. The cost of constructing developmental roads and works is borne in full by the Main Roads Department, but local councils are required to maintain them in satisfactory condition. For other roads the cost of both construction and maintenance work is generally chargeable to the revenue of local authorities, although Governmental assistance is not infrequently granted for works of construction and re-construction. In the Western Division the full cost of all roads and bridges is met by the Department of Main Roads.

The New South Wales Transport and Highways Commission was constituted in 1950 for the purpose of securing an efficient and integrated system of public transport by rail, road, air, sea and inland waterways within the State. Among others, the Commissioner for Main Roads, who is one of the eight members of the Commission, is subject to control and direction by the Commission in the exercise of any of his powers, authorities, duties and functions.

The general system of road communication throughout the State is made up of main roads classified as follows:—

State Highways—the principal avenues of communication between the coast and the interior or throughout the State, connecting with such avenues in other States.

Trunk Roads—forming with the State highways the framework of the general system of intercommunication throughout the State.

Ordinary Main Roads—used principally by through traffic as a means of intercommunication between towns or important centres of population. Public roads, except those within the City of Sydney, may be proclaimed as main roads on the recommendation of the Commissioner for Main Roads, who takes into consideration representations made by councils concerned, availability of funds for construction and maintenance purposes, and the value as connecting links between centres of population or business.

In addition, there are :—

Secondary Roads—in the metropolitan area of Sydney, carrying a substantial amount of through traffic and relieving neighbouring main roads of traffic which they would otherwise have to bear.

Developmental Roads—serving to develop a district or area of land by improving or providing access to a railway station or a shipping wharf, or to a road leading to a railway station or a shipping wharf.

(ii) *Length of Roads.* (*a*) *Proclaimed Roads.* The following table shows lengths of proclaimed roads at 30th June, 1950, according to class of road :—

PROCLAIMED ROADS, NEW SOUTH WALES : LENGTHS, 30th JUNE, 1950.

(Miles.)

Division.	Main Roads.				Secondary Roads.	Developmental Roads.	Total.
	State Highways.	Trunk Roads.	Ordinary Main Roads.	Total.			
Eastern and Central	5,204	2,672	9,701	17,577	(*a*) 68	2,783	20,428
Western	1,309	1,359	2,927	5,595	..	..	(*b*) 5,595
Total	6,513	4,031	12,628	23,172	68	2,783	26,023

(*a*) Metropolitan area. (*b*) Excludes 2,617 miles of unclassified roads, the responsibility of the Department.

During 1949–50 the following roads were proclaimed or declared :—294 miles of new main roads and extensions of existing main roads, and 85 miles of new developmental roads.

The length of main and secondary roads maintained by the Department of Main Roads at 30th June, 1950 (excluding the Western Division) was 2,538 miles (14 per cent.), while the length maintained by Councils was 15,107 miles (86 per cent.). The proportions of the several classes of main roads maintained by Department and Councils respectively were :—State highways, 37 per cent., 63 per cent. ; trunk roads, 2 per cent., 98 per cent ; ordinary main roads, 6 per cent., 94 per cent. ; secondary roads, 13 per cent., 87 per cent. In the County of Cumberland the Department maintained 58 per cent. of the roads (523 miles).

(*b*) *Composition of Roads.* In 1948 the total length of all roads in New South Wales was estimated at 126,272 miles, including 7,730 miles in the Western Division. The lengths of roads, according to their composition or nature, were as follows :—cement concrete, 386 miles ; asphaltic concrete, 195 miles ; tar or bituminous macadam, 4,178 miles ; surface water-bound macadam, 3,849 miles ; water-bound macadam, 2,367 miles ; gravel or crushed rock, 31,693 miles ; formed only, 27,454 miles ; cleared or natural surface only, 56,150 miles.

(iii) *Main Roads Department.* (*a*) *General.* Progress has continued with the implementation of the Main Roads Department plan for main road development in the metropolis and the County of Cumberland. This plan has been included in the Cumberland County Council planning scheme for the development and improvement of the County of Cumberland. Surveys and designs have been advanced, and the acquisition of land is proceeding, in connexion with the planned Newcastle and District Arterial Road System and Wollongong–Port Kembla District Main Roads System.

An investigation into the extent and classification of country main roads in the light of present and future traffic needs was completed during 1949–50.

In addition to its construction and maintenance work on roads, the Main Roads Department is engaged on a scheme for widening metropolitan roads and the acquisition of land required to implement approved schemes has been proceeding.

During 1949–50, 25 new bridges were completed on main roads by the Department and councils. Important work which has been continued included work on a steel and concrete bridge over Iron Cove between Balmain and Drummoyne, Sydney (length 1,536 feet) and on a reinforced concrete bridge over a diversion of Cook's River (length 566 feet).

(*b*) *Receipts and Payments.* The funds of the Department of Main Roads are derived principally from taxation of motor vehicles, contributions by the Commonwealth Government under the Federal and Commonwealth Aid Roads and Works Acts (*see* Chapter XVII.—Public Finance, for some particulars of the basis and distribution of grants under these Acts and par. 1 of this section, page 658, for particulars of the amounts paid in recent years), contributions by municipal and shire councils, and special (not statutory) assistance by the State Government by way of loan moneys or special grants from revenue funds. Receipts and payments for the four years 1946–47 to 1949–50 compared with the income and expenditure for 1938–39 are shown below.

Total	3,711,384	4,263,042	5,419,764	4,999,404	*c*6,207,490

(*a*) Income and expenditure. (*b*) Includes £398,830 not drawn by State during 1943–44. (*c*) Excludes £500,000 transferred from the County of Cumberland Main Roads Fund to the Country Main Roads Fund. (*d*) Includes £696,096 to liquidate certain outstanding liabilities before due dates.

The figures shown above represent the aggregate receipts and payments of three funds—the County of Cumberland Main Roads Fund, the Country Main Roads Fund and the Developmental Roads Fund. From 1st January, 1925 to 30th June, 1950 receipts amounted to £97,127,266 and payments to £95,619,042. Particulars of the individual funds are—County of Cumberland, receipts £26,985,763, payments £25,635,993; Country, £66,474,431, £66,441,844; Developmental, £3,667,072, £3,541,205.

The total expenditure on roads, streets and bridges in the State by all authorities during the years 1938–39 and 1946–47 to 1949–50 was, respectively, £8,894,099, £7,201,401, £8,934,403, £10,479,716 and £12,569,525. These figures are approximate and they include expenditure on construction, maintenance and direct administration, but not on debt charges. Expenditure on the Sydney Harbour Bridge is not included.

(c) *Sydney Harbour Bridge.* The Sydney Harbour Bridge was opened for traffic on 19th March, 1932. The main span is 1,650 feet and the clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway, two railway tracks and two tramway tracks, and there is also a footway on each side. During 1949–50 the number of toll lanes was increased from six to twelve by the construction of a new toll barrier, thus relieving traffic congestion. The capital cost of the bridge to the 30th June, 1950, was £9,743,252, but this amount will be reduced by approximately £273,000 on the disposal of all surplus resumed property. The portion met from repayable loan funds, over £8,000,000, is to be repaid over a period of 53 years, ending approximately in 1985. The accumulated balance of the Bridge Account to 30th June, 1950 showed a deficiency of £151,448. The following table shows income and expenditure for the years 1938–39 and 1946–47 to 1949–50 :—

SYDNEY HARBOUR BRIDGE, NEW SOUTH WALES : INCOME AND EXPENDITURE.

Total	424,294	437,787	433,832	435,034	468,309

During 1949–50, 23,136,000 rail travellers, 25,001,000 tram and omnibus travellers, and 20,600,000 road travellers in 11,841,000 road vehicles crossed the bridge, contributing respectively, 22 per cent., 5 per cent., and 73 per cent. of the total toll revenue.

3. **Victoria.**—(i) *General.* With the object of improving the main roads of the State the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine the main roads, State highways, tourists' roads, etc., to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance, and to recommend deviations in existing roads or the construction of new roads in order to facilitate communication or to improve the conditions of traffic.

(ii) *Length of Roads.* (*a*) *Declared Roads.* The total length of declared roads in Victoria at 30th June, 1950, was 14,303 miles, classified as follows :—State highways, 3,849 miles; main roads, 9,710 miles; tourists' roads, 402 miles; forest roads, 342 miles. The total length of the surface treated (black) system included in the foregoing totals was 6,468 miles or 45.2 per cent.

(*b*) *Composition of Roads.* It is estimated that, in addition to the 14,303 miles of classified roads as above, there were about 50,000 miles of more important unclassified roads. The latest detailed estimate of the length of roads and streets in Victoria (as at 30th September, 1948) provides the following information :—Wood or stone, 62 miles ; portland cement concrete, 150 miles ; asphaltic concrete and sheet asphalt, 202 miles ; tar or bitumen surface seal, 10,241 miles ; water-bound macadam, gravel, sand and hard loam pavements, 28,418 miles ; formed only, 23,901 miles ; surveyed only, 38,437 miles ; total 101,411 miles.

(iii) *Country Roads Board.* (*a*) *General.* During 1948–49 and 1949–50, respectively, 784 miles and 885 miles of declared roads under the Board's control were treated with bitumen. In addition, 43 miles (1948–49) and 53 miles (1949–50) of undeclared roads, for which the Board contributed funds were similarly treated. Work for other authorities carried out by the Board's plant amounted to 82 miles and 80 miles respectively. The total mileages of bitumen treatment carried out were 909 miles in 1948–49 and 1,018 in 1949–50. Of the work on the roads under the Board's control, 306 miles in 1948–49 related to State highways and 365 miles in 1949–50

During 1949–50, 135 bridge projects of a total value of £221,037 were initiated. Of these new projects, 42 of a total value of £114,813 were supervised by the Board and 93 of a total value of £106,224, were supervised by municipalities. Bridge construction work carried out during the year was below that necessary to strengthen or renew the bridges throughout the State within a reasonable period.

Despite delays occasioned by labour difficulties continuous progress was maintained during the year on the Swan street Bridge, Melbourne, for which the Country Roads Board is the constructing authority.

(*b*) *Receipts and Payments.* Funds created under the Act were the Country Roads Board Fund, the Loan Account and the Developmental Roads Loan Account. Particulars of the operations of these funds, together with those of the Federal and Commonwealth Aid Roads and Works Account, are given hereunder :—

Country Roads Board Fund. All fees (other than fees for licences to drive motor cars prior to 1949–50) and fines under the Motor Car Act, and all registration fees and fines for traction engines, less cost of collection of such fees and fines are credited to this fund. Particulars of receipts and payments connected with the Federal and Commonwealth Aid Roads and Works Acts, Commonwealth Defence Works and several other funds are not included therein (*see* next page for particulars). Receipts and payments for the years 1938–39 and 1946–47 to 1949–50 were as follows :—

Country Roads Board Loan Account. Loans have been authorized from time to time under the Country Roads Acts for permanent works on main roads and State highways. During the years ended 30th June, 1949 and 1950, respectively, receipts amounted to £437,529 and £391,867, and payments to £407,304 and £343,953. The total expenditure to 30th June, 1950 was £5,823,539.

Developmental Roads Loan Account. This fund was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan moneys raised were exhausted at 30th June, 1937, the total expenditure at that date being £6,425,758.

Federal and Commonwealth Aid Roads and Works Account. Revenue and expenditure in respect of the Federal and Commonwealth Aid Roads and Works Account, particulars of which are not included above, were as follows :—

(£.)

Item.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.
Revenue	716,019	813,024	993,144	1,201,971	1,540,233
Expenditure(*a*)	767,767	554,682	1,338,301	1,300,818	994,400

(*a*) Excludes amounts spent on maintenance and repairs of public roads adjoining, or of approach to, Commonwealth properties in Victoria (*see* table following).

Total Expenditure. The total expenditure by the Board on road construction and maintenance during each of the five years 1938–39 and 1946–47 to 1949–50 was as follows :—

COUNTRY ROADS BOARD, VICTORIA : EXPENDITURE ON ROADS.

(*a*) Includes amounts contributed by the Commonwealth Government under the provisions of the Federal and Commonwealth Aid Roads and Works Acts.

4. **Queensland.**—(i) *General.* Under the Main Roads Act 1920 a Main Roads Board was constituted, consisting of three members appointed by the Governor-in-Council. In 1925 the Board was abolished and its powers conferred upon a single Commissioner. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main, developmental, secondary, mining access, farmers' and tourist roads and tourist tracks, and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is subsidized by the State Government by means of Treasury loans. Other roads are built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

(ii) *Length of Roads.* (*a*) *Declared Roads.* The total length of declared roads in Queensland at 30th June, 1950 was 20,607 miles, comprising State highways, 7,610 miles; main roads, 10,876 miles; developmental roads, 245 miles; secondary roads, 627 miles; mining access roads, 686 miles; farmers' roads, 276 miles; tourist roads, 285 miles; tourist tracks, 2 miles. During 1949–50, 592 miles were added to the list. The length of roads improved in Queensland from the date of commencement of work under the Main Roads Acts 1920–1943 to 30th June, 1950 was 9,414 miles (46 per cent.). At that date, also, 1,462 miles of new road construction and 947 miles of stage construction work were proceeding.

(*b*) *Composition of Roads.* The total length of roads and streets in Queensland at 30th June, 1950 was:—Concrete, 90 miles; bitumen, 4,113 miles; macadam, 9,288 miles; other formed, 44,977 miles; unconstructed, 76,107 miles; total, 134,575 miles.

(iii) *Main Roads Commission.* (*a*) *General.* During 1949–50 (1948–49 in parentheses) the Commission completed 346 miles (225 miles) of roads including new construction and stage construction. Bridges of all types to a length of 3,943 (3,008) linear feet were constructed during 1949–50 (1948–49), bringing the total constructed by the Commission at 30th June, 1950 to 151,373 feet, approximately 29 miles. In addition, at 30th June, 1950, 5,451 feet were under construction. These figures exclude particulars of the Fitzroy River and Burdekin River bridges which are special projects.

The first of these projects is a joint operation being carried out by the Main Roads Commission and the Rockhampton City Council. The design provides for a bridge 1,210 feet long, at a total estimated cost, including approaches, of approximately £426,000, one half being financed under the terms of the Main Roads Act. The total expenditure to 30th June, 1950 was approximately £345,000. The bulk of the work completed to 30th June, 1950 has been on pier foundations and approaches. The second project is a combined road and rail bridge over the Burdekin River, with an overall length, including approaches, of 3,620 feet, estimated to cost about £1,900,000. This work, the largest single post-war project actually under construction in Queensland, had been advanced to a stage at 30th June, 1950, where six of the nine caissons designed for the river bed had been sunk to foundation level.

During 1949–50, construction was seriously impeded by heavy rains and floods; this affected costs, which at the end of the financial year totalled approximately £729,000.

(*b*) *Receipts and Payments.* The funds of the Main Roads Commission are obtained chiefly from motor vehicle registration and collections, fees, etc., under the Transport Acts, contributions under the Federal and Commonwealth Aid Roads and Works Acts, and loans, grants and advances from the State Government. The total receipts and payments, including amounts for defence works, during each of the years 1938–39 and 1946–47 to 1949–50 are shown below :—

5. **South Australia.**—(i) *General.* The Highways Act 1926–1949 created a Commissioner of Highways and provided for a Highways Fund. The Commissioner is virtually empowered to determine upon which main roads he will spend the moneys available ; in doing which he has to take into account the availability of funds for main roads, the service the road is intended to render, and the present or future adequacy of railway facilities in the area through which it passes.

The Highways Fund is credited with the receipts from State motor taxation, fees, fines and licences, after deduction of the costs of collection, and all loans raised and appropriated for roads. All moneys received by the State from the Commonwealth under the Federal and Commonwealth Aid Roads and Works Acts are also expended by the Commissioner of Highways under the general provisions of the Highways Act.

(ii) *Length of Roads.* The total length of roads in use for general traffic at 30th June, 1948 (the latest date for which this information is available), was as follows :—Within District Council and Corporation Boundaries.—Blocks (wood or stone), 8 miles ; bituminous concrete (asphalt and premix), 393 miles ; cement concrete and cement penetration, 2 miles ; penetration or surface dressed (bitumen or tar), 4,283 miles ; metalled (gravelled or rubbled), 13,429 miles ; formed, but little or no metal, 8,742 miles ; surveyed, used by traffic, but little or no improvement, 25,220 miles ; total, 52,077 miles ; Outside Districts (main roads only), 565 miles ; Grand total, 52,642 miles. Lengths of main roads within district council and corporation boundaries aggregated 7,556 miles.

(iii) *State Highways and Local Government Department.* (*a*) *General.* The Department's programme for the acquisition of land for road improvement in the metropolitan and rural areas was continued during 1949–50, when approximately 14,000 linear feet of frontages in the metropolitan area were acquired and set back. This brought the total acquisition since the inception of the metropolitan widening scheme to 41,000 linear feet. In rural areas the policy of widening roads and improving the alignments was continued in order to provide for an expected future increase in the volume of traffic.

Construction and reconstruction works on main roads were carried out in the following areas :—Northern and Eyre Peninsula, Mid-Northern, Central, Metropolitan, Murray Lands, Upper South-Eastern and Lower South-Eastern. In other areas local authorities carried out the works under departmental supervision.

(*b*) *Receipts and Payments.* The following table shows particulars of receipts and payments, during the years 1938–39 and 1946–47 to 1949–50, of funds controlled by the Highways and Local Government Department. Wholly comparable figures for 1938–39 are not available.

(a) Figures for 1938–39 are not completely comparable with those for following years. (b) Not separately available ; included elsewhere. (c) Interest and sinking fund payments.

The total expenditure, both revenue and loan, by State and local governments on roads, streets and bridges in South Australia during the years 1938–39 and 1946–47 to 1949–50 was, respectively, £1,966,000, £1,930,000, £2,341,000, £2,605,000 and £3,058,000.

6. **Western Australia.**—(i) *General.* Under the Main Roads Act 1930–1939 the Main Roads Board previously existing was abolished and a Commissioner of Main Roads was appointed. His duties relate to the determination of main roads after consideration of the funds available and the services to be rendered by the roads, the declaration and provision of developmental roads, the construction and maintenance of main roads, and the carrying out of surveys, investigations and experiments connected with roads and road materials. The Act authorizes two trust accounts (Main Roads Trust Account and Main Roads Contribution Trust Account) to record the moneys prescribed as available to the Commissioner for expenditure associated with roads, etc. In addition, the Commissioner operates on those Trust Accounts which are used for funds made available under the Federal and Commonwealth Aid Roads and Works Acts.

(ii) *Length of Roads and Streets.* The total known length of streets and roads in existence in the various municipalities at 31st October, 1950, and in road districts at 30th June, 1950, was as follows :—Concrete, 4 miles ; bituminous, 3,642 miles; granite, limestone, etc., waterbound, 280 miles ; gravel waterbound, 9,358 miles; other constructed surfaces, 2,711 miles ; formed only, 28,334 miles ; unprepared, 31,916 miles (incomplete) ; total, 76,245 miles.

The lengths of declared roads at 30th June, 1950, were :—Main roads, 3,154 miles ; developmental roads, 12,819 miles ; other classified roads, 24 miles ; total, 15,997 miles. No new main roads were declared during the years 1948–49 and 1949–50.

(iii) *Main Roads Department.* During the year 1949–50 (1948–49 in parentheses) the activities of the Department included :—clearing, 778 miles (962 miles) ; forming, 1,016 miles (1,269 miles) ; gravelling, 613 miles (693 miles) ; metalling, 1 mile (6 miles) ; reconditioning, 1,707 miles (2,514 miles) ; sanding, 56 miles (80 miles) ; side drains, 55 miles (92 miles). In addition, lengths of tar and bitumen work performed aggregated 296 miles (287 miles.) Bridges constructed numbered 20 (14). Work progressed on the causeway over the Swan River which involves the construction of two bridges. During 1949–50, construction was confined mainly to the Victoria Park end bridge where the pier system was almost completed. Work on the superstructure was commenced. During the year the construction of the Marble Bar–Port Hedland Road was commenced and a proposed route between Wyndham and Nicholson surveyed.

(iv) *Receipts and Payments—Combined Road Funds.* The following table shows the combined transactions of the Main Roads Trust Account, the Main Roads Contributions Trust Account, the Metropolitan Traffic Trust Account, the Transport Co-ordination Trust Account (up to the end of 1946–47) and the Federal and Commonwealth Aid Roads and Works Trust Accounts during the years ended 30th June, 1939 and 1947 to 1950.

7. **Tasmania.**—(i) *General.* Under the Transport Act 1938, which came into operation on 1st July, 1939, the Transport Commission was constituted to co-ordinate, regulate, control, and improve the means of, and facilities for, transport by road, rail or air within the State. Revenues at its disposal for road and motor traffic purposes are the Federal and Commonwealth Aid Roads and Works Grants, motor vehicle registration fees and tax, and licensing fees for drivers and public motor vehicles. Under the Roads and Jetties Act 1944, which provides for the classification of the whole of the roads of the State so that they will be adequately and efficiently maintained, the cost of maintenance of roads classified as State highways, tourist roads and developmental roads is borne by the Transport Commission. It is also responsible for a proportion of the cost of maintenance of main and secondary roads. Municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads, except in special cases. The cost of construction of roads and bridges in Tasmania is borne almost entirely by the State Government. The expenditure of the Public Works Department (the construction and maintenance authority for the Transport Commission) during 1949–50 on roads, tracks and bridges amounted to £907,021, of which £763,507 was charged to road funds, £67,000 to revenue, £76,328 to loan and £186 to Crown lands funds.

(ii) *Length of Roads.* (*a*) *Classified Roads.* The mileages of classified roads in Tasmania at 30th June, 1950 were as follows :—State highways, 1,165 miles ; main roads, 660 miles ; secondary roads, 189 miles ; tourist roads, 46 miles ; developmental roads, 49 miles ; subsidized roads, 78 miles ; total 2,187 miles. Country roads totalled more than 10,000 miles. The mileages of sealed roads, and their proportions to the respective totals, were :—State highways, 545 miles (47 per cent.); main roads, 148 miles (22 per cent.) ; secondary roads, 9 miles (5 per cent.) ; total, 702 miles (32 per cent. of all classified roads, and 6 per cent. of all roads, in Tasmania).

(*b*) *Composition of Roads.* The length of all roads in Tasmania, including those with surfaces of lower grade, at 30th June, 1951 was as follows :—Sheet asphalt on concrete base, 1 mile ; other bituminous, 914 miles ; concrete, 8 miles ; granite, limestone, etc., waterbound, 8,559 miles ; surfaces of lower grade, 2,787 miles ; total, 12,269 miles.

(iii) *Transport Commission.* The principal construction work carried out during 1949–50 was the completion of the North-South Bruny Road which effectively linked for the first time the northern and southern halves of Bruny Island. Expenditure from loans from the State Treasury amounting to £23,163 was incurred for this project. An amount of £112,966 was spent on the resealing of classified roads, as compared with £100,476 in 1948–49 and £181,806 in 1947–48.

(iv) *Receipts and Payments—Combined Road Funds.* The table hereunder shows particulars of the receipts and payments of combined Road Funds and Federal and Commonwealth Aid Roads and Works Funds under the control of the Transport Commission for the years 1939–40 and 1946–47 to 1949–50 :—

Other	31,894	58,720	54,572	195,394	(c) 383,961
Total	319,285	672,682	781,704	872,218	1,253,991

(a) First year of operation of Transport Commission. Figures not completely comparable with those for following years. (b) Includes £237,899 hire of plant. (c) Includes £192,619 hire and maintenance of road construction plant, etc.

(v) *Hobart Bridge.* Under the Hobart Bridge (Acquisition and Administration) Act 1944 the Transport Commission is responsible for the administration, control and management of the Hobart Bridge and transport services. Tolls on the Hobart Bridge were abolished as from 31st December, 1948.

8. **Summary of Roads used for General Traffic.**—(i) *Proclaimed or Declared Roads.* The table hereunder is a summary of the roads proclaimed or declared under the Acts of the several States relative to the operations of the central road authorities, and shows the lengths of various classes proclaimed or declared as at 30th June, 1950. These proclaimed or declared roads are those for which the central road authority assumes responsibility under the Act for the whole, or a proportion, of the cost of construction and/or maintenance, the extent varying from State to State and with the class and locality of the roads. Before proclamation of a main road, the following points are, in general, amongst the more important of those to be considered :—(a) the funds available or likely

to be available for main roads ; (*b*) whether the road is, or will be, the main trunk route connecting any large producing district with its market or point of shipment ; (*c*) whether the road is, or will be, the main trunk route of intercommunication between two or more such districts or between two or more large centres of population ; (*d*) whether the road is, or will be, the main trunk route between the capital of the State and any large producing district or any large centre of population ; (*e*) whether the road is, or will be, the main trunk route between the capitals of two or more States ; (*f*) whether the district concerned is, or will be, sufficiently served by railways. Provision is also made in some States for the declaration of roads other than main. The absence of a particular class from the following data for any State does not necessarily imply that there are no roads within that State that might be so classified ; the classes are restricted only to roads proclaimed or declared under the Acts. A further point to make is that, through various causes, e.g. insufficiency of funds, manpower or materials, etc.—construction or maintenance may not keep pace with gazettals of mileages, and that therefore the condition of a road may not match its status.

PROCLAIMED OR DECLARED ROADS : LENGTHS, 30th JUNE, 1950.

(Miles.)

Class of Road.	N.S.W.	Vic.	Q'land.	S. Aust. (*a*)	W. Aust.	Tas.	Total.

(*a*) At 30th June, 1948. (*b*) Forest roads. (*c*) Includes mining access roads, 686 miles ; farmers' roads, 276 miles ; tourist tracks, 2 miles. (*d*) Subsidized roads.

(ii) *Composition of Roads.* The following table represents an attempt to classify all the roads used for general traffic in Australia, at the latest dates available, according to States and Territories and to certain broad composition groups. The results are not entirely satisfactory, (i) because it is doubtful whether the whole of Australia is covered, (ii) because the dates of reference differ, and (iii) because the figures constituting each group are not wholly comparable for the States and Territories. It is hoped, however, despite these defects, that the table will provide an approximate and general idea of the main types of roads in Australia.

The data in the table for the States are obtained from the State Government Statisticians, and are derived mainly from local government sources. Unincorporated areas in some States are probably excluded and the figures on the returns supplied by the local government authorities are in some cases of doubtful accuracy. Details of the composition of roads, as far as they are available, vary to such an extent that it was considered preferable to show here only major divisions.

Groups 1–4 as shown in the table include, respectively, the following types of composition :—

1. *Wood or Stone.* Wood blocks ; stone paved.
2. *Concrete.* Cement concrete ; asphaltic concrete ; bituminous concrete ; sheet asphalt on concrete base.
3. *Bituminous.* Tar or bituminous macadam ; tar and bituminous surface seal ; surfaced water-bound macadam or gravel ; bituminous or cement penetration.
4. *Macadam and Other.* Water-bound macadam ; granite, limestone, and blast-furnace slag, water-bound ; gravel water-bound ; gravel or crushed rock ; metalled (gravel or rubble) ; gravel, sand and hard loam pavements.

Groups 5 and 6 include roads so-called mainly because they are used for general traffic, irrespective of their surfaces, prepared or otherwise.

It will be noticed that some of the terms used above are practically synonymous. Such terms are, of course, not used by any one State, but are the classifications adopted by different States.

For details of any particular State, *see* the respective paragraphs in the preceding pages.

ALL ROADS USED FOR GENERAL TRAFFIC : LENGTHS.
(Miles.)

Composition of Road.	N.S.W. 1948.	Vic. 30th Sept., 1948.	Q'land. 30th June, 1950.	S. Aust. 30th June, 1948.	W. Aust. 1950. (a)	Tas. 30th June, 1951.	N. Terr. 1949.	A.C.T. 30th June, 1951.	Total.

(a) Municipalities, 31st October and Road Districts, 30th June. (b) Estimated dissection.

It will be seen from the foregoing table that a little more than one-quarter of the road lengths of Australia has actually been constructed, the remainder, for the greater part, being in little more than the natural state. The percentages for each group are as follows :—Group 1, 0.01 ; Group 2, 0.28 ; Group 3, 6.36 ; Group 4, 20.72 ; Group 5, 27.48 ; Group 6, 45.15. The percentage of constructed lengths to total length in each State is as follows :—New South Wales, 33 ; Victoria, 39 ; Queensland, 10 ; South Australia, 34 ; Western Australia, 21 ; Tasmania, 77 ; Northern Territory, 15 ; Australian Capital Territory, 57. Comparisons between the States should be made with caution, however, because, in addition to the defects enumerated at the beginning of this section, factors such as the area, physiography, density and distribution of population, nature of economic activity, other facilities for transport, etc., in each State must be taken into account.

9. **Summary of Expenditure on Roads and Bridges.**—(i) *General.* Figures showing the total expenditure on roads and bridges in all States are not available. Such totals are very difficult to obtain, not only because of the number of States, but also because of the number of authorities concerned. In most States there are three classes of authorities—the State Government, the central road authority, and the numerous local government bodies. Both State Government and local government bodies operate

through revenue and loan funds, and payments may be made by the State Government direct from either fund, or through the funds of other authorities. The expenditure of the central road authority may also be direct or indirect. Consequently the problem of duplication caused by inter-fund payments arises. On the other hand, some expenditure may be omitted because separate particulars are not available. Ignorance of the precise nature of items may cause either incorrect inclusion or omission. To produce accurate figures would entail more research than at present can be undertaken.

The two paragraphs following therefore represent only: (i) aggregate expenditure from the various State road funds referred to in the foregoing pages, and (ii) loan fund expenditure by State Governments. No direct expenditure by local government bodies is included. Sub-section 2. Finances, of § 2. Local Government Authorities, contains some particulars of local government revenue and expenditure in connexion with roads, streets and bridges (*see* pages 651 and 654).

(ii) *Aggregate Expenditure from State Road Funds.* The following table shows the expenditure on the construction and maintenance of roads, including payments to local government bodies, by each State during the years 1938–39 and 1945–46 to 1949–50, as summarized from the foregoing sections. Expenditure on administration, debt charges, Commonwealth defence works, payments to State consolidated revenues, and on plant and materials is not included. In some instances expenditure on works other than roads and bridges is included. Figures are not completely comparable as between States, and, in some States, as from year to year.

ROADS AND BRIDGES: AGGREGATE EXPENDITURE FROM ROAD FUNDS.

(£'000.)

Year ended 30th June—	N.S.W. (a)	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
1939 ..	3,257	2,099	2,405	692	1,067	(b) 272	9,792
1946 ..	2,373	1,071	1,341	605	433	331	6,154
1947 ..	3,305	1,976	2,613	851	791	566	10,102
1948 ..	3,886	3,113	3,039	1,314	1,212	675	13,239
1949 ..	4,224	2,601	2,706	1,499	1,614	621	13,265
1950 ..	5,160	3,143	3,210	2,067	1,872	802	16,254

(a) Excludes Sydney Harbour Bridge. (b) Year 1939–40.

The foregoing particulars do not represent the total expenditure on roads and bridges in each State. To obtain such information additions must be made on account of (i) State Government expenditure from revenue and loan, and (ii) local government expenditure from revenue and loan, while, on the other hand, allowances must be made for inter-fund payments. (*See* par. (i) above.)

(iii) *State Net Loan Expenditure.* In recent years, expenditure from State loan funds on roads and bridges has not been large, and it would appear, also, that a considerable proportion passes through the funds of the central road authorities and is therefore included in the figures on their financial operations in the foregoing sections, while, on the other hand, it must be supplemented by expenditure from State revenue. Gross loan expenditure by all State Governments during each of the years 1948–49 and 1949–50 amounted to more than £1,000,000, and net expenditure to considerably less. Aggregate net loan expenditure on roads and bridges in each State to 30th June, 1950 amounted to the following approximate sums:—New South Wales, £21,000,000; Victoria, £13,000,000; Queensland, £8,000,000; South Australia, £4,000,000; Western Australia, £3,000,000; Tasmania, £6,000,000; total, £55,000,000.

§ 5. Water Supply, Sewerage and Drainage.

NOTE.—*See also* Chapter XXVI.—Water Conservation and Irrigation.

1. **New South Wales.**—(i) *General.* The largest two domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government and five members elected by local councils. These are (*a*) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e., in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, and (*b*) the Hunter District Water Board, serving the Newcastle area. At Broken Hill a similar board includes a representative of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal and shire councils.

(ii) *Water Supply—to 30th June,* 1950. (*a*) *Metropolitan.* The storage reservoirs of the metropolitan system, with a combined available capacity of 125,144 million gallons, drain catchment areas of 376 square miles (Upper Nepean, 347 square miles and Woronora, 29 square miles). Water is drawn also from the Warragamba River, with a catchment of 3,383 square miles. This system is being developed, and building has commenced on a dam to have an overall height of 415 feet (greatest depth of water 343 feet), giving a safe draught of 263 million gallons per day. The existing temporary storage is supplied by a weir 50 feet high with a maximum storage of 579 million gallons. At 30th June, 1950 there were 95 service reservoirs in use with a combined capacity of 541.3 million gallons. Rating for water for 1949–50 was 9½d. in the £1 of assessed annual value and the charge for water measured by meters 1s. 6d. per 1,000 gallons.

(*b*) *Newcastle.* The water supply is drawn from two sources (1) the Chichester Reservoir, with a storage capacity of about 5,000 million gallons and draining a catchment of 76 square miles, and (2) the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens. Service reservoirs and tanks distributed throughout the Water Supply District have a total storage capacity of 106 million gallons. Water rating for 1949–50 was 1s. 3d. in the £1 on assessed annual value. The price of water to domestic and industrial consumers is 1s. 6d. per 1,000 gallons.

(*c*) *Water Supplied, etc.* The following tables show, for the Sydney and Newcastle systems, the number of properties, the estimated population supplied, and other details for the years 1938–39 and 1945–46 to 1949–50 :—

WATER SUPPLY, SYDNEY(*a*) : SERVICES.

Year.	Improved Properties for which Water Main available.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for the Year.	Average Daily Consumption.		Length of Mains.	Number of Meters.
					Per Property.	Per Head of Estimated Population.

1949–50 ..	428,392	1,870,000	130.8	47,735	305	72.1	4,993	196,121

(*a*) Includes part of South Coast.

WATER SUPPLY, NEWCASTLE : SERVICES.

Year.	Properties Supplied.	Estimated Population Supplied.	Average Daily Supply.	Total Supply for Year.	Average Daily Supply.		Length of Mains.
					Per Property.	Per Head of Estimated Population.	
	No.		Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.
1938–39	48,370	193,480	11.9	4,331	245	61.3	936
1945–46	55,171	217,956	17.6	6,413	319	80.1	1,098
1946–47	56,804	223,656	18.9	6,900	333	83.9	1,134
1947–48	58,660	231,600	18.5	6,774	316	79.9	1,169
1948–49	61,215	241,036	19.0	6,951	310	79.0	1,202
1949–50	63,289	247,992	19.7	7,176	311	79.3	1,215

(iii) *Sewerage and Drainage—to 30th June,* 1950. (*a*) *Metropolitan.* The Sydney sewerage system consists mainly of outfall systems discharging into the Pacific Ocean. At 30th June, 1950 there were six outfalls and six treatment works, serving a population of 1,306,000 over a length of sewers of 2,899 miles.

Stormwater drainage channels under the Metropolitan Water, Sewerage and Drainage Board's control at the same date were 154 miles long. Sewerage rating for 1949–50 was 9¾d. in the £1 of assessed annual value and drainage from ¼d. to 3d.

(*b*) *Newcastle.* The main sewerage system of the Newcastle area discharges into the Pacific Ocean at Merewether Gulf. In some of the outlying districts treatment works have been installed.

Sewerage rates for 1949–50 were 1s. 3d. in the £1 of assessed annual value and drainage rates (on certain areas served) 2d. in the £1.

(*c*) *Particulars of Services.* The following table supplies, for the Sydney system, details of sewerage services and stormwater drains as at 30th June, 1939 and 1946 to 1950.

SEWERAGE AND DRAINAGE, SYDNEY(*a*) : SERVICES.

At 30th June—	Improved Properties for which Sewer Available.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Sewers.	Length of Stormwater Channels.
	No.		Mill. gals.	Miles.	Miles.
1939	254,632	1,066,000	8,299	2,561	87
1946	283,364	1,161,000	9,439	2,780	99
1947	287,098	1,198,000	9,604	2,805	117
1948	291,069	1,263,000	9,894	2,829	129
1949	294,822	1,282,000	10,621	2,855	153
1950	298,996	1,306,000	12,200	2,899	154

(*a*) Includes part of South Coast.

At 30th June, 1950 (at 30th June, 1949 in parentheses) 44,168 (42,838) premises had been connected to the Hunter District Water Board's sewerage system (Newcastle area). The total length of sewers under the Board's control was 608 (601) miles, and the length of drains over 24 inches diameter was 38 (38) miles.

(iv) *Finances, Sydney and Newcastle Systems.* (*a*) *Details,* 1948–49 *and* 1949–50. The following statement shows the debt, revenue and expenditure on account of the services of water supply, sewerage and drainage by the Metropolitan Water, Sewerage and Drainage Board and the Hunter District Water Board during 1948–49 and 1949–50.

NOTE.—*See* footnotes to previous table.

(v) *Country Water Supply and Sewerage Systems.* At 31st December, 1947, country water supply services were conducted or under construction by 72 municipalities, 45 shires and 4 county councils, and country sewerage services by 52 municipalities and 12 shires. The capital indebtedness of these schemes was £7,475,597 at 31st December, 1947, namely, £4,772,662 for water and £2,702,935 for sewerage. Of the foregoing amounts, Government advances amounted to £570,523. Debt of the municipalities amounted to £5,451,053, shires to £1,017,339 and county councils to £1,007,205. Aggregate income and expenditure, respectively, amounted to £1,018,671 and £899,588 in 1947, and to £1,000,152 and £852,687 during 1946.

(vi) *Other Water Supply and Sewerage Systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31st December, 1950 was £1,094,776. Income and expenditure, respectively, were £117,977 and £134,482 for 1950 and £98,484 and £119,822 for 1949.

The following country water supply systems—South-West Tablelands, Junee and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Railways Department, and other large consumers; only a small quantity is sold directly to private consumers. The capital indebtedness of these systems was £2,418,508 at 31st December, 1950.

There are also the Mulwala Water Supply and Sewerage Service constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System administered by the Department of Public Works in conjunction with the Junee supply.

2. **Victoria.**—(i) *Melbourne and Metropolitan Board of Works—to 30th June,* 1950. (*a*) *General.* The metropolis, for water supply, sewerage and drainage and river improvement purposes, comprises all that land within a radius of 13 miles of the Post Office at

the corner of Bourke and Elizabeth-streets, Melbourne, and the remaining portions of the Cities of Moorabbin, Mordialloc, and Nunawading and the shire of Mulgrave and certain portions of the remainder of the Shires of Eltham, Doncaster and Templestowe, and Dandenong, but excludes a portion of the Shire of Werribee within such radius. This territory has an area of 450 square miles and comprises 27 cities and one shire and parts of one other city and 9 other shires. The Board comprises 48 members, including the chairman, who is elected every four years by the other members. These members, or commissioners, are from time to time elected by the councils of the municipal districts wholly or partly within the metropolis. The principal functions of the Board are to control and manage the metropolitan water supply system ; to provide the metropolis with an efficient system of main and general sewerage ; to deal with main drains and main drainage works ; and to control and manage the rivers, creeks and watercourses within the metropolis.

(*b*) *Water Supply.* There are five storage reservoirs serving the metropolitan area—Yan Yean, 7,234 million gallons (available for consumption, 6,605 million gallons) ; Toorourrong, 60 million gallons ; Maroondah, 6,274 million gallons (4.855 million gallons) ; O'Shannassy, 930 million gallons ; Silvan, 8,853 million gallons (8,823 million gallons) ; total 23.351 million gallons (21,273 million gallons). Service reservoirs number 25, with a total capacity of 262 million gallons. Two new projects are under construction. One is a 23-mile conduit to carry water from the Upper Yarra catchment to the Silvan Reservoir and its estimated cost is £2,697,000. Up to 30th June, 1950, about one-third of the length of the pipe-line had been laid. The other project, approved by the Board in 1946, consists of a dam which will impound 30,000 million gallons of water, on the River Yarra, immediately upstream from the confluence of the Yarra and Doctors Creek, and work on the project is proceeding. In 1950 it was estimated to cost £7,800,000.

The water rate levied by the Board in 1949–50 was 7d. in the £1 on the net annual value of the property served, and there was a charge of 1s. per 1,000 gallons of water supplied by meter. From 1st July, 1950, the charge for water supplied by measure in excess of the quantity which, at 1s. per 1,000 gallons, would produce an amount equal to the water rate payable on the property, was increased from 1s. to 1s. 3d. The following table shows particulars of Melbourne metropolitan water supply services for the years 1938–39 and 1945–46 to 1949–50.

WATER SUPPLY, MELBOURNE : SERVICES.

The metropolitan sewerage system consists of the Main system (serving an area of 67,433 acres) and three subsidiary systems—the Sunshine system (serving an area of 941 acres in the Shire of Braybrook, including the township of Sunshine), the Kew system (serving an area of 103 acres in Kew) and the South-eastern system (serving an area of 2,292 acres in Cheltenham, Parkdale, Mentone and Mordialloc). The Metropolitan Sewage Farm, 26,056 acres in extent and situated about 24 miles south-west of Melbourne beyond the township of Werribee, serves to purify and dispose of approximately 95 per cent. of the sewage flow of the metropolis before its discharge into Port Phillip Bay. The total capital cost (less depreciation) to 30th June, 1950 was £1,885,231. Revenue during 1949–50 (1948–49 in parentheses) amounted to £79,166 (£77,690), cost of sewage disposal £99,413 (£95,749), trading expenses £66,690 (£58,469), interest £67,901 (£63,661), and net cost of sewage purification £154,838 (£140,189). These financial particulars are included in the sewerage items of the summary below.

At 30th June, 1950, the Melbourne and Metropolitan Board of Works had 126 miles of main drains under its control—105 miles of underground, 12 miles of constructed open drains, and 9 miles of natural watercourses and unlined open drains.

(*d*) *Finances—Details,* 1948–49 *and* 1949–50. The following table provides a summary, for the years 1948–49 and 1949–50, of the financial operations of the three services conducted by the Melbourne and Metropolitan Board of Works :—

(ii) *Geelong Waterworks and Sewerage Trust.* (*a*) *General.* The Geelong Waterworks and Sewerage Trust was constituted in 1908 and reconstituted under the Geelong Waterworks and Sewerage Act in 1910. It was further reconstituted in September, 1950 to include a Government nominee (Chairman) and provision was made for a commissioner to be elected by the ratepayers of the Shire of Corio, making a total of seven commissioners instead of five as formerly. The amount of loan money which may be raised is limited to £900,000 for water supply undertaking, £760,000 for sewerage undertaking, and £270,000 for sewerage installation to properties under the deferred payment system. The population supplied is estimated by the Trust at 57,800. This and other general information relates to 30th June, 1950.

(*b*) *Water Supply.* The catchment area is about 16,000 acres. There are five storage reservoirs and seven service basins whose total storage capacity is 2,746 million gallons. In addition, the State Rivers and Water Supply Commission has made available a supplementary supply of a minimum quantity of 545 million gallons of water per annum from the Bellarine Peninsula System. The total expenditure on water supply to 30th June, 1950 was £888,167. Expenditure for 1949–50 comprised £37,268 (£34,905 in 1948–49) on working expenses and £45,865 (£43,028 in 1948–49) on interest, sinking fund and reserves, and the revenue for the year 1949–50 was £84,410 (£82,844 in 1948–49). The sinking fund appropriations at June, 1950 amounted to £117,807. The replacement and contingencies reserve amounted to £166,274. There is a water rate of 1s. 3d. in the £1 (with minima of 5s. for unbuilt-on land and £1 for tenements) on the net annual value of ratable properties.

(*c*) *Sewerage Works.* The sewerage scheme consists of a main outfall sewer to the ocean at Black Rock, about 9 miles from Geelong, and 150 miles of main and reticulation sewers. The sewerage area is 9,571 acres, and the number of buildings within the sewered areas is 13,682 of which 13,040 have been connected. The number of buildings within the drainage area is 13,900. The total expenditure to 30th June, 1950 on sewerage works was £674,242, and on the cost of sewerage installation under deferred payment conditions £258,344, of which £515 was outstanding. The revenue in 1949–50 amounted to £55,831 (55,523 in 1948–49) and the expenditure comprised £16,465 (£15,882 in 1948–49) on working expenses and £35,831 (£35,814 in 1948–49) on interest, sinking fund and reserves. Sinking fund appropriations at June, 1950 were £104,838. Replacement and contingencies reserve amounted to £140,899. A general rate of 1s. 3d. in the £1 is levied on the net annual value of ratable properties.

(iii) *The Ballarat Water Commission and the Ballarat Sewerage Authority.* (*a*) *General.* The Ballarat Water Commission was constituted on 1st July, 1880, and the Ballarat Sewerage Authority on 30th November, 1920. The members of the Water Commission constitute the Sewerage Authority. The Commissioners number seven, three (one of whom is chairman) being appointed by the Government, and four being elected by the Council of the City of Ballarat. General information is as at 31st December, 1949 and financial information is given for the years 1949 and 1950.

(*b*) *Water Supply.* The Water Supply District embraces an area of about 65 square miles, containing a population of about 50,000. The total storage capacity of the six reservoirs is 2,332 million gallons and the catchment area is 17,545 acres.

The capital cost of construction of the waterworks was £1,347,090 to 31st December, 1949. The liabilities are loans due to the Government, amounting to £827,890 at 31st December, 1949. The revenue for the year 1950 was £75,596 (£67,985 in 1949). Working expenses during 1950 amounted to £32,216 (£29,324 in 1949) and interest and other charges to £42,867 (£36,015 in 1949). A rate of 1s. 3d. in the £1 is levied on the net annual value of all ratable properties, with a minimum of 15s. per annum for land on which there is a building or water supply.

(*c*) *Sewerage.* The Ballarat sewerage district embraces the City of Ballarat and part of the Shire of Ballarat. Work was commenced in 1922 and up to 31st December, 1950 the Authority had constructed a disposals works, 1 mile of outfall sewer, 2.1 miles of main sewer, 14.7 miles of sub-mains and 90 miles of reticulation. The capital cost of sewerage construction works to 31st December, 1950 was £554,188. The method of sewage disposal is by sedimentation, oxidation and sludge digestion. One hundred and nineteen sewered areas had been declared as at 31st December, 1950. Assessments in the sewerage district numbered 13,603, while those in sewered areas numbered 11,175. There were 9,591 buildings connected.

The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31st December, 1950 amounted to £461,701, redemption payments at that date totalling £158,967. An expenditure of £157,122 was incurred for house connexions, the whole of which has been redeemed. Revenue during 1950 (1949 in parentheses) amounted to £42,098 (£44,324) and expenditure, including £25,912 (£26,262) on interest and redemption, to £42,634 (£50,636).

A general rate of 1s. 5d. in the £1 is levied on the net annual value of all properties within the drainage area.

(iv) *Sewerage Authorities.* At 30th June, 1950, 54 sewerage authorities had been constituted under the provisions of the Sewerage Districts Acts in districts outside the areas under the control of the Melbourne and Metropolitan Board of Works and the Geelong Waterworks and Sewerage Trust, and systems were in operation in 28 districts (including three partly operating) serving a population of 182,400 persons.

In addition, sewerage authorities were constituted in a further 26 districts at this date, but their operations had either been suspended or had not commenced.

(v) *Water Supply in Country Towns and Districts.* Most of the country waterworks are controlled by the State Rivers and Water Supply Commission, but in some instances the control is by waterworks trusts or by municipal corporations.

The waterworks controlled by the State Rivers and Water Supply Commission at 30th June, 1950 included 35 large reservoirs and 234 subsidiary reservoirs and service basins with a total storage capacity of 537,490 million gallons (1,974,260 acre feet).

Length of channels was 15,221 miles (irrigation, 4,643 miles, domestic and stock, 8,505 miles, drainage and flood protection, 2,073 miles) and of pipe lines 1,160 miles. The quantity of water delivered to water users during 1949–50 was 526,875 acre feet (720,427 acre feet in 1948–49). The Commission administered 69 rural districts during 1949–50 (29 irrigation districts, 35 waterworks districts, 4 flood protection districts and 1 drainage district), and the reticulated pipe supplies for domestic and industrial purposes in 129 urban districts. In addition, 120 urban districts were administered by waterworks trusts and 15 by local governing bodies. The populations served in these groups of urban districts numbered, respectively, 148,140, 243,200 and 78,950 persons. The table below is a summary of the Commission's finances for operations in districts under its control for the years 1938–39 and 1945–46 to 1949–50 :—

STATE RIVERS AND WATER SUPPLY COMMISSION, VICTORIA : FINANCES. (a)

(£.)

Year.	Total Loan Capital Expenditure to 30th June.	Receipts.	Payments.				
			Operating Expenses.	Interest on Capital Allotted.	Depreciation.	Redemption.	Total.
1938–39 ..	24,223,037	560,680	476,085	145,105	27,553	4,922	653,665
1945–46 ..	26,417,497	773,423	1,110,170	41,864	48,420	1,767	1,202,221

1949–50 ..	35,041,827	1,433,561	1,519,659	38,117	66,441	3,055	1,627,272

(a) Excludes Waterworks Trusts and Local Governing Bodies.

The total loan capital expenditure of waterworks trusts and local governing bodies at 30th June, 1950 was £5,638,471, making a grand total of £40,680,298 when added to the figure for works under the control of the Commission. The net loan capital after redemption payments of £1,646,520 was £39,033,778.

The financial operations of the State Rivers and Water Supply Commission form part of Consolidated Revenue Fund, but are included in this section for convenience. The major proportion of the interest payable is borne by the State and is additional to that shown above. The net expenditure borne by the State during 1949–50 was £1,370,333 (£1,342,708 in 1948–49).

3. **Queensland.**—(i) *Brisbane City Council—to 30th June*, 1950. (*a*) *General.* This organization conducts the water supply and sewerage systems of the City of Greater Brisbane. Prior to 1928, water and sewerage activities had been controlled by the Metropolitan Water and Sewerage Board, but were then absorbed by the Brisbane City Council, which also supplies, in bulk, the whole of the water used by the City of Ipswich and the Town of Redcliffe.

(*b*) *Water Supply.* Water storage facilities comprise the following (available capacities are shown in parentheses) :—Somerset Reservoir, 32,000 million gallons (32,000 million gallons) ; Lake Manchester, 5,806 million gallons (5,725 million gallons) ; Brisbane River, 543 million gallons (484 million gallons) ; Pure Water Reservoir, Holt's Hill, 8.3 million gallons (8.3 million gallons) ; Enoggera Reservoir, 1,000 million gallons (631 million gallons) ; Gold Creek Reservoir, 407 million gallons (400 million gallons). There are eleven service reservoirs with a capacity of approximately 35.9 million gallons. The Somerset reservoir is under the control of the Stanley River Works Board and is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 55,000 million gallons to be for water storage and 145,000 million gallons for flood mitigation. Water rating at 30th June, 1950 was 5d. in the £1 of unimproved capital value for improved properties, and 3d. in the £1 for vacant lands, with a minimum of £3 10s. and £2 6s. 8d. respectively. The following table is a summary of operations of the complete Brisbane City Council system (metropolitan area, Ipswich and Redcliffe) for the years 1938–39 and 1945–46 to 1949–50 :—

WATER SUPPLY, BRISBANE (*a*) : SERVICES.

Year.	Services Connected.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for year.	Average Daily Consumption.		Length of Trunk and Reticulation Mains.	Number of Meters.
					Per Service.	Per Head of Estimated Population.		
			Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	
1938–39 ..	81,389	345,903	15.9	5,791	195	45.9	1,169	(*b*)
1945–46 ..	94,032	385,531	22.5	8,206	239	58.3	1,275	52,620
1946–47 ..	98,803	405,093	22.8	8,317	231	56.3	1,299	52,645
1947–48 ..	103,846	425,769	22.9	8,365	220	53.7	1,330	52,699
1948–49 ..	108,671	445,551	24.2	8,826	223	54.3	1,344	52,755
1949–50 ..	111,363	445,897	26.1	9,540	235	58.6	1,376	52,807

(*a*) Includes Ipswich and Redcliffe. (*b*) Not available.

(*c*) *Sewerage.* The sewage treatment works are situated at Luggage Point on the north bank at the entrance to the Brisbane River. The treatment plan is the activated sludge system, but this has not been put into operation, and since the commencement of pumping operations in 1923 a sedimentation plant only has been used. Sewerage rating at 30th June, 1950 was 4d. in the £1 of unimproved capital value for improved properties, and 3d. in the £1 for vacant lands, with a minimum of £3 10s. and £3 respectively. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1938–39 and 1945–46 to 1949–50 :—

SEWERAGE, BRISBANE : SERVICES.

Year.	Premises Connected.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Main, Branch, Reticulation, etc. Sewers.
			Mill. gals.	Miles.
1938–39	33,248	149,616	(*a*)	484
1945–46	41,381	169,662	4,632	533
1946–47	42,246	173,209	4,539	549
1947–48	43,485	178,289	4,696	567
1948–49	44,901	184,094	4,697	580
1949–50	46,330	189,953	4,967	590

(*a*) Not available.

(*d*) *Finances.* The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1938–39 and 1945–46 to 1949–50 :—

WATER SUPPLY AND SEWERAGE, BRISBANE : FINANCES.

(£.)

Service and Year.	Gross Capital Cost.	Revenue.	Expenditure.			Surplus (+) or Deficit (−).
			Working Expenses.	Interest, Redemption, etc. Charges.	Total.	
Water Supply—						
1938–39	4,849,732	606,244	129,219	280,827	422,366	+ 183,878
1945–46	6,637,459	754,521	210,718	301,609	550,605	+ 203,916
1946–47	6,906,676	744,989	225,343	315,595	596,948	+ 148,041
1947–48	7,156,116	765,936	255,430	335,307	633,982	+ 131,954
1948–49	7,356,335	815,673	307,130	338,963	703,092	+ 112,581
1949–50	7,579,798	866,366	353,805	276,796	700,237	+ 166,129
Sewerage—						
1938–39	5,992,936	240,963	52,792	403,386	485,974	− 245,011
1945–46	6,540,181	234,731	57,135	335,308	410,801	− 176,070
1946–47	6,763,448	234,032	57,600	224,194	312,152	− 78,120
1947–48	7,048,086	254,777	63,998	246,983	343,259	− 88,482
1948–49	7,526,302	285,194	76,098	248,341	346,120	− 60,926
1949–50	8,117,835	412,833	87,100	264,972	379,299	+ 33,534

(ii) *Country Towns.* (*a*) *Water Supply.* In addition to the City of Brisbane, there were, at 30th June, 1950, 95 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils.

(*b*) *Sewerage Systems.* At 30th June, 1950, there were 12 cities or towns outside the metropolitan area—Bundaberg, Charleville, Cunnamulla, Goondiwindi, Ipswich, Mackay, Maryborough, Quilpie, Rockhampton, Toowoomba, Townsville and Warwick—with sewerage systems. A sewerage system was in course of construction in Mt. Isa.

(*c*) *Finances.* The receipts (other than loan) of water undertakings controlled by the cities and towns referred to above amounted to £636,990 in 1949–50 (£564,146 in 1948–49). Expenditure amounted to £633,488, including £208,900 for debt charges (£576,429 and £208,135 in 1948–49). In addition, loan expenditure amounted to £349,183 (£209,980 in 1948–49).

Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

4. **South Australia.**—(i) *General.* The water supply and sewerage systems in this State were constructed and are maintained by the Engineering and Water Supply Department under the control of the Minister of Works. The works controlled comprise the Adelaide, Barossa, Baroota Creek, Beetaloo, Bundaleer, Tod River, Warren and other country water districts systems, the Morgan-Whyalla water supply system, the Adelaide metropolitan sewerage system, the Murray River Weirs, water conservation, and the Metropolitan Flood Waters Scheme.

(ii) *South Australian Waterworks.* (*a*) *Services.* The table hereunder shows particulars of the area, capacity, etc. of combined metropolitan and country waterworks for the years 1938–39 and 1945–46 to 1949–50 :—

WATERWORKS, SOUTH AUSTRALIA : SERVICES.

Year.	Assessments.(*a*)		Area of Districts Supplied. (*a*)	Capacity of Reservoirs, Tanks, etc.	Length of Mains.	Number of Meters.
	Number.	Annual Value.				
		£	Acres.	Mill. gals.	Miles.	
1938–39 ..	185,625	6,302,445	11,857,968	23,814	6,384	97,074
1945–46 ..	196,021	7,035,516	11,901,977	23,910	6,845	103,462
1946–47 ..	198,952	7,190,146	11,932,461	23,920	6,927	103,514
1947–48 ..	203,422	7,405,970	11,953,022	23,927	6,997	104,726
1948–49 ..	206,904	7,694,428	11,953,235	23,941	7,056	104,649
1949–50 ..	210,808	8,113,905	11,956,885	23,942	7,126	107,092

(*a*) Excludes Morgan-Whyalla Water Supply—water sold by measure.

(*b*) *Finances.* Figures for 1938–39 and 1945–46 to 1949–50 are shown in the following table.

WATERWORKS, SOUTH AUSTRALIA : FINANCES.

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(—).
			Working Expenses.	Interest and Sinking Fund.	Total.	
1938–39 ..	14,649,052	654,688	242,528	651,972	894,500	— 239,812
1945–46 ..	18,712,037	853,406	520,078	685,615	1,205,693	— 352,287
1946–47 ..	19,577,522	856,733	542,203	676,604	1,218,807	— 362,074
1947–48 ..	20,229,154	935,693	588,703	680,550	1,269,253	— 333,560
1948–49 ..	20,399,213	978,339	670,447	695,547	1,365,994	— 387,655
1949–50 ..	21,247,004	1,016,078	817,696	705,700	1,523,396	— 507,318

(iii) *Adelaide Waterworks.* At 30th June, 1950 the Adelaide waterworks supplied a district of 144,026 acres. The capacity of its five reservoirs was 14,466 million gallons and there were 1,636 miles of mains.

Two major projects are in hand—(i) the construction of a large reservoir on the South Para River to provide additional storage to serve the lower northern areas of the State and to make some additional provision for the metropolitan area, and (ii) bringing River Murray water into Adelaide to supplement the metropolitan and Warren system areas and to serve country areas en route. The capacity of the new reservoir will be about 10,000 million gallons and the pipeline from the Murray near Mannum will deliver about 11,000 million gallons per annum.

Particulars of finances for the years 1938–39 and 1945–46 to 1949–50 are shown below :—

ADELAIDE WATERWORKS : FINANCES.

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(−).
			Working Expenses.	Interest and Sinking Fund Charges.	Total.	
1938–39 ..	4,676,110	446,459	111,347	202,279	313,626	+ 132,833
1945–46 ..	5,335,798	517,555	185,603	196,576	382,179	+ 135,376
1946–47 ..	6,018,680	521,962	209,107	200,105	409,212	+ 112,750
1947–48 ..	6,253,146	574,687	211,450	203,510	414,960	+ 159,727
1948–49 ..	6,248,465	607,718	246,951	210,898	457,849	+ 149,869
1949–50 ..	6,665,805	630,765	310,382	218,737	529,119	+ 101,646

(iv) *Adelaide Metropolitan Sewerage.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg and Port Adelaide areas, with drainage areas of 88 square miles in all, includes a sewage farm, and treatment works at Glenelg and Port Adelaide. The total quantity of sewage pumped by the various stations was 2,713 million gallons during 1949-50 as compared with 2,579 million gallons during 1948–49. Other particulars for 1938–39 and 1945–46 to 1949–50 are shown hereunder :—

ADELAIDE METROPOLITAN SEWERAGE : SUMMARY.

Year.	Length of Sewers.	Number of Connexions.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(−).
					Working Expenses.	Interest and Sinking Fund.	Total.	
	Miles.		£	£	£	£	£	£
1938–39 ..	923	80,745	3,361,034	268,880	77,023	150,273	227,296	+ 41,584
1945–46 ..	985	91,201	3,874,065	300,207	121,554	148,283	269,837	+ 30,370
1946–47 ..	1,008	93,440	4,034,770	307,215	135,868	144,702	280,570	+ 26,645
1947–48 ..	1,025	96,057	4,176,725	319,078	159,509	145,732	305,241	+ 13,837
1948–49 ..	1,048	98,948	4,324,787	333,572	182,874	148,754	331,628	+ 1,944
1949–50 ..	1,092	102,782	4,629,510	352,631	209,410	154,959	364,369	− 11,738

(v) *Country Water Supply.* Water district systems outside Adelaide at 30th June, 1950 comprised an area of 11,812,939 acres, and the capacity of the reservoirs was 9,476 million gallons. These figures exclude the Morgan-Whyalla supply system, which obtains its water from the River Murray. The storage tanks of this system had a capacity of 44 million gallons.

Construction work is proceeding on the scheme for the augmentation of the Tod River District supplies, and for the supply of other areas not already served, by utilizing water from the Uley-Wanilla sub-artesian basin. Construction had progressed to the stage, at 30th June, 1950, where 434 million gallons could be pumped from the basin to meet essential requirements.

At the request of the Commonwealth, the Engineering and Water Supply Department undertook the construction above ground of a 10-in. pipeline, together with service reservoirs, pumping stations, etc., from Port Augusta to the Guided Missile Range at Woomera, a distance of about 110 miles. This project was completed in June, 1949.

To bring a permanent supply of water to the Yorke Peninsula, contracts were let for 76 miles of steel pipes for the enlargement of the main between the Bundaleer and Clinton Reservoirs, but shortage of steel plate has delayed progress.

The following table gives financial information on country waterworks for 1938–39 and 1945–46 to 1949–50 :—

COUNTRY WATERWORKS, SOUTH AUSTRALIA : FINANCES.(a)

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit(−).
			Working Expenses.	Interest.	Total.	
1938–39 ..	10,015,613	207,569	130,523	449,691	580,214	− 372,645
1945–46 ..	10,833,353	247,733	304,848	406,127	710,975	− 463,242
1946–47 ..	11,231,493	244,495	307,379	394,392	701,771	− 457,276
1947–48 ..	11,643,730	270,738	337,557	395,246	732,803	− 462,065
1948–49 ..	11,616,857	286,646	395,717	402,809	798,526	− 511,880
1949–50 ..	12,056,803	298,256	508,759	405,355	914,114	− 615,858

(a) Excludes Morgan-Whyalla system.

(vi) *Morgan-Whyalla Water Supply Scheme.* This scheme, which involved the laying of 223 miles of main, was officially opened on 31st March, 1944, the capital invested to 30th June, 1950 being £2,524,396. Particulars of this scheme, where applicable, are included in the tables of the combined waterworks in section (ii) above. The water is sold by measure ; hence particulars of assessments and area supplied do not apply. During 1948–49 the water used from the system between Hanson and Whyalla amounted to 965 million gallons and during 1949–50 to 1,015 million gallons. Revenue for the year 1948–49 was £124,818, working expenses, etc. £68,622, interest charges £81,840, net loss £25,644. Corresponding figures for 1949–50 were, respectively, £178,779, £90,277, £81,608 and a surplus of £6,894.

5. **Western Australia.**—(i) *General.* The water supply and sewerage systems of Western Australia are principally under the management of Government Departments, and are divided into the following categories :—(a) Metropolitan Water Supply, Sewerage and Drainage, covering Perth, Fremantle, Claremont, Guildford, Midland Junction and Armadale District ; (b) Goldfields Water Supply ; (c) Water Supply of other towns, etc. ; (d) Agricultural Water Supply and (e) Artesian and sub-artesian waters.

(ii) *Metropolitan Water Supply, Sewerage and Drainage.* (a) *General.* The sources of the metropolitan water supply are the Canning Dam, Churchman Brook, Wongong Brook, Victoria Reservoir, Armadale Pipe Head Dam and Well, and certain bores. The largest reservoir, the Canning Dam, has a capacity of 20,550 million gallons, about 5,000 million gallons more than that of the recently increased Mundaring Reservoir to which it is linked by a pipe line.

The sewage treatment works of Perth and suburbs consist of primary sedimentation with separate sludge digestion and discharge of all effluent direct to the ocean. Fremantle treatment works consist of septic tanks with ocean outfall for effluent. There are three treatment works, situated at West Subiaco, Swanbourne and Fremantle.

(b) *Water Supply.* The following table shows particulars of water supply services for 1938–39 and 1945–46 to 1949–50 :—

METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA : SERVICES.

Year.	Number of Services.	Estimated Population Supplied.	Average Daily Consumption	Total Consumption for Year.	Average Daily Consumption.		Length of Mains.	Number of Meters.
					Per Service.	Per Head of Estimated Population.		
			Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	
1938–39 ..	61,467	248,248	14.1	5,147	229	56.8	953	40,014
1945–46 ..	68,310	247,090	22.0	8,041	323	89.2	1,054	41,923
1946–47 ..	70,970	279,000	24.7	9,022	348	88.6	1,107	42,968
1947–48 ..	73,601	284,915	26.9	9,838	365	94.4	1,137	44,795
1948–49 ..	76,562	290,962	27.2	9,918	355	93.5	1,173	47,073
1949–50 ..	79,835	297,123	29.1	10,618	364	97.9	1,224	49,370

Water rating for 1949–50 was 1s. 6d. in the £1 on annual valuation, with a minimum of 10s.

(*c*) *Sewerage and Drainage.* Some particulars of the metropolitan sewerage and drainage services for 1938–39 and 1945–46 to 1949–50 are shown below :—

METROPOLITAN SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA : SERVICES.

Year.	Houses Connected.	Estimated Population Served.	Sewage Pumped for the Year.(*b*)	Length of Sewers.	Length of Stormwater Drains.
			Mill. gals.	Miles.	Miles.
1938–39..	36,652	162,457	1,030	444	31
1945–46..	43,509	(*a*)	1,994	529	33
1946–47..	44,638	(*a*)	2,160	537	33
1947–48..	45,977	193,103	2,263	550	34
1948–49..	47,446	199,273	2,273	569	34
1949–50..	48,909	205,418	2,326	588	34

(*a*) Revised Census figure not available. (*b*) Aggregate of quantities pumped by the various stations.

Sewerage rating for 1949–50 was 1s. 4d. in the £1 on annual valuation, with a minimum of 7s. 6d. Stormwater drainage rating was 5d. with a minimum of 2s. 6d.

(*d*) *Finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Department for the years 1938–39 and 1945–46 to 1949–50 ;—

METROPOLITAN WATER SUPPLY AND SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA : FINANCES.

1949–50	4,567,278	274,113	84,988	196,234	281,222	− 7,109

(iii) *Goldfields Water Supply.* The source of supply for Kalgoorlie, Coolgardie and adjacent goldfields, as well as for the towns and districts on or near the pipeline, is the Mundaring Reservoir, whose capacity has recently been increased from 4,650 million gallons to 15,100 million gallons (*see* below). This scheme is now linked by pipeline with the Canning Dam. Plans have been forumlated by the State Government, assisted financially by the Commonwealth Government, for a comprehensively reticulated water scheme at an estimated cost of approximately £4,000,000 to serve an area of about 4,000,000 acres of farm lands and some 23 agricultural towns, including the principal towns on the Great Southern Railway, and to increase the supply to the Eastern Goldfields to permit expansion of the gold-mining industry. The scheme involves the raising of the impounding walls of Mundaring Weir and Wellington Dam to increase the storage capacity of these reservoirs to 15,000 million and 38,000 million gallons respectively. The following table shows details for 1938–39 and 1945–46 to 1949–50 :—

GOLDFIELDS WATER SUPPLY, WESTERN AUSTRALIA : SUMMARY.

Year.	Number of Services.	Total Consumption.	Length of Water Mains.	Number of Meters.	Capital Cost.	Revenue.	Expenditure.(a)	Surplus (+) or Deficit(–).
		Mill. gals.	Miles.		£	£	£	£
1938–39 ..	13,670	1,735	1,720	10,872	5,527,890	331,457	298,531	+ 32,926
1945–46 ..	14,528	1,831	1,750	12,699	6,178,682	317,913	405,615	– 87,702
1946–47 ..	15,130	1,975	1,757	13,163	6,283,631	343,500	396,964	– 53,464
1947–48 ..	15,411	2,028	1,768	13,423	6,425,775	338,892	480,571	– 141,679
1948–49 ..	15,669	2,131	1,773	13,639	6,614,390	341,052	533,851	– 192,799
1949–50 ..	16,063	2,208	1,777	13,991	6,803,271	346,660	566,614	– 219,954

(a) Includes interest and sinking fund.

(iv) *Water Supply of Other Towns, etc.* (a) *Controlled by Public Works Department.* During 1949–50 (1948–49 in parenthesis) water supplied to other towns and districts, excluding minor water supplies, amounted to 651 (564) million gallons, including service to adjacent mines, 18 (20) million gallons, and railways 63 (60) million gallons. Estimated population served numbered 41,865 (37,587).

(b) *Controlled by Commonwealth and State Government Railways.* Consumption for the year ended 30th June, 1950 (1948–49 in parentheses) was 296 (399) million gallons. In addition, 457 (459) million gallons were obtained from other sources, mainly the Goldfields Water Scheme and the Metropolitan Water Supply.

(c) *Water Boards not Controlled by Government.* During 1949–50 (1948–49 in parentheses) approximately 372 (367) million gallons of water were supplied to an estimated population of 17,770 (17,731).

(v) *Agricultural Water Supply.* During the thirty-eight years from 1st July, 1910 to 30th June, 1950, 574 tanks were built, 387 wells sunk, and 3,040 bores put down to a total depth of 211,779 feet. Of the bores put down, 644 yielded fresh, and 383 stock, water.

(vi) *Artesian and Sub-artesian Waters.* Up to 30th June, 1950 the total number of bores put down in search of artesian or sub-artesian water and in which water was struck (exclusive of operations by Defence Services) was 454, ranging in depth from 21 to 4,006 feet.

6. **Tasmania.**—(i) *Waterworks.* At the end of 1949–50 (1948–49 in parentheses) there were 36 (36) municipal waterworks in Tasmania. The capacity of the reservoirs was about 900 million gallons, the estimated population served was 188,598 (174,856), the number of properties assessed was 58,782 (55,458), and the length of aqueducts, mains and reticulation was about 1,075 miles. Costs of construction amounted to £1,925,902 (£1,927,009). The largest of these undertakings is Hobart, with a reservoir capacity at the end of 1949–50 of 578 million gallons, and 156 miles of reticulation and 92 miles of aqueduct and main.

(ii) *Sewerage.* Sewerage in Tasmania also is the concern of local authorities.

§ 6. Harbour Boards and Trusts.

NOTE.—The number and net tonnage of all vessels which entered the major ports in each State during the years 1938–39 and 1946–47 to 1949–50 are shown in Chapter V.—Transport and Communication, § 3. Shipping at Principal Ports. Particulars of oversea and interstate cargo discharged and shipped during 1949–50 are shown in § 6 of the same chapter.

1. **New South Wales.**—(i) *Maritime Services Board of New South Wales.* (a) *General.* The Maritime Services Board of New South Wales is a corporate body of five Commissioners, three of whom are full-time members and two, representing shipping and

commercial interests, part-time members. The Board was brought into existence on 1st February, 1936 by the Maritime Services Act 1935 in order to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation.

The Board exercises general control over intra-State shipping, including the survey and certification of vessels, the licensing of harbour craft and the examination and issue of certificates to officers; is responsible for the provision of pilotage services, lights, beacons, buoys and other port facilities; imposes and collects rates and charges on goods and vessels; and is vested with the general control and management of the navigable waters and ports within the State.

At the Port of Sydney the Board is also responsible for the provision of adequate wharfage and channels, and carries out all construction, maintenance and dredging work. At other ports of New South Wales such work is undertaken by the Department of Public Works on behalf of the Board.

(*b*) *Port of Sydney.* The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as "The Heads", and the Harbour proper, a distance of 4 miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 43 feet deep (low water ordinary spring tides) and the Eastern Channel 40 feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length and the total area of the port is 13,600 acres, or 21 square miles, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated in close proximity to the business centre of the city, about four or five miles from the Heads. Excluding ferry wharves and jetties used for private purposes, there are 64,676 feet of wharfage controlled by the Maritime Services Board and 9,928 feet of commercial wharfage privately owned. Ferry berths cover 3,427 feet, and the total for all purposes is 78,031 feet. Depth of water at wharves is up to 40 feet. The principal wharves are leased to shipping companies whose vessels engage regularly in the trade of the port; the remainder are reserved for vessels which visit the port occasionally. Special facilities for the storage and handling of staple products such as wheat, wool, etc., are provided and modern plant has been installed for replenishing ships' bunkers with oil or coal.

The docking facilities comprise five large graving docks, four floating docks and eight patent slips. The Captain Cook Graving Dock, opened in March, 1945, is capable of accommodating the largest vessel afloat.

The following table shows particulars of the finances of the Board in respect of the Port of Sydney for 1938–39 and 1945–46 to 1949–50:—

MARITIME SERVICES BOARD: FINANCES OF THE PORT OF SYDNEY.

(£.)

Year.	Total Capital Debt.	Revenue.			Expenditure.			Surplus.
		Wharfage and Transhipment Rates.	Tonnage Rates and Berthing Charges.	Total.	Administration and Maintenance.	Interest, Sinking Fund, Exchange, etc.	Total. (*a*)	
1938–39..	11,276,399	773,501	38,180	1,155,627	380,120	536,781	916,901	238,726
1945–46..	11,048,854	799,734	170,766	1,420,187	640,703	550,957	1,191,660	228,527
1946–47..	11,097,221	725,903	158,521	1,379,882	702,833	540,240	1,243,073	136,809
1947–48..	11,242,140	759,014	167,406	1,446,779	793,319	530,159	1,323,478	123,301
1948–49..	11,334,338	821,376	182,360	1,569,157	923,656	517,715	1,441,371	127,786
1949–50..	11,571,669	925,144	229,092	1,658,203	957,510	526,171	1,483,681	174,522

(*a*) Excludes capital expenditure: 1938–39, £28,576; 1945–46, £77,395; 1946–47, £153,854; 1947–48, £282,345; 1948–49, £221,227; 1949–50, £287,210.

(*c*) *Port of Newcastle.* Newcastle Harbour is administered by the Maritime Services Board and an advisory committee consisting of five members appointed by the Governor. In regard to volume of shipping entered, Newcastle ranks second in importance in New South Wales and sixth in Australia. It is primarily a coal-loading port, and the proximity of the coal field has led to the establishment of important industries, including iron and steel works, in the district. Facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

The area used by shipping is about 570 acres, excluding the entrance to the harbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of 25 feet 6 inches at low water, is 350 feet wide. Wharfage accommodation amounts to 19,900 feet, the Maritime Services Board controlling 6,720 feet, the Railways Department 7,000 feet, the Public Works Department 200 feet, and private shipping companies 2,600 feet, while tie-up berths and ferry and depot wharves comprise 3,400 feet.

(*d*) *Port Kembla.* As from 3rd May, 1948, the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works The Department will, however, continue to be the constructing authority in respect of works, dredging and maintenance. In respect of volume of shipping entered, Port Kembla ranks third in the ports of New South Wales, and about seventh in those of Australia. It has an area of approximately 330 acres, with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfage accommodation has been provided for large ocean-going vessels. It is the port of the southern coalfields and for the expanding industrial area in and about Wollongong.

(*e*) *Other Ports.* In addition to the ports of Sydney, Newcastle and Port Kembla, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

(ii) *Port Charges.* The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Federal Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1st February, 1936, the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to £2,005,371 in 1948–49 and £2,278,369 in 1949–50. These figures include the Port of Sydney revenue (*see* table above) and State navigation service collections (£436,214 in 1948–49 and £620,166 in 1949–50). Commonwealth Government revenue from light dues and navigation receipts, for the whole of Australia amounted to £202,574 in 1948–49 and £227,759 in 1949–50.

2. **Victoria.**—(i) *Melbourne Harbor Trust.* (*a*) *General.* Information regarding the origin and constitution of this Trust, which controls the Port of Melbourne, appears in Official Year Book No. 12, p. 970 *et seq.* At 31st December, 1950, the sheds available for wharfage accommodation had a length of 20,093 feet, covering an area of 1,389,982 square feet. The area of water in the bay and River Yarra under the control of the Trust is approximately 5,327 acres and the total length of wharves, piers and jetties in the port is 61,740 feet, giving an area of over 58 acres of wharfage, and 53,109 feet of effective berthing space. During 1950, work commenced on the River Entrance Docks project which provides for the construction of 28 new deep water berths. Other work undertaken during the year provides for new berths at Appleton Dock (ultimately to have eighteen berths), Victoria Dock and South Wharf. The depths of water (low water ordinary spring tide) of main channels and at principal wharves are about 30 feet, the maximum being about 36 feet.

(*b*) *Finances.* The following table shows particulars of the financial operations of the Trust during the years 1939 and 1946 to 1950 :—

MELBOURNE HARBOR TRUST : FINANCES.

(£.)

Year.	Gross Loan Indebtedness.	Revenue.		Expenditure.				Surplus.
		Wharfage and Tonnage Rates.	Total.	Administration and Maintenance.	Interest, Sinking Fund, Exchange, etc.	Depreciation, Renewals and Insurance Account.	Total. (*a*) (*b*)	
1939 ..	4,018,527	689,100	843,899	282,533	270,650	129,160	837,577	6,322
1946 ..	3,973,100	701,591	961,037	424,601	244,890	129,200	958,009	3,028
1947 ..	3,937,709	819,425	1,113,456	399,641	238,084	123,940	944,516	168,940
1948 ..	3,820,203	961,925	1,313,813	471,039	220,463	134,230	1,037,152	276,661
1949 ..	3,766,678	1,118,059	1,471,221	460,955	190,056	121,798	1,015,421	455,800
1950 ..	3,972,029	1,293,923	1,771,074	675,839	187,582	162,883	1,301,687	469,387

(*a*) Includes statutory payments to Consolidated Revenue and Geelong Harbour Trust:—1939, £155,234; 1946, £159,318; 1947, £182,851; 1948, £211,420; 1949, £242,612; 1950, £275,383. (*b*) Excludes capital expenditure :—1939, £128,567; 1946, £403,400; 1947, £375,705; 1948, £393,240; 1949, £623,396; 1950, £1,589,392.

(ii) *Geelong Harbor Trust.* The Geelong Harbor Trust was constituted in 1905, and reconstituted in 1934 under the provisions of the Melbourne and Geelong Harbor Trusts Act 1934. The Trust is under the control of three Commissioners appointed by the Governor-in-Council. Revenue for the years 1949 and 1950 was £152,497 and £193,869 respectively, and revenue expenditure was £134,351 and £162,223. Payments made in respect of capital works amounted to £124,804 in 1949 and £120,000 in 1950, and loans outstanding at the end of each year amounted to £514,896 and £508,459. Depth of water available in Geelong harbour will, upon completion of dredging operations which in 1950 were well advanced, range from 32 to 37 feet (low water ordinary spring tide).

(iii) *Other Ports.* Portland is the only Victorian port other than Melbourne and Geelong of more than minor importance.

3. **Queensland.**—(i) *General.* The ports of Queensland, except Brisbane and certain minor ports, are administered by Harbour Boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

(ii) *Brisbane.* Brisbane accommodates comfortably, in its dredged and improved river, the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly, because of the increasing size of vessels, are still within easy access of the city. The maximum depths (low water ordinary spring tide) of the shipping channel decrease from 32 feet in the North-West channel to 20 feet in the Bulimba Reach to Victoria Bridge section. Depths at wharves vary between

23 and 29 feet. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1938–39 and 1945–46 to 1949–50 are shown below :—

BRISBANE HARBOUR : FINANCES.

(£'000.)

Year.	Loan Indebtedness.	Revenue.		Expenditure.		Credit Balance.
		Harbour Dues.	Total.	Working Expenses.	Total (including Interest and Redemption).	
1938–39 ..	1,179	165	173	36	112	(*a*) — 6
1945–46 ..	1,086	146	(*b*) 247	127	206	173
1946–47 ..	1,163	149	171	133	212	132
1947–48 ..	1,219	153	222	126	209	145
1948–49 ..	1,256	190	209	162	250	104
1949–50 ..	1,325	219	299	168	260	143

(*a*) Overdraft. (*b*) Includes accumulated hire charges, etc., for dredging done for the Commonwealth Government.

In addition to Brisbane Harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, the Brisbane River, and ten smaller harbours not administered by Harbour Boards.

(iii) *Harbour Boards.* Harbour Boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton and Townsville. Finances for each port for the year 1950 are shown below, together with a summary for the years 1939 and 1946 to 1950.

HARBOUR BOARDS, QUEENSLAND : FINANCES.

(£.)

4. **South Australia.**—*The South Australian Harbours Board.* All South Australian harbours are controlled by the South Australian Harbours Board, which consists of three Commissioners appointed by the Governor for a period of five years and eligible for re-appointment. The Board is responsible to the Minister of Marine for the discharge of its duties and functions, and controls about 60 ports, but at many of them there is little

or no shipping movement. The more important are Adelaide, Augusta, Lincoln, Pirie, Wallaroo and Whyalla. Maximum depths of water (low water ordinary spring tide) at the wharves of these ports range from 20 to 24 feet at Pirie to 35 feet at Adelaide (Outer Harbour). The following table shows the finances of the Board for 1938–39 and 1945–46 to 1949–50.

SOUTH AUSTRALIAN HARBOURS BOARD : FINANCES.

(£.)

Year.	Capital Expenditure to 30th June.	Revenue.	Expenditure from Revenue.				Surplus (+) or Deficit (–).
			Working Expenses.	Interest.	Sinking Fund.	Total.	
1938–39 ..	7,861,905	664,915	205,848	326,719	50,000	582,567	+ 82,348
1945–46 ..	8,224,568	600,658	322,010	301,583	22,696	646,289	– 45,631

1948–49 ..	8,456,041	938,797	503,563	281,110	30,356	815,029	+ 123,768
1949–50 ..	8,545,084	1,050,742	583,965	281,691	33,327	898,983	+ 151,759

5. **Western Australia.**—(i) *Fremantle Harbour Trust.* Fremantle Harbour is controlled by a board of five Commissioners appointed by the Governor-in-Council. Maximum depth of water (low water ordinary spring tide) at the entrance to the harbour is 36 feet, and at the wharves 32 feet. The length of wharf berth accommodation is 10,566 feet.

Gross earnings for the year 1948–49 amounted to £1,030,816, working expenses to £633,175, interest £130,633, sinking fund £30,964, renewals fund £2,000, and payment of surplus cash to Consolidated Revenue £195,880. Corresponding figures for 1949–50 were £1,243,046, £742,596, £117,791, £32,721, £2,000 and £311,468. The total amount debited to loan capital account at 30th June, 1950 was £2,976,677.

(ii) *Bunbury Harbour Board.* The Bunbury Harbour Board consists of five members appointed by the Government. The depth of water at the entrance and at the wharf is 27 feet (low water ordinary spring tide). Berthage accommodation is 3,700 feet. Gross earnings in 1948-49 were £19,669, working expenses £29,083, and interest £28,969 (1947-48, £22,818, £34,815, £28.363). The total amount debited to loan capital account at 30th June, 1949 was £776,646.

(iii) *Other Ports.* Only the ports of Fremantle and Bunbury in Western Australia are under the control of trusts, the remainder are Government operated. Of these, Albany, Carnarvon and Geraldton and Onslow have the largest amount of shipping movement.

6. **Tasmania.**—There are seven Marine Boards and two Harbour Trusts in Tasmania. The Marine Boards control the ports of Hobart, Launceston, Circular Head, Burnie and Table Cape, Devonport, Strahan, and King Island (Currie), and the Harbour Trusts those of Smithton and Leven. Aggregate receipts of revenue accounts of all these authorities during the year 1948–49 were £368,751 and expenditures £318,528, including loan charges £56,252. Corresponding figures for 1949–50 were £385,506, £397,469 and £61,973. The total receipts of the Hobart Marine Board during 1948–49 were £147,901, loan charges £2,351 and total expenditure £122,669. Corresponding figures for 1949–50 were £144,914, £6,186, and £141,523. Launceston Marine Board receipts during 1948-49 amounted to £83,927, loan charges to £9,893 and total expenditure to £83,927. The figures for 1949–50 were, respectively, £86,639, £9,893 and £86,639. Loan indebtedness of all Marine Boards and Trusts at 30th June, 1950 was £1,179,480, of which £279,620 was in respect of Hobart and £81,431 in respect of Launceston.

Hobart, Launceston, Burnie and Devonport are the principal ports of Tasmania. In addition to their interstate and intra-state traffic, there is also considerable oversea shipping. Depths of water at wharves vary, in general, between 16 and 34 feet (low water ordinary spring tide), but at Hobart there is a depth of water of from 30 to 52 feet.

§ 7. Fire Brigades.

1. **New South Wales.**—(i) *General.* A Board of Fire Commissioners, consisting of eight members, operates under the Fire Brigades Act 1909–1949, and 151 fire districts had been constituted at the end of 1950. The cost of maintenance of fire brigades has been borne in proportions of quarter, quarter, and half by the Government, the municipalities, and the insurance companies concerned, the expenditure so regulated that the proportion payable by the councils in a fire district should not, except in special circumstances, exceed the amount obtainable from ¼d. in the £1 rate on the unimproved capital value of ratable land in the fire district. In June, 1949 legislation was introduced (i) increasing the limit of the Board's borrowing power from £250,000 to £500,000, (ii) providing for the varying of the maximum rate that may be levied by councils, and (iii) altering the basis of contributions so that from 1st January, 1950 local councils and the Government will each pay one-eighth and the insurance companies three-quarters.

Other legislation, introduced in September, 1949 to improve and modernize the law dealing with the prevention of bush fires and to build up the organization of the bush fire-fighting services, provided for the establishment of Fire Regions and a Bush Fire Fighting Fund to be financed from contributions by the Government, councils and insurance companies in the proportion of one-quarter, one-quarter and one-half, respectively. The contribution of any council shall not exceed one-twentieth of a penny in the £1 on the unimproved capital value of ratable land in the area of the council not being land within a fire district constituted under the Fire Brigades Act 1909–1949.

(ii) *Board of Fire Commissioners of New South Wales.* At 31st December, 1950 the authorized strength of the Fire Brigade throughout the fire districts of New South Wales was 292 officers and 823 permanent, 2,039 volunteer, and 1,924 reserve firemen. Corresponding figures for the Sydney Fire District were 240, 774, 321 and 778. The revenue for the year 1950 (figures for the year 1949 in parentheses) was £1,096,617 (£929,610), made up as follows :—From the Government, £134,401 (£226,205) ; municipalities and shires, £134,401 (£226,205) ; fire insurance companies and firms, £806,406 (£452,410) ; and from other sources, £21,409 (£24,790). The disbursements for the year were £1,087,606 (£1,030,269).

2. **Victoria.**—(i) *General.* The Fire Brigades Act of 1928 provided for a Metropolitan Fire Brigades Board and a Country Fire Brigades Board each consisting of nine members. In December, 1944 the latter Board was superseded by the Country Fire Authority under an Act of that title, and the number of members was increased to ten. The income of each Board is derived in equal proportions from the Treasury, the municipalities and insurance companies.

(ii) *Metropolitan Fire Brigades Board.* On 30th June, 1950 the Board had under its control 42 stations, 580 permanent staff, 162 special service and clerical, etc. staff, and 20 partially-paid firemen. The total receipts for 1949–50 (1948–49 in parentheses) were £583,867 (£383,702), comprising contributions £470,179 (£279,764), receipts for services £66,419 (£68,350), and interest and sundries £47,269 (£35,588). The expenditure was £525,954 (£373,526).

(iii) *Country Fire Authority.* This authority, constituted in 1944, is responsible for the prevention and suppression of fires in the " country area of Victoria ", which embraces the whole of the State outside the metropolitan fire district, excluding State forests and certain crown lands. The country area has been divided into 24 fire control regions, three of which (Ballarat, Bendigo and Geelong) are wholly urban and the remainder mixed urban and rural. At 30th June, 1950 there were 171 municipal councils and 126 insurance companies included in the operation of the Act, and 194 urban and 940 rural fire brigades. The effective registered strength of the brigades was 73,717 members.

The receipts for the year 1949–50 (1948–49 in parenthesis) amounted to £135,445 (£115,623). Total expenditure other than loan amounted to £135,069 (£115,574).

3. **Queensland.**—(i) *General.* The Acts of 1920–1931 made provision for the retention of existing fire districts, and for the constitution of new districts. For each district there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows :—The Treasury two-sevenths, insurance companies three-sevenths, and local authorities two-sevenths. All volunteer fire brigades in a district must be registered.

(ii) *Fire Brigades Boards.* At 30th June, 1950 there were 63 Fire Brigades Boards. The total number of stations was 105, and full-time staff numbered 463, including 13 administrative, 84 officers and 351 firemen. Workshop staff numbered 15. Part-time staff numbered 571, including 63 administrative, 84 officers and 424 firemen. Volunteers numbered 370. The total revenue for the year 1949–50 (figures for 1948–49 in parentheses) was £396,182 (£308,391), received mainly from the following sources—Government £95,312 (£77,681), local authorities £94,971 (£78,053), insurance companies £142,873 (£117,160), and loans (Government and other) £47,967 (£20,012). The total expenditure for the year was £386,760 (£317,689), the chief items being salaries and wages £233,467 (£212,009), and interest and redemption of loans £34,235 (£24,556).

4. **South Australia.**—The Fire Brigades Act 1936–1944 provides for a board of five members, and the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury, five-ninths by insurance companies, and two-ninths by the municipalities concerned. The contribution of the Treasury, however, is limited to £10,000 and if two-ninths of the expenses and maintenance exceeds this amount, five-sevenths of the excess is contributed by the insurance companies and two-sevenths by the municipalities. At 30th June, 1950 there were altogether 34 fire brigade stations, of which 12 were metropolitan and 22 country.

The authorized strength of the permanent staff was 329, including 233 officers and men and 77 country auxiliary firemen. The total revenue for the years 1948–49 and 1949–50 was £129,312 and £166,783 respectively, the latter figure being made up as follows :—insurance companies £104,310, Treasury £21,144, and municipalities £41,329.

5. **Western Australia.**—In 1942 certain Municipal and Road Board Districts were constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 27 at 30th June, 1950. The income of the Board is derived in the proportion of two-ninths from the Government, two-ninths from Local Government Authorities, and five-ninths from insurance companies. The number of local government authorities and insurance companies who contributed numbered 52 and 113 respectively. The brigades throughout the State controlled by the Western Australian Fire Brigades Board at 30th September, 1950 numbered 43, with a staff of 1,173, including 210 permanent officers and firemen and 947 volunteer brigade officers and firemen. In addition, there were at 30th June, 1950, 394 registered bush fire brigades sponsored by local authorities under the Bush Fires Act 1937–1950. A Rural Fire Prevention Advisory Committee, acts in an advisory capacity. The revenue for the year ended 30th September, 1949 was £127,395 and the expenditure £134,571. Corresponding figures for the year ended September, 1950 were £156,548 and £149,144.

6. **Tasmania.**—The Fire Brigades Act 1945 provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of the 22 existing Fire Brigades Boards, while leaving the responsibility for individual control and management with the Boards. The Commission consists of five members nominated or elected by the Fire Brigades Boards and one member nominated by the Minister. Contributions towards the cost of operations remain on the old basis of one-third each from the Treasury, the municipalities and the insurance companies concerned. The cost for the year 1948–49 amounted to £33,409 and for 1949–50 to £35,953. There were at 30th June, 1950, 27 stations amongst the 22 brigades, and their aggregate staffs numbered 398, including 68 permanent officers and 306 partially-paid firemen, including officers.

CHAPTER XVI.
PRIVATE FINANCE.

NOTE.—This chapter, for convenience, has been sub-divided into seven sections as follows :—

Currency ; Banking, including Savings Banks ; Companies ; Insurance : Friendly Societies ; Probates and Letters of Administration ; and Lotteries, Totalizators and Investments with Bookmakers.

A. CURRENCY.

§ 1. General.

The Australian monetary system is based on the British system of which the unit is the pound (£) divided into 20 shillings (s.) each of 12 pence (d.). When the Australian currency was introduced in 1909 the Australian pound was specified as equivalent to 123.27447 grains of gold $^{11}/_{12}$ ths fine or 113.002 grains of fine gold and, until the depression in 1930, was identical with the pound sterling. There was a gradual depreciation of the Australian pound in terms of sterling from the beginning of 1930 until 3rd December, 1931, when it was stabilized at the rate of £125 Australian = £100 sterling. This relationship has been maintained until the present time. Following the depreciation, no action was taken to define the value of the Australian pound in terms of gold until 5th August, 1947, when the Australian Government advised the International Monetary Fund, in terms of the agreement, that the par value of the Australian pound was 2.86507 grammes (44.2148 grains) of fine gold. From 19th September, 1949 this was reduced to 1.99062 grammes (30.720 grains) of fine gold.

When the Commonwealth was established in 1901, the currency in Australia consisted of United Kingdom gold, silver and bronze coins, notes issued by the banks, and Queensland Treasury notes. Queensland Treasury notes were in circulation in Queensland only, having superseded bank notes in that State after the 1893 crisis. Under the Commonwealth Constitution the control of currency, coinage and legal tender and the issue of paper money were vested in the Commonwealth. The Commonwealth assumed these powers by enacting the Coinage Act 1909 and the Australian Notes Act 1910.

§ 2. Coinage.

1. **Coins in Circulation.**—Brief historical notes relating to the Australian Coinage are given in Official Year Book No. 37, pages 557 and 558. The gross weight, diameter, thickness and metal composition of coins in circulation at 30th June, 1951 are described in the following table :—

AUSTRALIAN COINS IN CIRCULATION AT 30th JUNE, 1951.

Denomination.	Gross Weight.	Diameter.	Thickness.	Metal Composition.	
				Metal.	Proportion.
	Grains.	Millimetres.	Millimetres.		Per cent.

Halfpenny (½d.) ..	87.50	25.48	1.62		

(a) Issued after 1st July, 1947 (Coins dated 1946 and later).

The silver coins issued prior to July, 1947 have a millesimal fineness of 925 (thirty-seven fortieths silver and three fortieths alloy) and those issued after 1st July, 1947 (dated 1946 and later) have a millesimal fineness of 500 (one half silver and one half alloy).

Australian coins are legal tender in Papua, New Guinea, Norfolk Island and Nauru.

From 1910 to 1916 Australian coins were minted in England by the Royal Mint, London, and the Mint, Birmingham Ltd., and in 1916 and 1917 by the Indian Mints. The minting of Australian coins was undertaken by the Australian Mints from 1916 and coins have been minted at the Melbourne branch of the Royal Mint from 1916 to the present time, at the Sydney branch from 1919 until that Mint closed in 1926 and at the Perth branch in 1922 and since 1940.

During the 1939–45 War the two Australian mints were unable to meet the demand for Australian coins and some coins were minted at mints in the United States of America and India. Details of Australian coins obtained from each mint to 30th June, 1951, are given in the following table :—

AUSTRALIAN COINS OBTAINED FROM MINTS FROM 1910 TO 30th JUNE, 1951.

(*a*) Includes the following amounts for which denominations are not available—1910 to 1949, £51,840; 1949–50, £21; 1950–51, £67. (*b*) Includes half-pence to 30th June, 1948. (*c*) Included with pence to 30th June, 1948.

Coin withdrawn between 1947 and 1951 included a considerable quantity of silver coin withdrawn for recoinage.

3. **Legal Tender.**—Imperial gold coins of the specified weight and fineness are legal tender in Australia for any amount. Australian silver coins are legal tender for any amount not exceeding forty shillings and Australian bronze coins are legal tender for any amount not exceeding one shilling.

4. **Profits on Coinage of Silver and Bronze.**—Australian silver and bronze coins are token coins and, as the face value of the coins is greater than the value of the bullion they contain, a profit is made from their issue. This profit forms part of the Commonwealth Consolidated Revenue. In the following table details are given of the value of coins issued, the cost of bullion, the cost of minting and sundry expenses connected with the issue, and the profits made on the issue of coins during the years 1938–39 and 1946–47 to 1950–51.

1950–51 ..	1,761,266	960,894	395	799,977	301,305	498,672

(a) Face value of coin less value of bullion recovered. (b) Included with Cost of Minting and Sundry Charges. (c) During 1946–47 a considerable quantity of new silver was minted but not issued until 1947–48. The cost of minting this coin is included in 1946–47. (d) In 1947–48 and 1948–49 silver in coin withdrawn was brought to account as bullion at a nominal value. In 1949–50 an adjustment was made to bring this value to the face value of the coin withdrawn. This adjustment and a consequent adjustment for an increase in the cost of bullion in coin issued during 1947–48, 1948–49 and 1949–50 are included in this figure. (e) Minus sign (—) denotes a loss.

5. **Australian Mints.**—(i) *General.* Soon after the discovery of gold in Australia a branch of the Royal Mint was established in Sydney. The formal opening took place on 14th May, 1855. The Melbourne branch was opened on 12th June, 1872, and the Perth branch on 20th June, 1899. The States of New South Wales, Victoria and Western Australia provided an annual endowment in return for which the mint receipts were paid to the respective State Treasuries. Owing to losses incurred in its operations, the Sydney branch was closed at the end of 1926.

Since their establishment, the Australian branches of the Royal Mint have been primarily concerned with the refining of gold, minting of Imperial gold coins and the production of bars and ingots of gold bullion for export. The minting of Imperial gold coins was discontinued in September, 1931. In 1916 the Melbourne branch took over the minting of Australian silver and bronze coins from the Royal Mint, London. Australian coins were also minted at the Sydney Mint from 1919 to 1926 and at the Perth Mint in 1922 and from 1940 to the present time. The Melbourne branch has also minted token coins for the Territory of New Guinea and for New Zealand.

(ii) *Gold Receipts and Issues.* (*a*) *Receipts.* The receipts of gold during 1949, 1950 and 1951 and the aggregate at each mint to the end of 1951 were as follows:—

AUSTRALIAN MINTS: RECEIPTS OF GOLD.

Mint.	Deposits during year (Oz.) (*a*)—			Total to end of 1951. Quantity (Oz.)	
	1949.	1950.	1951.	Gross.	Fine.
Sydney(*b*)	..	..	..	42,082,928	36,907,045
Melbourne	284,422	318,832	289,958	48,120,530	42,601,349
Perth	899,269	829,845	863,464	53,750,660	42,504,437
Total	1,183,691	1,148,677	1,153,422	143,954,118	122,012,813

(*a*) Gross weight. (*b*) To end of 1926, when the mint was closed.

(*b*) *Issues.* The Australian mints issue gold bullion for the use of local manufacturers (jewellers, dentists, etc.), and for export. Since September, 1931, when the United Kingdom departed from the gold standard, the minting of gold coins by Australian mints has ceased. Australian exports of gold are mainly in the form of 400-oz. ingots, but in earlier years a considerable amount of gold was shipped to India in 10-oz. bars. Since early in the 1939–45 War all gold has been acquired by the Commonwealth Bank and the export and use of gold has been subject to regulation by the Commonwealth Government. The issues during the years 1949 to 1951, and the total to the end of 1951, are shown in the table below:—

AUSTRALIAN MINTS: ISSUES OF GOLD.

(£.)

Year and Item.	Mint.			
	Sydney.	Melbourne.	Perth.	Total.
(i) Bullion (*a*)—				
1949	..	603,929	2,770,360	3,374,289
1950	..	590,627	2,580,512	3,171,139
1951	..	592,483	2,631,839	3,224,322
Aggregate to 30th June, 1951	7,574,408	32,722,296	73,830,506	114,127,210
(ii) Coin(*b*)—				
Aggregate to 30th June, 1951—				
Sovereigns ..	144,435,550	147,283,131	106,384,197	398,102,878
Half-sovereigns ..	4,781,000	946,780	367,338	6,095,118
Aggregate to 30th June, 1951	149,216,550	148,229,911	106,751,535	404,197,996
Total Gold Issued to 30th June, 1951 ..	156,790,958	180,952,207	180,582,041	518,325,206

(*a*) Value expressed at £3 17s. 10½d. per standard ounce. (*b*) Gold coin has not been issued since September, 1931.

6. **Price of Gold.**—The following table shows the average prices of gold and the average value of the sovereign in London and Australia for the years 1938–39 and 1941–42 to 1950–51. The average price of gold in Australia is based on the Commonwealth Bank's buying price for gold lodged with the mints.

PRICE OF GOLD : LONDON AND AUSTRALIA.

Period.	London.		Australia.

§ 3. Notes.

1. **General.**—Brief historical notes relating to the circulation and issue of notes in Australia are given in Official Year Book No. 37, pages 561 and 562. The issue of notes intended for circulation as money by any person, bank or State other than by the Commonwealth Bank is prohibited.

2. **The Australian Note Issue.**—(i) *General.* Notes in circulation in Australia are issued by the Commonwealth Bank through the Note Issue Department. The Bank is authorized to issue Australian notes in denominations of 5s., 10s., £1, £5, £10 and any multiple of £10. The Commonwealth Bank is not required to hold a specific reserve in gold against the note issue, but the assets of the Note Issue Department must be held or invested in gold, on deposit with any bank or in securities of the Government of the United Kingdom, the Commonwealth or a State. All profits of the Note Issue Department, with the exception of an amount not exceeding £500,000 each year which may be paid to the other departments or divisions of the Commonwealth Bank, are paid to the Commonwealth Consolidated Revenue Fund.

Australian notes are legal tender to any amount within Australia and have been issued in denominations of 10s., £1, £5, £10, £20, £50, £100 and £1,000.

(ii) *Australian Notes in Circulation.* Particulars of the average values of notes in circulation for the years 1938–39 and 1946–47 to 1950–51 are given in the following table :—

AUSTRALIAN NOTE ISSUE.

(£'000.)

Denomination.	Average of monthly statements for year—					
	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

Total ..	48,572	199,639	198,306	204,355	223,001	254,083

(iii) *Commonwealth Bank—Note Issue Department.* The following statement shows particulars of liabilities and assets of the Note Issue Department of the Commonwealth Bank as at 30th June, 1950 and 1951.

NOTE ISSUE DEPARTMENT : LIABILITIES AND ASSETS, 30th JUNE.

(£'000.)

Liabilities.	1950.	1951.	Assets.	1950.	1951.
Notes on Issue(*a*) ..	231,270	275,221	Gold and Balances held abroad (including money at short call) ..	80,409	135,553
Special Reserve—Premium on gold sold	4,755	4,755	Government Securities (including Commonwealth Treasury Bills)	157,847	146,719
Other Liabilities(*a*) ..	2,362	2,364	Other Assets ..	131	68
Total Liabilities ..	238,387	282,340	Total Assets ..	238,387	282,340

(*a*) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years, and notes of a denomination exceeding one pound which have been on issue for more than 40 years are not included in the item "Notes on Issue" but are included in the item "Other Liabilities".

All the net profits of the Note Issue Department, except £2,000,000 paid between 1926 and 1933 to the capital account of the Rural Credits Department, £1,200,000 paid between 1943 and 1951 to the capital of the Mortgage Bank Department and an amount not exceeding £500,000 each year that may be paid to the other departments or division of the Bank from 1951, are paid to the Commonwealth Treasury. In 1949–50 the net profits of the Note Issue Department amounted to £4,333,000 of which £4,183,000 was paid to the Commonwealth Treasury and £150,000 to the capital account of the Mortgage Bank Department. In 1950–51 the net profits amounted to £3,544,000 of which £3,394,000 was paid to the Commonwealth Treasury and £150,000 to the capital account of the Mortgage Bank Department.

§ 4. Legal Tender Extant.

Accurate information regarding the amount of legal tender in circulation is not available, but the following table provides an estimate of the amount of legal tender extant about the middle of the years 1939 and 1947 to 1951.

ESTIMATED LEGAL TENDER EXTANT : AUSTRALIA.

(£'000.)

Particulars.	1939. (a)	1947.	1948.	1949.	1950.	1951.
Australian Notes(b)—						
Held by Banks	14,829	19,037	22,766	23,744	28,068	35,130
Held by Public	32,701	183,643	173,839	189,111	203,245	240,140
Coin(c)—						
Gold(d)—Held by Banks(e)	79	81	82	86	91	95
Held by Public	..	..	..	..	..	..
Silver—Held by Banks(e)	2,508	5,168	6,720	6,803	6,551	5,889
Held by Public ..	6,830	21,058	22,236	22,712	23,013	24,106
Bronze—Held by Banks(e)	132	169	162	143	175	161
Held by Public	521	1,260	1,371	1,556	1,674	1,896
Total	57,600	230,416	227,176	244,155	262,817	307,417

(a) Prior to 1947 withdrawals of coin were negligible and no allowance has been made for coin withdrawn in the estimates for the year 1939. (b) Last Monday in June, in 1939. Last Wednesday in June thereafter. (c) *See* paragraph below. No allowance has been made for coin lost or destroyed which, during the war years, may have been considerable. (d) Value—one sovereign equals £1. (e) At 30th June.

The figures shown above for silver coin represent the net issues of Australian silver coin less the excess of exports of Australian coins over the reimports of Australian coins. The amount of British coin in circulation in Australia is negligible, and, as it is not possible to ascertain accurately its volume, no allowance has been made for it. The figures shown for bronze coins refer to the total issues of Australian coin, the small amount of British coin in circulation being disregarded.

B. BANKING.

§ 1. Cheque-Paying Banks.

1. **Banking Legislation.**—(i) *Commonwealth Legislation.* Under Section 51 of the Commonwealth Constitution the Commonwealth Parliament has power to legislate with respect to " Banking, other than State banking, also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money ". The principal Commonwealth Acts at present in force relating to Banking are—

(a) The Commonwealth Bank Act 1945–1951 which replaced the Commonwealth Bank Act 1911–1943, and provides for the constitution and management of the Commonwealth Bank and Commonwealth Savings Bank and the management of the Australian note issue ; and

(b) The Banking Act 1945, which provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth.

The Banking Act 1945 was assented to on 3rd August, 1945, and came into operation on 21st August, 1945. It applies to all banks, except State Banks, operating in Australia or Territories of the Commonwealth. The objects of the Act are :—(a) To provide a legal framework, uniform throughout Australia, for regulating the banking system; (*b*) to safeguard depositors of the banks from loss; (*c*) to provide for the co-ordination of banking policy under the direction of the Commonwealth Bank; (*d*) to control the volume of credit in circulation and bank interest rates; (*e*) to mobilize and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the Act is given in Official Year Book No. 37, page 565.

The Banking Act 1947 which was assented to on 27th November, 1947, provided for the acquisition by the Commonwealth Bank of the Australian business and assets of the private banks operating in Australia, and for the prohibition of private banks from carrying on banking business in Australia. The Act did not apply to State banks or savings banks. For a summary of the main provisions of the Act *see* Official Year Book No. 37, pages 566 and 567. The validity of this Act was challenged in the High Court by the private banks and the States of Victoria, South Australia and Western Australia, and, in a majority judgment delivered on 11th August, 1948, the Court held that certain vital sections were invalid. An appeal to the Privy Council against part of this judgment was dismissed and the Act was repealed by the Commonwealth Bank Act 1951.

(ii) *State Legislation.* State banking legislation relates to the incorporation of banks and the constitution and management of State banks. The Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g., the Bank of New South Wales by Act of Council 1817, The Bank of Australasia by Royal Charter, The Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the crisis of 1893. State banks constituted under State Acts transacting general banking business are the Rural Bank of New South Wales, The State Bank of South Australia and The Rural and Industries Bank of Western Australia.

2. **Royal Commission on Monetary and Banking Systems.**—A Royal Commission was appointed by the Commonwealth Government in November, 1935 to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interests of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report on 15th July, 1937, and a summary of the recommendations appears in Official Year Book No. 31, p. 1010.

3. **Presentation of Banking Statistics.**—Because of the different purposes they serve in the Australian financial system Australian cheque-paying banks have been divided for statistical purposes into three groups and a separate series is presented for each of these groups. These groups are:—

(*a*) *The Commonwealth Bank.* This is the Central Bank. It also transacts general banking business through a General Banking Division and provides special banking facilities through the Rural Credits, Mortgage Bank and Industrial Finance Departments. Statistics of the Central Banking Business (including the Note Issue Department) and the General Banking Division and Rural Credits, Mortgage Bank and Industrial Finance Departments are presented in separate series.

(*b*) *Private Trading Banks.* This group was formerly known as the Nine Trading Banks but the number of banks included has been reduced to seven by amalgamations. With the General Banking Division of the Commonwealth Bank, these banks provide the major part of the general banking facilities in Australia. The banks included in this group are—The Bank of New South Wales, The Commercial Banking Company of Sydney Ltd., The National Bank of Australasia Ltd. (which has absorbed the Queensland National Bank Ltd.), The Commercial Bank of Australia Ltd., The Bank of Adelaide, The Australia and New Zealand Bank Ltd. (an amalgamation of The Bank of Australasia Ltd. and The Union Bank of Australia Ltd.), and The English, Scottish and Australian Bank Ltd.

(c) *Other Banks.* This group consists of (i) three State Government Banks—The Rural Bank of New South Wales, The State Bank of South Australia and The Rural and Industries Bank of Western Australia which, in their general banking business, specialize mainly in financing rural industries, (ii) two joint stock banks—The Ballarat Banking Co. Ltd. and The Brisbane Permanent Building and Banking Co. Ltd. which have specialized business in two districts only, and (iii) branches of three oversea banks—The Bank of New Zealand, Comptoir National d'Escompte de Paris and the Bank of China which transact limited business in Australia and are mainly concerned with financing trade, etc., between Australia and oversea countries.

In addition to the series mentioned above, a series for all cheque-paying banks is presented. This series covers the General Banking Division and Rural Credits, Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank, the Private Trading Banks and the other cheque-paying banks included in the third group.

Unless otherwise stated, the statistics presented are averages of weekly returns. Averages of liabilities and assets are the averages of the liabilities and assets of the banks on the several weekly balance days during the period concerned. Averages of bank clearings and debits to customers' accounts are the averages of transactions for weeks ended on the balance days during the period.

Until December, 1946 these balance days were the Mondays of each week. From January, 1947 Wednesday became the weekly balance day.

Under the Banking Act 1945 the returns furnished by cheque-paying banks were slightly modified and the figures quoted in the following pages may not in all cases be strictly comparable with those quoted in earlier issues of the Official Year Book. The main changes relate to the classification of assets and liabilities. Under the Commonwealth Bank Act 1945 the Commonwealth Bank was reorganized and figures quoted for this Bank are not comparable with those published in issues of the Official Year Book prior to No. 37.

4. **Banks Transacting Business in Australia.**—(i) *Number of Branches.* At 30th June, 1951 the 17 banks operating in Australia transacted all classes of banking business at 3,000 branches and 1,045 agencies. The Commonwealth Bank of Australia and the Private Trading Banks have branches throughout the Commonwealth. The Rural Bank of New South Wales, State Bank of South Australia and Rural and Industries Bank of Western Australia, being State Government banks specializing mainly in financing rural industries, have branches only in those States. Two banks, the Ballarat Banking Company Ltd. and the Brisbane Permanent Building and Banking Co. Ltd., transact business only in Ballarat and Brisbane respectively. The remaining three banks are branches of oversea banks.

CHEQUE-PAYING BANKS: NUMBER OF BRANCHES(a) AT 30th JUNE, 1951.

5. **Commonwealth Bank.**—(i) *General.* An account of the progress and development of the Commonwealth Bank is given in earlier issues of the Official Year Book (*see* No. 37, pages 570 to 573). The general functions of the Bank are set out in section 8 of the Commonwealth Bank Act 1945–1951 which states—

> "8. It shall be the duty of the Commonwealth Bank, within the limits of its powers, to pursue a monetary and banking policy directed to the greatest advantage of the people of Australia, and to exercise its powers under this Act and the Banking Act 1945 in such a manner as, in the opinion of the Bank, will best contribute to :—
>
> (*a*) the stability of the currency of Australia ; (*b*) the maintenance of full employment in Australia ; and (*c*) the economic prosperity and welfare of the people of Australia."

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department and provides general banking facilities through a General Banking Division and special services through the Rural Credits Department, Mortgage Bank Department and Industrial Finance Department. The Commonwealth Savings Bank, a separate institution providing for small depositors, is controlled by the Commonwealth Bank Board and is operated in conjunction with the Commonwealth Bank.

(ii) *Management.* Under the Commonwealth Bank Act 1911 the Bank was managed by a Governor. From 1924 to August, 1945 it was controlled by a Board of Directors. Under the Commonwealth Bank Act 1945 control was vested in a Governor, assisted by an Advisory Council. Since 21st August, 1951, under the Commonwealth Bank Act 1951, the policy of the Commonwealth Bank and the Commonwealth Savings Bank has been determined by the Commonwealth Bank Board consisting of the Governor (Chairman), the Deputy Governor, the Secretary, Department of the Treasury and seven other members appointed by the Governor-General. The Bank is managed by the Governor who shall act in accordance with the policy of the Bank and with any directions of the Board. The Bank is required to inform the Government of the monetary and banking policy of the Bank. In the event of a disagreement between the Government and the Bank as to whether the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia, the Governor-General acting with the advice of the Executive Council may determine the policy to be adopted by the Bank.

(iii) *Central Banking Business.* Under the powers it possessed under the Commonwealth Bank Act 1911–1943 and under its war-time powers under the National Security Regulations, the Commonwealth Bank had gradually assumed the functions of a Central Bank. Part III. of the Commonwealth Bank Act 1945 formally constituted the Commonwealth Bank as a Central Bank and granted the Bank the necessary powers to carry on the business of a Central Bank. The capital for the Central Banking Business is £4,000,000 and such other sums as are transferred from the Reserve Fund. Until 30th June, 1951 the profits of the Central Banking Business were distributed as follows :—(*a*) One-quarter to be placed to the credit of the Commonwealth Bank Reserve Fund ; (*b*) one-quarter to be paid to the Mortgage Bank Department Capital Account ; (*c*) one-half to be paid to the National Debt Sinking Fund. When the capital of the Mortgage Bank Department has reached £4,000,000 the share of profits payable to that department will be credited to the Commonwealth Bank Reserve Fund. By the Commonwealth Bank Act 1951 the distribution of profits was altered as follows :—(*a*) One-half to be paid to the National Debt Sinking Fund ; (*b*) for a period of five years an amount not exceeding £500,000 per annum may be paid to the capital of the various sections of the Bank, this amount to be distributed as follows—General Banking Division, Mortgage Bank Department and Industrial Finance Department each two-sevenths and the Rural Credits Department one-seventh ; and (*c*) the balance to be paid to the Commonwealth Bank Reserve Fund.

(iv) *Note Issue Department.* This department was established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank. The Bank may, through this department, issue, re-issue and cancel Australian notes. Until 30th June, 1951, all profits of this Department, with the exception of £2,000,000 paid to the capital account of the Rural Credits Department and £1,200,000 paid to the capital account of the Mortgage Bank Department, were paid to the Commonwealth Consolidated Revenue. Under the Commonwealth Bank Act 1951 provision is made for an amount, not exceeding £500,000 per annum for five years, to be paid to the capital accounts of the General Banking Division and the Rural Credits, Industrial Finance and Mortgage Bank Departments. This amount is payable only if a similar amount is paid from the profits of the Central Banking Business and is to be distributed to the various sections in the same proportions as the amount payable from the profits of the Central Banking Business. The balance of the profits is to be paid to the Commonwealth Consolidated Revenue Fund.

(v) *General Banking Division.* Under the Commonwealth Bank Act 1911–1943 no provision was made for the separation of the general banking business of the bank from its central banking business. Under the Commonwealth Bank Act 1945 the General Banking Division was set up to carry on the general banking business of the Bank. The accounts and transactions of this division are kept separate and distinct from the other accounts of the Bank. The capital of the General Banking Division is £4,000,000, and such other sums as are transferred from the General Banking Division Reserve Fund, or from the profits of the Central Banking Business and the Note Issue Department. The profits of the General Banking Division are distributed as follows :—(*a*) one-half is credited to the General Banking Division Reserve Fund, and (*b*) one-half is paid to the National Debt Sinking Fund.

(vi) *Rural Credits Department.* The Rural Credits Department was established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce. The Bank may, through this department, make advances, upon the security of primary produce placed under the legal control of the Bank or other security associated with the production or marketing of primary produce, to co-operative associations or marketing boards formed under the laws of the Commonwealth or of a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not be more than one year. The capital of the Rural Credits Department is £2,000,000 and such amounts as are transferred from the profits of the Central Banking Business and the Note Issue Department. Profits are distributed as follows :—(*a*) one-half is credited to the Rural Credits Department Reserve Fund, and (*b*) one-half is credited to the Rural Credits Department Development Fund for the promotion of primary production.

(vii) *Mortgage Bank Department.* The Mortgage Bank Department was established in 1943 for the purpose of making long-term loans to primary producers. Through this department the Bank may make a loan to any person engaged in farming, agricultural, horticultural, pastoral or grazing operations or other form of primary production, upon the security of a mortgage to the Bank of an estate or interest in land in the Commonwealth owned by the borrower. The term of the loan shall not be less than five years nor more than forty-one years. The capital of the department is limited to £4,000,000 plus any amount transferred from the profits of the Central Banking Business and the Note Issue Department. Profits are credited to the Mortgage Bank Department Reserve Fund.

(viii) *Industrial Finance Department.* The functions of the Industrial Finance Department established in January, 1946 are :—(*a*) to provide finance for the establishment and development of industrial undertakings ; (*b*) to assist in the establishment and development of industrial undertakings ; and (*c*) to provide advice on the operations of industrial undertakings with a view to promoting the efficient organization and conduct thereof. To exercise these functions the Bank may, through the Industrial Finance Department, lend money and purchase and sell shares or securities in an industrial undertaking. The capital of this department is £4,000,000 plus any amount transferred from the profits of the Central Banking Business and Note Issue Department. The Treasurer, the Bank and the Savings Bank may advance money to the Industrial Finance Department. The amount that may be advanced by the Bank is limited to £1,000,000. The profits of the department are credited to the Industrial Finance Department Reserve Fund.

(ix) *Housing Loans.* Provision is made for the Bank, through the General Banking Division, to make loans to individuals or building societies for the erection or purchase of homes or for the discharge of mortgages on homes. These loans must be made at the lowest possible rate of interest. Loans to individuals are to be on *crédit foncier* terms, to be secured by first mortgage on an estate or interest in land owned by the borrower and to be repaid in periods of not less than 5 years nor more than 35 years. Loans to building societies are to be made on such security and on such terms and conditions as the Bank determines.

(x) *Liabilities and Assets—All Departments.* Liabilities and assets of each department of the Commonwealth Bank at 30th June, 1951 are shown in the following table. The Commonwealth Savings Bank, which is operated as a separate institution, is not included (*see* § 2, para. 8 (iv) following) :—

COMMONWEALTH BANK : LIABILITIES AND ASSETS, 30th JUNE, 1951.

(£'000.)

(*a*) Includes Territories of Papua and New Guinea. (*b*) Ten months ended June, 1946.

9. **Classification of Advances within Australia—Commonwealth Bank and Private Trading Banks.**—(i) *States, June,* 1951. A dissection of advances made by the Commonwealth Bank (General Banking Division and the Rural Credits, Mortgage Bank and Industrial Finance Departments) and the Private Trading Banks at the end of June, 1951, is shown in the following table. Business advances, which have been classified according to the main industry of the borrower, are those made mainly for business purposes and include all loans to corporate bodies other than public authorities. Advances made to public authorities are those made to Commonwealth, State and Local Governments, Government Agencies and Semi-governmental Authorities irrespective of the purpose of the advance or the industry in which the authority is engaged. Personal advances, which have been classified according to purpose, include advances to persons in their private capacity for such purposes as the purchase of a house or of household equipment, repayment of personal debts, etc.

COMMONWEALTH BANK(*a*) AND PRIVATE TRADING BANKS: CLASSIFICATION OF ADVANCES WITHIN AUSTRALIA(*b*)—STATES, END OF JUNE, 1951.

(a) Excludes transactions connected with the issue and redemption of Treasury Bills. (b) Periods ended on last Wednesday; previously periods ended on last Monday.

12. **Debits to Customers' Accounts—All Cheque-Paying Banks.**—Statistics of debits to customers' accounts have been collected since September, 1945. Generally they represent the total of all cheques drawn by the customers of the banks. In the following table are shown the average weekly debits to customers' accounts of all cheque-paying banks for each State for the years ended June, 1946 to 1951. In this table debits to accounts of Australian Governments in capital cities are excluded as they are subject to abnormal influences and are not uniform for each State.

AVERAGE WEEKLY DEBITS TO CUSTOMERS' ACCOUNTS: ALL CHEQUE-PAYING BANKS.

(Excluding Debits to Australian Government Accounts in capital cities.)

(£'000.)

Year ended June—	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	A.C.T.	Total.
1946(a)	46,732	43,512	14,724	8,639	5,807	2,889	95	122,398
1947	58,080	52,901	16,824	10,443	7,142	3,374	119	148,883

(a) Ten months ended June, 1946. (b) From January, 1948 debits to Customers' Accounts relating to the transfer of accounts from the Queensland National Bank Ltd. (in voluntary liquidation) to the National Bank of Australasia Ltd. have been excluded.

13. **Rates of Exchange.**—(i) *Oversea Exchange Rates.* In the following table the average telegraphic transfer rates of exchange for Sydney on a number of oversea countries are shown. For the year 1938–39 the rates quoted are the averages of quotations at the end of each month; for subsequent years they are averages of daily quotations. Generally the averages are based on rates quoted by the Commonwealth Bank of Australia, but where these were not available rates quoted by other Australian Banks have been used.

OVERSEA EXCHANGE RATES: AVERAGE TELEGRAPHIC TRANSFER RATES FOR SYDNEY ON OVERSEA COUNTRIES.(*a*)

The exchange rate between Papua and New Guinea and the mainland is 10s. per cent. for all points.

§ 2. Savings Banks.

1. **General.**—The inauguration of Savings Banks in Australia dates from 1819, when a private Savings Bank was opened in Sydney. In 1832 the legislature created "The Savings Bank of New South Wales" under the control of trustees, and shortly after its establishment the funds of the private Savings Bank were transferred to the new institution. In the other States provision for placing deposits with Savings Banks dates from 1841 in Victoria; 1854 in Queensland; 1840 in South Australia; 1863 in Western Australia (a Savings Bank was opened in 1856 but was closed a year later); 1835 in Launceston; and 1845 in Hobart. These early banks functioned as Trustee Savings Banks, but, with the exception of the Hobart and Launceston institutions, were later absorbed by, or amalgamated with, Government Savings Banks.

Post Office Savings Banks were established in all States from 1864 onwards. These were separate Government institutions except in South Australia, where the Post Office acted as agent for the Savings Bank. Since the federation of the Australian States in 1900, post offices have been controlled by the Commonwealth Government, but they continued to act as savings bank agencies for the State institutions until the establishment of the Commonwealth Bank in 1912. They now act as agents for the Commonwealth Savings Bank.

Savings banks at present operating are the Commonwealth Savings Bank (all States and Territories); State Savings Bank of Victoria; Savings Bank of South Australia; and the two Trustee Banks—Hobart and Launceston.

2. **Extension of Facilities.**—The prime object of the foundation of savings banks in Australia was the encouragement of thrift, deposits of one shilling and upwards being accepted; nevertheless the facilities offered, while preserving the original object, have led to developments in another direction. Although depositors may not operate on their accounts by means of cheques, they have practically all the other advantages of a current account and in addition receive interest on their minimum monthly balances. No charge is made by the banks for keeping the accounts.

3. **Statistical Returns.**—Commencing with July, 1931, monthly returns have been furnished by savings bank authorities. The information given in the following paragraphs relates to the deposits at 30th June in each year. For convenience of reference the information has been grouped under the following headings :—

(i) All Savings Banks; (ii) Commonwealth Savings Bank; and (iii) State Savings Banks (including Trustee Banks in Tasmania).

4. **Number of Accounts.**—The following table shows the number of savings bank accounts in existence at 30th June, 1950 and 1951. It should be noted that these figures relate to the number of accounts and not necessarily to the number of depositors.

ALL SAVINGS BANKS : NUMBER OF ACCOUNTS.(*a*)

Bank.	30th June, 1950.		30th June, 1951.	
	Operative.	Inoperative. (*b*)	Operative.	Inoperative. (*b*)
Commonwealth Savings Bank ..	4,029,129	1,799,376	4,166,606	1,935,370

(*b*) *Deposits per head and Purchasing Power.* Particulars of the deposits per head of population, actual and adjusted to purchasing power by the application of retail price index-numbers, at 30th June in each of the years 1939 and 1942 to 1951 are shown in the following table. In calculating the index-numbers in this table the average of deposits per head of population at 30th June, 1937, 1938 and 1939 has been used as a base and made equal to 1,000.

ALL SAVINGS BANKS: DEPOSITS PER HEAD OF POPULATION.

At 30th June—	Actual.		Adjusted to Purchasing Power.(*a*)	
	Deposits per head of population.	Index-Number.	Deposits per head of population.	Index-Number.
	£	1937–1939 = 1000	£	1937–1939 = 1000
1939	35.25	1018	34.32	991
1942	38.20	1103	31.55	911
1943	49.48	1429	38.66	1117
1944	64.51	1863	51.20	1479
1945	76.70	2215	60.89	1758
1946	88.89	2567	69.32	2002
1947	87.08	2515	66.24	1913
1948	88.36	2552	61.75	1783
1949	90.28	2607	57.46	1659
1950	93.10	2689	54.20	1565
1951	99.93	2886	48.68	1406

(*a*) On the basis of the All Items ("C") Series of Retail Price Index-numbers (6 capitals) for June quarter in each year. (Base: average of June quarters, 1937, 1938 and 1939 = 1,000.)

In interpreting the figures above it should be remembered that savings bank accounts are used to some extent by institutions and business people, as well as by individuals for the investment of personal savings. The relative extent to which savings bank accounts are used for business purposes, etc., may, and probably does fluctuate considerably from time to time.

6. **School Banking.**—With the object of encouraging principles of thrift amongst children, agencies of the Savings Banks have been established at most of the schools throughout Australia. Particulars of operative accounts for each State and Territory at 30th June, 1951 were as follows:—

SCHOOL SAVINGS BANKS AT 30th JUNE, 1951.

State.	Number of Schools.	Number of Operative Accounts.	Deposits.	Deposits per Operative Account.
			£	£ *s.* *d.*
New South Wales	2,516	165,694	880,970	5 6 4
Victoria	2,738	178,984	934,902	5 4 6
Queensland	1,235	69,456	462,629	6 13 2

1951	8,239	591,915	3,369,872	5 13 10

7. **War Savings and Savings Certificates.**—Sales of savings certificates and stamps under the War Savings and Savings Certificate schemes, particulars of which were given in earlier issues of the Official Year Book (*see* No. 37, page 586), were discontinued after 31st January, 1949, except for some sales made to wind up savings groups, etc. This method of saving was replaced by special savings schemes to operate through the savings banks. Employers were asked to co-operate by forming employee savings groups and by making regular deductions from wages and salaries for payment into group savings bank accounts, and thence, at the end of each quarter to individual accounts. The total value of certificates outstanding at 30th June in each of the last five years was :—1947, £59,520,000 ; 1948, £64,483,000 ; 1949, £62,198,000 ; 1950, £55,025,000 ; 1951, £48,115,00.

8. **Commonwealth Savings Bank.**—(i) *General.* The Savings Bank Department of the Commonwealth Bank opened for business in Victoria on 15th July, 1912 ; in Queensland on 16th September, 1912 ; in the Northern Territory on 21st October, 1912 ; and in New South Wales, South Australia and Western Australia on 13th January, 1913. The Tasmanian State Savings Bank was absorbed by the Commonwealth Bank in January, 1913, the Queensland State Savings Bank was taken over in 1920 and the New South Wales and Western Australian State Savings Banks in 1931. The Savings Bank Department was separated from the General Bank on 9th June, 1928, and established as a separate institution known as the " Commonwealth Savings Bank ". It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The Commonwealth Bank Act 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of

three members to manage the Savings Bank. This Commission was never appointed and the Commonwealth Bank Act 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank.

(ii) *Particulars for Years* 1949–50 *and* 1950–51. Particulars for the States and Territories for the years 1949–50 and 1950–51 are shown in the table below :—

(a) Year ended 31st August, 1951. *See* par. 9 (1).

In 1949–50 total receipts were £7,580,000 and expenditure, £6,936,000. Net profits amounted to £644,000.

10. **Classification of Depositors' Balances.**—The classification of deposits published by savings banks does not permit a fully detailed analysis with respect to Australia as a whole, but information supplied to the Royal Commission on Monetary and Banking Systems for all savings banks except the Hobart Trustee Savings Bank shows that at 30th June, 1936 the amount on deposit in accounts with balances of less than £100 represented 21 per cent. of the total deposits ; balances of over £100 but under £250, 21 per cent. ; over £250 but under £500, 23 per cent. ; over £500 but under £1,000, 25 per cent. ; while those of over £1,000 accounted for 10 per cent. School, penny bank and small inoperative accounts were excluded in determining these percentages.

A similar classification as at 30th June, 1936, 1939 and 1947 to 1951, but relating only to the combined State Savings Banks of Victoria and South Australia, is shown below.

STATE SAVINGS BANKS : CLASSIFICATION OF DEPOSITS.

(Per Cent.)

At 30th June—	£100 and Under.	£101–£300.	£301–£500.	Total under £501.	£501–£1,000.	Over £1,000.

(a) Rates on ordinary accounts. On Friendly and other Society Accounts the rates at 30th June, 1951 were 2 per cent. on first £2,000 and 1 per cent. on the balance. (b) Up to 1941 the interest-bearing limit in all States except Queensland was £1,300. In Queensland it was £2,000. The limit since 1942 has been £1,000 in all States.

C. COMPANIES.

NOTE.—Statistics available in regard to registered companies relate to (a) **Trustees, Executors and Agency Companies**; (b) **Registered Building and Investment Societies**; and (c) **Registered Co-operative Societies.**

§ 1. Trustees, Executors and Agency Companies.

The following table shows, for the years 1939 and 1946 to 1950, particulars of the assets and liabilities of certain trustee companies transacting business in Australia and New Zealand. Figures for the year 1939 were obtained from returns supplied to the Commonwealth Bureau of Census and Statistics, while those for the years 1946 to 1950 have been extracted from a summary of the last published balance-sheets as shown in the *Australasian Insurance and Banking Record.* Individual items are therefore not entirely comparable. Details of assets of trust funds administered are shown for the year 1939, but for the years 1946 to 1950 totals are available for nine offices only.

(a) Includes Starr-Bowkett and other terminating societies:—N.S.W., £35,693,088; Queensland, £551,146. (b) Not available.

§ 3. Co-operative Societies.

1. **General.**—Returns relating to co-operative societies are divided into three classes—(i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act 1923–1945. A summary of the business of co-operative societies for the year 1950 for all States except Western Australia is given in the following table. For Western Australia details of the business during 1940–41 (the latest year available) are given.

(*b*) Includes one Consumers' Society for which separate details are not available for publication. (*c*) Not available.

D. INSURANCE.

§ 1. Insurance—General.

1. **Legislation.**—Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate in regard to "insurance other than State insurance; also State insurance extending beyond the limits of the State concerned". Legislation by the Commonwealth Parliament includes the Life Assurance Companies Act 1905 limiting the amount of assurance payable on the death of children, the Marine Insurance Act 1909 defining the limits of marine insurance and regulating the terms of contracts, etc., the Insurance Act 1932–1937, requiring the lodgment of deposits by insurance companies, and the Life Insurance Act 1945–1950 generally regulating life insurance business in Australia. The Life Assurance Companies Act 1905 was repealed by the Life Insurance Act 1945–1950 which incorporated the provisions of that Act. The Marine Insurance Act 1909 and the Insurance Act 1932–1937 have limited application, and, except for life insurance business which is regulated by the Life Insurance Act 1945–1950, insurance business is conducted under State laws.

2. **Insurance Act 1932–1937.**—Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to deposit money or approved securities with the Commonwealth Treasurer to the extent specified in the schedule.

Money deposited is invested by the Treasurer in prescribed securities according to the selection of the depositor, and all interest accruing on deposits or securities is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies.

After this Act became law, State laws governing insurance deposits ceased to operate. Deposits held by States on 1st February, 1932, could, however, remain with the States subject to the conditions embodied in the laws of the States. Whilst deposits so remained with the State, the depositors, to the extent of the value of their deposits, were exempt from liability to make deposits under the Commonwealth Act, and the conditions of State laws continued to apply to the deposits until the Commonwealth Treasurer required their return to depositors who immediately had to make deposits of the prescribed amount with the Commonwealth Government.

The following are not regarded as insurance businesses under the Act:—

Staff superannuation schemes; schemes of religious organizations solely for insurance of their property; and Friendly Society, Union and Association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and under the Life Insurance Act 1945–1950 ceased to apply to life insurance business.

The following statement shows particulars of deposits under the Insurance Act 1932–1937 and Life Insurance Act 1945–1950 at 30th June, 1950:—

DEPOSITS UNDER INSURANCE ACTS, 30th JUNE, 1950.
(£.)

Class of Insurance.	Deposited with Government of—		Total.
	Commonwealth.	States.	
Life	1,084,436	..	1,084,436
Other	1,967,866	1,448,360	3,416,226
Total	3,052,302	1,448,360	4,500,662

The deposits comprise cash £491,750, government, municipal and other securities £3,466,262, fixed deposits £1,000, bank guarantees and undertakings £249,000, titles and mortgages £292,650.

3. **Life Insurance Act 1945–1950.**—In his speech on the introduction of the Bill for the Life Insurance Act 1945 the Treasurer stated that the objects of the legislation were as follows :—(*a*) To replace all State legislation on the subject of life insurance and to provide a uniform basis for applying the requirements of those Acts to the whole of Australia ; (*b*) to incorporate existing Commonwealth Acts with minor amendments ; (*c*) to appoint an Insurance Commissioner who shall exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy owners ; (*d*) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency.

In addition, it was proposed to provide for the establishment of a Commonwealth Government Insurance Office, if and when the establishment of such an office was thought to be in the public interest.

The Act was assented to on 16th August, 1945, and came into operation on 20th June, 1946. A summary of the provisions of the Act is given in Official Year Book No. 37 (pages 595 to 597).

The original Act was amended by the Life Insurance Act 1950 which specified the grounds on which registration of a company could be refused.

§ 2. Life Assurance.

1. **General.**—Statistical returns have been collected from life assurance institutions since 1907. Until 1946 these returns were collected under the Census and Statistics Act. Since 1947 returns lodged under the Life Insurance Act 1945–1950 have been used to compile life assurance statistics. This change in method of collection has resulted in some slight changes in definition and, as a result, the statistics for 1947 and later years are not in all cases strictly comparable with those for earlier years. In earlier years statistics of revenue and expenditure and of assets and liabilities, although generally related only to the life assurance business of the offices making the returns, also included, in some cases, a small amount of other classes of business. Under the Life Insurance Act 1945–1950 companies transacting life assurance business are required to set up separate statutory funds for their life assurance business. As a result of this, it has been possible to separate life assurance business from other classes of business. Except where otherwise indicated, the figures in the succeeding paragraphs refer to Australian business only.

2. **Offices Transacting Business.**—The number of offices which transacted life assurance business in Australia during 1950 was 23, including two oversea companies. Of the twenty-one Australian offices, six are purely mutual, including one which transacts general business in respect of which share capital is used, thirteen are public companies, and two are State Government institutions. Of the total offices, thirteen transacted both ordinary and industrial business, and one industrial business only. Ordinary and industrial business has, where possible, been kept separate.

3. **Australian Business—Policies in Existence.**—(i) *Ordinary.* In the following table details of ordinary policies on the registers in each State and the Australian Capital Territory are given for the year 1950 :—

ORDINARY LIFE ASSURANCE : AUSTRALIAN BUSINESS—POLICIES IN EXISTENCE, 1950.

State or Territory.(*a*)	Assurance and Endowment Policies.				Annuity Policies.

(*a*) Includes other expenses of management, licence fees and taxes, etc.

8. **Liabilities and Assets.**—(i) *General.* The liabilities of the Australian offices consist mainly of their assurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian offices. A number of the larger Australian offices have extensive business overseas and separate details of liabilities and assets in respect of Australian business are not available for years after 1941. For 1941 and earlier years *see* Official Year Book No. 37 and previous issues.

(ii) *Total Liabilities and Assets.* In the two tables which follow the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life assurance business of the two State Government offices, all business of the Provident Life Assurance Co. Ltd. (incorporated in New Zealand) and the Australian business only of the Prudential Assurance Co. Ltd. (incorporated in England). For various reasons several offices do not attempt the dissection of liabilities and assets between the industrial and ordinary branches, and, therefore, the figures in the following tables relate to the ordinary and industrial branches combined. Details of the total liabilities of life assurance offices for the year 1950 are given in the following table :—

ORDINARY AND INDUSTRIAL LIFE ASSURANCE : TOTAL LIABILITIES, 1950.

(*a*) Life assurance and other classes of business. (*b*) Assets held in Australia. (*c*) Not available separately; included with other assets. (*d*) Included with other investments. (*e*) Includes goodwill and other intangible assets.

9. **Loans.**—In the following table details are given of new loans granted by life assurance companies during each of the years ended 31st December, 1947 to 1951. The information has been compiled from monthly returns furnished by each company. New loans granted by the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office are not included. Advances of premiums are also excluded.

LIFE ASSURANCE COMPANIES(*a*) : NEW LOANS GRANTED.(*b*)

(£'000.)

(*a*) Excludes Government Insurance Office of New South Wales and Queensland State Government Insurance office. (*b*) Excludes Advances of Premiums. (*c*) State, etc. of location of mortgage, registration of policy, or residence of borrower.

§ 3. Fire, Marine and General Insurance.

1. **Australasian Companies.**—The statistical information in this paragraph has been extracted from the *Australasian Insurance and Banking Record.* The following table shows, for the years 1938–39 and 1945–46 to 1949–50, particulars of the revenue and expenditure of a group of insurance companies having their head offices either in Australia, New Zealand or Fiji.

FIRE, MARINE AND GENERAL INSURANCE COMPANIES : SUMMARY OF REVENUE AND EXPENDITURE.

Particulars.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
No. of companies	40	43	43	43	47	44
	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
Premiums, less reinsurances	9,708	13,246	15,472	19,363	21,816	24,008
Losses	5,417	7,031	8,056	10,437	11,502	12,585
Expenses, commission and taxes	2,994	4,633	4,928	5,720	6,991	7,880
Transfer to Reserve for Unearned Premiums ..	(*a*)	(*a*)	(*a*)	(*a*)	1,335	1,526
Underwriting Profit ..	(*b*) 1,297	(*b*) 1,582	(*b*) 2,488	(*b*) 3,206	1,988	2,017
Interest, rent, etc. ..	1,011	1,108	1,141	1,181	1,257	1,360
Total surplus	2,308	2,690	3,629	4,387	3,245	3,377
Dividends and bonuses paid	709	1,036	1,102	1,248	1,470	1,755

(*a*) Not available. (*b*) Trade surplus. No provision has been made for transfers to Reserve for Unearned Premiums.

2. **Aggregate Australian Business.**—(i) *General.* While the foregoing statements relate only to those companies whose head offices are located in Australia, New Zealand or Fiji, the following particulars, which are somewhat restricted in the range of information, are in respect of all companies operating in Australia. The statistics in this paragraph conform substantially to the following definitions and should be interpreted in accordance therewith.

(*a*) Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from " earned premium income " appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than " earned premium income " appropriate to the year. The converse applies when business is declining.

(*b*) Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.

(*c*) Contributions to Fire Brigades, Commission and Agents' Charges, and Expenses of Management represent mainly charges paid during the year.

(*d*) Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The tables contain selected items of statistics and the information shown is not suitable for the construction of a " profit and loss " statement or " revenue " account.

In cases where the business is underwritten in one State and the risk is situated in another the business is included in the State in which the policy was issued.

During 1950–51 (1949–50) revenue from premiums amounted to £57,949,000 (£46,732,000) and from the net interest on investments, etc., to £2,087,000 (£1,801,000), totalling £60,036,000 (£48,533,000). Expenditure on losses amounted to £27,405.000 (£21,168,000), contributions to Fire Brigades £1,402.000 (£1,038,000), commission and agents' charges £6,102,000 (£4,945,000), expenses of management £9,731,000 (£7,917.000) and taxation £2,460,000 (£1,978,000), a total of £47,100,000 (£37,046,000).

(ii) *States.* The following table shows, for each State, the aggregate premium income less reinsurances and returns, and claims paid less reinsurances, for all classes of insurance other than life for the years 1938–39 and 1946–47 to 1950–51.

FIRE, MARINE AND GENERAL INSURANCE : PREMIUMS AND LOSSES—STATES.

(£'000.)

Marine	1,018	(*b*) 2,367	(*b*) 3,026	(*b*) 3,635	4,296	5,302
Personal Accident	554	(*c*)	(*c*)	1,012	1,188	1,541
All Other	1,472	3,973	5,440	5,342	6,730	8,005
Total	16,850	24,406	31,270	38,882	46,732	57,949
GROSS CLAIMS OR LOSSES, LESS AMOUNTS RECOVERABLE.						
Fire	2,223	2,101	2,414	2,951	2,430	4,197
Workers' Compensation(*a*) ..	2,972	4,799	5,751	5,920	6,292	6,784
Motor Vehicle—						
Compulsory Third Party ..	2,324	1,060	1,493	2,014	2,695	3,372
Other		1,954	2,619	3,528	4,970	7,867
Marine	243	(*b*) 638	(*b*) 1,145	(*b*) 1,248	1,784	2,244
Personal Accident	264	(*c*)	(*c*)	349	412	514
All Other	503	1,210	2,931	2,888	2,585	2,427
Total	8,529	11,762	16,353	18,808	21,168	27,405

(*a*) From 1946–47 excludes Workmen's Compensation Insurance in coal-mining industry in New South Wales. (*b*) Excludes business of Commonwealth Marine War Risks Insurance Board (*see* Official Year Book No. 38, pp. 753–4). (*c*) Included with All Other.

The volume of business measured by the amount of premium income shows that fire insurance represented about 26.4 per cent. of the total business during 1949–50 and 25.5 per cent. during 1950–51, workers' compensation 24.7 per cent. during 1949–50 and 23.1 per cent. during 1950–51, and motor vehicles (including compulsory third party insurance) 22.7 per cent. in 1949–50 and 25.8 per cent. in 1950–51. Marine insurance constituted 9.2 per cent. in each year.

E. FRIENDLY SOCIETIES.

1. **General.**—The total membership of friendly societies in Australia is over 600,000, but as certain benefits, such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns about their membership and their finances, and reports are published in most of the States dealing with the returns received.

2. **Number of Societies, Lodges and Members.**—The number of different societies and lodges, the total number of benefit members at the end of the year 1949–50 and their average number during the year are shown in the following table :—

FRIENDLY SOCIETIES : SOCIETIES, LODGES AND MEMBERS, 1949–50.

State.	Registered Friendly Societies.	Branches.	Benefit Members at End of Year.	Average Benefit Members during the Year.
New South Wales (*a*) ..	33	2,299	223,296	189,303
Victoria (*b*)	112	1,449	200,131	201,714
Queensland	25	549	67,858	68,444
South Australia (*c*) ..	17	(*d*) 850	75,168	75,964
Western Australia (*c*) ..	13	315	29,092	29,416
Tasmania (*e*)	20	167	20,657	21,310
Total	..	5,629	616,202	586,151

(*a*) Includes branches in the Australian Capital Territory; excludes 22 miscellaneous societies consisting of Medical Institutes, Dispensaries and Accident and Burial Societies. (*b*) Excludes Dispensaries, Juvenile Branches and members contributing to medical benefits only. (*c*) Excludes Juvenile Branches. (*d*) Societies containing male and female branches counted as two branches. (*e*) Year 1950.

3. **Sickness and Death Returns.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shows the total number of members who received sick pay during the year, the number of weeks in the aggregate for which they received

pay, and the average per member sick, and, further, the number of benefit members who died during the year, together with the proportion of deaths per thousand average members :—

FRIENDLY SOCIETIES : SICKNESS AND DEATH RETURNS, 1949–50.

State.	Members who received Sick Pay.	Total Weeks Sick Pay granted.	Average Weeks per Member sick.	Benefit Members.(a)	
				Deaths.	Proportion of Deaths per 1,000 (Average).
New South Wales	(b)	(b)	(b)	(b)	(b)
Victoria..	44,565	493,140	11.07	2,506	12.42

Total	(b)	(b)	(b)	(b)	(b)

(a) Excludes registered wives. (b) Not available. (c) Year 1950.

4. **Revenue and Expenditure.**—(i) *Revenue.* The financial returns are not prepared in the same way in each State, but an attempt has been made in the following table to group the revenue under the main headings :—

FRIENDLY SOCIETIES : REVENUE, 1949–50.

(£.)

State.	Entrance Fees, Members' Contributions and Levies.	Interest, Dividends and Rents.	All other Revenue.	Total Revenue.
New South Wales	1,052,419	202,934	138,658	1,394,011
Victoria	1,104,130	304,990	96,029	1,505,149
Queensland	285,241	97,454	(a)	382,695
South Australia	337,215	154,112	26,141	517,468
Western Australia	160,139	32,475	13,926	206,540
Tasmania (b)	95,982	22,413	22,574	140,969
Total	3,035,126	814,378	297,328	4,146,832

(a) Included in Interest, Dividends and Rents. (b) Year 1950.

(ii) *Expenditure.* The returns relating to expenditure are in greater detail than those for revenue and particulars of the major items are shown below.

FRIENDLY SOCIETIES : EXPENDITURE, 1949–50.

(£.)

State.	Sick Pay.	Medical Attendance and Medicine.	Sums payable at Death of Members and Members' Wives.	Administration.	All other Expenditure.	Total Expenditure.
New South Wales ..	277,164	455,491	118,145	227,446	114,439	1,192,685

(a) Included in administration. (b) Year 1950.

5. **Funds.**—The funds of friendly societies in each State at the end of the year 1949-50 were:—New South Wales, £6,695,000; Victoria, £8,381,000; Queensland, £2,577,000; South Australia, £3,884,000; Western Australia, £967,000; Tasmania, £714,000; total, £23,218,000.

F. PROBATES AND LETTERS OF ADMINISTRATION.

The following particulars give some idea of the number and value of estates of deceased persons in each State for the latest year for which information is available. Owing to differences in legislation in the various States the figures are not entirely comparable.

G. STATE LOTTERIES AND BETTING.

§ 1. State Lotteries.

State Governments operate lotteries in New South Wales, Queensland and Western Australia. In Tasmania, Tattersall's Lotteries are conducted under Regulations framed under the Gaming Act 1935.

New South Wales State Lotteries commenced in 1932. At present, each ordinary lottery consists of 100,000 tickets at 5s. 6d. each, with prizes totalling £17,750. Each special lottery has 100,000 tickets at 10s. each, with prize money totalling £31,700. Net profits of the lottery are paid to the Consolidated Revenue Fund from which grants are made to hospitals.

In Queensland, the Golden Casket Art Union commenced in 1916 with the specific object of augmenting the funds of the Queensland War Council. Subsequently, Anzac Cottages and Nurses Quarters Funds benefited until 1920, when net profits were paid to the Department of Health and Home Affairs (Hospitals, Motherhood and Child Welfare Trust Fund) and used for the maintenance of hospitals, grants to institutions, and for motherhood and child welfare purposes. A stamp duty is imposed on tickets sold. The proceeds of this are paid to Consolidated Revenue Fund. At present, ordinary tickets are priced at 5s. 6d. each (100,000), special tickets at 10s. each (100,000), with prizes totalling £17,550 and £32,000 respectively.

In Western Australia, lotteries are conducted by the Lotteries Commission under the Lotteries Control Act of 1932. Profits are paid by the Commission to hospitals and other charities. Each lottery comprises 100,000 tickets at 2s. 6d. each, with prizes totalling £6,630.

Details of the Income, Expenditure and Net Profit of the three State Lotteries for the years 1938–39 and 1946–47 to 1950–51 are given in the following table.

STATE LOTTERIES: INCOME, EXPENDITURE AND NET PROFIT.

H. GOVERNMENT, SEMI-GOVERNMENTAL AND PARLIAMENTARY PENSION AND SUPERANNUATION SCHEMES.

§ 1. Government and Semi-Governmental Pension and Superannuation Schemes.

The Commonwealth and all State Governments have established pension or superannuation schemes for their employees. These schemes are operated through funds to which both the Government and the employees make contributions. Employees of semi-governmental authorities are in some cases covered by the Commonwealth or State Government scheme and in other cases by a separate scheme of the authority.

In the following table aggregate details are given for the year 1950–51, of the receipts, expenditure, accumulated funds and number of contributors and pensioners of the Commonwealth and State Government and main semi-governmental schemes. The funds included are :—

(*a*) *Commonwealth.*—The Superannuation Fund and Defence Forces Retirement Benefits Fund.

(*b*) *New South Wales.*—State Superannuation Fund, Government Railways Superannuation Fund and Police Superannuation and Reward Fund.

(*c*) *Victoria.*—The Superannuation Fund, Police Superannuation Fund, Police Pensions Fund, Melbourne Harbour Trust Superannuation Account, Melbourne and Metropolitan Board of Works Superannuation Fund, Electricity Provident Fund, Metropolitan Fire Brigades Board Superannuation Fund, Country Fire Authority Superannuation Fund and Port Phillip Pilots' Sick and Superannuation Fund.

(*d*) *Queensland.*—Public Service Superannuation Fund and Police Superannuation Fund.

(*e*) *South Australia.*—South Australian Superannuation Fund, Police Pensions Fund and Public Service Superannuation Fund.

(*f*) *Western Australia.*—The Superannuation Fund.

(*g*) *Tasmania.*—Public Service Superannuation Fund (Old and New Funds), Police Provident Fund and State Teachers' Superannuation Fund.

For details of the individual funds summarized above *see Finance Bulletin* No. 42 issued by this Bureau.

§ 2. Parliamentary Pension and Superannuation Schemes.

Pension and superannuation schemes have been established for members of the Commonwealth and all State Parliaments except the Tasmanian. Full details of these schemes are given in pages 91 to 99 of Official Year Book No. 38, and on page 77 of this issue is a table showing their finances for 1948–49 and 1949–50. All the schemes are operated through funds to which the members of Parliament and the Commonwealth or States contribute. Details of the receipts, expenditure, funds and number of contributors and pensioners for the year 1950–51 are given in the following table. :—

CHAPTER XVII.

PUBLIC FINANCE.

NOTE.—The subject of "Public Finance" is dealt with in this Chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement the Commonwealth assumed the liability to bondholders for the States' Debts existing at the date of the agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of the Public Debts of the Commonwealth and the States. In view of this it has been found convenient to deal with the Commonwealth and State Public Debt in a separate division.

The subject of income taxes is also dealt with in a separate division.

A. COMMONWEALTH FINANCE.

§ 1. General.

1. **Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (*see* pages 20–23 of this issue). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer to the Commonwealth from the States of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Section 87 deals with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Official Year Book and on pages 788-92 of this issue a summary is given of the present provisions for Commonwealth financial assistance to the States.

The majority of the tables relating to Commonwealth Finance have been compiled from the annual Budget Papers as presented to Parliament by the Treasurer of the Commonwealth.

2. **Accounts of Commonwealth Government.**—The Commonwealth Government, like the State Governments, bases its accounts upon three funds, the Consolidated Revenue Fund, the Trust Fund and the Loan Fund, the last-mentioned fund coming into existence in the financial year 1911–12.

§ 2. Consolidated Revenue Fund.

Division I.—Nature of Fund.

1. **Provisions of the Constitution.**—The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on the fund, are contained in Sections 81 to 83 of the Constitution (*see* page 20 of this issue).

2. **Annual Results of Transactions.**—The following statement shows, for the period 1938–39 to 1950–51, the receipts, expenditure and excess receipts or deficiency for each year, and the expenditure from the excess receipts.

The receipts and expenditure on account of the balance of interest on States' Debts payable by the States to the Commonwealth under the Financial Agreement have been excluded.

COMMONWEALTH CONSOLIDATED REVENUE FUND : RECEIPTS, EXPENDITURE, ETC.

(£'000.)

Year.	Receipts.	Expenditure.	Excess Receipts.	Expenditure from Excess Receipts.		
				Defence Equipment.	Reserve for War Gratuity.	Total.
1938–39	95,065	94,438	627	3,495	..	3,495
1939–40	111,914	108,986	2,928	627	..	627
1940–41	150,482	150,482	..	2,928	..	2,928
1941–42	210,041	210,041	..	..	..	..
1942–43	294,459	294,459	..	..	..	..
1943–44	342,188	342,188	..	..	..	..
1944–45	376,854	376,854	..	..	..	..
1945–46	390,780	390,780	..	..	..	..
1946–47	431,256	431,256	..	..	..	..
1947–48	465,905	464,485	1,420	..	..	..
1948–49	554,377	554,377	..	..	1,420	1,420
1949–50	580,652	580,652	..	..	..	..
1950–51	841,792	841,792	..	..	..	..

The Consolidated Revenue Fund for the financial years 1940–41 to 1946–47 and 1948–49 to 1950–51 was balanced, as all available revenue after charging expenditure on ordinary services was used for defence, war and repatriation purposes.

Division II.—Revenue.

1. **General.**—The following table furnishes details of the revenue from each source and the amount per head of population under each of the main headings during the years 1938–39 and 1946–47 to 1950–51 :—

COMMONWEALTH CONSOLIDATED REVENUE FUND : SOURCES OF REVENUE. (£'000.)

Source.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

(*a*) Includes Australian Capital Territory. (*b*) Includes Northern Territory.

(iv) *Other Taxation.* (*a*) *General.* Taxes other than customs and excise are, in general, assessed and collected by the Commissioner of Taxation. The organization comprises an office in each State assessing the returns of taxpayers whose interests are restricted to that State only, and a Central Office assessing taxpayers whose interests are in more than one State. Taxes, however, may be paid to any office, so that the sums actually received by any office do not correspond to the assessments made by that office and frequently differ by very large amounts. For example, the actual receipts of income tax by the Queensland State office may include tax in respect of Central Office or New South Wales assessments, and, therefore, may not be a proper measure of income tax paid on account of income derived in Queensland.

The actual receipts by the various offices are the figures of necessity used by the Treasury for accounting purposes, and may be called the " Treasury " figures. In order to show a more significant picture of the taxation in each State, figures furnished by the Commissioner of Taxation, which refer strictly to the assessments made by the State office concerned, are used in the following tables. The totals of these figures do not quite agree with the total Treasury figures shown on page 761, owing to certain technicalities of accounting. The Taxation Office figures present a fair comparison between States, e.g., in taxation paid per head, but do not give the absolute measure of taxation, because the Central Office collections, which include taxation on account of all States, have not been allocated to the States. In the absence of precise information, it may be assumed, as a rough approximation, that Central Office collections may be divided among States in proportion to State office collections. It is probable, however, that a somewhat larger share is derived from the more populous States, New South Wales and Victoria.

(*b*) *Land Tax.* Commonwealth Land Tax was first imposed on the unimproved value of land in 1910–11. The following table shows the rates of land tax imposed for each assessment year from 1941–42 to 1950–51:—

LAND TAX : RATE OF TAX PER £1 OF TAXABLE VALUE.

(T = Taxable Value.)

(Pence.)

Assessment Year.	Residents.			Absentees.(*a*)				
	If the Taxable Value is from £1 to £75,000—	If the Taxable Value is over £75,000—		If the Taxable Value is from £1 to £80,000—		If the Taxable Value is over £80,000—		
		On £75,000	On excess over £75,000–	On first £5,000–	On excess over £5,000—	On £5,000–	On next £75,000–	On excess over £80,000–
1941–42 to 1950–51 (*b*)	$\left(1 + \frac{T}{18,750}\right)$	5.0	9.0	1.0	$\left(2 + \frac{T-5,000}{18,750}\right)$	1.0	6.0	10.0

(*a*) Absentees are not allowed an exemption of £5,000 granted to residents. (*b*) In addition, if the taxable value exceeds £20,000, there is payable for 1941–42 and subsequent years a super tax equal to the lesser amount of the following :—(i) twenty per cent. of the amount of land tax ; or (ii) one per cent. of the amount by which the taxable value of the land exceeds £20,000.

Under the National Security (Values for Land Tax) Regulations the revaluations of land for the purposes of the Land Tax Assessment Act 1910–1940 were postponed until after the war. Thereby the values of land, or of interests in land, as assessed for the financial year 1939–40, were adopted for the financial year 1940–41 and subsequent years for the duration of the war. Under section 10 of the Defence (Transitional Provisions) Act 1946–1949 the provisions of the National Security (Values for Land Tax) Regulations were incorporated in the Land Tax Assessment Act 1910–1949 and revaluations of land for purposes of the Act were postponed until after the assessment year commencing on 1st July, 1950. A revaluation of land is to be made for the assessment year which commenced on 1st July, 1951.

Land tax receipts in each State and Central Office for the years 1938–39 and 1946–47 to 1950–51 were as follows. The receipts referred to in this table differ slightly from the collections shown on page 761 because some refunds credited before 30th June were not paid until after that date.

LAND TAX RECEIPTS.

(c) *Estate Duty.* The Commonwealth Estate Duty was first levied in 1914. Particulars of exemptions and the rates imposed prior to 1940 are given in earlier issues of the Year Book (*see* No. 37, page 614).

Estate duty, under the Estate Duty Assessment Act 1940, is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula :—(*a*) where the whole of the estate passes to the widow, children or grandchildren of the deceased, the sum of £2,000 decreasing by £1 for every £10 by which the value exceeds £2,000 up to £10,000, and thereafter decreasing by £1 for every £2 by which the value exceeds £10,000 ; (*b*) where no part of the estate passes to the widow, children or grand-children, the sum of £1,000 decreasing by £1 for every £10 by which the value exceeds £1,000 up to £6,000, and thereafter decreasing by £1 for every £8 by which the value exceeds £6,000 ; and (*c*) where part only of the estate passes to the widow, children or grand-children, the statutory exemption is to be calculated proportionately under (*a*) and (*b*).

The rates of duty, which increase as the value of the estate increases are :—£1 to £10,000, 3 per cent. ; £10,001 to £20,000, 3 per cent. to 6 per cent. ; £20,001 to £120,000, 6 per cent. to 26 per cent. ; £120,001 to £500,000, 26 per cent. to 27.9 per cent. ; over £500,000 27.9 per cent.

Particulars of the collections in each State and Central Office for the years 1938–39 and 1946–47 to 1950–51 are shown in the following table. These figures differ slightly from the figures on page 761 as some refunds were credited before 30th June and not paid until after that date.

Average duty per estate	£	207	385	404	397	429	442

(*d*) *Gift Duty.* The Gift Duty Assessment Act 1941–1947 and the Gift Duty Act 1941–1947 impose a gift duty on all gifts made after the 29th October, 1941. A gift has been defined as any disposition of property, which is made otherwise than by will, without adequate consideration in money or money's worth.

There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty.

The following rates of duty have been fixed by the Gift Duty Act 1941–1947 :—

Value of all Gifts made within Eighteen Months.	Rate of Duty.
Not exceeding £2,000 (*a*)	Nil
£2,001 (*a*) to £10,000	3%
£10,001 to £20,000	3% to 6%
£20,001 to £120,000	6% to 26%
£120,001 to £500,000	26% to 27·9%
£500,001 and over	27·9%

(*a*) Prior to 3rd June, 1947, no duty was payable if the value of all gifts as defined above did not exceed £500. If the value of all gifts exceeded £500 but did not exceed £10,000 the rate of duty was 3 per cent.

An amendment which operated from 3rd June, 1947 provided that gift duty will not exceed one half of the amount by which the value of the gift exceeds £2,000.

The receipts from gift duty in each State for the years 1946–47 to 1950–51 are shown in the following table. The figures shown in the table differ from those shown on page 701 because certain refunds credited before 30th June were not paid until after that date.

(*e*) *Income Taxes.* Details of taxes on income are given in Section "E" of this Chapter.

(*f*) *Pay-roll Tax.* The Pay-roll Tax Assessment Act 1941–42 and the Pay-roll Tax Act 1941 imposed a pay-roll tax of 2½ per cent. on all wages in excess of £20 per week paid by an employer after 30th June, 1941. These measures formed part of the Commonwealth scheme of child endowment, the revenue from the tax being designed to provide part of the money required.

Pay-roll tax is collected in a similar manner to sales tax. Employers are required to register and to furnish a monthly return of all wages paid.

The following table shows the receipts from pay-roll tax in each State for the years 1946–47 to 1950–51. The figures shown vary slightly from the collections shown on page 701 because some refunds which were credited before 30th June were not paid until after that date.

PAY-ROLL TAX RECEIPTS.

Total	13,554,117	16,613,416	19,801,526	22,719,296	28,716,111

(*g*) *Gold Tax.* The Gold Tax Collection Act 1939–1940 and the Gold Tax Act 1939 imposed a tax on all gold delivered to the Commonwealth Bank of Australia or to an agent of that Bank, on and after 15th September, 1939, of 50 per cent. of the amount by which the price payable by the Bank for each fine ounce of gold delivered exceeded £9. This tax was suspended from 20th September, 1947, by the Gold Tax Suspension Act 1947. Collections and repayments of tax during the five years 1946–47 to 1950–51 were as follows :—1946–47, £556,435 ; 1947–48, £10,713 ; 1948–49, *Dr.* £4,605 ; 1949–50, *Dr.* £9,217 ; and 1950–51, *Dr.* £182.

(*h*) *Entertainments Tax.* The Entertainments Tax Assessment Act 1942–1946 and Entertainments Tax Act 1942–1949 came into force on 1st October, 1942, following the agreement of the State Governments to the request of the Commonwealth to suspend their entertainments tax legislation for the duration of the war and one year after. This enabled the Commonwealth Government to re-enter this field of taxation. Until 1945–46 the Commonwealth recompensed the States by annual payments of £765,787, an amount equal to that collected by the States during the year 1941–42. Thereafter these payments were discontinued and the agreement that the States should not levy a tax on entertainments was terminated.

The rates of entertainments tax from 1st October, 1949 are shown in the following table. Details of rates operating prior to 1st October, 1949 are given in earlier issues of the Official Year Book (*see* No. 37, page 617).

RATES OF ENTERTAINMENTS TAX OPERATING FROM 1st OCTOBER, 1949.

Amount paid for Admission (excluding amount of Tax). Exceeding—	Amount paid for Admission (excluding amount of Tax). But not exceeding—	Reduced Rates.	Full Rates.
s. d.	*s. d.*	*s. d.*	*s. d.*
	1s. 0d.	Nil	0 2
1 0	1 3	Nil	0 4
1 3	1 6	0 3	0 4
1 6	2 0	0 4	0 5
2 0	2 6	0 5	0 7
2 6	3 0	0 6	0 9
3 0	3 6	0 8	0 10

4 0	4 6	0 10	1 1
4 6	5 0	0 11	1 3
5 0	5 6	1 1	1 5
5 6	6 0	1 3	1 8
6 0	..	1s. 5d. plus 1½d. for each 6d. (or part thereof) by which the payment for admission exceeds 6s. 6d. (*a*)	1s. 10d. plus 2½d. for each 6d. (or part thereof) by which the payment for admission exceeds 6s. 6d.(*a*)

(*a*) Fractions of a penny in the amount of tax are treated as follows :—¼d. and ½d. are disregarded—¾d. is taken as one penny.

The reduced rates of tax apply to entertainments which consist of one or more of the following items, viz. :—a stage play, a ballet, a performance of music, a lecture, a recitation, a music hall or other variety entertainment, or a circus or travelling show, and to entertainments which consist solely of a game or sport in which human beings are the sole participants and the entertainment is conducted by a society which is not established or carried on for profit. The full rates apply to all other forms of entertainment. Entertainments tax is not charged on admissions to entertainments the proceeds of which are devoted to public, patriotic, philanthropic, religious or charitable purposes or where the entertainment is of an educational or scientific character.

Entertainments tax received during the five years 1946–47 to 1950–51 is shown in the following table. The figures shown in the table differ from those shown on page 761 because certain refunds credited before 30th June were not paid until after that date.

There were 12,893,000 admissions at the reduced rate, and 157,398,000 at the full rate.

(*i*) *Sales Tax.* The sales tax was first imposed in August, 1930. The operation of the tax is controlled chiefly by a system of registration of taxpayers whereby all manufacturers and wholesale merchants, who are the taxpayers under the Act in respect of goods sold in Australia, must be registered with the Department. The tax on imports subject to sales tax is collected by the Customs Department at ports of entry.

Since the inception of the tax certain exemptions have been allowed. These exemptions, which have been extended from time to time, relate mainly to goods of an essential nature or for use in primary production. The most recent exemptions were those granted from 13th October, 1950, and 27th September, 1951.

A general rate of Sales Tax is levied on all goods other than those specified in the schedules of the Sales Tax (Exemptions and Classifications) Act 1935–1951. These schedules set out details of goods exempt from sales tax and those subject to special rates. The general and special rates which operated from 15th November, 1946, were :—

Period.	General Rate.	Special Rate.
15th November, 1946 to 7th September, 1949 ..	10 per cent. ..	25 per cent.
8th September, 1949 to 12th October, 1950 ..	8⅓ per cent. ..	25 per cent.
13th October, 1950 to 26th September, 1951 ..	8⅓ per cent. ..	10, 25 and 33⅓ per cent.
From 27th September, 1951	12½ per cent. ..	20, 25, 33⅓, 50 and 66⅔ per cent.

For particulars of rates applicable since the inception of Sales Tax in August, 1930 *see* Official Year Book No. 37, page 617.

Particulars of the net amount of sales tax payable, and the sales of taxable and exempt goods in each State for 1950–51 are given in the following table. The figures are in respect of sales during the period 1st July to 30th June.

SALES TAX AND AMOUNT OF SALES, 1950–51.

(£'000.)

State, etc.	Net Sales on which Sales Tax was Payable.	Sales of Exempt Goods by Registered Persons.	Total Sales of Taxable and Exempt Goods.	Net Taxable Sales at Each Rate.				Sales Tax Payable.
				8⅓ per cent.	10 per cent.	25 per cent.	33⅓ per cent.

Sales of taxable and exempt goods and sales tax payable for Australia as a whole for the years 1938–39 and 1946–47 to 1950–51 are shown in the following table :—

SALES TAX AND AMOUNT OF SALES.

(£'000.)

Year.	Net Sales on which Sales Tax was Payable.	Sales of Exempt Goods by Registered Persons.	Total Sales of Taxable and Exempt Goods.	Sales Tax Payable.
1938–39	196,491	280,656	477,147	9,363
1946–47	294,957	506,046	801,003	35,782
1947–48	314,311	639,948	954,259	34,059
1948–49	363,164	757,381	1,120,545	38,197
1949–50	455,251	866,575	1,321,826	40,789
1950–51	547,347	1,138,887	1,686,234	53,984

In the foregoing tables exempt sales relate to goods exempted from sales tax under the Sales Tax (Exemptions and Classifications) Act 1935–1951.

The figures shown in the foregoing tables do not represent the total sales of all commodities, as vendors trading in exempt goods only are not required to be registered and consequently the volume of their sales is not included in the statistics above.

(*j*) *Flour Tax.* Particulars of the rates of flour tax which operated from 4th December, 1933 to 21st December, 1947 are given in Official Year Book No. 37, pages 618 and 619. Because of the rise in wheat prices the rate was declared to be nil as from 22nd December, 1947.

Net receipts after allowing for refunds for 1938–39 and the last five years were: 1938–39, £1,793,833; 1946–47, £1,706,623; 1947–48, £941,207; 1948–49, *Dr.* £8,839; 1949–50, *Dr.* £11,319; and 1950–51, *Dr.* £2,100.

(*k*) *Wool Levy.* The Wool Tax Act 1936 and Wool Tax Assessment Act 1936 provided for a levy on all wool grown in Australia and shorn on or after 1st July, 1936. Details of this levy are given in earlier issues of the Official Year Book. The levy is suspended for any period during which the Wool (Contributory Charge) Act 1945 is in operation. The Wool Contributory Charge was levied from 1st July, 1946 and only arrears of wool levy have been collected since that date. The amounts collected from wool levy in 1938–39, 1946–47 and 1947–48 were £74,396, £11,628 and £458 respectively. No levy has been collected since 1947–48.

(*l*) *Wool Contributory Charge.* The Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 imposed a charge on all wool produced in Australia and sold, manufactured or exported after a date fixed by proclamation. Wool sold by the Australian Wool Realization Commission was not liable to the charge. The rate of the charge is to be such a percentage of the sale value of the wool as is necessary to provide the following amounts:—

(*a*) The amounts required to meet the share of the industry in the operating expenses of the Joint Organization for the disposal of wool stocks;

(*b*) the amounts required for payment of interest on the amount spent by the Commonwealth in purchase of wool under the disposals plan; and

(*c*) the amount of the wool levy.

The Acts came into operation on 1st July, 1946, and the rate fixed was 5 per cent. on the sale value of the wool. From 1st August, 1947 the rate was reduced to 0.75 per cent. A further reduction to 0.5 per cent. was made on 1st July, 1948. On 26th August, 1950, the rate of the charge was reduced to 0.25 per cent. and a further charge of 7.25 per cent. to provide funds for a reserve prices scheme was introduced. In the Wool (Reserve Prices) Fund Act 1950 it was provided that if a reserve prices scheme which had the general approval of wool-growers was not in operation on 30th September, 1951 the amounts of contributory charge collected for that purpose were to be refunded.

A scheme placed before wool-growers was not accepted and the collections were subsequently refunded. (*See also* Chapter XIX.—Pastoral Production.) Collections in each State during the years 1946–47 to 1950–51 are shown in the following table :—

WOOL CONTRIBUTORY CHARGE RECEIPTS.

(£.)

State.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.
New South Wales ..	1,554,997	502,281	315,280	551,707	15,665,338
Victoria..	1,315,834	359,574	294,734	402,218	12,956,946
Queensland	747,298	248,589	192,143	211,595	6,859,425
South Australia	399,372	154,161	107,939	134,137	4,500,062

Tasmania	89,727	25,173	19,141	23,512	801,068
Total	4,497,107	1,423,862	1,029,110	1,439,148	44,844,261

(*m*) *Wool Sales Deduction.* The Wool Sales Deduction Act 1950 and the Wool Sales Deduction (Administration) Act 1950 came into operation on 2nd December, 1950 and require that a deduction be made from the sale value of wool sold or exported, the amount deducted being subsequently added to the wool-growers provisional tax and the total amount set off against the Income Tax and Social Services Contribution assessed in respect of the year in which the deduction was made. For the income year 1950–51 the amount of deduction was 20 per cent. of the sale value. Deductions for each State during the year 1950–51 were as follows :—New South Wales, £42,693,248 ; Victoria, £28,787,516 ; Queensland, £15,458,630 ; South Australia, £10,170,949 ; Western Australia, £10,154,237 ; Tasmania, £2,148,625 ; Total, £109,413,205.

See also Chapter XIX.—Pastoral Production.

(*n*) *Wheat Export Charge and Wheat Tax.* The Wheat Export Charge Acts 1946 imposed an export charge on wheat (including the content of wheat products) harvested after 30th September, 1945 and exported from the Commonwealth after 30th November, 1945. These acts did not apply to wheat harvested between 1st October, 1945 and 1st October, 1947 and exported by the Australian Wheat Board, but provision was made in the Wheat Tax Act 1946 to collect an amount equivalent to the charge that would have been collected on this wheat, by imposing a tax on wheat acquired by the Board. There were no collections under the Wheat Export Charge Acts 1946, but collections under the Wheat Tax Act 1946, which came into operation on 9th August, 1946 and imposed a tax on all wheat of the 1945–46 and 1946–47 seasons acquired by the Australian Wheat Board, amounted to £5,500,000 in 1946–47 and £5,729,780 in 1947–48. These amounts were paid to the Wheat Prices Stabilization Fund and, under the Wheat Tax (Refund and Repeal) Act 1948, were refunded to growers. The amount of the refund was £11,548,637 (including interest, £318,857).

The Wheat Export Charge Act 1948, which operated from 25th November, 1948, repealed the Wheat Export Charge Acts 1946 and provided for an export charge on all wheat and wheat products of the 1947–48 and subsequent seasons exported after 25th November, 1948. Subject to a lower rate being prescribed, the rate of charge per bushel of wheat exported by the Australian Wheat Board was fixed at 50 per cent. of the amount by which the average price per bushel of all wheat exported by the Board exceeded the guaranteed price, with a maximum charge of 2s. 2d. per bushel. If the exporter is not the Australian Wheat Board the charge is the same except that there is no maximum charge of 2s. 2d. per bushel.

The guaranteed price for the 1947–48 season was 6s. 3d. per bushel for all fair average quality bulk wheat f.o.r. at the ports of export. It was raised to 6s. 8d. per bushel for the 1948–49 season and to 7s. 1d. for the 1949–50 season. Unless Parliament otherwise provides the act shall not apply to wheat harvested after 30th September, 1953.

Under the Wheat Industry Stabilization Act 1946–1948 an amount equivalent to the charges collected under the Wheat Export Charge Act 1948 is paid to the Wheat Prices Stabilization Fund. Out of this fund payments shall be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price. Under the Wheat Industry Stabilization (Refund of Charge) Acts 1950 and 1951 the wheat export charge collected on wheat for the 1947–48 and 1948–49 seasons was refunded. (*See also* Chapter XX.—Agricultural Production.)

Collections of wheat tax and wheat export charge were as follows:—1946–47, £5,500,000; 1947–48, £5,730,000; 1948–49, £18,086,000; 1949–50, £12,633,000; and 1950–51, £13,353,000.

(o) *Stevedoring Industry Charge.* The Stevedoring Industry Charge Act 1947 and the Stevedoring Industry Charge Assessment Act 1947 imposed a charge of 4½d. per man-hour on the employer of a waterside worker after 22nd December, 1947.

The amounts received are paid to the Stevedoring Industry Board for the payment of attendance money to waterside workers and for other expenses of the Board.

From 11th October, 1949 the charge was reduced to 2½d. per man hour.

Collections in each State during the years 1947–48 to 1950–51 are shown in the following table:—

STEVEDORING INDUSTRY CHARGE RECEIPTS.

(a) Included under Broadcasting Services.

Further particulars of the Postmaster-General's Department's receipts to 1949–50 are given in Chapter V.—Transport and Communication (part I. Posts, Telegraphs, Telephones and Wireless).

(ii) *Broadcasting Services.* Following the amendment of the Australian Broadcasting Act 1942–1946 by Act No. 64 of 1948, the Broadcasting Control Board was set up on 15th March, 1949. (*See also* Chapter V.—Transport and Communication, and Chapter XXIX.—Miscellaneous.)

Details of net receipts for the years 1949–50 and 1950–51 are shown in the following table :—

BROADCASTING SERVICES : NET RECEIPTS.
(£.)

Particulars.	1949–50.	1950–51.
Listeners' Licence Fees	1,898,865	1,943,130
Broadcasting Station Licence fees	16,811	17,670
Miscellaneous	18,602	9,657
Total	1,934,278	1,970,457

(iii) *Commonwealth Railways.* The Commonwealth Government is responsible for four railways—the Trans-Australian, the Central Australia, the North Australia and the Australian Capital Territory. The following table shows the amounts paid to the credit of the Consolidated Revenue Fund on account of each of these railways for the years 1938–39 and 1946–47 to 1950–51 :—

COMMONWEALTH RAILWAY REVENUE.
(£.)

Total	525,910	1,154,517	1,190,160	1,605,596	1,803,952	2,044,465

Further particulars to 1949–50 are given in Chapter V.—Transport and Communication (part B. Railways).

4. **Other Sources of Revenue.**—Revenue derived by Consolidated Revenue Fund from the Territories of the Commonwealth during 1950–51 amounted to £1,150,000 (Australian Capital Territory, £831,000 : Northern Territory, £319,000). Of other sources of revenue, amounting in 1950–51 to £14,663,000, the following are noteworthy:—Interest, £2,521,000 ; Civil Aviation, £3,504,000 ; and Net Profit on Australian Note Issue, £3,394,000.

Division III.—Expenditure.

1. **Details of Expenditure from Consolidated Revenue.**—The following table shows details of the expenditure from the Consolidated Revenue Fund during the years 1938–39 and 1946–47 to 1950–51.

COMMONWEALTH CONSOLIDATED REVENUE FUND : EXPENDITURE.

(*a*) For details *see* § 6, pages 796–7. (*b*) For details *see* § 7, page 798. (*c*) In previous issues of the Official Year Book part was included with War (1939–45) Services and the balance with Departments of Trade and Customs and Commerce and Agriculture. For details *see* pages 186–7. (*d*) Included with Department of the Interior. (*e*) Included with Defence Services. (*f*) Included with Prime Minister's Department. (*g*) For details *see* page 781. In 1938–39 expenditure consisted of Invalid and Age Pensions and Maternity Allowances. (*h*) Provided in part from Postmaster-General's Department Votes and balance from Wireless Broadcasting Trust Account. (*i*) In addition, £24,911,000 was provided from Loan Fund. (*j*) Assistance to Primary Producers.

Particulars for each department include interest, sinking fund, superannuation charges, etc., but do not include the expenditure on capital works and services and Defence, War and Repatriation Services. Details of expenditure of each department are shown in paragraph (2.) below.

A graphical representation of the revenue and expenditure of the Commonwealth Consolidated Revenue Fund appears on page 805. In this diagram Public Debt Charges (interest and sinking fund payments, etc.) are shown as a separate item, whereas in the table above, these charges are included in the section to which they relate. Details for 1950–51 are as follows :—Interest (including exchange on interest payments), £49,512,402 ; Sinking Fund, £17,087,439 ; Other Debt Charges, £375,032 ; Total, £66,974,873.

2. **Total Cost of Departments.**—(i) *Introductory.* Under the heading "Total Cost of Departments" are included (i) particulars of expenditure on the estimates of departments in respect of salaries and general expenses, and (ii) particulars of expenditure from special appropriations in respect of salaries of the Governor-General, Ministers, Judges, etc., Government contributions for superannuation, and interest and sinking fund charges, etc., allocated to departments. Expenditure from appropriations for Defence, War and Repatriation Services, and Capital Works and Services is not included.

Information on the functions of the several departments and the acts administered by the Ministers of Departments was published in Official Year Book No. 37, pages 76–86, and particulars of subsequent changes in departmental structure are given in this issue (pages 100–1).

(ii) *Governor-General.* Section 30 of the Constitution enacts that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of a Governor-General shall not be altered during his continuance in office. The expenditure in connexion with the Governor-General and establishment for the years 1938–39 and 1946–47 to 1950–51 was as follows :—

EXPENDITURE : GOVERNOR-GENERAL AND ESTABLISHMENT.

(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.
Salary	10,000	10,000	10,000	10,000	10,000	10,000
Government Houses, maintenance, etc.	12,305	23,956	24,748	32,219	24,878	31,410
Governor-General's office (*a*)	5,381	8,565	5,649	5,122	4,779	6,477
Interest and Sinking Fund ..	5,079	4,082	4,446	4,956	5,090	4,873
Total	32,765	46,603	44,843	52,297	44,747	52,760

(*a*) Represents official services outside the Governor-General's personal interests, and carried out mainly at the instance of the Government.

(iii) *Parliament.* Under this head have been grouped all the items of expenditure connected with the Commonwealth parliamentary government of Australia for the years 1938–39 and 1946–47 to 1950–51. Although the administration of the Electoral Act and the conduct of elections come within the functions of the Department of the Interior, the expenditure in connexion therewith is fundamentally incurred on account of the parliamentary government system and for that reason is included herein.

EXPENDITURE : COMMONWEALTH PARLIAMENT.

(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

Miscellaneous	15,401	9,068	11,349	11,838	11,600	12,503
Total	444,873	735,576	828,474	770,893	1,182,324	1,472,648

In Section 66 of the Constitution provision is made for the payment from Consolidated Revenue of an annual sum for the salaries of Ministers, and Section 48 specifies the amount of the allowance to each Senator and each Member of the House of Representatives. These details, together with subsequent increases, will be found on pages 14 and 18 of this volume, while details of the cost of parliamentary government of the Commonwealth and each State will be found on page 102.

(iv) *Prime Minister's Department.* Since the tables published in the last issue of the Official Year Book were prepared, several changes have occurred in departmental structure (*see* pages 100–1). This department has been affected as follows. In May, 1949, the Council for Scientific and Industrial Research, which was under the control of the Prime Minister's Department, was abolished. and the Commonwealth Scientific and Industrial Research Organization was constituted ; early in 1950 the Office of Education and the Division of Economic Policy were transferred from the Department of Post-war Reconstruction to the Prime Minister's Department. In respect of each of these changes the table below has been amended so that the figures are comparable throughout the periods shown ; that is, expenditure on the Office of Education and the Division of Economic Policy is incorporated in the table back to 1946–47, and the expenditure on the Council for Scientific and Industrial Research has been deleted and is now included under the heading of the Commonwealth Scientific and Industrial Research Organization (*see* page 784). External territories were administered by the Prime Minister's Department until June, 1941, when the Department of External Territories was created. Particulars of expenditure relating to the administration of external territories for the years 1946–47 to 1950–51 are shown under the heading of the Department of Territories (*see* page 783). The expenditure of the Prime Minister's Department for the years 1938–39 and 1946–47 to 1950–51 is shown in the following table :—

EXPENDITURE : PRIME MINISTER'S DEPARTMENT.

(*a*) Provided under War and Repatriation Services (*see* page 798).

(viii) *Department of the Interior.* Particulars of the expenditure for the years 1938–39 and 1946–47 to 1950–51 on services (other than Railways, Territories and the Electoral Office) under the control of this Department are shown in the table below.

In 1938–39 the administration of Commonwealth public works and immigration was the responsibility of the Department of the Interior and the expenditure for that year includes these services. For the years 1946–47 to 1950–51 the expenditure on these services is included under the respective departments. Northern Territory and the Australian Capital Territory, which are administered by the Department of the Interior are for convenience included under Territories, while expenditure in connexion with the Electoral Office, which is administered by the Department of the Interior, is included under Parliament. Commonwealth Railways, whose administration passed to the Department of Shipping and Fuel from the Department of the Interior in March, 1950, is also shown separately—*see* Railways below.

In March, 1950 the Department of Information was abolished and the News and Information Bureau was established under the control of the Department of the Interior. The table below has been revised to include expenditure on information services from 1946–47.

EXPENDITURE : DEPARTMENT OF THE INTERIOR.(*a*)

(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

(xv) *Department of Supply.*—Early in 1950 the Departments of Supply and Development, and Shipping and Fuel were abolished, and the three Departments of Supply—Fuel, Shipping and Transport—and National Development were established. The Department of Supply took over the supply sections of the former Department of Supply and Development. Before 1948–49 expenditure for all the functions now performed by the Department of Supply was provided under Defence and War and Repatriation

Services. In the following table expenditure on services now controlled by this Department, and not provided under Defence or War and Repatriation Services, is shown for the years 1948–49 to 1950–51 :—

EXPENDITURE : DEPARTMENT OF SUPPLY.

(£.)

Details.	1948–49.	1949–50.	1950–51.
Administration—Salaries and general expenses ..	40,000	75,000	55,000
Ship Construction—Salaries and general expenses	66,795	70,534	80,011
Transport and Storage Services	571,783	977,105	284,881
Reserves of Stores and Materials	..	10,807	..
Mining Industry—Assistance	102,086	29,110	(a)
Electricity Supply in Australia—Development ..	23,632	11,222	21,358
Bureau of Mineral Resources—Operations ..	16,642	11,485	(a)
Total	820,938	1,185,263	441,250

(a) Provided under Department of National Development.

(xvi) *Department of Shipping and Transport.* This Department, formed early in 1950, was at first known as the Department of Fuel, Shipping and Transport and took over the functions of the former Departments of Shipping and Fuel and of Transport. In May, 1951, the fuel function was transferred to the Department of National Development.

The table below shows expenditure on these functions for the years 1938–39 and 1946–47 to 1950–51 :—

EXPENDITURE : DEPARTMENT OF SHIPPING AND TRANSPORT.

(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

Total	214,832	389,387	5,291,909	3,947,453	3,020,405	1,472,888

(a) Transport only, remainder provided under Defence and War and Repatriation Services. (b) Provided under War and Repatriation Services. (c) Provision also made under Administrative. (d) Provided under Department of Labour and National Service. (e) Includes Reserves of Stores and Materials, £764,098.

(xvii) *Department of Territories.* This Department was set up in June, 1941 to administer the Commonwealth External Territories of Papua, New Guinea, Norfolk Island and Nauru. In May, 1951, it took over administration of the Northern Territory from the Department of the Interior. Expenditure of the Department for the years 1946–47 to 1950–51 is shown hereunder. Particulars of expenditure on Territories are given in sub-para. (xxv) following.

EXPENDITURE : DEPARTMENT OF TERRITORIES.

(£.)

Details.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

Total	183,219	1,411,007	3,588,938	9,801,437	12,969,761

(*a*) Included with Displaced persons from Europe.

(xix) *Department of Labour and National Service.* This Department was set up during the 1939–45 War for the purpose of mobilizing the nation's man-power and to deal with matters affecting industrial relations, welfare and training, and war housing. The Department's post-war functions relate to industrial matters, vocational training (other than University type) of discharged members of the Forces, the operation of the Commonwealth Employment Service, etc.

Prior to 1946–47, expenditure on this Department was included under Defence, War and Repatriation Services. Expenditure for the years 1946–47 to 1950–51 is shown in the following table :—

EXPENDITURE : DEPARTMENT OF LABOUR AND NATIONAL SERVICE.

(£.)

Details.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

Superannuation	37	507	684	756	2,033
Rent, repair and maintenance of buildings	95,742	97,676	84,882	99,797	90,164
Total	1,127,430	1,276,740	1,328,190	1,775,568	2,412,791

(a) Provided under Department of Shipping and Transport.

(xx) *Department of National Development.* This Department was formed early in 1950 to carry out the Government's policy for national development. Transferred to it from other Departments were—the Division of Industrial Development and the Regional Planning Division (from the former Department of Post-war Reconstruction) and the Bureau of Mineral Resources (from the former Department of Supply and Development). In May, 1951, the Fuel Branch of the Department of Fuel, Shipping and Transport was also transferred to it.

Expenditure on the services now performed by the Department of National Development is shown in the following table for the years 1946–47 to 1950–51:—

EXPENDITURE : DEPARTMENT OF NATIONAL DEVELOPMENT.

(£.)

Details.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.
Administrative—Salaries and general expenses	193,604	321,147	287,991	298,451	436,778

Rent, repair and maintenance of buildings ..	33,388	31,679	30,502	24,816	51,955
Total	226,992	352,826	318,493	401,551	771,042

(a) Provided under Defence and War and Repatriation Services. (b) Provided under Department of Supply. (c) Also part provided under Department of Supply.

(xxi) *Commonwealth Scientific and Industrial Research Organization.* This organization was created in May, 1949, when the former Council for Scientific and Industrial Research, controlled by the Prime Minister's Department, was abolished.

The table below shows expenditure on the services now performed by the Commonwealth Scientific and Industrial Research Organization for the years 1938–39 and 1946–47 to 1950–51 :—

EXPENDITURE : COMMONWEALTH SCIENTIFIC AND INDUSTRIAL RESEARCH ORGANIZATION.

(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

(xxii) *Postmaster-General's Department.* From the beginning of 1949–50, Broadcasting Services were separated from the Postmaster-General's Department. In years prior to 1949–50 part of the expenditure on these services is included with the Postmaster-General's Department. Details of the expenditure of this Department for the years 1938–39 and 1946–47 to 1950–51 are given in the following table :—

EXPENDITURE : POSTMASTER-GENERAL'S DEPARTMENT.
(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

Total	15,028,233	26,755,701	32,171,144	40,919,118	47,512,271	54,802,414

(a) Expenditure charged to various works.

Further details of expenditure for 1949–50 on account of the Postmaster-General's Department appear in Chapter V.—Transport and Communication (part I., Posts, Telegraphs, Telephones and Wireless).

(xxiii) *Broadcasting Services.* Since 1949–50 all expenditure on broadcasting services has been brought together in one section. Previously these services had been financed partly by the Postmaster-General's Department and partly from the Wireless Broadcasting Trust Account. Details of expenditure for 1949–50 and 1950–51 are shown in the following table :—

EXPENDITURE : BROADCASTING SERVICES.
(£.)

Details.	1949–50.	1950–51.
Australian Broadcasting Control Board	36,665	58,900
Australian Broadcasting Commission—Salaries, general and programme expenses	1,539,314	2,010,293
Technical and other Services—Postmaster-General ..	1,290,430	1,508,518
Repairs and maintenance	5,748	12,169
Audit (proportion)	..	900
Total	2,872,157	3,590,780

(xxiv) *Railways.* The Commonwealth Railways, previously administered by the Department of the Interior, were transferred in March, 1950 to the newly-formed Department of Fuel, Shipping and Transport (later Shipping and Transport). The expenditure on railways for the years 1938–39 and 1946–47 to 1950–51 is shown below.

EXPENDITURE : COMMONWEALTH RAILWAYS.

Total	1,351,041	1,921,172	2,088,611	2,594,320	2,791,901	3,380,631

(*a*) Includes loans, redemption and conversion expenses, 1946–47, £54,648; 1947–48, £20,274; 1948–49, £903; 1949–50, £6,808; and 1950–51, £402.

Additional details of the financial operations of the Commonwealth Railways to 1949–50 are given in Chapter V.—Transport and Communication (part B, Railways).

(xxv) *Territories.* The following table shows the expenditure on account of territorial services for the years 1938–39 and 1946–47 to 1950–51. The Australian Capital Territory is administered by the Department of the Interior, and the Department of Territories controls the external territories and the Northern Territory. The expenditure has been grouped in one table for convenience. Information in greater detail will be found in the *Finance Bulletins* issued by this Bureau.

EXPENDITURE : TERRITORIES.

(£.)

Details.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

(*a*) Excludes Railways, *see* para. XXIV.

3. **Subsidies and Bounties.**—The following table shows details, for the years 1938–39 and 1946–47 to 1950–51, of Commonwealth expenditure from revenue on subsidies, bounties and assistance to primary producers. Expenditure on special relief such as drought, frost, flood and bush fire, etc., is not included, nor are items of expenditure grouped under " Primary Production—Self Balancing Items ". These items of expenditure are from the proceeds of certain taxes on primary products and profits from

marketing schemes, which have been paid to trust funds for the purpose of price or other stabilization schemes or for distribution to producers. Information relating to these schemes and other assistance to primary producers is given in Chapter XX.—Agricultural Production.

Previously, particulars of price stabilization subsidies and assistance to primary producers were included in this chapter partly with expenditure on War (1939–45) and Repatriation Services and partly with departmental expenditure. As the items included with War (1939–45) and Repatriation Services expenditure are no longer regarded as war expenditure, and because of the importance of the subject, they have now been combined in the one table following.

Details of price stabilization subsidies and of various forms of assistance to primary producers for earlier years may be found on pages 414 and 1014–5 respectively of Official Year Book No. 38.

EXPENDITURE: SUBSIDIES AND BOUNTIES.

(£'000.)

A detailed statement of expenditure on Capital Works and Services from Revenue, Trust and Loan Funds will be found in § 5, page 795.

5. **Defence, War and Repatriation Services.**—Full details concerning the expenditure from Consolidated Revenue upon Defence, War and Repatriation Services will be found in §§ 6 and 7, pages 796–8.

Division IV.—Payments to or for the States.

1. **General.**—An outline of the provisions of the Constitution requiring the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Official Year Book (*see* No. 37, pages 633 to 638). In the following paragraphs reference is made to the agreements at present in operation.

2. **Financial Agreement.**—Details of the Financial Agreement between the Commonwealth and the States are given in Official Year Book No. 37, pages 685 to 690. Under this agreement the Commonwealth agreed to contribute £7,584,912 per annum towards interest payable on the State Debts for a period of 58 years from 1st July, 1927. This amount is to be distributed amongst the States as follows :—New South Wales, £2,917,411 ; Victoria, £2,127,159 ; Queensland, £1,096,235 ; South Australia, £703,816 ; Western Australia, £473,432 ; Tasmania, £266,859 ; Total, £7,584,912.

These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926–27 at the rate of 25s. per head of population, the rate at which the Commonwealth had contributed annually to the States since 1st July, 1910 as compensation for the States relinquishing, after Federation, the right to levy Customs and Excise Duties.

In addition, the Commonwealth agreed to pay to the National Debt Sinking Fund for redemption of State Debts the following amounts :—(*a*) an annual contribution of 2s. 6d. per cent. of the net public debt of the States at 30th June, 1927 for a period of 58 years from 1st July, 1927 (in respect of New South Wales net public debt from 1st July, 1928) ; (*b*) an annual contribution of 5s. per cent. on new borrowings (except those for redemption, conversion or funding a State deficit) after 1st July, 1927 for a period of 53 years from the date of raising ; (*c*) an annual contribution of 5s. per cent. on loans raised to meet revenue deficits occurring between 1st July, 1927 and 30th June, 1935 for a period of 39 years from 1st July, 1944.

3. **Special Grants.**—The Constitution provides in Section 96 for the granting of special financial assistance to the States. Western Australia has received financial assistance each year since 1910–11. In 1912 a grant was made to Tasmania, the amount payable in the first year, 1912–13, being £95,000, which was to be progressively reduced by £10,000 in each successive year. The Tasmania Grant Act 1913 provided for an addition to this grant, bringing the amount payable to £85,000 per annum to the year 1921–22, after which annual grants of varying magnitude were made. South Australia received £360,000 in 1929–30 and further grants in each successive year.

In 1933 the Commonwealth Government appointed the Commonwealth Grants Commission of three members to inquire into and report upon claims made by any State for a grant of financial assistance and any matters relevant thereto.

Applications have been received from South Australia, Western Australia and Tasmania during each year from 1933 and the recommendations of the Commission in respect of the years 1938–39 and 1947–48 to 1951–52 were as follows :—

COMMONWEALTH GRANTS COMMISSION : GRANTS RECOMMENDED.

(£.)

State.	1938–39.	1947–48. (a)	1948–49. (a)	1949–50. (b)	1950–51. (c)	1951–52. (d)
South Australia ..	1,040,000	2,318,000	2,850,000	4,174,000	5,332,000	4,558,000
Western Australia ..	570,000	2,977,000	3,600,000	5,618,000	5,839,000	5,088,000
Tasmania	410,000	747,000	1,000,000	1,262,000	1,004,000	876,000
Total ..	2,020,000	6,042,000	7,450,000	11,054,000	12,175,000	10,522,000

(a) Includes additional grants recommended : 1947–48, Western Australia, £1,000,000 ; 1948–49, South Australia, £600,000, Tasmania, £100,000, total £700,000. (b) Includes the excess of the assessed grant over the special grant received for 1947–48 : South Australia, £324,000, Western Australia £768,000, Tasmania, £262,000. (c) Includes the excess of the assessed grant over the special grant received for 1948–49 : South Australia, £762,000, Western Australia, £1,089,000, Tasmania, *Dr.* £96,000. (d) Includes the excess of the assessed grant over the special grant received for 1949–50 : South Australia, £308,000, Western Australia, £88,000, Tasmania, £126,000.

4. **States Grants (Tax Reimbursement) Acts.**—Details of the States Grants (Income Tax Reimbursement) Act 1942 and the States Grants (Entertainments Tax Reimbursement) Act 1942 are given in earlier issues of the Official Year Book (*see* No. 37, pages 635 to 637). These acts provided for grants to the States as compensation for vacating the fields of Income Tax and Entertainments Tax. Grants under these acts ceased after 1945–46 and were replaced by grants under the States Grants (Tax Reimbursement) Act 1946–1948. This Act provided for the following reimbursement grants to be paid to the States, the figures shown relating to 1946–47 and 1947–48 respectively :—New South Wales, £16,477,000, £18,536,625 ; Victoria, £8,860,000, £9,967,500 ; Queensland, £6,601,000, £7,426,125 ; South Australia, £3,458,000, £3,890,250 ; Western Australia, £3,384,000, £3,807,000 ; Tasmania, £1,220,000, £1,372,500 ; Total, £40,000,000, £45,000,000.

For 1948–49 and subsequent years an amount is to be determined by increasing the aggregate grants paid in 1947–48 (£45,000,000) by the same proportion as the aggregate population of the six States at the beginning of the financial year increases over the aggregate population of the six States at 1st July, 1947. This amount is to be further increased by a percentage equal to the percentage increase in average wages per person employed in the financial year preceding the year in which the reimbursement grants are to be paid over the average wages per person employed in 1945–46. The amount so determined will be the aggregate of the reimbursement grants and is to be distributed to the States in the following proportions :—

(i) 1948–49 to 1956–57 :—(*a*) The following percentages of the grant shall be distributed in the proportion indicated by the distribution of the aggregate reimbursement grant in 1946–47 and 1947–48 viz. :—1948–49, 90 per cent ; 1949–50, 80 per cent. ; and thus decreasing by 10 per cent. each year to 10 per cent. in 1956–57, and (*b*) the remainder in the proportion indicated by the "adjusted" population* for each State.

(ii) 1957–58 and subsequent years :—the proportion indicated by the "adjusted" population for each State.

It is provided that, if the application of the foregoing formula for distribution of the aggregate grants causes the amount of the reimbursement grant for any State to fall below the grant for 1946–47, the grant payable will be the same as that for 1946–47 and the balance of the aggregate grant is to be distributed between the remaining States in the proportions above.

---

* In the "adjusted" population allowances are made for differences in the proportion of school children in the population and the density of the population in each state.

An amount equal to arrears of State income taxes collected by the States in any year is to be deducted from the reimbursement grants for that year. The aggregate amount so deducted less any refunds of State income taxes made by the Commonwealth is to be repaid in the event of uniform taxation ceasing to operate. This amount bore interest at 3 per cent. up to 30th June, 1946, but thereafter, under the new arrangement, will bear no interest.

In 1950–51 an amount of £5,000,000 was paid to the States under the States Grants (Additional Tax Reimbursement Act) 1950. As this was considered as a non-recurring grant the formula outlined above was not amended.

The payment of the tax re-imbursement grant in any year to any State is subject to the condition that that State does not impose a tax on incomes in that year.

5. **Additional Financial Assistance, 1949–50 and 1950–51.**—(i) *Coal Strike Emergency Grant.* During 1949–50 State business undertakings suffered considerable losses as a result of the coal strike. Towards meeting these losses the Commonwealth made grants totalling £8,000,000 to the States. The amounts paid to each State were :—New South Wales, £3,261,000 ; Victoria, £1,830,000 ; Queensland, £1,309,000 ; South Australia, £687,000 ; Western Australia, £661,000 ; and Tasmania, £252,000.

(ii) *Special Financial Assistance Grant.* During 1950–51 there were heavy additions to the financial needs of the States and in June, 1951 a special grant of £15,000,000 was made. The amounts granted to each State were—New South Wales, £6,250,000 ; Victoria, £4,750,000 ; Queensland, £2,000,000 ; South Australia, £800,000 ; Western Australia, £1,000,000 ; and Tasmania, £200,000.

6. **Grants for Road Construction.**—(i) *Main Roads Development Act* 1923–25, *Federal Aid Roads Acts* 1926, 1931 *and* 1936, *and Federal Aid Roads and Works Act* 1937. Particulars of the agreements between the Commonwealth and the States under these Acts are referred to in earlier issues of the Year Book (*see* issue No. 38, pp. 787–8) and in the *Finance Bulletins* published by this Bureau.

(ii) *Commonwealth Aid Roads and Works.* The Federal Aid Roads and Works Agreement expired on 30th June, 1947, and was replaced by the Commonwealth Aid Roads and Works Act 1947, which provided for the following grants to be made to the States for the three years commencing on 1st July, 1947 :—

(*a*) An amount equal to 3d. a gallon customs duty and 2d. a gallon excise duty on petroleum and shale products (except benzol, on which the proportion of excise duty was 1½d. a gallon) as specified in Customs Tariff Item 229C and Excise Tariff Item 11. Petroleum and shale products used in civil aircraft were excluded.

(*b*) £1,000,000 in each year.

These grants were distributed to the States in the following proportions :—

(1) Five per cent. to Tasmania ;

(2) Ninety-five per cent. distributed between the remaining States as to three-fifths according to population at 30th June, 1947, and two-fifths according to area.

The amount of the grant received by the States under (*a*) above was to be expended on the construction, reconstruction, maintenance and repair of roads and (not exceeding one-sixth) on other works connected with transport. The grant under (*b*) above was to be expended on construction and maintenance of roads in sparsely populated areas, timber country and rural areas or on purchase of road-making plant for use in those areas.

The Act also provided £500,000 per annum to be expended by the Commonwealth on strategic roads and roads of access to Commonwealth property and £100,000 for the promotion of road safety practices.

Amendments to the Act in 1948 and 1949 increased the grant under (*b*) above to £2,000,000 in 1948–49 and £3,000,000 in 1949–50.

In each of the years 1948–49 and 1949–50 an additional £100,000 was paid to the Commonwealth Aid Roads and Works Trust Account from the Department of Transport's vote for expenditure on the promotion of road safety practices.

On the expiration of this Act the Commonwealth Aid Roads Act 1950 provided, for a period of five years from 1st July, 1950, an amount equivalent to the sum of (i) 6d. per gallon of customs duty and (ii) 3½d. per gallon of excise duty collected on petroleum and shale products as specified in Customs Tariff Item 229C and Excise Tariff Item 11 (excluding such products used in civil aircraft). Out of this amount the following grants are to be made to the States for construction and maintenance of roads and the purchase of road-making plant :—

(*a*) Sixty-five per cent. of the amount less £600,000 per annum for expenditure on roads, and

(*b*) Thirty-five per cent. of the amount for expenditure on roads in rural areas other than highways, trunk or main roads.

Of the former amount, one-sixth may be spent on other works connected with transport by road or water. Five per cent. of the grants to the States is payable to Tasmania. Fifty-seven per cent. is to be divided between the other States in proportion to their populations at 30th June, 1947, and 38 per cent. according to area. In addition, the Commonwealth may spend each year £500,000 on strategic roads and £100,000 on the promotion of road safety practices.

7. **Amounts Paid.**—(i) *Year* 1950–51. The following table shows particulars of the amounts paid to each of the States during 1950–51 as grants for the several purposes referred to in the preceding paragraphs.

PAYMENTS BY THE COMMONWEALTH TO OR FOR THE STATES, 1950–51.(*a*)

§ 4. Commonwealth Loan Funds.

Brief historical notes relating to the Commonwealth Loan Fund are given in earlier issues of the Official Year Book (*see* No. 37, page 640). In the following table details are given of the net expenditure from the Commonwealth Loan Fund for the years 1938–39 and 1946–47 to 1950–51 and of the aggregate expenditure to 30th June, 1951. The figures shown represent "net" loan expenditure, i.e., after adjustments have been made on account of amounts expended in earlier years.

(*a*) Repayment of surplus balances of Defence Trust Accounts. (*b*) Comprises £24,911,484 expenditure under War Services Homes Act 1914–1949, and £3,861,577 financial assistance to the States in connexion with War Service Land Settlement. (*c*) Excludes amounts charged to War Loan Fund. (*d*) In addition, £13,045,408 was expended from War Loan Fund prior to 1923–24. (*e*) Includes Administration and other Public Buildings, Australian Capital Territory. (*f*) Payment to National Debt Sinking Fund. *See* page 838.

NOTE.—Minus sign (−) indicates excess of repayments to Loan Fund.

Information relating to the Public Debt of the Commonwealth is given in Part D. Commonwealth and State Public Debt (of this chapter).

§ 5. Commonwealth Expenditure on Capital Works and Services.

In the following table details are given of Commonwealth expenditure on capital works and services during each of the years 1946–47 to 1950–51 and of the aggregate to 30th June, 1951. The table covers all expenditure on capital works and services made from the Consolidated Revenue Fund, the Loan Fund and Trust Funds.

COMMONWEALTH EXPENDITURE ON CAPITAL WORKS AND SERVICES FROM REVENUE, TRUST AND LOAN FUNDS.

§ 6. Commonwealth Expenditure on Defence Services.

Details of the expenditure on Defence Services by the Departments of Defence, Navy, Army, Air, and Supply are shown in the following table. The expenditure shown under Department of Supply includes the former Departments of Shipping and Fuel, Supply and Development, Supply and Shipping, and Munitions. This table now relates to Defence Services only. In previous issues particulars of expenditure on War (1939–45) and Repatriation Services were also included. These are now shown in the table in the following section, which includes, in addition, particulars of expenditure on the 1914–18 War formerly shown in a separate table.

The figures represent the combined expenditures from revenue, trust and loan funds for the years 1938–39 and 1946–47 to 1950–51.

(*b*) From Service Departments and Australian Soldiers' Repatriation Trust Account. (*c*) Represents expenditure on War and Repatriation Services by Defence Departments (*see* page 797), but for which dissection is not available. (*d*) Provided under Ordinary Services. (*e*) Munitions, stores, etc., supplied to the Government of United Kingdom and other administrations. Includes waivure of war-time indebtedness of other administrations. (*f*) These subsidies, which from 1941–42 to 1949–50 were provided under War and Repatriation Services, are excluded from this table. In 1950–51 they were provided under Ordinary Services. For details *see* page 787.

B. STATE FINANCE.

§ 1. General.

1. **Functions of State Governments.**—In comparing the financial returns of the States, allowances must be made for the various functions discharged by the respective Governments, and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another relegated to municipal or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the Central Government. Care, therefore, is needed in making comparisons, and the particulars contained in this Chapter should be read with those contained in Chapter XV.—Local Government. In many respects, moreover, the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such as railways, tramways, water supply, etc., which in other countries are often left to private enterprise.

2. **Accounts of State Governments.**—The various financial transactions of the States are in each case mainly concerned with one or other of three Funds—the " Consolidated Revenue Fund ", the " Trust Fund ", and the " Loan Fund ". All revenue (except certain items paid into special funds) collected by the State is paid into its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a Special Act.

Figures in § 2 following relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the Business Undertakings included in the Annual Budget Papers. These latter are as follows :—Railways, Tramways and Omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Adjustments have been made to the Budget figures, however, in order to obviate duplications caused by inter-fund payments and to maintain uniformity from year to year in the presentation of statistics. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

The Trust Fund comprises all moneys held in trust by the Government, and includes such items as sinking funds, insurance companies' deposits, etc.

The Loan Fund is debited with all loan moneys raised by the State, and credited with the expenditure therefrom on public works or other purposes.

3. **Inter-relation of Commonwealth and State Finances.**—A statement in some detail, covering the inter-relation of Commonwealth and State Finances during the period from the inception of Federation to the passing of the Financial Agreement Act 1928, was published in Official Year Book, No. 22, pages 379–80. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Official Year Book from year to year (*see also* pages 788–792 and 820).

§ 2. State Consolidated Revenue Funds.

Division I.—Revenue.

1. **General.**—The principal sources of State revenue are :—

> (*a*) Taxation ; (*b*) the Business Undertakings controlled by the State Governments ; (*c*) Sale of and Rental from Crown lands ; (*d*) Payments by Commonwealth Government under the Financial Agreement, Special Grants and Tax Reimbursement Acts, etc. ; (*e*) Interest on advances ; and (*f*) Miscellaneous sources, comprising Fines, Fees, etc.

Of these sources, that yielding the largest revenue for the States as a whole is the group of Business Undertakings, the principal contributors being the Government Railways and Tramways. Next in magnitude are Commonwealth payments under the Tax Reimbursement Acts, followed in order by Taxation, the Commonwealth payments under the Financial Agreement and Special Grants, and Lands receipts. Since the introduction in 1942–43 of the Uniform Tax Scheme, Commonwealth payments under the Income and Entertainments Tax Reimbursement Acts and, from 1946–47, under the Tax Reimbursement Act, have replaced revenue previously received from Income and Entertainments taxes.

2. **Revenue Received.**—The following table shows particulars of the total amounts and the amounts per head of consolidated revenue received by the several States during the years 1938–39 and 1946–47 to 1950–51.

STATE CONSOLIDATED REVENUE.

Year.	N.S.W.(*a*)	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.

Lands	1 1 8	0 10 5	1 15 0	0 8 8	1 1 6	0 13 6	0 19 2
Interest (n.e.i.) ..	0 3 10	0 16 7	0 15 5	1 16 3	1 11 2	3 0 10	0 15 7
Commonwealth Payments—							
Tax Reimbursements ..	9 5 6	7 16 0	10 5 9	9 2 0	10 16 0	8 6 0	9 1 7
Other (*c*) ..	2 17 7	3 3 2	2 13 8	9 14 4	12 18 0	5 2 4	4 5 8
Miscellaneous ..	2 9 7	1 16 3	1 13 5	2 14 1	3 14 8	2 14 2	2 5 11
Total ..	39 3 9	28 8 2	37 9 10	43 14 0	50 14 3	27 3 9	36 15 11

(*a*) *See* § 1 par. 2, page 779. (*b*) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections *see* next page. (*c*) Includes payments under Financial Agreement, Special Grants and Prices Control Reimbursement Grants.

In comparing the revenue of the States, it should be borne in mind that business undertakings which in one State may be controlled by the Government are, in another State, controlled by a board or trust. For example, in New South Wales and Western Australia the tramway systems are controlled by the Government, while in the other States ownership is largely vested in trusts. Harbour and river services and water supply and sewerage are also controlled in some cases by the State and in others by trusts. All the Tasmanian transport facilities are controlled by a commission.

(ii) *Revenue from Taxation.* (*a*) *General.* The following table shows, for the year 1950–51, particulars of all State taxation collections irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and represent a comprehensive statement of all taxation collections by the Government in each State. In this and the succeeding statements of taxation the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under " Entertainments Tax " instead of under " Stamp Duties "

and "Licences" respectively. Commonwealth payments under the State Grants (Tax Reimbursement) Act are included because these grants have replaced revenue received by the States from Income and Entertainments taxes prior to the introduction of the Uniform Tax Scheme in 1942–43 :—

STATE REVENUE FROM TAXATION(a) : TOTAL NET COLLECTIONS AND COMMONWEALTH TAX REIMBURSEMENTS, 1950–51.

(£.)

Tax.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.

GRAND TOTAL ..	100.00	100.00	100.00	100.00	100.00	100.00	100.00

Prior to Federation, duties of Customs and Excise constituted the principal source of revenue from taxation. Thereafter, until the introduction of the Uniform Income Tax Scheme, the most productive State taxes were the various Income Taxes, which, in 1941–42, included Unemployment Relief, State Development and Hospital Taxes.

The total amounts and the amounts per head raised from all sources of taxation by the several State Governments, including amounts not paid into the Consolidated Revenue Fund and tax reimbursements received from the Commonwealth, during the years 1938–39 and 1946–47 to 1950–51, are shown in the following table :—

STATE REVENUE FROM TAXATION AND COMMONWEALTH TAX REIMBURSEMENTS.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
TOTAL NET COLLECTIONS. (£'000.)							
1938–39 ..	20,263	12,023	8,646	4,199	3,597	1,779	50,507

(*a*) Includes Commonwealth Tax Reimbursement.

(*b*) *Probate and Succession Duties.* Probate duties have been levied for many years in all the States, but the provisions of the Acts governing the payment of duty differ widely both in regard to the ordinary rates and those which apply to special beneficiaries. A table showing the values of the estates in which probates and letters of administration were granted is given in Chapter XVI.—Private Finance.

The duties collected for the years 1938–39 and 1946–47 to 1950–51 are as follows :—

STATE PROBATE AND SUCCESSION DUTIES : NET COLLECTIONS.

(£.)

State.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.

(e) *Income Taxes.* State taxes levied on incomes prior to the introduction of the Uniform Tax Scheme in 1942–43 were as follows :—

New South Wales—Income Tax, Super Tax and Further Tax on Undistributed Income of Companies ;

Victoria—Income Tax, Special Income Tax, and Unemployment Relief Tax ;

Queensland—Income Tax, Super Tax, Additional Tax and Income (State Development) Tax ;

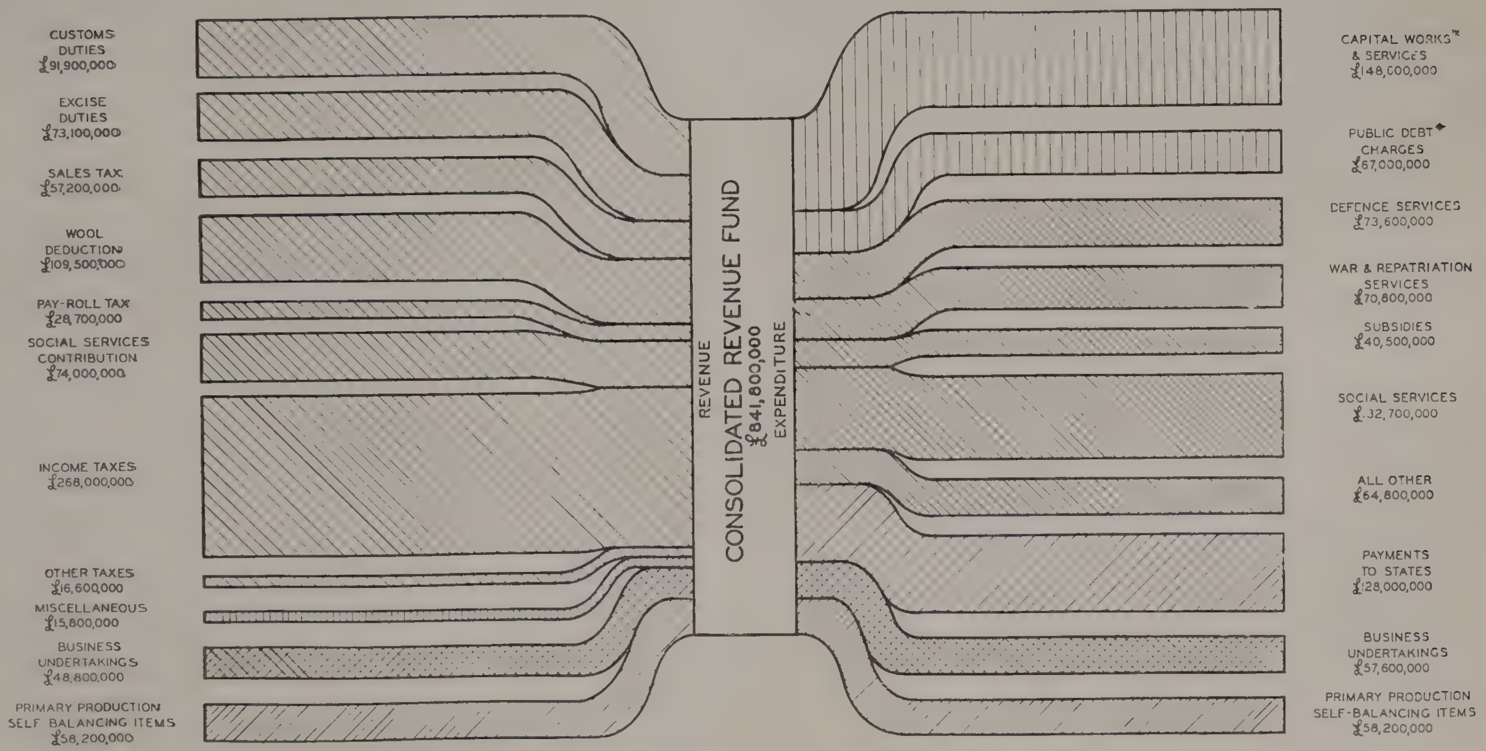
South Australia—Income Tax ;

Western Australia—Income Tax, Hospital Tax and Gold Mining Profits Tax ;

Tasmania—Income Tax.

Some details of these taxes are given in earlier issues of the Year Book.

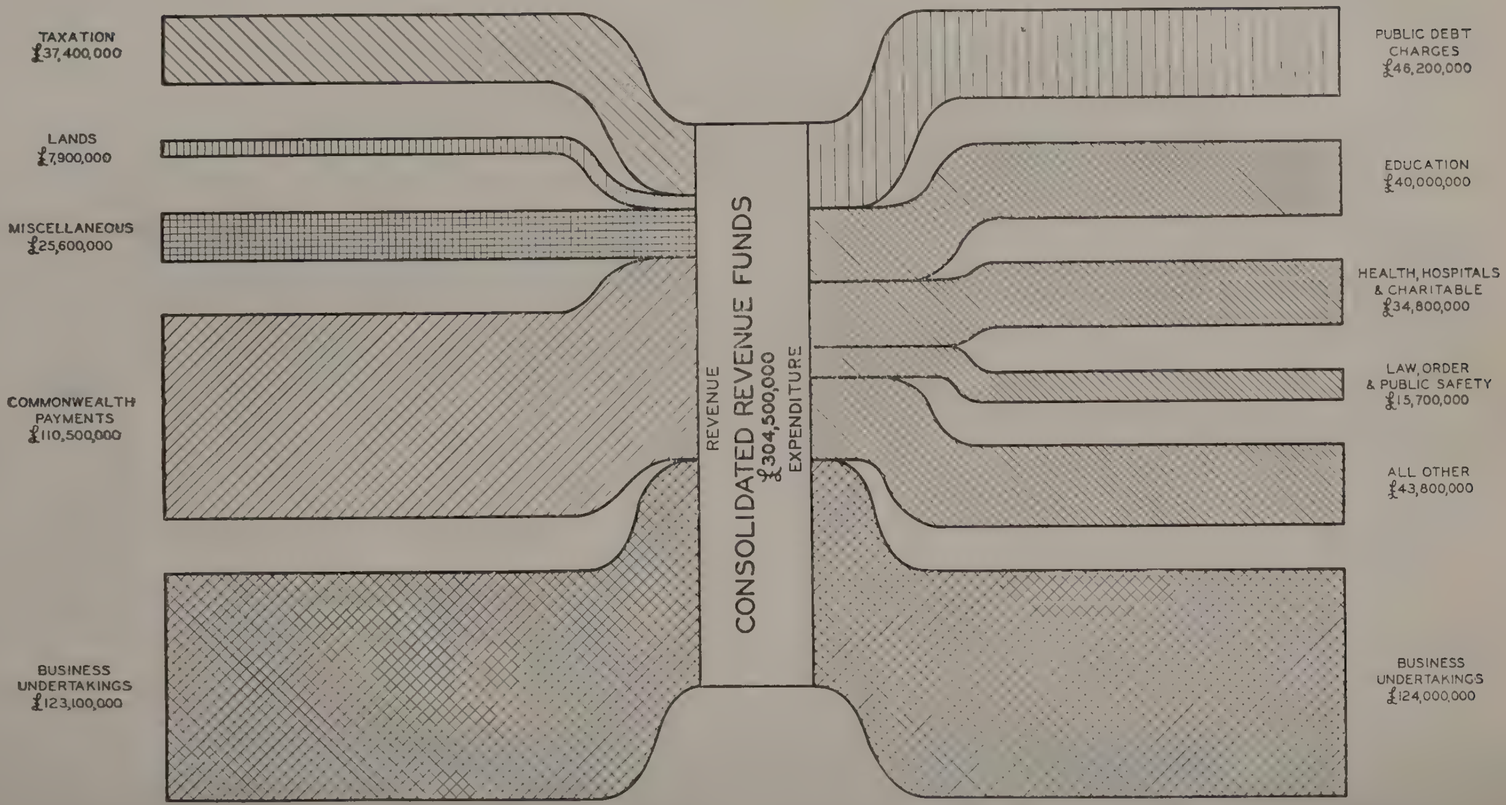
COMMONWEALTH CONSOLIDATED REVENUE FUND, YEAR ENDED 30TH JUNE, 1951



* INCLUDES DEFENCE WORKS AND SERVICES £73,500,000

◆ INCLUDES WAR DEBT CHARGES £58,800,000

STATE CONSOLIDATED REVENUE FUNDS, YEAR ENDED 30TH JUNE, 1951



When the Uniform Tax Scheme was introduced in 1942–43 these taxes, together with the Commonwealth War Tax, were discontinued, and the Commonwealth Income Tax rates were increased to raise the revenue previously raised by these taxes. The States are reimbursed by the Commonwealth for the revenue lost to them by the discontinuance of these taxes. Details of these reimbursement grants are given on pages 791 and 792.

In the following table total State collections of the taxes mentioned above are shown for the year 1938–39. For the years 1946–47 to 1950–51 the total of Commonwealth reimbursements and arrears of State taxes collected are shown.

STATE INCOME AND DIVIDEND TAXES: NET COLLECTIONS AND COMMONWEALTH TAX REIMBURSEMENTS.

Except in the case of South Australia, the proceeds of motor tax and motor registration fees are paid into special funds and the amounts do not appear in the Consolidated Revenue Funds. The total for Australia for the year 1950–51, £15,569,074, comprises registration fees and taxes, £12,216,825, drivers' and riders' licences, £1,090,045, and licences to operate, etc., £2,262,204.

(iii) *Business Undertakings.* (a) 1950–51. A very large proportion of State gross revenues is made up of receipts from business undertakings under the control of the Governments. The principal of these are railways and tramways, harbour works, water supply and sewerage and electricity supply, and, in addition, State batteries for the treatment of auriferous ores are included for Western Australia, and various minor revenue-producing services are rendered by the Governments of all States. For the year 1950–51 the revenue from these sources was £123,102,359 or 40.4 per cent. of the revenue from all sources. Details of revenue are as follows :—

STATE REVENUE FROM BUSINESS UNDERTAKINGS, 1950–51.

(iv) *Lands.* The revenue from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and has been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of Crown lands for the year 1950–51 :—

STATE LAND REVENUE, 1950–51.

(£.)

Source.	N.S.W.	Victoria.	Q'land.	S.Aust.	W.Aust.	Tas.	Total.
Sales ..	84,136	87,455	..	53,980	38,778	3,001	267,350

Total ..	3,545,429	1,167,259	2,087,262	307,552	615,229	194,761	7,917,492

The total land revenue for all States for the years 1938–39 and 1946–47 to 1950–51 respectively was :—£4,144,000, £5,190,000, £6,196,000, £6,476,000, £7,004,000, £7,917,000.

(v) *Commonwealth Payments.* Commonwealth Payments to the States represent a considerable proportion of the States' Revenue. In 1950–51 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was £110,548,629 (36.3 per cent.). This was made up of the contribution towards interest on States' debts under the Financial Agreement, £7,584,912, special grants to the States of South Australia, Western Australia and Tasmania, £12,175,000, Prices Control Reimbursement, £682,053, Special Financial Assistance, £15,000,000, and Tax Reimbursement Grants, £75,106,664. The latter item has been included under the State taxation above as it is paid to the States as a reimbursement for vacating the field of income taxation.

In addition to these, the States receive a number of other payments which are paid to Trust Funds. The main items in this class are the contribution towards the sinking fund on States' debts (£2,241,106 in 1950–51) paid to the National Debt Sinking Fund and grants for Commonwealth Aid Roads (£13,542,537 in 1950–51) paid to State Trust Funds.

More detailed information concerning Commonwealth payments to the States is given under part A of this Chapter, (§ 2, Division IV., page 788).

(vi) *Interest and Miscellaneous.* In addition to the foregoing, there are in each State several miscellaneous sources of revenue, including such items as interest, fines, fees, etc. In 1950–51 interest, mainly from loans to local governing bodies, on public account balances and for Soldier Land Settlement supplied £6,462,072, whilst "Miscellaneous" revenue, which includes fines of the courts and fees for services, amounted to £18,988,807.

Division II.—Expenditure.

1. **General.**—The principal heads of State expenditure from Consolidated Revenue Funds are :—

> (*a*) Interest, sinking fund and exchange charges in connexion with public debt ; (*b*) Working expenses of railways, tramways and other business and industrial undertakings ; (*c*) Education ; (*d*) Health and charitable expenditure ; (*e*) Justice ; (*f*) Police ; (*g*) Penal establishments ; and (*h*) all other expenditure, under which heading is included Public Works, Lands and Surveys, Agriculture and Forestry, Legislative and General Administration, Pensions and Miscellaneous.

In earlier years the working expenses of Railways and Tramways were the most important item of State Governmental expenditure, but, for a period prior to 1941–42, Public Debt charges were the heaviest item. Since then, however, Railways and Tramways expenditure has again taken the major place. In the year 1950–51 the working expenses of the Railways and Tramways and Omnibuses were 37.9 per cent. of the total expenditure from the State Consolidated Revenue Funds ; next in importance were Public Debt Charges, 15.2 per cent. ; Education, 13.1 per cent. ; Charitable, Public Health and Hospitals, 11.4 per cent. ; and Law, Order and Public Safety, 5.1 per cent.

2. **Total Expenditure.**—The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1938–39 and 1946–47 to 1950–51 are shown in the following table :—

STATE EXPENDITURE : CONSOLIDATED REVENUE FUNDS.

NOTE.—Minus sign (−) indicates deficit.

§ 3. State Trust Funds.

In addition to the moneys received as revenue and paid to the credit of Consolidated Revenue Funds, considerable sums are held by the State Governments in trust for various purposes. The balances of trust funds held at 30th June of the years 1939 and 1947 to 1951 were as follows :—

(a) Special Deposits Account and Special Accounts.

§ 4. State Loan Funds.

1. **General.**—As far back as 1842 revenue collections were supplemented by borrowed moneys, the earliest loan being raised by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2¾d. to 5¼d. per £100 per diem, or

approximately from 4½ per cent. to 8 per cent. per annum. Australian public borrowing, however, is mainly due to the fact that the State Governments, in addition to ordinary administrative duties, undertake functions which in other countries are usually entrusted to local authorities or left to private enterprise. Foremost amongst these are the construction and control of the railway systems. Loan moneys have also been largely used for improvements to harbours and rivers, and for the construction of roads, water supply and sewerage works. The State loan expenditure and public debt thus differ very materially from those of most European countries, and from those of the Commonwealth, where such expenditure was very largely incurred for defence or war purposes. As shown above, the State debts consist chiefly of moneys raised and expended with the object of assisting the development of the resources of the country, and are to a very large extent represented by tangible assets.

Statements relating to Loan Expenditure are shown below for both "gross" and "net" expenditure. The gross expenditure represents the amounts disbursed during each year whereas the net expenditure represents the gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

2. **Details of Loan Expenditure.**—(i) *Gross Loan Expenditure*, 1950–51. Particulars of the gross loan expenditure on Works, Services, etc., for the year 1950–51 are shown in the following table :—

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC., 1950–51.

(a) *See* footnotes (a) and (b) to table in par. 2 (ii) above.

The four tables in this paragraph and paragraph 2 do not include particulars of expenditure on loan discounts and flotations, the funding of deficits, the retirement of treasury bills, and similar items of a nature other than works, services, etc. The aggregate net expenditure on those items to 30th June, 1951 is shown in paragraph 4 following. Summaries of the gross and net expenditure and repayments in respect of all loan purposes for the years 1948–49 to 1950–51 are shown in paragraph 5 following.

4. **Total Net Loan Expenditure to 30th June, 1951.**—The total net loan expenditure including revenue deficits, etc., of the States from the initiation of borrowing to 30th June, 1951 amounted to £1,415,830,000. The purposes for which this sum was expended are shown in the following table :—

STATE NET LOAN EXPENDITURE TO 30th JUNE, 1951.

(a) Aggregate *Gross* Loan Expenditure. (b) Loans to Municipal Tramways Trust. (c) Not available separately. Distributed under various particular headings. (d) Expenditure from Commonwealth Loans under Commonwealth-State Housing Agreement has been excluded. (e) Under Prickly Pear and Land Act. (f) Included with Advances to Settlers. (g) Includes grain elevators, New South Wales and Victoria. (h) Includes Government Agency Department of Rural and Industries Bank, £2,680,000. (i) Includes Gas and Fuel Corporation shares, £2,551,000. (j) Includes £1,549,000 State Bank. (k) Includes Rural and Industries Bank, £5,674,000. (l) Contributions to Sinking Fund.

The figures in the foregoing table show the amounts actually expended from loan fund, and differ from those shown later in the statements relating to the public debt, which represent the amount of loans still outstanding. The statement above includes all expenditure, whether the loans have been repaid or are still in existence. As in the earlier tables on net loan expenditure, allowance has been made, however, for credits on account of repayments of advances to local government bodies, settlers, etc., the sale of assets, and transfers from other funds. In the public debt statement, on the other hand, loans repaid are not included, and in the case of loans still outstanding, each is shown according to the amount repayable at maturity, and not according to the amount originally available for expenditure.

5. **Total Loan Expenditure, 1948–49 to 1950–51.**—The following table shows particulars, in summary form, of the total loan expenditure in each State during each of the years 1948–49 to 1950–51.

Information relating to the States Public Debt is given in part D. Commonwealth and State Public Debt (page 820).

C. COMMONWEALTH AND STATE FINANCE.

1. **Revenue and Expenditure.**—(i) *Consolidated Revenue Funds.* The following tables show the aggregate revenue and expenditure of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1938–39 and 1946–47 to 1950–51. In these tables the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other sections of this Year Book. The items excluded from the adjusted figures include the following :—payments made by the Commonwealth to the States on account of tax reimbursements, interest under the Financial Agreement, Special Grants, Special Financial Assistance, Coal Strike Emergency Grants, Price Control Reimbursements and estimated payments of pay-roll tax by the States to the Commonwealth.

D. COMMONWEALTH AND STATE PUBLIC DEBT.

§ 1. General.

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth and State Public Debts were amalgamated and the Commonwealth Government accepted responsibility for the State Public Debts. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf and the debt is redeemed from a sinking fund to which both the Commonwealth and the States make contributions. Under the agreement the Commonwealth arranges for all borrowings on behalf of the Commonwealth and the States, and Commonwealth securities are issued for all money borrowed.

In the statistical tables relating to Public Debt the units of currency for debt outstanding and interest payable, with the exception referred to below, are :—Debt in Australia—£ Australian ; Debt in London—£ Sterling ; Debt in New York—£ (converted from dollars at the rate of $4.8665 to £1).

The totals shown represent the total " face " or " book " value of the debt without adjustment on account of the differences in currency mentioned above.

In § 3. par. 5 only, details of the debt for the Commonwealth and each State are given in Australian currency.

§ 2. The Financial Agreement between the Commonwealth and the States.

1. **General.**—Full details of the Financial Agreement between the Commonwealth and the States are given in earlier issues of the Official Year Book (*see* No. 37, pages 685 to 690). In this issue a summary of the main provisions only is given.

2. **Australian Loan Council.**—The Australian Loan Council was set up to co-ordinate the public borrowings of the Commonwealth and the States. It consists of the Prime Minister of the Commonwealth as Chairman and the Premier of each State, or Ministers nominated by them in writing. Each year the Loan Council examines the loan programmes of the Commonwealth and the States and determines the total amount to be borrowed during the year. Borrowings by the Commonwealth for defence purposes are not subject to decisions of the Loan Council.

3. **Loan Raisings for the Commonwealth and States.**—Subject to the decisions of the Loan Council, the Commonwealth arranges for all borrowings for or on behalf of the Commonwealth or any State, and for all conversions, renewals, redemptions, and consolidations of the Public Debts of the Commonwealth and of the States.

If the Loan Council unanimously decides, however, a State may borrow outside Australia in the name of the State, and may issue securities for the amount so borrowed. The Commonwealth then guarantees that the State will fulfil all its obligations to bondholders in respect of the money so borrowed and the money is deemed to be borrowed by the Commonwealth for and on behalf of the State.

Subject to any maximum limits decided upon by the Loan Council for interest, brokerage, discount and other charges, the Commonwealth or any State may—

- (i) Borrow within its own territory, for any purpose, money from any authorities, bodies, funds or institutions (including Savings Banks) constituted or established under Commonwealth or State law or practice ;
- (ii) Borrow from the public by means of counter sales of securities ; and
- (iii) Use any available public moneys.

However, any securities issued for money so borrowed or used must be Commonwealth securities on terms approved by the Loan Council.

4. **Taking over of State Public Debts.**—The Commonwealth took over on 1st July, 1929—

- (*a*) the balance then unpaid of the gross public debt of each State existing on 30th June, 1927 ; and
- (*b*) all other debts of each State existing on 1st July, 1929 for money borrowed by that State deemed by the Agreement to be money borrowed by the Commonwealth for and on behalf of the State,

and in respect of these debts assumed, as between the Commonwealth and the States, the liabilities of the States to bond holders.

5. **Transferred Properties.**—In respect of State properties transferred to the Commonwealth under Section 85 of the Constitution, the States, as from 1st July, 1929, were discharged from any liability in respect of principal, interest or sinking fund on so much of the debts bearing interest at 5 per cent. per annum, taken over by the Commonwealth, as amounted to the agreed value of these properties, namely £10,924,323.

6. **Payment of Interest.**—For a period of 58 years from 1st July, 1927 the Commonwealth agreed to contribute the sum of £7,584,912 each year towards the interest payable on the State debts. The balance of the interest payable on the State debts is paid to the Commonwealth by the States.

7. **Sinking Fund.**—(i) *State Public Debt existing at 30th June, 1927.* A sinking fund at the rate of 7s. 6d. per annum for each £100 of the net public debts of the States existing on 30th June, 1927, and conversions thereof, was established under the terms of the Agreement. The Commonwealth contributes annually from revenue 2s. 6d. per cent. on the net public debts of the States existing at 30th June, 1927 and each State contributes annually 5s. per cent. on the net public debt of such State at 30th June, 1927. The payments of the Commonwealth and of all States except New South Wales will continue for a period of 58 years from 1st July, 1927, and those of New South Wales for a similar period from 1st July, 1928.

(ii) *New Borrowings.* On new borrowings after 1st July, 1927 (except those for redemptions or conversions, or funding a State deficit) a sinking fund at the rate of 10s. per cent. per annum was established and the State and the Commonwealth contribute from revenue equal shares for a period of 53 years from the date of raising. (New South Wales did not commence sinking fund contributions in respect of new loans raised in the financial year 1927–28 until 1st July, 1928.)

(iii) *Loans raised to meet a Revenue Deficit.* In respect of any loan (except any of the loans referred to in par. (iv) below) raised after 30th June, 1927 by a State to meet a revenue deficit accruing after that date, no sinking fund contribution is made by the Commonwealth, but the State makes a sinking fund contribution at the rate of not less than 4 per cent. per annum of the loan for a period sufficient to provide for the redemption of the loan, the contributions being deemed to accumulate at the rate of 4½ per cent. per annum compound interest.

(iv) *Loans raised to meet Revenue Deficits between 30th June, 1927 and 1st July, 1935.* In respect of loans raised by a State or by the Commonwealth on behalf of a State, on the security of Commonwealth Treasury Bills, to meet a revenue deficit accruing after 30th June, 1927 and before 1st July, 1935, special contributions are payable Details of these contributions are given in Official Year Book No. 37, pages 688 and 689.

(v) *National Debt Commission.* The sinking funds established are controlled by the National Debt Commission which may arrange with any State to act as its agent in connexion with payments due to bond holders. Except where the conditions relating to sinking funds, redemption funds, and funds of a like nature held by a State on 30th June, 1929, precluded such transfer, all such funds were transferred to the National Debt Commission.

(vi) *Operation of Sinking Fund.* Sinking fund contributions made in respect of the debts of a State, and funds of that State transferred to the National Debt Commission, are not accumulated but must be applied, whenever expedient, to the redemption and repurchase of loan securities. When such a loan security is repurchased or redeemed by the National Debt Commission, it is cancelled, and the State, in addition to sinking fund contributions otherwise payable, pays a further annual sinking fund contribution at the rate of 4½ per cent. on the face value of the cancelled security.

(vii) *Oversea Debt.* Sinking fund contributions in respect of oversea debt shall be calculated at the mint par of exchange prevailing on 1st July, 1927.

8. **Borrowing by Semi-Governmental Authorities.**—It was realized at the inception of the Loan Council that, in the interests of co-ordinated borrowing, the Council should be advised of borrowings of large amounts by semi-governmental authorities. In May, 1936, all resolutions passed by the Loan Council in connexion with semi-governmental borrowings were consolidated into one set of rules, which superseded all previous resolutions. This set of rules is regarded as the "Gentlemen's Agreement", and provides, *inter alia*, for the submission of annual loan programmes in respect of semi-governmental authorities proposing to raise £100,000 or more in a year, for the consideration of such programmes in conjunction with the loan programme of the Government concerned, and for the fixing of the terms of individual semi-governmental loans coming within the scope of the annual programme.

§ 3. Commonwealth and State Public Debt Outstanding.

1. **Public Debt and Annual Interest Payable at 30th June, 1951.**—In the following table details are given of the Commonwealth and State Public Debt and annual interest payable at 30th June, 1951.

1951	462,241	250,933	166,157	148,388	123,186	57,433	1,208,338
			DEBT PER HEAD OF POPULATION. (£ *s.* *d.*)				
1939	130 18 7	95 13 3	125 4 11	182 10 6	203 2 4	111 1 2	129 3 11
1947	121 5 9	89 2 2	122 6 9	176 13 2	197 0 6	126 18 9	122 13 1
1948	126 19 1	90 7 6	123 0 7	180 12 5	194 11 11	129 8 6	125 12 10
1949	127 6 10	94 16 11	125 4 10	185 6 0	193 4 2	140 2 6	128 1 1
1950	131 17 3	98 13 11	127 5 5	190 3 7	196 7 1	152 18 3	132 7 7
1951	139 6 11	110 11 7	137 3 7	206 1 8	211 17 0	197 9 6	144 0 5

In some States certain public utilities such as Tramways, Water Supply and Sewerage, Harbour Services, etc., are controlled by Boards or Trusts, which, in addition to receiving advances from the Central Government, raise loans by public borrowing on their own behalf, while in other States these services are controlled by the Central Governments. Comparison of the debts of the States is therefore difficult, but on page 833 figures showing the aggregate debts of the States, including these local and semi-governmental authorities, are shown for the years 1938–39 and 1946–47 to 1949–50.

5. **Public Debt and Interest Payable in Australian Currency.**—In the foregoing tables relating to Commonwealth and State Public Debt the debt outstanding in London is expressed in sterling, and debt outstanding in New York is expressed in pounds converted

from dollars at the rate of $4.8665 to £1. This method of showing the debt gives no indication of the amount that the Australian Government would have to find to repay the debt. In the following tables the public debt and the interest payable are shown in terms of Australian currency throughout. Debt in London and in New York has been converted to Australian currency at the selling rate of exchange on 30th June, 1951.

COMMONWEALTH AND STATE PUBLIC DEBT AND INTEREST PAYABLE AT 30th JUNE, 1951: AUSTRALIAN CURRENCY.

(*a*) Includes short-term debt, Australia, £2,400,000 ; London, £22,868,000.

Under the Financial Agreement Act 1944, Treasury Bills issued to meet State revenue deficits accruing between 1st July, 1928 and 30th June, 1935 were retired on 31st December, 1944. In place of those not redeemed, one per cent. debentures amounting to £43,018,000 were issued. One of these debentures will mature in each year up to 1983. Particulars of these debentures are included under their respective years of maturity in the tables above.

8. **Short-term Debt.**—(i) *Amount.* Particulars of the short-term debt (Treasury Bills and Debentures) of the Commonwealth and States in London and in Australia at 30th June, 1939 and at intervals from 30th June, 1947 to 30th June, 1951 are shown in the following table. This debt is included in the public debt as shown elsewhere.

(a) Excludes Overdrafts and Internal Treasury Bills.

(ii) *Interest Rates.* (a) *London.* The rates of interest payable on Treasury Bills and Debentures in London during the following periods were: 1938–39 to 1940–41—minimum rate, 2 per cent., maximum rate, 2¼ per cent.; 1941–42 to 1943–44—minimum rate, 2 per cent., maximum rate, 3 per cent.; 1950–51 to 1949–50—minimum rate, 2 per cent., maximum rate, 2¼ per cent.

(b) *Australia.* The Treasury Bill rates in Australia were as follows:—1⅞ per cent. from 1st January, 1935; 1½ per cent. from 1st May, 1940; 1¼ per cent. from 1st May, 1943; 1 per cent. from 1st March, 1945; ¾ per cent. from 1st May, 1949.

9. **State and Municipal and Semi-Governmental Authority Public Debt.**—For the reasons indicated on page 827 direct comparisons of the debts of the several States should be made with caution. The table following shows, for 1938–39 and 1946–47 to 1949–50 particulars of the debts of the States and the debts due to the Public Creditor by municipal, and semi-governmental authorities in each State.

(a) Due to public creditor and excludes amounts due to Central Government. Includes Bank overdrafts.

§ 4. Commonwealth Loan Raisings.

1. **New Loans Raised, 1946–47 to 1950–51.**—Under the Financial Agreement between the Commonwealth and the States, the Commonwealth is responsible for raising all loan moneys required by both the Commonwealth and the State Governments. Details of loan transactions given in this and the next two paragraphs relate, therefore, to all loans raised for the Commonwealth and the States. The following table shows details of new loans raised in Australia by the Commonwealth during the five years 1946–47 to 1950–51. No new loans were raised in London during this period, and the only new loan raised in New York was that from the International Bank for Reconstruction and Development, amounting to $100,000,000, raised in May, 1951 and repayable half-yearly from 1st September, 1955 to 1st September, 1975. The rate of interest is 4¼ per cent. Of this loan $9,059,385 had been drawn at 30th June, 1951.

(a) Includes loans raised for redemption of Treasury Bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (*see* below). (b) Special issue (taken up by Commonwealth Bank of Australia).

In addition to the new loans raised shown in the foregoing table, and the redemption and conversion loans shown in the following table, there were other miscellaneous debt operations during 1950–51, viz. :—National Savings Stamps, decrease of £1,000 ; Savings Certificates and War Savings Certificates (Five and Seven Years' Series), decrease of £6,910,000 ; War Savings and Savings Stamps, decrease of £4,000 ; "Over the Counter Sales" (small amounts borrowed by the States by virtue of certain statutory rights), £2,482,000. Advance loan subscriptions in hand decreased from £26,776,000 at the end of 1949–50 to £1,026,000 at the end of 1950–51.

2. **Conversion and Redemption Loans, 1946-47 to 1950-51.**—(i) *Australia.* Particulars of conversion loans raised in Australia during the five years 1946–47 to 1950–51 are given in the following table :—

COMMONWEALTH CONVERSION AND REDEMPTION LOANS RAISED IN AUSTRALIA.

(a) No account has been taken of cost of issuing the conversion loans at a discount. Exchange calculated at £A.125.375 = £ stg. 100.

(iii) *New York.* During 1946–47 the Queensland 6 per cent. loan in New York became due for redemption and the option of redeeming other loans bearing interest at 5 per cent. and 4½ per cent. occurred. In order to take advantage of lower rates of interest, the Commonwealth gave notice that it intended to redeem the latter loans and four loans totalling $128,000,000 were raised to provide the money for redemption. Particulars of these loans are given in the following table. These operations were the first conversion operations undertaken in New York.

COMMONWEALTH LOANS RAISED IN NEW YORK FOR REDEMPTION OF EXISTING LOANS.

(a) No account has been taken of the cost of issuing the new loans at a discount. (b) Converted at selling rate of exchange on 30th June, 1947—$3.2002 = £A1.

3. **International Bank for Reconstruction and Development Loan.**—To provide dollar funds for the purchase of certain types of capital equipment and plant which were indispensable to the furtherance of development in Australia and which could only be obtained in the United States of America and Canada, the Commonwealth Government, in August, 1950, arranged a loan of $100,000,000 from the International Bank for Reconstruction and Development. The loan is for a term of 25 years with interest at 4¼ per cent. per annum on the amount of the loan withdrawn and outstanding from time to time. In addition there is a commitment charge of ¾ per cent. per annum on the amount of the loan not withdrawn from time to time. Repayment of the loan is to be made in half-yearly instalments commencing on 1st September, 1955. The last instalment is payable on 1st September, 1975. Up to 30th June, 1951, $9,050,385 had been drawn on the loan.

The capital equipment and plant to be purchased from the proceeds of the loan will be made available to Commonwealth and State Government departments and agencies and private firms and individuals for use in the development of Australian resources. Subject to a special import licence being obtained, the goods will be imported and distributed through normal channels and payment made through the Australian banking system. Periodically, schedules of dollar payments for goods imported against loan licences are to be submitted to the International Bank for Reconstruction and Development. These schedules will form the basis for periodical drawings by the Commonwealth against the loan. The amounts drawn will be paid to the Commonwealth Bank to replace the dollar funds used in making the purchases. In return, the Commonwealth Government will receive Australian currency from the Commonwealth Bank. This will be paid to the Commonwealth National Debt Sinking Fund, out of which the loan will subsequently be redeemed.

4. **Summary of Loan Transactions, 1941–42 to 1950–51.**—**The following table contains a summary of loan transactions on behalf of the Commonwealth and State Governments during the last ten years.**

(a) Includes loans raised for redemption of Treasury Bills. No new loans were raised in London during this period. (b) "Over the Counter Sales" and net increase in debt on account of Citizens' National Emergency Loans, War Savings and Savings Certificates and Stamps, National Savings Bonds and Stamps, and Advance Loan Subscriptions. Debt in London includes Citizens' National Emergency Loans and debt to United Kingdom Government. (c) Amount drawn of $100,000,000 loan from International Bank for Reconstruction and Development.

NOTE.—Minus sign (−) denotes a decrease in debt.

§ 5. National Debt Sinking Fund.

1. **Commonwealth Public Debt.**—Particulars relating to the creation of sinking funds are included in issues of the Official Year Book prior to No. 23.

The old sinking funds were merged in the National Debt Sinking Fund on 11th August, 1923. Particulars of receipts and expenditure of the Commonwealth Account for the years 1938–39 and 1946–47 to 1950–51 were as follows :—

2. **State Public Debt.**—(i) *States*, 1950–51. Prior to the passing of the Financial Agreement Act 1928, the practice by the States of providing sinking funds had been consistently followed in Western Australia only. This Act contains provisions for the establishment of a sinking fund on States' debts (see p. 821). Particulars of the transactions of the National Debt Sinking Fund (States' Account) for each State during the year 1950–51 are shown on the following page.

Particulars of the Financial Agreement between the Commonwealth and the States and of the provisions regarding Sinking Fund contributions are shown on pages 816 and 817 of this issue and in the *Finance Bulletins* issued by this Bureau.

E. TAXES ON INCOME.

NOTE.—The following section was written prior to the introduction of the 1952–53 Commonwealth Budget, when certain changes in income taxes were made. For a description of the taxes inclusive of these changes *see* Appendix to this volume.

1. **General.**—A description of the development of income taxes in Australia appeared in Official Year Book, No. 35, p. 926. Since July, 1943, the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

2. **Present Taxes.**—Commencing with 1950–51 the two taxes on incomes of individuals (Income Tax and Social Services Contribution) were combined into a single tax known as Income Tax and Social Services Contribution. The several taxes on companies were continued in 1950–51, but in 1951–52 the super tax and tax on the undistributed income of public companies were discontinued. However in the latter year provision was made for an additional tax on the income of certain public companies and an advance payment of tax for 1952–53.

3. **Assessable Income.**—Income taxes in Australia are levied, primarily, on all income derived from Australian sources by any person, rather than on income derived from all sources by Australian residents. Thus a non-resident is taxed on income derived in Australia, while a resident is, in general, not taxed on income other than dividends derived from overseas (provided the income is taxed in the country in which it is derived).

Certain types of Australian income are exempt from tax in Australia, the most important being income from gold-mining and a small amount of tax-free interest on Commonwealth Government securities. No amount is included in assessable income on account of a house occupied by its owner. Profits derived from the sale of property are not assessable income if such property was not purchased with a view to resale at a profit. Commencing with the income year 1951–52, income received from a scholarship, bursary or other educational allowance is exempt. Pay and allowances earned by a member of the Defence Forces while serving in Korea after 26th June, 1950 and Malaya after 28th June, 1950 is also exempt.

Assessable income is divided into two main groups—personal exertion and property. Personal exertion income includes all wage, salary, business and professional incomes, while property income includes all rents, dividends and interest. A further tax on property income is imposed on individuals in all cases where the total taxable income exceeds £400 and the amount of property income exceeds £100. No distinction is made for companies.

Expenses incurred in earning income, certain subscriptions to business associations and trade union dues, are allowable deductions. Losses incurred in previous years may be carried forward as a deduction.

Because of uncongenial climatic conditions, isolation and high cost of living, taxpayers living in certain areas are allowed an additional deduction. Two zones have been prescribed, and the allowances are Zone A, £120 and Zone B, £20.

Income Tax and Social Services Contribution is levied on the taxable income remaining after making these deductions and the concessional deductions to which reference is made in paragraph 5 following.

4. **Taxes on Individuals.**—Income Tax and Social Services Contribution is payable by all persons without dependants whose taxable income exceeds £104 per annum. Persons with dependants are exempt from Income Tax and Social Services Contribution if their annual income does not exceed the minimum as set out in paragraph 9 following. Commencing with the 1951–52 income year, an aged person (i.e. a man who has attained the age of 65 years or a woman who has attained the age of 60 years) is exempt from Income Tax and Social Services Contribution if the net income (i.e. gross income less expenses of earning that income) does not exceed £234 or, if he or she contributes to the maintenance of a spouse, £468.

5. **Concessional Deductions.**—By a revision made in the assessment of income taxes on individuals for the income year 1950–51, concessional allowances for dependants, medical expenses, life assurance and superannuation contributions, etc., made by way of rebates of Income Tax or by way of concessional rates for Social Services Contribution were replaced by concessions by way of deductions from income. The maximum deduction allowed for each dependant, parent or a housekeeper employed by the taxpayer is shown in the following table :—

CONCESSIONAL DEDUCTIONS FOR DEPENDANTS, ETC.

(£.)

Dependant, etc. (Resident).	Income Years 1950–51 and 1951–52.
Spouse	104
Daughter-housekeeper(*a*)	104
Housekeeper(*a*) having care of taxpayer's children under 16 years of age	104
Parent	104
First child under 16 years of age	78
Other children under 16 years of age	52
Invalid child, step-child, brother or sister over 16 years of age ..	78
Child 16 to 21 years receiving full-time education	78

(*a*) Of a widower or widow. These deductions are allowed only if the dependant or parent is a resident of Australia. If the dependant is not wholly maintained by the taxpayer or is maintained for part only of the year a partial deduction is allowed.

Medical expenses paid by a taxpayer who is a resident, in respect of himself, a dependant, or other child under 21 years of age, up to £100 for each person, are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist, or a hospital, in respect of an illness or operation, payments for dental services not exceeding £20 for any one person, payment for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, and the remuneration of an attendant of a person who is blind or confined to bed or invalid chair.

Payments of life, etc., insurance premiums and contributions to superannuation and similar funds and friendly societies, not exceeding an aggregate of £200, and funeral expenses of a dependant not exceeding £30 are allowed as concessional deductions if the taxpayer is a resident.

In addition to concessional deductions, all taxpayers (residents and non-residents) are allowed a deduction from income of rates and taxes on land which are annually assessed, of gifts to charitable, benevolent or patriotic funds and one-third of amounts paid as calls to certain mining, forestry and oil-prospecting companies.

6. **Lodgment of Returns and Assessment of Tax.**—All persons with incomes in excess of £104 are required to lodge returns by the 31st July each year (31st August for business incomes). Income Tax and Social Services Contribution payable is assessed, and assessment notices showing the amount payable are issued during the year following the year of income (in most cases from September to June following the lodgment of the return). The approximate amount payable, however, has already been collected during the income year—from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already collected and any difference either collected or refunded.

7. **Deductions from Wages and Salaries.**—Employers are required to deduct tax and contribution from each payment of wages and salary to an employee at the appropriate rate in accordance with a deduction scale. This scale shows the amount to be deducted according to the number of dependants the employee has, and makes an average allowance for other concessional deductions.

Under the group scheme of deduction, which covers most employers of over ten persons, the amount deducted is remitted to the Taxation Department, and after 30th June each year each employee is given a group certificate by his employer showing the amount of deductions made during the year. The employee then uses the group certificate for that year to meet, in full or in part, the assessment on that year's income when it is received.

Under the stamp scheme, used by small employers, a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of the deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

8. **Provisional Tax.**—For non-employees collection of tax and contribution for the current year is made at the same time as collection and assessment for the previous year is adjusted. The notice of assessment shows an amount of provisional tax and contribution for the current year. This provisional amount is an approximation to the tax and contribution which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged) but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax and contribution paid in the previous year as a credit against the tax and contribution assessed on the basis of the return for that year.

Employees with more than £50 income from sources other than wages and salaries are also required to pay provisional tax in respect of that income.

9. **Effective Exemptions from Tax.**—For income years 1950–51 and 1951–52 resident taxpayers without dependants were exempt from Income Tax and Social Services Contribution if their income did not exceed £104. The effect of the deductions for dependants was to exempt taxpayers up to the incomes shown below in the years 1950–51 and 1951–52. For comparison, the effect of concessions for dependants for the years 1948–49 and 1949–50 are also shown.

RESIDENT TAXPAYERS : EFFECTIVE EXEMPTIONS FROM TAX.

(£.)

Taxpayer with—	Social Services Contribution—1948–49 and 1949–50 Income.	Income Tax and Social Services Contribution—1950–51 and 1951–52 Income.

If the taxable income exceeds £400 and includes income from property, the amount of the income from property is subject to the further tax shown in the following table.

FURTHER TAX ON PROPERTY INCOME.

Taxable Income from Property.		Column 3.			Column 4.	
Column 1. Not less than—	Column 2. Not more than—	Further Tax and Contribution on Taxable Income shown in Column 1.			Further Tax and Contribution on Remainder of Taxable Income from Property.	
£	£	£	s.	d.		£
Nil	100	Nil			Nil	
100	1,000	Nil			plus 8d. on each £1 in excess of	100
1,000	4,000	30	0	0	„ 16d. „ „ „	1,000
4,000	6,000	230	0	0	„ 8d. „ „ „	4,000
6,000	10,000	296	13	4	„ 4d. „ „ „	6,000
10,000	upwards	363	6	8	(No rate on excess over £10,000)	

If the total taxable income does not exceed £1,000, the further tax on property income cannot exceed twelve pence for every £1 by which the total taxable income exceeds £400. The application of this provision is illustrated by the following example based on an income of £600 derived wholly from property:—

Further tax on £600 property income—

	£	s.	d.
By applying scale rate £500 at 8d. in the £1 ..	16	13	4
By applying limiting provision £200 at 1s. in the £1	10	0	0

These rates were not changed for 1951–52 income year, but an additional tax and contribution of 10 per cent. of the tax payable prior to allowance of any rebate or credit was imposed.

Prior to the 1951–52 income year the rate of Income Tax and Social Services Contribution for farmers and pastoralists was determined by the average taxable income of the five years up to the current year and this rate was applied to the taxable income of the current year. From the income year 1951–52 the application of the averaging provisions was limited to that part of the taxable income which did not exceed £4,000 and provision was made for a taxpayer to elect not to have the averaging provisions applied to his assessment for any income year and subsequent years. Such an election once made is irrevocable.

Interest on Commonwealth Loans issued prior to 1st January, 1940 is subject to the condition that it shall not be taxed at rates higher than those for 1930–31. Interest on Commonwealth Loans issued after 1st January, 1940 and interest on certain State semi-governmental loans issued free of State income tax receive a rebate of 2s. in the £1.

The minimum amount of Income Tax and Social Services Contribution payable is 10s. and the amounts payable and rebates are calculated to the nearest shilling.

11. **Taxes on Sample Individual Incomes.**—The following table shows the Income Tax and Social Services Contribution payable by taxpayers with various incomes and numbers of dependants on income derived in 1949–50, 1950–51 and in 1951–52 :—

12. **Company Income Taxes.**—(i) *General.* For taxation purposes, companies are divided into two main groups—public companies and private companies. A private company is defined as a company in which all the issued shares are held by not more than twenty persons or which is under the control of not more than seven persons, and which is not a company in which the public are substantially interested or a subsidiary of a public company. Ordinary Income Tax and Social Services Contribution is imposed on both groups of companies, but other taxes on companies are imposed according as to whether a company is public or private.

(ii) *Public Companies.* (*a*) *Ordinary Income Tax and Social Services Contribution.* The income of companies is assessed for Income Tax and Social Services Contribution on the same principles as for individuals. Dividends received are assessable income both for companies and individuals, but resident companies receive a rebate at the average rate on the amount of dividends included in the taxable income. This rebate is not allowed to non-resident companies. For the year 1950–51 the rate of ordinary Income Tax and Social Services Contribution was 5s. in the £1 on the first £5,000 of taxable income and 6s. in the £1 on the remainder. For mutual life assurance companies the rate was 4s. in the £1 on the first £5,000 of taxable income and 5s. in the £1 on the remainder. For the year 1951–52 the rate for companies other than life assurance companies was 7s. in the £1 on all taxable income. For mutual life assurance companies the rate was 6s. in the £1 on all taxable income and for other life assurance companies the rate was 6s. in the £1 on mutual income and 7s. in the £1 on other income. The rate on Commonwealth Loan Interest subject to 1930–31 rates was 1s. 4d. in the £1.

(*b*) *Super Tax.* In 1950–51 a Super Tax of 1s. in the £1 on the excess of the taxable income over £5,000 was imposed. All companies received a rebate of 1s. in the £1 on the amount of dividends (from companies which had already paid super tax) included in super tax income. This super tax was not levied in 1951–52.

Commonwealth Loan Interest subject only to 1930–31 rates of tax was excluded from super tax income since the full 1930–31 rate of 1s. 4d. in the £1 was already paid as ordinary Income Tax and Social Services Contribution.

(*c*) *Undistributed Income Tax.* From 1940–41 to 1950–51 a tax was imposed at the rate of 2s. in the £1 on the undistributed income of a public company. The undistributed income was the taxable income less :—

(*a*) Income Tax and Social Service Contribution, Super Tax, and War-time (Company) Tax, and tax paid outside Australia on the taxable income;
(*b*) dividends paid out of the taxable income before the expiration of six months (nine months if the company is a non-resident) after the close of the year of income;
(*c*) the net loss incurred in carrying on the company's business outside Australia; and
(*d*) the portion of Commonwealth Loan Interest subject to 1930–31 rates remaining in the undistributed income.

Mutual life assurance companies and non-resident companies not carrying on business in Australia were exempt from the tax.

(*d*) *Additional Income Tax and Social Services Contribution.* For 1951–52 an additional tax of 2s. in the £1 was imposed on taxable income. This additional tax did not apply to income of non-resident companies from dividends, the income of mutual life assurance companies or the mutual income of other life assurance companies and the income of co-operative companies and companies not carried on for the profit of individual members.

(iii) *Private Companies.* For 1950–51 the rates of ordinary Income Tax and Social Services Contribution payable by a private company were the same as those payable by a public company. For 1951–52 the rates were 5s. in the £1 on the first £5,000 of taxable income and 7s. in the £1 on the remainder of the taxable income. Private companies were not liable to the additional Income Tax and Social Services Contribution and were not liable for Super Tax or the normal Undistributed Income Tax. However, an additional tax on the undistributed income was imposed, this tax being based on the close relationship between a private company and a partnership.

The undistributed income was calculated in approximately the same way as it was for a public company (*see* above) but, instead of a flat rate of 2s. in the £1 being imposed, the additional Income Tax and Social Services Contribution which would have been payable by the shareholders, if all the income had been distributed, was calculated, and this amount was charged to the company as additional tax on undistributed income. In this way the shareholders of a private company were required to pay approximately the same tax as if they were a partnership or sole traders.

(iv) *Advance Payment of Income Tax and Social Services Contribution.* In 1951–52 all companies were required to make an advance payment of part of the Income Tax and Social Services Contribution that would be assessed in 1952–53. The amount of this advance payment was fixed at 10 per cent. of the Income Tax and Social Services Contribution assessed for 1951–52 (other than tax on the undistributed income of private companies).

13. **Yield of Income Taxes.**—(i) *Collections from all Income Taxes.* The following table shows the collections of taxes of all types imposed on income for the years 1938–39, and 1946–47 to 1950–51 :—

INCOME TAX COLLECTIONS.

(£'000.)

Year.	Total.		
	Commonwealth.	State.	Total.
1938–39	11,882	29,812	41,694
1946–47(*a*)	207,800	502	208,302
1947–48(*a*)	232,944	368	233,312
1948–49(*a*)	272,368	235	272,603
1949–50(*a*)	279,663	258	279,921
1950–51(*a*)	341,970	279	342,249

(*a*) Commonwealth collections are greater than the Budget figures by the amount of refunds of State taxes. State collections are net arrears.

(ii) *Commonwealth Income Tax Assessed.* The amounts of Commonwealth taxes assessed on the income of recent years are shown in the following table. The amounts are shown under the year in which most of the assessments were made, i.e., the year following the income year. Income taxes assessed on income for past years and for the years shown after the close of the normal assessing period are not included.

(iii) *Commonwealth Income Tax on Residents—Grades of Income.* Individual income taxes assessed on residents are distributed according to grades of actual income (income before allowing deductions of a concessional nature or statutory exemptions and including exempt income) in the following table. The year shown in each case refers to the year in which assessment was made, i.e., the year following the income year. The figures relate only to assessments made on the income of the previous year during the normal assessing period. Assessments issued after the normal assessing period are excluded.

CHAPTER XVIII.

MINERAL INDUSTRY.

§ 1. The Mineral Wealth of Australia.

1. **Place of Mining in Australian Development.**—The discovery of gold in payable quantities first attracted population to Australia in large numbers and was thus a significant factor in its early development. In more recent times the rapid growth of Australia's secondary industries has been associated with considerable expansion in mining for silver-lead-zinc, copper and iron ores, and for coal. However, the value of mineral production has lagged behind that recorded for Australia's large rural industries and in 1949 represented only about 7.3 per cent. of the net value of production of all primary industries.

2. **Extent of Mineral Wealth.**—The extent of the total mineral wealth of Australia cannot yet be regarded as completely ascertained, as large areas of country still await geological surveys. More detailed reference to this matter will be found in preceding issues of the Official Year Book. (*See* No. 22, p. 755.)

During the years 1934 to 1940 a survey of certain areas in Australia north of the 22nd parallel of south latitude was undertaken by the Governments of the Commonwealth, Queensland and Western Australia. This survey is referred to in § 14 below.

3. **Quantity and Value of Production in 1949.**—The quantities (where available) and the values of certain of the principal minerals produced in each State, and in Australia as a whole, during 1949, are shown in the tables immediately following. It must be clearly understood that the figures quoted in these tables refer to the quantities and values of the various minerals in the form in which they were reported to the State Mines Departments, and represent amounts which the Mines Departments consider may fairly be taken as accruing to the mineral industry as such. They are not to be regarded as representative of Australia's potentiality as a producer of metals. New South Wales is, of course, in normal times a large producer of iron and steel from iron ore mined in South Australia. As the table shows, the latter State receives credit for this iron ore in its mineral returns. The iron and steel produced therefrom cannot be assigned to the mineral industry of New South Wales, but the value of the transformation from

ore to metal is credited to the manufacturing industry of that State. Similarly, lead, silver-lead, cadmium, cobalt and zinc are credited in the form reported to the State of origin—chiefly New South Wales—although the actual metal extraction is carried out principally in South Australia and Tasmania.

The quantities of cadmium and cobalt recovered in Tasmania from zinc ores mined in New South Wales during 1949 are shown in § 7, par. 2 (page 875).

(a) Not available. (b) Incomplete. (c) Excludes cadmium and cobalt extracted in Tasmania from zinc ores and concentrates produced at Broken Hill. (d) Gold values calculated on current price of gold in Australian currency. (e) The bulk of silver and lead is contained in the concentrates, etc., despatched from the Broken Hill field and treated outside the State. (f) Silver as a by-product from gold mining: *see also* Silver-lead Ores, Concentrates, etc. (g) Includes small tonnage of sub-bituminous coal. (h) Not reported.

The figures in the foregoing table exclude certain materials, such as stone for building and industrial uses, sand, gravel, brick and pottery and other clays and limestone which usually are included under the generic term "mineral". Particulars of the production of some of these items are given in par. 6, Quarries, below. Items normally included in mine or quarry production by the Mines Departments of some States, such as cement, carbide and sulphuric acid, are omitted therefrom and included in manufacturing production. As far as possible, the mineral materials used in the manufacture of these products are included in mine or quarry production.

4. **Value of Production, 1938, 1945 to 1949.**—The values of the minerals produced in each State during the years 1938 and 1945 to 1949 are given in the table hereunder :—

MINERAL PRODUCTION : VALUES.

(£.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.
1938 ..	10,786,157	1,884,015	3,966,119	2,932,473	10,844,469	1,889,804	214,724	32,517,761
1945 ..	16,879,131	1,830,374	4,355,127	2,309,991	5,804,238	1,934,066	176,197	33,289,124
1946 ..	20,327,962	2,079,353	4,761,403	2,776,145	7,586,707	2,855,674	166,543	40,553,787
1947 ..	26,264,688	2,206,628	8,545,299	3,209,382	8,862,277	4,224,756	229,437	53,542,467
1948 ..	36,350,972	2,346,855	9,211,588	3,260,309	8,561,269	4,366,730	294,078	64,391,801
1949 ..	36,021,609	2,755,593	11,858,270	2,442,863	9,463,354	4,628,771	599,253	67,769,713

The value of mineral production in Australia reached its highest level in 1949 at £67,769,713 compared with £64,391,803 in 1948 and £32,517,761 in 1938. Although this marked increase since 1938 was due to some extent to higher quantity output the main contributing factors were the increased prices paid in 1949 for coal, silver, lead and zinc.

Since 1938 the greatest increase has occurred in New South Wales, £25,235,452; followed by Queensland, £7,892,151; Tasmania, £2,738,967; Victoria, £871,578. Because of the reduced output of gold in Western Australia, the value of minerals produced in that State was £1,381,115 lower in 1949 than in 1938. The value of mineral output decreased in South Australia between 1938 and 1949 by £489,610.

5. **Total Production to end of 1949.**—In the next table will be found the estimated value of the total mineral production in each State up to the end of 1949. The items excluded from the preceding table are also omitted here, and consequently the total for New South Wales is considerably less than that published by the State Department of Mines. The principal items excluded from the table below are coke, cement, lime, marble, slate, granite, chert, gravels, etc., which the State Department now includes in the returns for quarries.

MINERAL PRODUCTION : VALUES TO END OF 1949.

Other ..	12,440	1,157	3,660	17,914	2,482	3,979	453	42,085
Total ..	737,521	353,259	241,345	93,510	330,149	102,487	6,863	1,865,134

The "other" minerals in New South Wales include alunite, £234,000; antimony £479,000; arsenic, £212,000; bismuth, £264,000; chrome, £143,000; diamonds, £151,000; magnesite, £907,000; molybdenite, £232,000; opal, £1,646,000; scheelite, £264,000; and shale oil, £4,201,000. In the Victorian returns antimony ore was responsible for

£638,000. The value for coal in this State includes £10,230,000 for brown coal. Included in "other" in the Queensland production were opal, £190,000; gems, £662,000; bismuth, £147,000; cobalt, £158,000; molybdenite, £632,000; limestone flux, £903,000; and arsenic, £124,000. The chief items in South Australian "other" minerals were salt, £7,443,000; limestone flux, £1,247,000; gypsum, £2,038,000; phosphate, £196,000; and opal, £458,000. In Western Australia arsenic, £747,000; gypsum, £253,000; and asbestos, £432,000 were the principal items included with "other" minerals. In the Tasmanian returns osmiridium was responsible for £665,000, scheelite for £1,486,000 and limestone flux for £1,416,000.

6. **Quarries.**—Statistics giving details of the output of quarries were first published in Official Year Book No. 33, 1940. The details were collected following a resolution of the Conference of Australian Statisticians held in 1935.

The Conference decided that quarries, for the purpose of these statistics, should be confined to establishments in which four persons or more are employed, or in which power other than hand-power is used. The Conference, however, did not define the types of establishments which should be included as quarries, either according to the nature of the product or the method of obtaining the "mineral" material. Further difficulties have arisen owing to collection being made wholly or in part by Mines Departments in some States on bases inconsistent with those adopted by Statisticians. Consequently, the statistics which have been collected and reported as quarry production lack uniformity in many respects, while practices have varied considerably in classifying such materials as limestone and clays to mining or quarrying. The gathering of sand for various purposes has in general been omitted from quarry production.

The quarrying of limestone for use as a flux has for many years been included in "Mineral" production for all States (*see* para. 3 preceding). Limestone used for other purposes (cement, lime, chemicals, etc.) has been reported as quarry production but the figures are incomplete for most States. In 1949–50 limestone used by Australian factories for the manufacture of cement and lime and for general chemical purposes amounted to 1,939,449 tons, valued at £1,007,645.

The production of certain types of clays is included in "mineral" production, particulars being shown in the tables in para. 3 preceding. In addition, considerable quantities of clays are reported under quarry production, totals furnished for 1949 being as follows:—New South Wales, 1,251,606 tons, £289,927; Victoria, 81,336 tons, £32,468; Queensland, 109 tons, £652; South Australia, 251,333 tons, £58,765; Western Australia, 10,321 tons, £12,789; Tasmania, 7,337 tons, £24,688; Total, 1,602,042 tons, £419,289.

Particulars of the reported output of establishments engaged in the quarrying of building stone, macadam, ballast, etc. during 1949 (or other appropriate year) are shown in the table below.

BUILDING STONE, MACADAM, BALLAST, ETC., QUARRIED, 1949.

(*a*) 1948–49. (*b*) 1949–50. (*c*) Excludes Tasmania, Northern Territory and Australian Capital Territory, particulars for which are not available.

§ 2. Gold.

1. **Discovery in Various States.**—The discovery of gold in payable quantities was an epoch-making event in Australian history, for, as one writer aptly phrases it, this event " precipitated Australia into nationhood ". A more or less detailed account of the finding of gold in the various States appears under this section in Official Year Books, Nos. 1 to 4.

2. **Production at Various Periods.**—(i) *Quantities.* The following table shows the quantity of gold produced in the several States and in Australia as a whole during each of the nine decennial periods from 1851 to 1940, and in single years from 1941 to 1949. Owing to the defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful miners who preferred to keep the amount of their wealth secret.

GOLD : QUANTITY PRODUCED.

The amount of gold raised in Australia in any one year attained its maximum in 1903, when Western Australia also reached its highest point. For the other States the years in which the greatest yields were obtained were as follows :—New South Wales, 1852 ; Victoria, 1856 ; Queensland, 1900 ; South Australia, 1904 ; and Tasmania, 1899.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining the production of gold in Australia declined from 3,837,979 fine oz. in 1903 to 427,160 fine oz. in 1929, the lowest output since the discovery of the precious metal.

Increased activity in prospecting due to prevailing economic conditions resulted in some improvement in 1930, but the marked development between that year and 1939 received its impetus from the heavy depreciation of Australian currency in terms of gold. Oversea and local capital were attracted to the industry, and the employment of advanced geological methods and technical improvements brought many difficult or abandoned propositions into profit. The output of gold rose annually from 467,742 fine oz. in 1930 to 1,645,697 fine oz. in 1939. Following the outbreak of war in 1939, production fell very slightly in 1940, and rapidly thereafter, due to the diversion of man-power, until in 1944 it was only 656,867 fine oz. In 1945, the year in which hostilities in the 1939–45 War ceased, production showed practically no change, but in 1946 a marked increase of 167,267 fine oz. or 25 per cent. was recorded. A further increase occurred in 1947, but production fell in 1948 and remained at much the same level in 1949. Output in this year, 889,058 fine oz. was 35 per cent. higher than the war-time trough of 657,000 fine oz. in 1944 and 1945 but was 46 per cent. less than output in 1939.

(ii) *Values.* In the next table the gold produced since 1851 is valued in Australian currency. For the years 1851 to 1918 and 1925 to 1930 the price used was £4 4s. 11$^5/_{11}$d. per fine oz. For the years 1919 to 1924 the price ranged between £5 12s. 6d. in 1920 and £4 8s. 6d. in 1923. The value applied for 1931 and to June, 1932 was the export parity calculated directly from London prices. Since then the average price paid by the Australian branches of the Royal Mint has been used.

(a) Period July, 1911 to June, 1920. (b) Period July, 1920 to December, 1930.

Values per fine oz. in Australian currency assigned to the production of gold during recent years are: £9 14s. 5¾d. in 1939, £10 13s. 1⅜d. in 1940, £10 13s. 8d. in 1941, £10 9s. 0⅜d. in 1942, £10 9s. 0d. in 1943, £10 10s. 1½d. in 1944, £10 13s. 11½d. in 1945 and £10 15s. 3d. in 1946, at which level it remained until 19th September, 1949. On that date, following the alteration in the rate of exchange, the value of gold rose to £15 9s. 10d. per fine oz. in terms of Australian currency. Further information regarding the price of gold is given in Chapter XVI.—Private Finance.

3. **Changes in Relative Positions of States as Gold Producers.**—The figures in the table showing the quantity of gold raised explain the very large increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. With the exception of 1889, when its output was exceeded by that of Queensland, Victoria maintained its position as the chief gold producer for a period of forty-seven years, until its production was surpassed by that of Western

Australia in 1898. From that year onward the proportion contributed by Western Australia has increased and in 1949 represented 73 per cent. of the entire yield of Australia. The proportion contributed by this State for the period 1851 to 1949 was 32 per cent. and by Victoria for the same period 43 per cent.

4. **Place of Australia in the World's Gold Production.**—The table below shows, in decennial periods from 1851 to 1940 and the quinquennium 1941–45, the world's gold production (as ascertained from authoritative sources) and the share of Australia therein. The details of world production shown for the years 1941 to 1945 are possibly less complete than those shown for other years, because of censorship during the war. The figures recorded for these years represent recorded production only and therefore omit any production for those countries not reporting. Included in this latter group are the Soviet Union and other producing countries of lesser importance.

GOLD : WORLD PRODUCTION.

Period.	World Production of Gold.	Gold Produced in Australia.	Proportion of Australian Production to Total.
	Fine oz.	Fine oz.	%
1851–60	64,482,933	24,877,012	38.58
1861–70	61,098,343	19,038,661	31.16
1871–80	55,670,618	14,429,601	25.92
1881–90	51,280,184	11,586,625	22.59
1891–1900	101,647,521	21,187,662	20.84

Belgian Congo ..	394	347	331	301	300	334

(a) Estimated. (b) Includes Newfoundland. (c) Includes Gambia, Gold Coast, Nigeria, Sierra Leone.

5. **Employment in Gold-mining.**—The number of persons employed in gold-mining in each State at various intervals since 1901 is shown in the following table. The figures include prospectors, etc., so far as data are ascertainable, and include those who may not have worked during the whole of the year.

GOLD-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Total.
1901 ..	12,064	27,387	9,438	(a)1,000	19,771	1,112	(a) 200	70,972
1903(b) ..	11,247	25,208	9,229	(a)1,000	20,716	973	(a) 200	68,573
1913 ..	3,570	11,931	3,123	800	13,445	481	175	33,525
1923 ..	1,141	2,982	603	32	5,555	119	30	10,462
1933 ..	6,913	6,126	4,161	231	9,900	229	95	27,655
1938 ..	3,764	6,315	3,378	158	15,374	141	267	29,397
1945 ..	509	643	1,256	16	4,818	15	46	7,303
1946 ..	772	1,282	1,651	38	6,961	13	106	10,823
1947 ..	795	1,135	1,834	50	7,649	14	176	11,653
1948 ..	702	1,064	1,627	34	7,178	15	171	10,791
1949 ..	688	1,019	(c) 1,589	52	6,800	9	238	10,395

(a) Estimated. (b) Year of maximum production for Australia. (c) Mainly mining for copper-gold ore.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining, the number employed in gold-mining had dwindled to the comparatively small figure of 6,108 in 1929. Stimulated by the enhanced price of gold, employment in the industry rose by almost five-fold to 33,113 in 1935, but thereafter the numbers employed declined each year to 7,015 in 1944. Following the cessation of hostilities and a relaxation of manpower control, the numbers rose in each succeeding year to 11,653 in 1947 but fell to 10,791 in 1948 and to 10,395 in 1949.

6. **Tax on Gold.**—(i) *General.* The Commonwealth Government imposed a tax on gold produced in Australia or in any Territory under its jurisdiction and delivered to the Commonwealth Bank on or after 15th September, 1939. The rate of tax was fixed at 50 per cent. of the price payable by the Bank in excess of £A.9 per fine oz.

The tax on gold yielded £1,214,621 during 1939–40; £1,452,260 during 1940–41; £1,030,425 in 1941–42; £524,694 in 1942–43; £317,720 in 1943–44; £342,457 in 1944–45; £383,552 in 1945-46; and £556,435 in 1946–47. This tax was suspended as from 20th September, 1947 by the Gold Tax Suspension Act 1947.

(ii) *Development of Gold Mining Industry.* Assistance amounting to £150,000 was given to the gold-mining industry, through the medium of the States, during 1940–41. In addition, an amount approximating £150,000 was paid during 1942 and subsequent years for the maintenance of those mines where, under manpower control, miners were transferred to other activities more directly associated with the war effort.

The suspension of the tax on gold referred to above was designed to assist the gold-mining industry in meeting higher costs and to encourage greater output.

7. **Bounty on Production.**—A reference to the bounty provided by the Commonwealth on gold production in Australia appears in Official Year Book No. 32, p. 579.

§ 3. Silver, Lead and Zinc.

1. **Production.**—(i) *General.* The values of production of silver, silver-lead ores, concentrates, etc., zinc and concentrates, as reported by Mines Departments for each of the years 1938 and 1945 to 1949, are shown in the following table :—

SILVER, LEAD AND ZINC : VALUE OF PRODUCTION.

(£.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938 ..	3,751,454	647	1,256,078	70	29,477	624,225	..	5,661,951
1945 ..	5,699,005	1,622	17,788	601	22,757	666,867	..	6,408,640
1946 ..	8,378,736	2,687	1,355,993	224	43,860	1,328,009	..	11,109,509

(ii) *New South Wales.* By far the greater amount of silver-lead-zinc ore in New South Wales, in fact in Australia, is won from the massive silver-lead-zinc sulphide deposit at Broken Hill. Those concerned in operating this gigantic lode are North Broken Hill Limited (which mines the northern limb of the ore-bearing structure), Broken Hill South Ltd., and Zinc Corporation Ltd. with which is associated New Broken Hill Consolidated (which are conducting operations on the southern limb).

The oxidized lead ores were directly smelted at Broken Hill prior to 1897, when smelting operations were transferred to Port Pirie in South Australia. The present-day sulphide ores are concentrated by gravity and flotation methods at Broken Hill. The lead (galena) concentrates (averaging approximately 76 per cent. lead, 4 per cent. zinc, 30 oz. silver per ton, 9.0 grains of gold per ton, 0.22 per cent. antimony and 0.64 per cent. copper) are railed to Port Pirie, and smelted to produce lead bullion which is later refined by a continuous lead refining process for the elimination of arsenic and antimony and the recovery of silver and gold. A large proportion of the zinc concentrates produced at Broken Hill are roasted by fertilizer plants in South Australia for the recovery of sulphur dioxide for sulphuric acid manufacture, the calcines after roasting being sent to Risdon in Tasmania for refining. The balance of the concentrates is either exported overseas or sent to Risdon in Tasmania for roasting and refining.

At Captain's Flat, Lake George Mines Limited is operating a lode of similar constitution. Concentration of the ore is carried out at the mine itself, after which process individual concentrates of zinc and lead (containing silver) are despatched to Port Kembla, New South Wales, for further treatment. Copper, pyrites and gold are also produced at this mine.

Silver-lead-zinc ore has been mined in small quantities in various other parts of the State, the more important localities being Yerranderie, Howell and Kangiara.

Particulars of the New South Wales mine production of silver, lead and zinc, as reported by the Mines Department, are shown in the table below for the years 1938 and 1945 to 1949. The particulars shown for silver relate, in the main, to the silver content of copper concentrates. The greater part of silver of New South Wales origin is contained in the silver-lead ore and concentrates shown separately in the table. Further particulars of the production of silver, lead and zinc by the Broken Hill and Lake George Mines are given in par. 1 (ix) hereafter.

Despite some reduction in the output of silver-lead ore and concentrates and zinc concentrates since 1938, the reported value of New South Wales production of silver, lead and zinc rose from £3,751,454 in 1938 to £17,772,355 in 1949, because of substantial increases in prices for these metals, particularly export prices (*see* par. 5 hereafter).

SILVER, LEAD AND ZINC: PRODUCTION, NEW SOUTH WALES.

Year.	Silver.(a)		Silver-lead Ore and Concentrates.		Zinc Concentrates.		Total Value.
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	
	Fine oz.	£	tons.	£	tons.	£	£
1938	83,822	7,357	317,230	3,513,108	265,296	230,989	3,751,454
1945	131,309	20,703	205,805	4,604,962	265,284	1,073,340	5,699,005
1946	122,364	28,297	215,928	6,971,256	273,781	1,379,183	8,378,736
1947	112,471	26,242	212,410	10,554,416	249,420	1,774,959	12,355,617
1948	105,314	24,573	228,590	16,643,612	259,260	2,613,822	19,282,007
1949	99,158	25,442	220,046	14,307,964	257,040	3,438,949	17,772,355

(a) Mainly silver content of copper concentrates; most of the silver of New South Wales origin is contained in the silver-lead ore and concentrates shown in the next column.

(iii) *Victoria.* Small quantities of lead sulphide ore occur on most of Victoria's goldfields and in minor amounts in the Omeo, Bethanga and Cassilis districts. There has been no production of lead ore in recent years, the total recorded production being about 800 tons valued at £5,892.

The whole of the Victorian silver production of 12,316 fine oz. valued at £3,054 for 1949 was won as a by-product of the gold mining industry.

(iv) *Queensland.* In the far north-west of Queensland at Mt. Isa, some 600 miles west of Townsville, is operated the mining, milling and smelting enterprise of Mt. Isa Mines Ltd. Here, mining is carried out on extensive silver-lead-zinc ore lodes. After concentration by flotation in the concentrating mill, the silver-lead concentrate is converted to bullion in the smelter. All Mt. Isa bullion is exported overseas, where certain impurities, such as antimony, arsenic, and copper, as well as silver are removed to yield a pure lead suitable for commercial use.

Zinc concentrates and copper-lead dross produced by Mt. Isa are also exported overseas. During the 1939–45 War, operations on silver-lead-zinc ores at Mt. Isa were suspended while the mine was engaged in mining copper, but normal operations of the mine were resumed in 1946.

In 1949 approximately 87 per cent. of Queensland's production of both silver and lead and all the State's output of zinc were produced by the Mt. Isa mines.

The following table shows particulars of Queensland mine or smelter production of silver, lead and zinc, as reported by the Mines Department for the years 1938 and 1945 to 1949. The reduction in output in 1945 and 1946 was due to the suspension of silver-lead-zinc mining at Mt. Isa during the war. The lower output in 1949 compared with 1938 is more than offset by the higher prices received for these metals, the total value for the group having risen from £1,256,078 in 1938 to £6,674,881 in 1949.

SILVER, LEAD AND ZINC: PRODUCTION, QUEENSLAND.

Year.	Silver.(a)		Lead.(a)		Zinc.(a)		Total Value.
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	
	Fine oz.	£	Tons.	£	Tons.	£	£
1938	3,533,490	298,589	41,196	628,025	23,735	329,464	1,256,078
1945	112,710	17,788	..	..	..	..	17,788
1946	980,538	209,094	12,754	627,775	11,361	519,124	1,355,993
1947	2,100,966	380,038	29,590	2,486,942	25,212	1,738,600	4,605,580
1948	2,306,869	422,015	30,779	3,002,381	21,593	1,687,325	5,111,721
1949	2,872,577	584,075	37,697	4,136,607	21,241	1,954,199	6,674,881

(a) Metal content of ores, concentrates and bullion produced.

(v) *South Australia.* Output of lead from local ores has been very small in recent years. In 1949, the lead content of concentrates produced amounted to 99 tons, valued at £8,406. Silver production was 1,749 fine oz., valued at £391, which was also contained in the above lead concentrates.

There has been no recorded zinc production since 1903, when the zinc was contained in lead ores and concentrates which came mainly from the Glen Osmond and Strathalbyn districts.

(vi) *Western Australia.* During 1949, a total of 2,922 tons of silver-lead-zinc ores and concentrates were exported from the State. These shipments contained 1,966 tons of lead, 35 tons of zinc and 9,992 fine oz. of silver. The value of the ores and concentrates was £154,777. The principal producer was the Prothero mine at Nabawa, while the Northampton Mineral Field also provided a large portion of the total ores and concentrates. Other centres of production are in the Naroo, Kooline, Wyloo and Napier Range areas.

In addition to the silver contained in the silver-lead-zinc ores and concentrates, 194,721 fine oz., valued at £49,246, was obtained as a by-product from the gold bullion despatched to the Perth Mint from the various goldfields.

Particulars of silver, lead and zinc production, as reported by the Mines Department of Western Australia for the years 1938 and 1945 to 1949, are shown below.

SILVER, LEAD AND ZINC : PRODUCTION, WESTERN AUSTRALIA.

Year.	Silver-lead-zinc Ores and Concentrates.		Silver in Gold Bullion.		Total Value.
	Quantity.	Value.	Quantity.	Value.	
	Tons.	£	Fine oz.	£	£
1938	352	625	271,346	28,852	29,477
1945	..	..	146,025	22,757	22,757
1946	36	1,068	171,452	42,792	43,860
1947	22	937	199,302	47,814	48,751
1948	2,192	114,268	187,818	44,198	158,466
1949	2,922	154,777	194,721	49,246	204,023

(vii) *Tasmania.* There are two large centres of silver-lead-zinc mining in Tasmania. The more important is the field operated by the Electrolytic Zinc Company of Australasia, Ltd. at Read-Rosebery. These are primarily zinc mines, although lead and copper-lead concentrates are also produced. This company also owns the electrolytic zinc works at Risdon near Hobart.

The lead concentrates and copper-lead concentrates produced at Rosebery are exported overseas.

The zinc concentrates, which are the principal product from the mine, also contain some lead. This concentrate is sent to Risdon for roasting and refining, portion of the resultant lead residue being sent to Port Pirie in South Australia for refining, the balance being dumped. In addition to the refining of zinc concentrates produced at Rosebery, the Risdon plant also treats considerable quantities of zinc concentrates from the Broken Hill mines.

Of secondary importance to Rosebery is the Mount Farrell field, situated 6 miles north-east of Rosebery. These ore-bodies are mainly silver-lead lodes which yield a lead concentrate with high silver content. The zinc content is insufficient to warrant recovery.

Most of the State's silver is contained in concentrates produced at Rosebery and Mount Farrell. Some silver is obtained from the Mount Lyell copper refinery tank house slimes which are treated at Port Kembla in New South Wales.

Particulars of Tasmanian mine production of silver, lead and zinc, as reported by the Department of Mines, are shown in the following table for the years 1938 and 1945 to 1949. As with New South Wales and Queensland, increased prices for these metals have resulted in a considerable rise in total values from £624,225 in 1938 to £2,717,438 in 1949.

SILVER, LEAD AND ZINC : PRODUCTION, TASMANIA.

Year.	Silver.(a)		Lead.(a)		Zinc.(a)		Total Value.
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	
	Fine oz.	£	Tons.	£	Tons.	£	£
1938	1,219,550	104,671	10,652	163,102	25,366	356,452	624,225
1945	816,157	102,101	6,298	157,459	15,609	407.307	666,867
1946	896,293	187,428	6,891	340,509	17,990	800,072	1,328,009
1947	918,791	169,068	7,719	660,861	18,513	1,295.883	2,125,812
1948	907,216	168,726	7,328	697,194	18,504	1,469.241	2,335,161
1949	1,011,032	207,238	7,874	796,701	20,286	1,713,499	2,717,438

(a) Metal content of ores and concentrates of Tasmanian origin.

(viii) *Northern Territory.* During 1949, 23 tons of silver-lead ore, valued at £973, were mined. In 1948, 26 tons of ore, valued at £1,407, were raised. The output in each case came mainly from a few old mines in the northern part of the Territory, abandoned since the early days of mining. The principal centres are Boomiera, Mount Shoobridge, McArthur River and Jervois Range.

(ix) *Australia.* The table at the commencement of this section shows particulars for each State and for Australia as a whole of the total values ascribed to silver-lead-zinc mining by State Departments of Mines. Owing to lack of uniformity in the bases of reporting quantity output adopted by Mines Departments, data from those sources do not give a satisfactory picture of total output of the industry in Australia. A better indication is given in the following table, which shows the estimated silver, lead and zinc *content* of ores and concentrates produced in Australia according to data compiled by the Australian Mines and Metals Association. Comparable figures for 1938 are not available.

SILVER, LEAD AND ZINC CONTENTS OF ORES AND CONCENTRATES PRODUCED.

Year.	Broken Hill, N.S.W.	Captain's Flat, N.S.W.	Mt. Isa, Q'land.	Rosebery, Tas.	Mt. Farrell, Tas.	Other.	Total, Australia.

Italy	60,759	Bolivia	17,350
Western Germany	56,905		

(*a*) Estimated.

5. **Prices of Silver, Lead and Zinc.**—In view of the close association in Australia, particularly in New South Wales, of ores containing these metals, relevant particulars of the prices of each of the metals have been included in the following table. The table shows average prices in Australia and on the London Metal Exchange during the years 1938 and 1946 to 1950. Lead and zinc prices have been controlled in the United Kingdom and Australia since the outbreak of war in 1939. Silver prices have not been controlled.

PRICES OF SILVER, LEAD AND ZINC.

(£ s. d.)

1949	6,052	1,285	32	135	616	6	8,126

§ 4. Copper.

1. **Production.**—Copper is widely distributed throughout Australia. However, the principal producing States are at present Tasmania, Queensland and New South Wales, in that order.

The values of the local production, as reported and credited to the mineral industry for the years 1938 and 1945 to 1949, are shown hereunder. Quantities for Australia as a whole, as returned by the several State Mines Departments, are appended at the foot of the table :—

COPPER : PRODUCTION.

State.	1938.	1945.	1946.	1947.	1948.	1949.

Ore and Concentrates	935					

Particulars of the copper *content* of ores and concentrates produced in each producing State and the Northern Territory, as published by the Australian Mines and Metals Association for the years 1938 and 1945 to 1949, are shown in the table below.

COPPER CONTENT OF ORES AND CONCENTRATES PRODUCED.

(Tons).

State.	1938.	1945.	1946.	1947.	1948.	1949.
New South Wales ..	1,963	1,830	1,768	2,391	2,515	2,453
Queensland.. ..	4,458	15,007	6,481	2,778	3,149	4,924
South Australia ..	254	134	..	..	4	3
Western Australia ..	5	12	1	..	..	5
Tasmania	12,729	7,472	9,380	7,954	6,574	5,229
Northern Territory ..	37	65	125	..	126	848
Australia ..	19,446	24,520	17,755	13,123	12,368	13,462

2. **Sources of Production.**—(i) *New South Wales.* The copper content of ores and concentrates produced in New South Wales in 1949 amounted to 2,453 tons. The principal sources of this production were Broken Hill, New Occidental (Cobar) and Captain's Flat ores.

(ii) *Queensland.* In 1949 the yield of metallic copper in this State amounted to 4,924 tons compared with 3,149 tons in 1948 and 2,778 tons in 1947. The bulk of the production in 1949 came from Mt. Morgan (3,126 tons) while 1,588 tons represented the copper content of copper-lead dross from Mt. Isa Mines, treated overseas.

A copper mill and smelter is under construction at Mt. Isa for the purpose of operating on copper ores at that site. Copper was produced from copper ore at Mt. Isa during the 1939–45 War, but production was suspended in 1946 and operations since have been confined to silver-lead-zinc ores.

(iii) *South Australia.* Deposits of copper are found over a large portion of South Australia, and its total production to date exceeds that of any other State, notwithtanding that output has diminished to negligible dimensions since the exhaustion of the ore reserves on the principal copper fields. No production was recorded in 1946 or 1947, while in 1948 and 1949 only 4 and 3 tons respectively, of metallic copper were produced.

(iv) *Western Australia.* The ore sent to smelters in 1949 amounted to 49 tons containing 4.8 tons of metal, valued at £630. In the same year carbonate ores for use as fertilizers amounted to 254 tons, valued at £2,821.

(v) *Tasmania.* The quantity of copper produced in Tasmania during 1949 was 5,229 tons, valued at £735,365, the Mount Lyell Mining and Railway Co. Ltd. accounting for the greater part of the production. Copper in concentrates produced by this company in 1949 was 7,940 tons, but much of this remained unsmelted at the end of the year. Output of cathode copper was 4,430 tons in 1949, while production of blister copper was seriously affected by shortage of smelting coke from Newcastle and Port Kembla during the coal strike.

(vi) *Northern Territory.* Copper has been found at various places in the Territory. In 1947 there was no production, but during 1946 279 tons were produced compared with 96 tons in 1939. In 1948 and 1949 281 tons and 4,492 tons, respectively, of ore were mined. The large increase in 1949 was due to an active developmental programme carried out at Barrow Creek and Jervois Range.

3. **Production, Sales and Stocks of Refined Copper.**—In the following table, details of the production, sales and stocks of *refined* copper, as compiled by the Australian Mines and Metals Association, are given for the years indicated. Comparable figures for the year 1938 are not available.

REFINED COPPER: PRODUCTION, SALES AND STOCKS, AUSTRALIA.

(Tons.)

Particulars.	1939.	1945.	1946.	1947.	1948.	1949.	1950.
Stocks from previous year . .	1,342	800	2,611	1,313	409	391	361
Production for year . .	17,867	20,498	22,659	19,505	11,389	9,858	13,509
Total Available Supply . .	19,209	21,298	25,270	20,818	11,798	10,249	13,870
Sold to Australian consumers	18,808	18,687	22,957	20,409	11,407	9,884	11,910
Exported or sold for export	100	. .	1,000	. .	. .	4	. .
Stocks on hand at end of year	301	2,611	1,313	409	391	361	1,960
Total Disposals and Stocks	19,209	21,298	25,270	20,818	11,798	10,249	13,870

The particulars above relate to copper refined from Australian ores. In recent years, local demand for copper has considerably exceeded Australian production and substantial quantities of copper have been imported. A large proportion of the imports in 1947–48 and later years has comprised blister copper imported mainly from South Africa and refined in Australia. Recorded imports of "pigs, ingots and other refinery shapes" (mainly blister copper) in 1949–50 were 16,369 tons.

4. **World Production of Copper.**—The world's estimated production of copper during the years 1938 and 1946 to 1950 is shown below.

COPPER : WORLD PRODUCTION.

(Tons of 2,240 lb.)

1938.	1946.	1947.	1948.	1949.	1950.
2,020,000	1,811,000	2,218,000	2,302,000	2,246,223	(a) 2,465,000

(a) Subject to revision.

The yields in 1950 from the principal copper-producing countries reporting, as published in the *Year Book of the American Bureau of Metal Statistics*, were as follows :—

COPPER : PRODUCTION IN PRINCIPAL COUNTRIES, 1950.

(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
United States of America ..	817,362	Union of South Africa ..	32,900
Chile	357,024	Cyprus	28,468
Rhodesia	280,883	Peru	27,412
Canada(*a*)	233,852	Cuba	20,235
Russia	(*b*) 214,000	Finland	16,958
Belgian Congo	173,140	Sweden	15,845
Mexico	58,273	Norway	15,156
Yugoslavia	39,400	**Australia**	**14,905**
Japan	38,701	Turkey	11,422

(*a*) Includes Newfoundland. (*b*) Estimated.

During 1950 the share of the United States of America in the world's copper production amounted to 41.2 per cent. while the Australian proportion was less than 1 per cent.

5. **Prices.**—Since the outbreak of war in 1939, the price of copper in Australia and the United Kingdom has been fixed by Regulation. Details of the average price for the years shown are given in terms of Australian currency and sterling in the following table :—

AVERAGE PRICE PER TON OF ELECTROLYTIC COPPER IN AUSTRALIA AND UNITED KINGDOM.

(£ s. d.)

Country.	December, 1939.	1946.	1947.	1948.	1949.	1950.
Australia — in Aust. currency*a*	63 17 6	95 0 0	123 5 9	140 0 0	167 19 5	189 1 8

(*a*) *Ex* works Port Kembla.

6. **Employment in Copper-mining.**—The number of persons employed in copper-mining, as recorded by Mines Departments for each of the years 1938 and 1945 to 1949, was as follows :—

COPPER-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938	13	213	67	4	1,015	5	1,317
1945	145	814	3	2	738	5	1,707
1946	134	59	11	1	709	9	923
1947	184	48	..	2	733	15	982
1948	187	45	11	..	746	13	1,002
1949	136	57	14	3	757	32	999

In 1917 over 9,000 persons were engaged in copper-mining.

§ 5. Tin.

1. **Production.**—The values of the production of tin, as reported to the Mines Departments in producing States during the years 1938 and 1945 to 1949, are shown in the following table. A separate line is appended showing the production of *refined* tin from ores and concentrates smelted, as recorded by the Australian Mines and Metals Association for the years indicated.

TIN : PRODUCTION.

State.	1938.	1945.	1946.	1947.	1948.	1949.
	£	£	£	£	£	£
New South Wales ..	286,768	291,788	257,153	246,423	302,045	261,067
Victoria	28,650	9,869	14,917	25,397	20,695	20,109
Queensland.. ..	141,547	207,948	220,901	390,833	224,579	396,412
Western Australia ..	7,421	4,370	5,838	5,565	12,985	13,079
Tasmania	244,037	240,369	240,584	353,045	427,372	380,942
Northern Territory ..	3,205	5,026	3,228	4,698	12,055	10,138
Total ..	711,628	759,370	742,621	1,025,961	999,731	1,081,747
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Refined Tin ..	3,229	2,359	2,225	2,371	1,885	1,955

2. **Sources of Production.**—(i) *New South Wales.* Production of tin concentrates in 1949 was stated at 616 tons, valued at £261,067, compared with 760 tons, valued at £302,045 in 1948. A large proportion of the output in this State is obtained in normal years by dredging and sluicing, principally in the New England district.

(ii) *Victoria.* The production of tin in this State is obtained solely as a by-product from the gold dredging operations at Eldorado. The production in 1949 amounted to 40 tons of concentrates, valued at £20,109, compared with 54 tons, valued at £20,695, in 1948.

(iii) *Queensland.* The chief producing districts in Queensland during 1949 were Herberton, 923 tons of concentrates; Cooktown, 37 tons; Stanthorpe, 33 tons; Chillagoe, 20 tons; and Kangaroo Hills, 33 tons. The total production in 1949 amounted to 1,051 tons, valued at £396,412, compared with 683 tons, valued at £224,579, in 1948. It is interesting to compare these production figures with those recorded in the early years of this century in this State when the output ranged between 2,000 and 5,000 tons per annum.

(iv) *Western Australia.* The quantity of tin concentrates reported in this State in 1949 amounted to 35 tons, valued at £13,079, and was obtained mainly in the Pilbara and Greenbushes fields.

(v) *Tasmania.* For 1949 the output amounted to 883 tons of tin concentrates, valued at £380,942, a decrease of 146 tons on the output of the previous year.

(vi) *Northern Territory.* The production for 1949 amounted to 27 tons of concentrates, valued at £10,138, compared with 33 tons of concentrates valued at £12,055 produced during 1948.

3. **World Production.**—The world's production of tin ore, *in terms of metal*, during each of the years 1938 and 1944 to 1949 was as follows :—

TIN : WORLD PRODUCTION.(*a*)

(Tons of 2,240 lb.)

1938.	1944.	1945.	1946.	1947.	1948.	1949.
148,649	99,700	87,700	88,800	112,200	151,600	162,000

(*a*) As reported by the International Tin Study Group and United States of America Bureau of Mines.

The production of tin reached its maximum in 1941 when 241,400 tons were recorded. The following are the chief producing countries of the world :—Malayan Union, Bolivia, Indonesia, Belgian Congo and Nigeria. Normally these countries produce about three-quarters of the total production.

The production of tin ore, in *terms of metal*, for the principal producing countries in 1949 were as follows :—

TIN : PRODUCTION IN PRINCIPAL COUNTRIES, 1949.

(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
Malayan Union	54,910	**Australia**	**1,955**
Bolivia	34,123	Burma	1,906
Indonesia	28,965	Portugal	1,400
Belgian Congo	13,539	United Kingdom	1,217
Nigeria	8,823	Union of South Africa ..	465
Thailand (Siam)	7,817	Mexico	309
China	4,200	Spain	300

Australia's share of the world's tin production in 1949 was about 1.2 per cent.

4. **Prices.**—At the outbreak of war in September, 1939, the price of tin in Australia and London was fixed by Regulation. London control of tin prices ceased on 14th November, 1949, while the Australian price is still controlled. Details of the movement in average prices for the years shown are given in terms of Australian currency and sterling in the following table:—

AVERAGE PRICE PER TON OF TIN IN AUSTRALIA AND UNITED KINGDOM.
(£ s. d.)

Country.	December, 1939.	1946.	1947.	1948.	1949.	1950.
Australia—in Aust. currency	*a*299 0 0	376 0 0	438 15 0	577 7 0	620 0 0	725 5 9
United Kingdom —in sterling..	*b*271 0 0	*b*336 2 10	*b*425 18 7	*b*548 1 11	*b*599 16 1	*c*745 16 9

(*a*) *Ex* smelters for sales of 10 cwt. or more or in ingots of 70 lb. or more. (*b*) Average official prices for standard tin. (*c*) Tin, standard, spot.

5. **Employment in Tin-mining.**—The number of persons employed in tin-mining during the years 1938 and 1945 to 1949 was as follows:—

TIN-MINING: PERSONS EMPLOYED.

Year.	N.S.W.	Victoria. (*a*)	Q'land.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938	1,440	5	1,263	73	1,123	15	3,919
1945	814	4	465	13	736	(*b*) 48	2,080
1946	778	..	462	10	695	49	1,994
1947	523	..	528	9	627	52	1,739
1948	534	..	480	11	577	63	1,665
1949	548	..	515	24	576	82	1,745

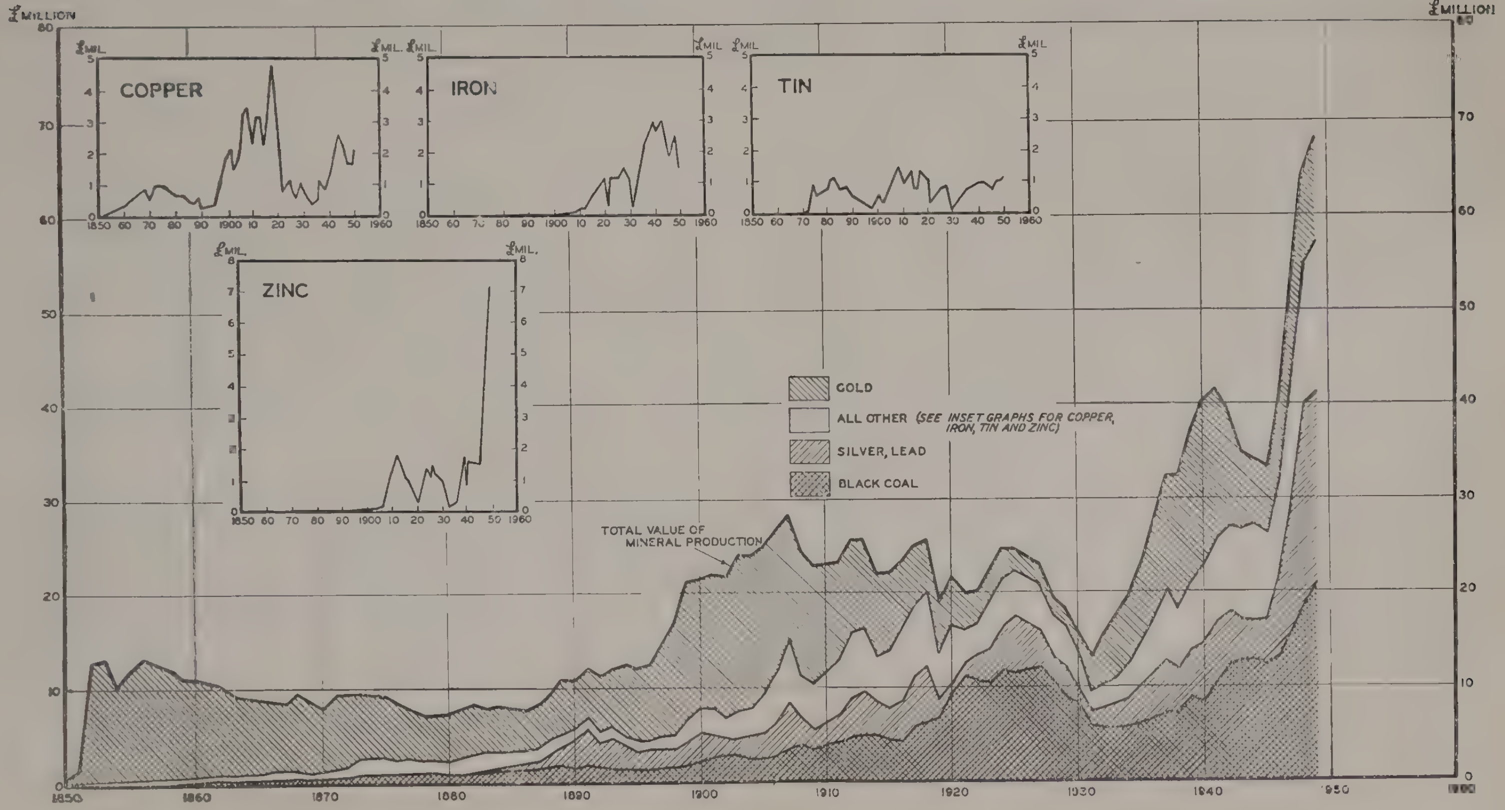
(*a*) The tin produced in Victoria was raised by a dredging company operating primarily for gold. (*b*) Includes some engaged in mining for tantalite.

§ 6. Iron.

1. **General.**—Although iron ore is widely distributed throughout Australia, the only known ore bodies of large extent and high grade which are easy of access are those situated at Iron Knob, South Australia and at Yampi Sound, Western Australia. Estimates of the reserves at these centres place the quantities available at approximately 150 million tons and 100 million tons respectively. Bearing in mind the expansion of the iron industry in Australia, and the limitations of these reserves, the Commonwealth Government prohibited the export of iron ore from 1st July, 1938. A survey of the iron ore resources of Australia undertaken by the Commonwealth Geologist was completed at the end of 1940.

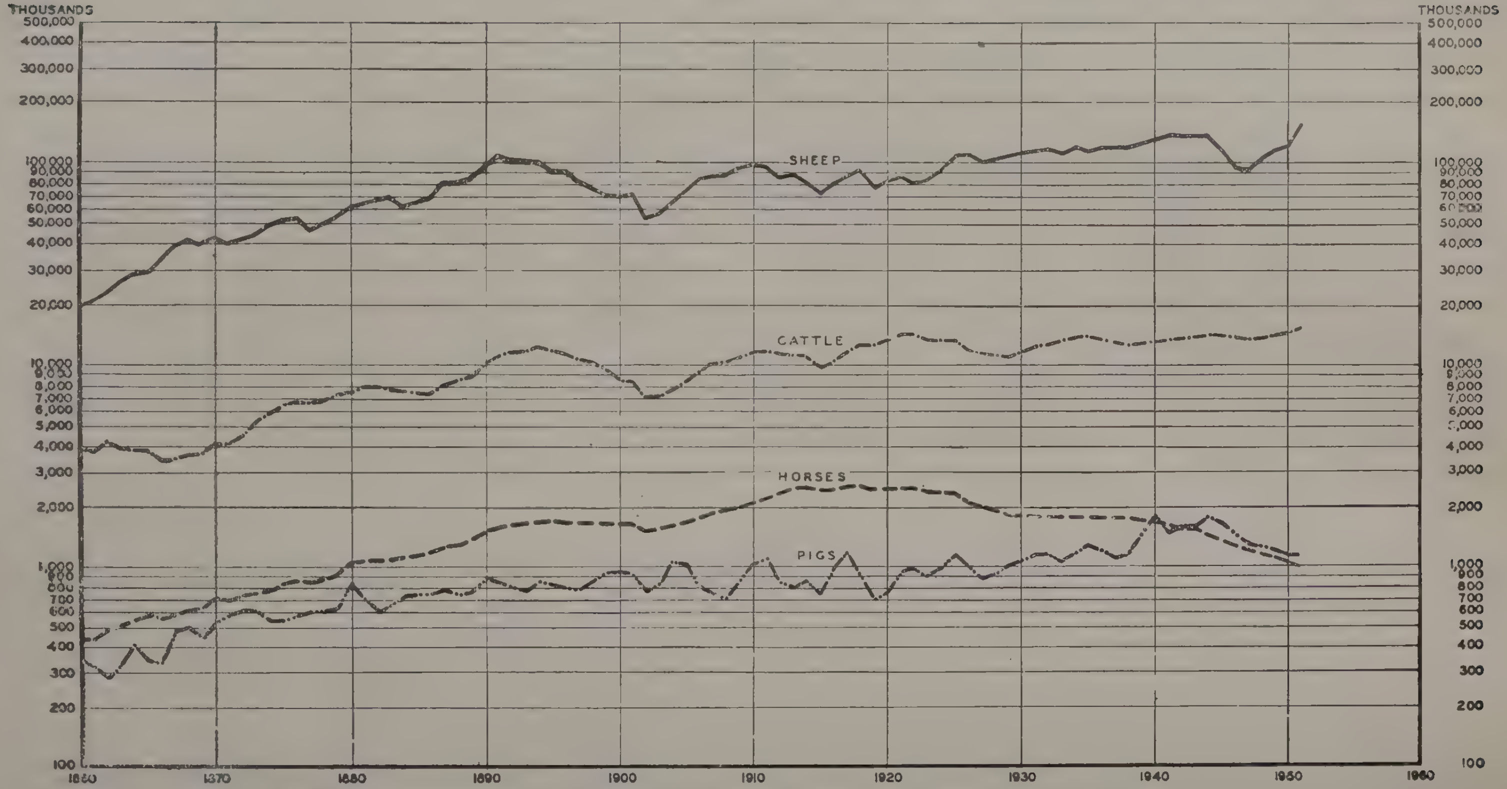
2. **Production.**—(i) *New South Wales.* The production in 1935 of pig-iron from ores mined in New South Wales amounted to 4,580 tons, valued at £18,320. No iron ores were produced from 1935 until 1941, when 202,180 tons of ore were mined. In 1942, 375,297 tons were mined, but only 86,185 tons in 1945. Since that year there has been no iron-ore mined in this State for conversion into pig-iron. For many years the chief source of supply has been South Australia.

VALUE OF PRINCIPAL MINERALS PRODUCED: AUSTRALIA, 1850 TO 1949



LIVESTOCK: AUSTRALIA, 1860 TO 1951

RATIO GRAPH



NOTE:- VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO RATE OF INCREASE OR DECREASE, ACTUAL NUMBERS ARE INDICATED BY SCALE.

Small quantities of iron oxide produced in New South Wales are used by the various gas-works for purifying gas, and also in the manufacture of paper, and for pigments. These supplies are drawn chiefly from the deposits in the Port Macquarie Division. During 1949, 10,313 tons of oxide, valued at £10,149, were won.

(ii) *Queensland.* Extensive deposits of iron ore are known to exist in Queensland. Their location and size, however, in comparison with the more favourable deposits of South Australia and Western Australia, preclude their exploitation. The output of 2,101 tons, valued at £4,662, for 1949 came mainly from the Biggenden district.

(iii) *South Australia.* The production from the deposits worked by the Broken Hill Pty. Co. Ltd. at Iron Knob reached its maximum in 1939, when 2,571,759 tons of ore, valued at £2,957,523, were raised. The production of 1,447,731 tons, valued at £1,465,005, for 1949 was below normal post-war output. This decrease was caused by an industrial dispute in South Australia followed by a coal strike in New South Wales in the same year.

(iv) *Western Australia.* The development of the deposits at Yampi Sound was discontinued in 1938 as a result of the embargo on exports. However, in 1942, production of iron ore was reported for the first time since 1938 ; it amounted to 150 tons, valued at £225. Production in 1943 amounted to 84 tons, valued at £128, but up to 1947 no further production had been recorded.

Developmental work at the iron ore deposits on Cockatoo Island in Yampi Sound reached a climax on 24th July, 1951, when one specially designed vessel of the Broken Hill Proprietary Co. Ltd. left the island with 10,384 tons of ore for Port Kembla, New South Wales.

The production of pig-iron was commenced at Wundowie in Western Australia in January, 1948 under the direction of the State Department of Industrial Development. The ore used is obtained from the local deposits and converted to pig-iron by the use of charcoal burnt from timber obtained in the same locality. The production, which amounted to 771 tons for the six months ended June, 1948, had grown to 7,727 tons of pig iron for the year 1950. This, in addition to meeting local requirements, provided a small quantity for export to the eastern States.

The whole iron pyrites production of Western Australia is won at the Iron King and Norseman mines and is railed, in the form of ores and concentrates, to superphosphate manufacturers at Bassendean and Bayswater on the coast.

(v) *Tasmania.* There has been no production of ironstone in Tasmania since 1943 when 7 tons, valued at £14 were produced. The production of pyrites, which in 1950–51 amounted to 55,604 tons, valued at £111,549, is not included in the mineral returns, but is credited to the manufacturing industry, as it is a by-product from the flotation of copper ore at Mount Lyell. This product is exported to the mainland, where the sulphur contents have displaced imported sulphur in the manufacture of chemical fertilizers.

Reference to the iron ore deposits in the various States appears in preceding issues of the Official Year Book (*see* No. 22, pp. 777–9).

3. **Iron and Steel Bounties.**—During 1948–49 the bounties paid under the Bounties Acts on articles manufactured from locally produced materials were as follows :—Wire-netting, nil ; traction engines, £37,146. Corresponding amounts paid during 1947–48 were £321 and £19,978 respectively.

4. **Production of Iron and Steel in Principal Countries.**—(i) *General.* Particulars of the production in the principal countries during the years 1938, 1948 and 1949, according to figures published by the Imperial Institute and the Statistical Office of the United Nations, are shown in the next table.

PIG-IRON AND STEEL : PRODUCTION IN PRINCIPAL COUNTRIES.

(*a*) Not available. (*b*) Western Germany. (*c*) Year ended 30th June. (*d*) Incomplete.

The principal producers in Australia are the Broken Hill Pty. Co. Ltd. and the Australian Iron and Steel Ltd., both in New South Wales, the former situated at Newcastle and the latter at Port Kembla. The Broken Hill Pty. Co. Ltd. established a blast furnace at Whyalla in South Australia; this was blown in during May, 1941, and has since continued to operate except for the periods May, 1944 to April, 1946 and April, 1949 to September, 1949.

In Western Australia, the production of pig-iron, under the direction of the State Department of Industrial Development, commenced in January, 1948. The output for the year 1950 amounted to 7,727 tons.

(ii) *Australia.* The production of steel and pig-iron in Australia, of which New South Wales is the main producing State, is shown in the following table for each of the years 1940–41 to 1949–50 inclusive.

PIG-IRON AND STEEL : AUSTRALIAN PRODUCTION.

(Tons.)

Year.	Pig-iron. (*a*)	Steel Ingots.	Blooms and Billets.	Year.	Pig-iron. (*a*)	Steel Ingots.	Blooms and Billets.

(*a*) Includes pig-iron for castings.

§ 7. Other Metallic Minerals.

1. **Tungsten.**—Tungsten ores occur in all States, and on King Island in Bass Strait. Particulars of the King Island scheelite concentrates are included with Tasmanian production. Important deposits of tungsten ores occur in Queensland, New South Wales, Tasmania and Northern Territory, but production from the other States has been comparatively unimportant. Queensland has the largest total output to date, but its annual production is now much less than formerly. In recent years the largest production has come from Tasmania, followed by Northern Territory. Production during 1938 and the five years 1945 to 1949 is shown in the following table :—

TUNGSTEN CONCENTRATES : PRODUCTION.

2. **Cadmium and Cobalt.**—Production of cadmium metal began in Australia in 1922 when the electrolytic zinc works at Risdon, Tasmania, came into operation. In Australia, cadmium is produced as a by-product in the treatment of lead and zinc concentrates from ores mined at Broken Hill in New South Wales and Read-Rosebery in Tasmania. In 1938, which is the last year for which relatively complete world production figures are available, Australia produced 196 tons of cadmium, amounting to about five per cent. of the world output.

Cobalt as cobalt oxide is recovered from the treatment of silver-lead-zinc concentrates of Broken Hill and Tasmanian origin in the same way as is cadmium. The production of cobalt and cadmium is shown for the years 1938 and 1945 to 1949 in the following table :—

CADMIUM AND COBALT OXIDE : PRODUCTION.

Year.	Cadmium.				Cobalt Oxide.			
	Extracted in Tasmania from Ores mined in—				Extracted in Tasmania from Ores mined in—			
	New South Wales.	Tasmania.	Total.		New South Wales.	Tasmania.	Total.	
	Cwt.	Cwt.	Cwt.	£	Cwt.	Cwt.	Cwt.	£
1938	2,943	980	3,923	79,406	377	12	389	8,084
1945	3,818	588	4,406	98,671	274	5	279	6,427
1946	3,737	675	4,412	98,823	305	4	309	7,106
1947	3,076	691	3,767	84,335	239	4	243	5,102
1948	3,724	880	4,604	103,145	300	5	305	11,183
1949	3,426	880	4,306	248,653	280	5	285	11,780

The figures shown above do not include the metallic contents of cadmium and cobalt oxide contained in the ores and concentrates exported overseas.

3. **Platinoid Metals.**—(i) *Platinum.* (*a*) *New South Wales.* The deposits worked in the State are situated in the Fifield division, near Parkes, and in the Ballina division. The production in 1945 from all divisions amounted to 2 oz., valued at £22. The total production recorded to the end of 1945 amounted to 20,555 oz., valued at £130,667. There has been no production in New South Wales since that year.

(*b*) *Victoria.* In Gippsland the metal has been found in association with copper and 127 oz. were produced in 1913, but there has been no production in recent years.

(*c*) *Queensland.* Platinum, associated with osmiridium, has been found in the beach sands between Southport and Currumbin, in creeks on the Russell gold-field near Innisfail, and in alluvial deposits on the Gympie gold-field, but no production has been recorded.

(ii) *Osmium, Iridium, etc.* (*a*) *New South Wales.* Small quantities of osmium, iridium and rhodium are found in various localities. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River about 15 miles from Oban, on the beach sands of the northern coast, in the gem sands at Bingara, Mudgee, Bathurst and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content. There has been no production in recent years.

(*b*) *Victoria.* In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

(*c*) *Tasmania.* The yield of osmiridium was returned as 99 oz. in 1947, valued at £2,700, compared with the record production in 1925 of 3,365 oz., valued at £103,570. The decrease in later years was largely due to the decline in price from £31 per oz. in 1925 to £15 0s. 4d. per oz. in 1938 (although the price rose to £24 19s. 1d. per oz. in 1940 and reached £27 5s. 5d. in 1947), but the depletion of the known alluvial deposits was also a factor. However, 92 oz., valued at £2,094, was produced in 1948, while in 1949 production dropped to 39 oz., valued at £1,136.

4. **Other.**—Metallic minerals other than those mentioned above, but which are worthy of note are (with particulars of 1949 production shown in brackets) :—Antimony (393 tons of ore and concentrates valued at £25,859) ; Arsenic (33 tons of oxide valued at £983) ; Bismuth (28 cwt. of concentrates valued at £790) ; Manganese (13,089 tons of ore valued at £79,620) ; and Molybdenum (118 cwt. of concentrates valued at £1,567).

§ 8. Coal.

1. **Production in each State.**—An account of the discovery of coal in each State appears in preceding issues of the Official Year Book (*see* No. 3, pp. 515–16). The quantity and value of the production in each State and in Australia during 1915, 1925, 1935, 1938, and for each of the years 1945 to 1950 are shown in the following table :—

BLACK COAL : PRODUCTION.

Year.	N.S.W.	Victoria.(*a*)	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.

1945	5,445,108	641,069	1950	7,327,119	1,706,612

(*a*) Cost of production.

2. **Distribution and Production of Coal in each State.**—(i) *New South Wales.* The coal deposits of New South Wales are the most important and extensively worked in Australia. The principal fields are known as the Northern, Southern and Western, and are situated in the vicinity of Newcastle, Bulli and Lithgow respectively.

The coal from the various districts differs in quality or, geologically speaking, rank—that from the Northern district being especially suitable for gas-making, household purposes and steam, while the product of the Southern and Western districts is essentially a steaming coal. The Permian Coal Measures in the Northern district are being worked extensively in the Hunter River Valley area, particularly in the vicinity of Maitland, Cessnock and, more recently, Muswellbrook. The Northern district of New South Wales is the most important, from the aspect of coal mining, in Australia.

The following table shows the yields in each of the three districts during the five years 1946 to 1950 compared with 1938. Separate details are given respecting coal won underground and from open cuts—

COAL: PRODUCTION IN DISTRICTS OF NEW SOUTH WALES.

(a) At the pit's mouth. (b) Subject to revision.

Much development has been carried out in recent years on the New South Wales coalfields. Areas receiving particular attention are those in the vicinities of Muswellbrook and Lithgow, where the open-cut mining method is being exploited more fully. Consequently, in 1950, 12,798,000 tons of bituminous and sub-bituminous coal were won, which is 2,062,000 tons more than in 1949, when production was reduced because of the prolonged strike by miners in that year.

Open-cut production accounted for 11.6 per cent. of all coal produced in this State in 1949, and for 12.5 per cent. in 1950, an appreciable advance on the 10.7 per cent. for 1948 and indicative of the extent of the recent development in this sphere.

(ii) *Victoria.* (a) *Black Coal.* During 1950, production of bituminous coal rose by 3,924 tons to a total of 126,431 tons. Of this, 109,988 tons or 87.0 per cent., were won from the State Coal Mines at Wonthaggi in South Gippsland, while the remaining 16,443 tons represent the total production of four small mines at Korumburra, Kileunda, Outtrim and Jumbunna.

The Department of Mines considers that future prospects at the State Coal Mines are doubtful, as seams are becoming increasingly faulted and it is difficult to induce men to work under existing conditions.

The output of black coal in Victoria during each of the five years ended 1950 compared with 1938 was as follows :—

BLACK COAL : PRODUCTION IN VICTORIA.

Year.	Quantities. State Coal-mine.	Quantities. Other Coal-mines.	Quantities. Total.	Total Value. (a)
	Tons.	Tons.	Tons.	£
1938	253,065	54,193	307,258	188,101
1946	169,650	21,640	191,290	392,812
1947	153,236	20,447	173,683	299,784
1948	145,880	21,660	167,540	347,687
1949	108,159	14,348	122,507	379,464
1950	109,988	16,443	126,431	382,230

(a) At the pit's mouth.

(b) *Brown Coal—General.* The mining of brown coal is carried on only in the State of Victoria where extensive deposits exist ; estimates place the available reserves at 27,000 million tons. Large-scale development projects are in progress ; these, when completed, will greatly reduce the dependence on fuel from other States. Brown coal produced in Victoria in 1949 amounted to 7,375,550 tons, of which 6,965,478 tons or 94.4 per cent. was won at the State open cut at Yallourn. During 1949–50, 6,404,059 tons of brown coal were produced by Yallourn, of which 4,075,075 tons went to the Yallourn power station, and 2,328,984 tons to the briquette factory.

Production of Briquettes. The briquetting plant of the State Electricity Commission started operations in November, 1924, and the output, which in 1926 was 95,477 tons, had increased to 180,905 tons in 1930 and to 588,504 tons in 1949–50. Two and a half tons of brown coal are required to make one ton of briquettes.

The table following shows the production and distribution of brown coal, and the production of briquettes in Victoria for the years 1945–46 to 1949–50, compared with 1938–39.

BROWN COAL : PRODUCTION AND UTILIZATION, VICTORIA.
('000 Tons.)

The production of 2,320,799 tons in 1950 represents the highest annual production to date.

(iv) *South Australia.* Coal mined in South Australia is won by open cut methods at Leigh Creek, some 380 miles by rail north of Adelaide. This important deposit yields a low grade sub-bituminous coal of Triassic age, and has known reserves of about 380 million tons. However, this State relies to a great degree on bituminous coal from New South Wales to supplement the demand created by industrial expansion. In its first year of major production in 1944, 34,620 tons were won. However, in 1950, the output had risen to 261,337 tons, valued at £130,669.

Details of production are given in the following table for the years 1946 to 1950.

COAL : PRODUCTION IN SOUTH AUSTRALIA.

Particulars.		1946.	1947.	1948.	1949.	1950.
Quantity ..	tons	135,460	193,351	239,464	344,638	261,337
Value	£	47,411	67,777	119,732	172,319	130,669

(v) *Western Australia.* The only coal deposit which has been developed on a commercial scale is at Collie in the south-west of the State. Collie coal is sub-bituminous in rank. Details of production for the years 1946 to 1950 compared with 1938 are given in the following table :—

COAL : PRODUCTION IN WESTERN AUSTRALIA.

Particulars.		1938.	1946.	1947.	1948.	1949.	1950.
Quantity ..	tons	604,792	642,287	730,506	732,938	750,594	814,352
Value ..	£	375,083	730,104	840,249	880,236	972,245	1,185,038

(vi) *Tasmania.* Two periods of coal formation are represented in Tasmania. The older (Permo-Carboniferous) seams contain fairly high ranking semi-anthracitic coal, with a high sulphur content, but production from these mines represents less than one per cent. of Tasmanian black coal output. The more recent Mesozoic coal of bituminous rank is mined in the north-east of the island, the Cornwall and Mt. Nicholas mines being the most prolific producers. Details of production for the years 1946 to 1950 compared with 1938 are shown in the following table :—

COAL : PRODUCTION IN TASMANIA.

Particulars.		1938.	1946.	1947.	1948.	1949.	1950.
Quantity ..	tons	83,753	158,751	167,140	179,393	181,618	222,351
Value ..	£	61,991	137,736	154,725	177,652	181,897	231,599

(vii) *Australia's Coal Reserves.* The latest available estimate of the actual and probable coal reserves of Australia is that prepared by the Coal and Lignites Panel of the Power Survey Sectional Committee of the Standards Association of Australia in May, 1950. The following table shows the actual and probable coal reserves as determined by that Committee :—

ACTUAL AND PROBABLE COAL RESERVES OF AUSTRALIA.

('000,000 Tons.)

State.	Rank of Coal.	
	Anthracitic and Bituminous.	Sub-bituminous and Lignitic.
New South Wales	11,770	100
Victoria	33	37,000
Queensland	2,000	67
South Australia	..	650
Western Australia	..	1,000
Tasmania	244	..
Total	(a) 14,000	(a) 39,000

(a) Rounded figures.

3. **Production in Various Countries.**—The total known coal production of the world in 1949 amounted to about 1,600 million tons, towards which Australia contributed about 21 million tons. The following tables show the production of the chief British and foreign countries during each of the three years 1948 to 1950 compared with 1938, as published by the Statistical Office of the United Nations.

COAL: PRODUCTION IN BRITISH COUNTRIES.

(*a*) Not available. (*b*) Pre-war Germany.

World production of coal amounted to 1,440 million tons in 1938; it rose to 1,770 million tons in 1943, but declined to 1,668 million tons in 1948. Of these quantities, those produced in the British Commonwealth totalled 304 million or 21 per cent. in 1938, 286 million or 16 per cent. in 1943 and 307 million tons or 18.4 per cent. in 1948.

4. **Exports.**—(i) *General.* The quantity of coal of Australian production exported to other countries in 1949–50 was 68,404 tons, valued at £206,460, shipped mainly from New South Wales. These figures of oversea exports exclude bunker coal supplied to oversea vessels, which in 1949–50 amounted to 135,059 tons, valued at £418,939. The quantities and values of the oversea exports of Australian coal for the years specified are shown in the following table. Similar details for the coal taken for bunker purposes on oversea vessels are shown below in a separate table.

COAL : OVERSEA EXPORTS, AUSTRALIA.

(EXCLUDING BUNKER COAL.)

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1913 ..	2,098,505	1,121,505	1946–47 ..	44,375	54,754
1921–22 ..	1,028,767	1,099,899	1947–48 ..	67,228	108,733
1931–32 ..	344,015	341,800	1948–49 ..	36,913	97,353
1938–39 ..	382,085	347,054	1949–50 ..	68,404	206,460
1945–46 ..	75,883	92,764			

Australian coal taken for bunker purposes on oversea vessels during the same years was as follows :—

BUNKER COAL SUPPLIED TO OVERSEA VESSELS, AUSTRALIA.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1913 ..	1,647,870	1,018,375	1946–47 ..	355,428	655,207

1948–49 ..	2,443	284	31	233	8,624	11,615
1949–50 ..	1,898	231	68	135	8,961	11,293

5. **Consumption in Australia.**—Details of the average annual production of coal and its distribution in Australia are given in the following table for the five years ended 1938–39 and 1948–49, together with similar details of production and distribution for the year 1949–50.

Under normal circumstances the production and consumption of coal move in the same direction, but in times of short supplies or abnormal consumption consumers may be compelled to rely upon accumulated stocks, and, consequently annual figures may move out of alignment. For this reason the following table has been prepared on a five-yearly basis in order to smooth out any variations from the normal.

COAL : PRODUCTION AND UTILIZATION IN AUSTRALIA.

Particulars.	Quantity.			Proportion of Total.		
	Average for five years ended—		1949–50.	Average for five years ended—		1949–50.
	1938–39.	1948–49.		1938–39.	1948–49.

(*a*) Includes miners' and colliery coal. (*b*) Incomplete. (*c*) Estimated when details not available. (*d*) Government railways only. (*e*) Includes bunker coal for interstate and intrastate shipping. (*f*) Not available.

In order to meet the greatly increased demands for coal in Australia, arrangements have been made in recent years to import considerable quantities to augment local supplies. The quantity imported in 1949–50 was 493,805 tons.

6. **Coal Value at Pit's Mouth in New South Wales.**—Particulars of the average value at the pit's mouth of the saleable output of coal for each district and for New South Wales as a whole are shown in the following table for the years 1938 and 1946 to 1950, according to figures compiled by the State Statistician. The figures relate to the pit head value (including subsidy). Excise duty operative from 1st November, 1949 is also included.

AVERAGE VALUE(*a*) AT THE PIT'S MOUTH PER TON OF SALEABLE COAL(*b*): NEW SOUTH WALES.

(s. d.)

Year.	Northern District.	Southern District.	Western District.	Average for State.
1938	12 0	14 0	9 6	12 0
1946	18 8	23 1	15 7	18 10
1947	20 11	23 11	16 10	20 9
1948	26 1	29 11	20 6	25 8
1949	31 8	33 4	22 6	30 3
1950	36 5	34 5	29 4	34 11

(*a*) Includes subsidy from 1943 and excise duty from November, 1949. (*b*) "Saleable" output represents "gross" output, less coal used in operating the mines, and miner's coal.

7. **Prices in New South Wales, Great Britain, Canada and the United States of America.**—In the following table the prices of coal in Canada and the United States of America are compared with the average value per ton of coal in New South Wales and Great Britain.

AVERAGE PRICES OF COAL PER TON: NEW SOUTH WALES, GREAT BRITAIN, CANADA AND UNITED STATES OF AMERICA.

Country.	1938.	1944.	1945.	1946.	1947.	1948.	1949.	1950.
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*
New South Wales—Bituminous(*a*)	12 0	17 10	18 7	18 10	20 9	25 8	30 3	34 11
Great Britain—Deep mined*b*	16 8	31 3	35 0	36 10	40 3	47 2½	47 11	47 9½
	$	$	$	$	$	$	$	$
Canada—Bituminous(*c*) ..	5.417	6.650	6.788	6.980	6.980	6.980	6.980	(*d*)
United States of America—Bituminous (*e*) ..	4.327	5.239	6.356	5.770	6.873	(*f*)8.118	(*f*)8.631	(*f*)8.738

(*a*) Average pit head value per ton of 2,240 lb.; the figures relate to saleable coal and include subsidy from 1943 and excise duty from November, 1949. (*b*) Average value in sterling at the mine per ton of 2,240 lb. (*c*) Wholesale price in Canadian currency per ton of 2,000 lb. (*d*) Not available. (*e*) Wholesale price, car-lots, on tracks, destination, in United States of America currency per ton of 2,000 lb. (*f*) Figures for 1948 to 1950 represent averages for nine months, nine months and ten months respectively. As a result of changes in the basis of compiling the averages, figures are not strictly comparable from year to year.

8. Employment in Coal-mines.—The number of persons employed, both above and below ground, in coal-mines in each of the producing States is given for selected years from 1915 and for the years 1945 to 1950 inclusive :—

COAL-MINES : PERSONS EMPLOYED.

Year.	New South Wales.	Victoria.		Queensland.	South Australia.	Western Australia.	Tasmania.	Total.
		Black.	Brown.					
1915	17,959	1,312	(a)	2,518	..	498	161	22,448
1925	24,049	1,947	646	2,826	..	677	312	30,457
1935	13,337	1,397	615	2,455	..	689	340	18,833
1938	15,815	1,322	444	2,495	..	765	269	21,110
1945	17,427	1,016	584	2,966	100	860	279	23,232
1946	17,448	924	655	2,641	121	955	276	23,020
1947	17,614	860	594	3,337	124	1,032	288	23,849
1948	18,693	824	526	3,323	237	1,064	274	24,941
1949	18,546	787	811	3,390	347	1,044	312	25,237
1950	18,540	777	889	3,495	408	1,099	334	24,653

(a) Included with black coal; production prior to 1925 was of little significance.

The year of maximum employment was 1926 when 31,774 persons were engaged in the coal-mines of Australia. Shortly after that year the industrial depression and a prolonged stoppage of work on one of the principal fields of New South Wales during 1929 and 1930 seriously affected the figures of employment. Since 1933 there has been a gradual increase, but the numbers employed in 1950 were only about three-quarters of the maximum figure already quoted. In New South Wales in 1939, 3,594,000 tons of coal, or 32.1 per cent. of the total output of underground coal, was cut by machinery, compared with 3,819,000 tons or 36.6 per cent. in 1946, 4,150,000 tons or 38.7 per cent. in 1947, 3,805,357 tons or 36.4 per cent, in 1948, 3,364,351 tons or 35.5 per cent. in 1949, and 4,345,836 tons or 38.8 per cent. in 1950. Similar details for other States are not available.

9. Accidents in Coal-mining.—The following table gives the number of persons killed or injured in the coal-mining industry in Australia during 1949, with the proportion per 1,000 employed, a factor which must be reckoned with in any consideration of the degree of risk attending mining operations. Due to the different bases of recording mining accidents in the various States of Australia the figures in the table below are not strictly comparable between States.

COAL-MINING : EMPLOYMENT AND ACCIDENTS, 1949.

State.	Persons Employed in Coal-mining.	No. of Persons.		Proportion per 1,000 Employed.	
		Killed.	Injured.	Killed.	Injured.
New South Wales ..	18,546	(a) 24	(a) 75	1.29	4.04
Victoria(b)	1,598	..	3	..	1.88
Queensland	3,390	..	156	..	46.02
South Australia	347	..	12	..	34.58
Western Australia ..	1,044	1	175	0.96	167.62
Tasmania	312	..	4	..	12.82
Total	25,237	25	425	0.99	16.84

(a) Includes shale. (b) Includes brown coal.

The next table shows for the five-yearly period 1945 to 1949 annual averages respecting the number employed in mining and the number of fatalities, and the proportion of fatalities per 1,000 employed.

COAL-MINING : AVERAGE ANNUAL FATALITIES, 1945 TO 1949.

State.	Average No. of Coal-miners Employed.	Average Annual No. of Fatalities.	Proportion per 1,000 Employed.
New South Wales	17,946	16.0	0.89
Victoria	1,268	1.4	1.10
Queensland	3,131	3.8	1.21
South Australia	185	0.2	1.08
Western Australia	991	0.6	0.61
Tasmania	286	0.2	0.70
Total	23,807	22.2	0.93

10. **Commonwealth Board of Inquiry into the Coal-mining Industry.**—Reference to the appointment in 1945 of the Commonwealth Board of Inquiry, its terms of reference and the report issued in 1946 is given in Official Year Book No. 37, page 842.

11. **Joint Coal Board.**—(i) *General.* Under war-time emergency legislation, the Commonwealth had wide powers to control the production, distribution and price of coal in Australia. Under peace-time conditions, however, the constitutional powers of the Commonwealth were less effective and in order to ensure the maintenance of supplies of coal to meet the peace-time needs of industry it was necessary to seek wider powers.

With this objective in view, the Governments of the Commonwealth and New South Wales, the chief coal-producing State, mutually agreed to create jointly an authority with powers similar to and in some respects wider than those possessed under Commonwealth war-time legislation. Following this agreement, the Joint Coal Board was created and has functioned as from 1st March, 1947.

(ii) *Constitution.* The legislative authority of the Joint Coal Board is contained in the Coal Industry Act No. 40 of 1946 passed by the Commonwealth Parliament and in the Coal Industry Act No. 44 of 1946 passed by the Parliament of New South Wales. Both Acts are identical for all practical purposes except that the New South Wales Act granted to the Board powers to control collieries and compulsorily to requisition and resume land, buildings, plant, machinery and equipment.

(iii) *Powers.* Under Section 14 of the Commonwealth Act and Section 11 of the New South Wales Act, the powers and functions of the Board are stated to include the taking of such action as is necessary or desirable—(*a*) to ensure that coal is produced in the State in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries ; (*b*) to ensure that the coal resources of the State are conserved, developed, worked and used to the best advantage in the public interest ; (*c*) to ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities ; and (*d*) to promote the welfare of workers engaged in the coal industry in the State. In addition, the Board has full power with regard to health matters but does not exercise any basic responsibilities as regards safety measures or inspection of mines ; these duties remain the responsibility of the New South Wales Department of Mines.

§ 9. Coke.

1. **General.**—The production of metallurgical coke in Australia was limited to about 250,000 tons per annum prior to the 1914–18 War. This was below local requirements and necessitated an annual import of about 27,000 tons from abroad. By 1920, production had risen to more than 500,000 tons and by 1938–39 it had reached 1,164,873 tons. This increased production permitted an export of 30,000 tons in 1938–39. Imports in the same year were 9,700 tons. In 1949–50 the quantity exported was 2,791 tons, valued at £15,661, of which 2,217 tons, valued at £12,362, went to New Zealand. In the same year 21,269 tons, valued at £125,173, were imported, of which 12,203 tons, valued at £59,411, came from the Union of South Africa.

In addition to metallurgical coke referred to above (which is produced by specialized coke works), considerable quantities of coke are produced in gas works as a by-product of the manufacture of gas. Output in gas works in 1949–50 was 1,094,982 tons compared with 757,046 tons in 1938–39.

In order to avoid duplication with coal values, the returns for coke have not been included in the general tables of mineral production in the early part of this chapter.

2. **Total Production, Australia.**—In the following table, particulars of the production of coke in coke works and gas works in Australia are shown for the years 1938–39 and 1945–46 to 1949–50. Relevant particulars of the output of coke breeze are also shown.

TOTAL COKE PRODUCTION: AUSTRALIA.

(Tons.)

Industry.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
			COKE.			
Coke Works ..	1,164,873	986,005	1,197,636	1,384,238	1,150,039	1,182,773
Gas Works ..	757,046	1,027,157	1,072,906	1,170,545	1,181,516	1,094,982

Ammonium Sulphate(a)	24,251	21,823	29,266	39,480	53,247	48,736

(a) Includes production in other works.

§ 11. Shale-oil and Mineral Oil.

1. **Shale-oil.**—(i) *General.* Reference to the deposits of shale and the search for mineral oil in Australia will be found in Official Year Book No. 22, pp. 791–3.

(ii) *New South Wales.* Reference to the establishment of the shale-oil industry in Australia will be found in previous issues of the Official Year Book. In 1937 negotiations were completed between the Commonwealth and New South Wales Governments and the National Oil Proprietary Ltd., by which the latter company undertook to develop the shale-oil industry in the Newnes-Capertee district. The Commonwealth Government agreed to protect the industry by exempting from excise, up to 10 million gallons annually, the Company's output of petrol for a period of 25 years.

Production of petrol from crude oil commenced at Glen Davis, near Newnes in 1940 and a total of 24,501,186 gallons of petrol had been produced to the end of 1950.

In January, 1951, the Commonwealth Government announced that in view of the continued uneconomic operation of the project, its small contribution to Australian petroleum supplies, the doubtful prospect of raising production to a considerably higher figure and the urgent need for miners in black coal production, it would close down the works completely as soon as possible. In September, 1951, the Government appointed a receiver in National Oil Pty. Ltd., the company which has operated this project.

The following table shows the production of oil shale during the years 1943 to 1949 compared with 1940 :—

OIL SHALE : PRODUCTION IN NEW SOUTH WALES.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1940	43,805	43,805	1946	121,654	139,902
1943	116,875	160,215	1947	138,427	193,798
1944	137,458	165,285	1948	136,352	204,528
1945	123,170	164,648	1949	120,956	181,437

(iii) *Tasmania.* About 38,000 gallons of crude oil were produced in 1934 from shale treated in Tasmania, while the total quantity of oil distilled from shale up to the end of 1934 was set down at 357,000 gallons. The plant owned by the Tasmanite Shale Oil Company has not operated since the end of January, 1935.

Interest in the commercial utilization of oil shales of the Mersey Valley for the extraction of fuel oils has been retarded due to structural and physical conditions for underground mining and the low-grade nature of the shale.

2. **Coal Oil.**—Reference to investigations made into the possibility of establishing plants for the production of oil from coal is made in previous issues of the Official Year Book.

3. **Natural Oil.**—(i) *Australia.* Natural oil has been proved to exist in Queensland, Victoria and Western Australia, the best indications being found in Victoria and Queensland. Many of the conditions favourable to the accumulation of oil in commercial quantities have been shown to be present in Queensland, Western Australia and New South Wales. In the latter State, however, no strong positive evidence of its existence has been recorded.

Reference is made in § 14 below to the assistance afforded by the Commonwealth Government in the search for petroleum oil.

(ii) *Victoria.* There has been a small production of crude oil from Lakes Entrance. For the year ended 31st December, 1950, production was 40,000 gallons. Gravity and aeromagnetic surveys have been carried out by the Bureau of Mineral Resources* in

---

* References to this Bureau in this and succeeding paragraphs relate to the Commonwealth Bureau of Mineral Resources, Geology and Geophysics—*see* § 14 para. 1. following.

East Gippsland and it is proposed to extend the gravity surveys and carry out seismic surveys. Geological surveys have been carried out in the Portland–Nelson–Mt. Gambier area of Western Victoria and the eastern part of South Australia by the Departments of Mines of Victoria and South Australia. Geophysical surveys (gravity) were made in Western Victoria by the Bureau of Mineral Resources.

(iii) *Queensland.* A test bore was drilled at Rolleston by Shell (Queensland) Development Pty. Ltd., but was abandoned early in 1951 after igneous rock had been penetrated. The Bureau of Mineral Resources has conducted geophysical surveys in the Comet and Roma areas. In the case of Comet, the Shell company decided against further bores but it is expected that drilling operations will be undertaken at Roma.

(iv) *South Australia.* Under prescribed conditions, the South Australian Government offers a bonus of £5,000 to the person or body corporate which first obtains from a local bore or well 100,000 gallons of crude petroleum containing not less than 90 per cent. of products obtainable by distillation.

Geophysical surveys were undertaken by private interests during 1947, and continued into 1948, in the north-east corner of the State and extending over the border into New South Wales and Queensland, but with little success. Assistance given by the Commonwealth included equipment and a geophysical survey party.

(v) *Western Australia.* Geological and geophysical surveys by the Bureau of Mineral Resources in connexion with the search for oil have been in progress since 1947 in the North West Basin and Desert Basin areas. The deep drilling operation which commenced in 1939 on the Nerrima Dome in the Kimberley district was suspended in 1942, for security reasons, at a depth of 4,271 feet. Operations were resumed in 1948, but were abandoned in 1950. Proposals are under consideration for drilling another bore on the structure.

(vi) *Papua.* After the 1939–45 War, test drilling by the Australasian Petroleum Company Pty. Ltd. was resumed in 1946. At the end of 1950 four bore-holes had been completed and two were in progress, but no oil had been produced. Geological and geophysical surveys and test drilling are being continued by this company and also the Island Exploration Pty. Ltd.

(vii) *General.* During 1939 efforts were made to secure greater uniformity in State legislation governing the search for oil. A draft Bill based on modern legislation in other countries was prepared by the Commonwealth and submitted to the State Governments. As a result amending legislation was passed in Victoria, Queensland, South Australia and Western Australia. There was immediate response to this in Queensland, where an agreement has been reached between the State Government and one of the major oil companies, whereby the company has undertaken to spend up to £400,000 in the search for oil in that State.

Further details of action taken by the Commonwealth Government in connexion with the search for oil will be found in § 14. " Government Aid to Mining, and Mineral Control ".

§ 12. Gems and Gemstones.

1. **Diamonds.**—It is difficult to secure accurate returns in connexion with the production of precious stones, but the yield of diamonds in 1949 in New South Wales was estimated at 5 carats, valued at £15. The majority of diamonds are won in the Inverell district. The total production to the end of 1949 is stated as 206,957 carats, valued at £150,814.

2. **Sapphires.**—The production of sapphires in New South Wales during 1929 was returned as 65 oz., valued at £450, obtained wholly at Sapphire in the Inverell district, From 1941 to 1949 inclusive, a total of 3,970 oz., valued at £2,803, was won, of which 1,200 oz., valued at £600, were recorded in 1941. Production in 1949 was only 10 oz., valued at £5.

In Queensland, the value of gems won in 1948 was £6,059 and in 1949, £4,868. There were about 120 miners operating on the fields during 1934 but only 32 at the end of 1949. Production has declined very considerably since 1920, when the yield was valued at £66,000.

3. **Precious Opal.**—The estimated value of the opal won in New South Wales during 1949 was £1,592. This is not regarded as the total output of the State, however, because in many instances miners, buyers and collectors leave the fields before a record of their production or purchases can be secured. Some very fine stones are sometimes obtained, one weighing 5 ozs. and valued at £300, being found in 1911. Three finds of large stone were made in 1928, the gems weighing 790, 590 and 232 carats respectively and showing a fine adamantine lustre. Occasionally black opals of very fine quality are found, one specimen from the Wallungulla field, weighing 6½ carats, being sold in 1910 for £102, while in the early part of 1920 a specimen realized £600. It is stated that this locality is the only place in the world where the "black" variety of the gem has been found. The total value of opal won in New South Wales since 1890 is estimated at about £1,645,500 but, as pointed out above, the figures are to some extent understated.

In Victoria small quantities of precious opal have been found in the Beechworth district.

The opal bearing district in Queensland stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far south as Cunnamulla. The yield in 1949 was estimated at £1,200, and up to the end of that year, at about £189,200. These figures are, however, merely approximations, as large quantities of opal, of which no record is obtained, are disposed of privately. The greatest recorded output was for the year 1895, when the yield was valued at £32,750.

Owing to the poor market for gems, production from the Coober Pedy opal field, situated in the Stuart Range in South Australia, fell from £11,056 in 1929 to £1,517 in 1934. The production rose in 1937 to £11,887, but declined to £6,020 in 1939, and rose again to £11,568 in 1941. After a further drop in 1942, to less than £6,000, the value of production rose in 1947 to £61,569, the greatest annual production ever recorded. However, the value of production dropped to £39,798 in 1949. The field is extremely prolific, a large quantity of precious white opal having been raised therefrom, and only a small portion of the known opal-bearing area has been thoroughly tested.

4. **Other Gems.**—Various other gems and precious stones have from time to time been discovered in the different States, the list including agate, amethyst, beryl, chiastolite, emerald, garnet, moonstone, olivine, ruby, topaz, tourmaline, turquoise and zircon. In Western Australia, 609 carats (rough) of emeralds, valued at £278, were produced during 1929 in the Cue district on the Murchison gold-field. The value of the 3,750 carats reported from the same area in 1930 was not ascertainable as there were no sales during the year. There has been no recorded production since 1930. During the three years 1939, 1940 and 1941, 10 tons of beryl ore, valued at £83, were produced in Western Australia. There was no production in 1942, but in the period 1943–49, 1,051 tons were produced, valued at £33,755. The largest production was registered in 1943 when 515 tons were won, valued at £14,564. The most recent production figures show a marked decrease to 35 tons, valued at £2,122, in 1949.

Until recently, beryl was chiefly sought as a gemstone—the emerald variety being particularly valuable. However, research over the past few years has shown that the metal beryllium has wide applications in industrial alloys with copper, aluminium and iron. These alloys possess unusual hardness, tensile strength and resistance.

§ 13. Number Engaged, Wages Paid and Accidents in Mining.

1. **Total Employment in Mining.**—The number of persons engaged in the mining industry in Australia fluctuates according to the season, the price of industrial metals, the state of the labour market, and according to the permanence of new finds and the development of the established mines. During 1949 the number so engaged was as follows :—

NUMBER OF PERSONS ENGAGED IN MINING, 1949.

State.	Number of Persons engaged in Mining for—						Total.
	Gold.	Silver, Lead and Zinc.	Copper.	Tin.	Coal.	Other.	
New South Wales ..	688	6,052	136	548	18,546	1,566	27,536
Victoria..	1,019	..	..	..	a 1,598	241	2,858
Queensland	1,589	1,285	57	515	3,390	330	7,166
South Australia	52	32	14	..	347	1,103	1,548
Western Australia ..	6,800	135	3	24	1,044	496	8,502
Tasmania	9	616	757	576	312	158	2,428
Northern Territory ..	238	6	32	82	..	104	462
Australia	10,395	8,126	999	1,745	25,237	3,998	50,500

(*a*) Includes 811 engaged in mining brown coal.

Included in the figures for " other " in South Australia were 175 engaged in mining iron ore, 87 gypsum miners, 269 salt gatherers, and 70 opal miners. The Tasmanian figures include 137 scheelite miners. The Northern Territory figures include 44 wolfram and 55 mica miners.

The following table shows, at intervals since 1911, the number of persons engaged in mining in each State and the proportion so engaged of the total population :—

NUMBER ENGAGED IN MINING AND PROPORTION PER 100,000 OF POPULATION.

State.	1911.		1921.		1931.	
	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.
New South Wales ..	37,017	2,225	29,701	1,410	30,682	1,200
Victoria	15,986	1,210	5,211	339	6,463	359
Queensland	13,201	2,147	5,847	766	6,753	730
South Australia	6,000	1,457	2,020	406	518	90
Western Australia.. ..	16,596	5,787	7,084	2,122	7,147	1,653
Tasmania	5,247	2,760	3,170	1,486	3,397	1,512
Northern Territory ..	715	21,595	131	3,356	145	2,918
Australia	94,762	2,109	53,164	974	55,105	844

NUMBER ENGAGED IN MINING AND PROPORTION PER 100,000 OF POPULATION—*continued.*

State.	1941.		1948.		1949.	
	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.
New South Wales ..	27,554	984	27,571	910	27,536	884
Victoria	4,839	250	2,484	119	2,858	134
Queensland	6,541	631	7,222	643	7,166	624
South Australia	940	156	1,130	172	1,548	230
Western Australia	14,021	2,958	8,700	1,690	8,502	1,595
Tasmania	2,974	1,237	2,357	891	2,428	899
Northern Territory ..	424	4,125	394	3,233	462	3,428
Australia	57,293	807	49,858	648	50,500	638

The upward movement in the number of miners engaged which commenced in 1930 reached a peak of 998 per 100,000 of population in 1937, but thereafter the ratio declined continuously to the level of 569 in 1945. After the 1939–45 War the ratio increased to 646 in 1947 and remained at much the same level during the next two years.

2. **Wages Paid in Mining.**—Information regarding rates of wages paid in the mining industry is shown in the *Labour Report* issued by this Bureau.

3. **Accidents in Mining, 1949.**—The following table shows particulars of the number of men killed or injured in mining accidents during 1949:—

MINING ACCIDENTS, 1949.

Mining for—	N.S.W.	Victoria.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	Australia.

(a) Includes shale. (b) Copper and gold.

§ 14. Government Aid to Mining, and Mineral Control.

1. **Aid to Mining.**—(i) *Commonwealth.* (*a*) *General.* The Precious Metals Act 1926, the Gold Bounty Act 1930, the Loan Appropriation (Unemployment Relief) Act 1934, the Northern Australian Survey Act 1934 and the Gold Mining Encouragement Act 1940, mentioned in the previous issue of the Official Year Book, either have become inoperative or have been superseded. The Petroleum Oil Search Act 1936 is still in force. Further expenditure under the Gold Mining Encouragement Act is not contemplated, as an entirely new method of providing financial assistance to the mining industry is in operation, and is described below. Similarly no further expenditure is contemplated under the Petroleum Oil Search Act 1936, except for two projects not yet completed, and the Government policy now is to conduct geological and geophysical surveys of possible oil fields (*see* below).

Applications for financial assistance for the development of mining projects which offer promise of contributing materially to the economic welfare of the Commonwealth may be considered by the Bureau of Mineral Resources and the Treasury after consultation with the State concerned. This policy supersedes that set out in Official Year Book No. 37, page 849—the Australian Mining Council which was to have been set up under the previous policy has not met or fulfilled any of its functions and its creation was not finalized.

The Commonwealth Government in 1948 decided to provide financial assistance to certain gold mines in remote and isolated parts of Western Australia. These mines were experiencing difficulty because income from the fixed price for gold was insufficient to cover higher operating costs due to a number of factors, including the general rise in the level of wages and prices. Before granting assistance, the mine, its financial position and its relation to the economic and social welfare of the district were investigated by officers of the Bureau of Mineral Resources and the Treasury in collaboration with the State Mines Department, and conditions which should be observed in order to obtain financial assistance were laid down. Assistance as decided in 1948 was in the form of periodical payments sufficient to cover the difference between revenue and expenditure and to provide a return of 4 per cent. on the paid-up capital of the Company, but in 1949 this was increased to 6 per cent. At the same time the assistance scheme was extended to enable gold mines in remote areas of other States to participate. The scheme was terminated on the devaluation in September, 1949 of the Australian pound in terms of the United States of America dollar, which had resulted in a rise of £4 14s. 7d. per fine ounce in the Australian price of gold. Officially, the scheme of assistance operated to 31st December, 1950, but, because of the higher gold price, all mines made profits and so did not qualify for the 6 per cent. profit subsidy.

(*b*) *Rewards for discovery of Uranium Ore.* To encourage the search for and discovery of deposits of uranium ore, the Commonwealth Government has approved the granting of monetary rewards. These rewards will be paid as follows :—(1) £1,000 for the discovery of a deposit containing sufficient ore to be of economic importance ; (2) £1,000 for the discovery of a deposit capable of producing 25 tons or more of uranium oxide and £2,000 for each 25 tons in excess of the first 25 tons ; and (3) a maximum of £25,000 for any one deposit.

(*c*) *Bureau of Mineral Resources, Geology and Geophysics.* The Bureau of Mineral Resources, etc. has sections dealing with geology and geophysics, mining engineering, fuel technology and mineral economics. The geological section conducts all surveys required in Commonwealth Territories, detailed and regional surveys in conjunction with or by arrangement with the State Mines Departments, surveys of possible oil-fields in Australia and New Guinea, surveys of mines for which financial assistance is sought, and investigations of deposits of radio-active minerals. The geophysical section conducts investigations throughout Australia and New Guinea connected with the search for metalliferous, radio-active and other mineral deposits ; problems connected with exploration for coal, oil and water ; regional magnetic and gravity surveys ; engineering and military geophysics ; and the operation of geophysical (magnetic and seismic) observations. The Bureau works in close co-operation with the Mines Departments of the States. It has assumed full responsibility for geological and geophysical surveys in Commonwealth Territories, but suitable arrangements have been made to ensure that the local Administrations have the necessary technical advice directly available to them. The Bureau has also assumed full responsibility for scout-boring to prove deposits of coal in New South Wales suitable for working by open-cut methods.

(*d*) *Diamond Drills.* The four diamond drills mentioned in the previous Official Year Book have arrived in Australia and are now in use. Further light drills have been purchased and special equipment for alluvial prospecting has been ordered.

(*e*) *Search for Oil.* No variation has been made in the policy described in Official Year Book No. 37, page 850, regarding the search for petroleum throughout Australia and its Territories. In addition to its activities set out in that Year Book, the Bureau of Mineral Resources, Geology and Geophysics furnishes field laboratories and trained personnel to assist small companies in recording scientific information obtained while drilling for oil. A modern diesel-driven rotary drilling plant has been ordered for deep test-drilling on suitable geological structures.

The Commonwealth Government has encouraged the search for oil in Australia, Papua and New Guinea; details of the efforts made are outlined in previous issues of the Official Year Book. A considerable amount of geological work and test drilling was conducted under the provision of the Petroleum Oil Search Act 1936 and, at the outbreak of the 1939–45 War, two tests were partially completed, one at Oiapu in the Gulf district of Papua and the other at Nerrima in the Kimberley district of Western Australia. At Nerrima the Freney Kimberley Oil Co. (1932) N.L. rejected a Commonwealth offer of financial assistance. The company is now drilling with financial assistance from the Government of Western Australia, using a drilling plant hired from the Commonwealth; technical advice and assistance is also provided by the Commonwealth.

(*f*) *Survey of North Australia.* Reference to this survey which was completed at the end of 1940 appears in Official Year Book No. 35, page 744. A few reports on individual areas remain to be printed.

(*g*) *Mining Industry Advisory Panel.* This panel has not functioned since 1946. The Bureau of Mineral Resources completed the draft of a uniform Act dealing with health and safety in mines, recommended by the Panel. A meeting of the Chief Inspectors of Mines of all States and Territories was held in November, 1950, to consider this draft and considerable progress was made in achieving uniformity. A committee has been set up to advise on non-destructive testing of wire ropes used in the mining industry.

(*h*) *Ore-dressing and mineragraphic investigations.* These investigations are conducted by the Commonwealth Scientific and Industrial Research Organization as required by the industry. Ore-dressing investigations are carried out conjointly with appropriate State institutions, the three laboratory centres being the School of Mines, Kalgoorlie, the School of Mines and Industries, Adelaide, and the University of Melbourne.

The grant of £22,000 mentioned in Official Year Book No. 37, page 851, was expended by 1947; since that year funds to continue the investigations are included in an investigational vote approved annually for the Commonwealth Scientific and Industrial Research Organization. In 1948 the Government expended approximately £5,000 on ore-dressing and £6,100 on mineragraphic investigations.

(*i*) *Petroleum Legislation.* The petroleum ordinances of Papua and New Guinea have been amended and combined in a single ordinance, No. 6 of 1951, entitled Petroleum (Prospecting and Mining) Ordinance 1951.

(ii) *States.* (*a*) *General.* In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining industry where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

(*b*) *New South Wales.* State aid to assist metalliferous mining consisted of grants to assist the prospecting and/or mining for gold and minerals and for the purchase, removal and installation of mining plant or equipment. In 1949, this assistance totalled £2,448, the greater part of which was granted to prospect or mine for either tin or gold.

(*c*) *Victoria.* Grants may be made to assist prospecting and development or the purchase of machinery. The Mines Department has 24 stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities.

(*d*) *Queensland.* The Mines Department maintains a treatment works for tin ores, etc. at Irvinebank, an assay office at Cloncurry and diamond-drilling plants in several parts of the State. The Venus State Mill at Charters Towers is available for the treatment of gold-bearing ores and another State battery is located at Kidston. In addition, many departmental compressor plants, pumping plants and other mining equipment are provided and made available on hire on the principal mining fields. Financial aid granted to prospectors for 1949 amounted to £15,847, whilst other forms of aid for mining granted by the State amounted to £294,590 for the same period.

(*e*) *South Australia.* During 1940 the Premier announced that assistance would be given to copper mining in the form of financial help towards such development work as was absolutely necessary for a mine to enter upon reasonably continuous production. On 5th November, 1942, the Leigh Creek Coal Act was passed to develop the Leigh Creek Coalfield. As a result of extensive drilling operations, development of open-cut mining was commenced in January, 1943. State aid to mining during 1948 totalled £79,194, of which £14,928 was for coal, £7,074 for copper, £8,394 for gold, and the balance, £48,798, for other minerals. The State maintains batteries and cyanide works at Mount Torrens, Peterborough, Mongolata, Tarcoola and Glenloth, and assays for public purposes are made at the School of Mines.

(*f*) *Western Australia.* Financial aid granted to prospectors and others in 1949 amounted to £26,226; this sum was allotted as follows :—coal, £11,169; gold, £4,420; lead, £2,131; tin, £498; other forms of assistance, £8,008. The Mines Department has about twenty batteries throughout the mining fields where prospectors and others can have their ore treated.

(*g*) *Tasmania.* During 1948 the Department of Mines reported that the policy of assistance to mining was maintained to the extent provided for under the provisions of the Aid to Mining Act but no material advantage was taken thereof. In that year £485 was expended and £314 was repaid against advances previously made.

Other assistance rendered to the industry is provided by a well-equipped metallurgical laboratory at Launceston where ore-dressing and other metallurgical problems can be investigated for the mine-owner, and advice given regarding the most suitable type of plant to install.

(*h*) *Northern Territory.* The Commonwealth Government has maintained a ten-head battery at Tennant Creek for the treatment of ore by miners. Another battery has been leased. A ten-head battery is situated on the Maranboy tin-field and crushes ore for all parties on the field. Assistance has been given to miners on the mica fields to purchase air-compressors and other mining plant on liberal terms. The Commonwealth Government has purchased all mica produced on the fields. Roads and water supply services are provided and maintained for all mines and mineral-producing areas throughout the Territory.

2. **Control of Minerals.**—(i) *Minerals Committee, and Controller of Minerals Production.* With the termination of the war the activities of the Controller of Minerals Production, appointed under the provision of the National Security (Minerals) Regulations, were reduced. In 1948, operations conducted by the Controller were the Dorset Tin Dredge in Tasmania and the acquisition and sale of mica produced in Australia. The Dorset Tin Dredge is in active operation and produces about 150 tons of tin concentrates yearly. It has about ten years of operation in sight.

(ii) *Mica Production.* The Commonwealth Government, through the Department of Supply and Development, operates a Mica Pool which purchases all mica won, thus ensuring the miners of a ready market for their product at fixed prices, and also permits an orderly distribution of mica to the trade. Under a recent Cabinet decision, the Commonwealth Mica Pool will operate until the end of 1953.

(iii) *Control of Exports of Metals and Minerals.* In order to conserve supplies and to direct surpluses to destinations where most needed, export controls were initiated in 1946. Metals, etc., controlled include copper and copper alloys ; iron, steel and scrap ; all non-ferrous scrap ; zinc dross and dust ; antimony metal and concentrates ; metallic tin, tin concentrates and ores ; and pig lead and scrap and manufactured lead.

(iv) *Atomic Energy (Control of Materials) Act* 34 *of* 1946. This Act provides for control of substances which could be used for production or use of atomic energy. It gives the Commonwealth power to acquire such substances in their natural state and in waste materials from mining operations, to carry on mining and other operations necessary for the recovery of such substances, and to pay compensation for such acquisition. It also gives the Commonwealth power to obtain possession of such substances held by any person.

The Act provides for the notification of discovery of any such substances or mineral containing such substance.

CHAPTER XIX.

PASTORAL PRODUCTION.

NOTE.—Values of Australian oversea trade shown throughout this Chapter are expressed as f.o.b. Australian currency, except where otherwise indicated.

§ 1. Initiation and Growth of Pastoral Industry.

1. **General.**—A detailed account of the various enumerations of live stock in Australia made prior to 1860 is given in previous issues of the Year Book. The numbers recorded between 1800 and 1860 are regarded as somewhat defective. Doubtless the growth of population, the expansion in the area settled and the increase in private ownership made it difficult in those early times to secure accurate returns. Since 1860, however, the annual enumerations have been based, with few exceptions, on actual collections made through the agency of the State Police and reliably record the movement in live stock numbers from year to year.

2. **Live Stock Numbers since 1860.**—Particulars concerning the numbers of each of the principal kinds of live stock in Australia at decennial intervals from 1860 to 1930, and from 1939 onwards in single years are given in the following table, and are shown continuously on the graph on page 872.

During the ninety-one years from 1860 to 1951 the live stock of Australia increased considerably, viz. :—Horses, 132 per cent. ; cattle, 284 per cent. ; sheep, 474 per cent. ; and pigs, 223 per cent. The average annual increases which these aggregates represent are as follows :—Horses, 1.03 per cent. ; cattle, 1.49 per cent. ; sheep, 1.94 per cent. ; and pigs, 1.30 per cent.

LIVE STOCK : AUSTRALIA.
('000.)

Year.	Horses.	Cattle.	Sheep.	Pigs.
1860	432	3,958	20,135	351
1870	717	4,276	41,594	543
1880	1,069	7,527	62,184	816
1890	1,522	10,300	97,881	891
1900	1,610	8,640	70,603	950
1910	2,166	11,745	98,066	1,026
1920	2,416	13,500	81,796	764
1930	1,793	11,721	110,568	1,072
1939	1,724	12,862	111,058	1,156
1940	1,699	13,080	119,305	1,455
1941	1,666	13,256	122,694	1,797
1942	1,611	13,561	125,189	1,415
1943 (31st March)	1,518	14,005	124,615	1,563
1944 „ „	1,449	14,184	123,174	1,747
1945 „ „	1,359	14,133	105,371	1,631
1946 „ „	1,265	13,878	96,396	1,426
1947 „ „	1,195	13,427	95,723	1,273
1948 „ „	1,165	13,785	102,559	1,255
1949 „ „	1,115	14,124	108,735	1,196
1950 „ „	1,057	14,640	112,891	1,123
1951 „ „	999	15,229	115,596	1,134

3. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of droughts which have from time to time left their impress on the pastoral history of Australia. These occurred in 1868, 1877, 1883–4, 1892, 1893, 1895, 1901–2, 1912, 1914, 1918, 1919, 1922–23, 1925–26, 1927–28, 1929–30, 1940–41 and 1944–45 to 1946–47.

The years in which the numbers of live stock attained their maxima are as follows :—Horses, 1918 (2,527,000); cattle, 1951 (15,229,000); sheep, 1942 (125,189,000); and pigs, 1941 (1,797,000).

On pages 905–8 there are graphs which show the distribution throughout Australia of beef cattle, dairy cattle, sheep and pigs as at 31st March, 1948.

4. **Minor Classes of Live Stock.**—Excluding Victoria, where the details are not available, the numbers of minor classes of live stock returned for 1941 were as follows :—Goats, 80,366; camels, 2,267; and mules and donkeys, 10,881. Of these, goats were most numerous in Queensland, and camels, mules and donkeys in Western Australia. In the raising of goats, some attention has been devoted to the angora goat and its product (mohair), and upwards of 5,000 angora goats are included in the number shown above. Of these, 1,640 were in New South Wales, 1,000 in Queensland, 1,531 in South Australia, and 284 in Tasmania. Details for later years were not collected.

5. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of Australia exceeded the imports for the years 1938–39 and 1946–47 to 1949–50 were as follows :—

NET EXPORTS OF PASTORAL PRODUCTS : AUSTRALIA.

Product.	Unit of Quantity.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.

(a) Quantity not available. (b) Includes chilled beef. (c) Includes hare skins. (d) Includes edible and inedible tallow.

NOTE.—Minus sign (−) signifies net imports.

The values of the net exports for the same five years are furnished in the next table. For the four years ended 1949–50 they amounted to £959,999,865, or an average of £239,999,966 per annum, of which wool represented 85.0 per cent. Meat, skins and tallow comprise the remaining principal pastoral products exported. Net exports in 1938–39 were valued at £56,290,910 of which wool represented 74.56 per cent.

7. **Consumption of Meats.**—Particulars of the quantity of meat per head per annum available for civilian consumption in Australia, Canada, the United Kingdom and the United States are given in the following table. Canned and cured meat has been included at its carcass weight equivalent.

The sources of the figures for Canada, the United Kingdom, and the United States of America are Food Balance Sheets published by the Food and Agricultural Organization of the United Nations (April, 1949) for the years 1947–48 to 1949–50 and Food Consumption Levels in the United States of America, Canada and the United Kingdom—Third Report (1946) of a Special Joint Committee set up by the Combined Food Board for the pre-war periods.

The demand for meat during the war years was such as to necessitate the introduction of rationing in order to divert supplies from civilian consumption to the armed services. The rationing of meat (other than bacon and ham, canned meat, sausages and offal) was in operation in Australia from 17th January, 1944 to 21st June, 1948. Details of the ration rates in force over this period are shown in Official Year Book No. 37, p. 858.

QUANTITY OF MEAT (INCLUDING CURED AND CANNED) AND EDIBLE OFFAL AVAILABLE FOR CIVILIAN CONSUMPTION PER HEAD PER ANNUM.

8. **Marketing of Meat.**—(i) *General.* The Meat Export Control Act 1935–1946 was introduced following a decision of a conference of Commonwealth and State Ministers with members of the Commonwealth Meat Advisory Committee, held in October, 1935, to set up a Meat Board with defined statutory powers. The Australian Meat Board, which was appointed under the Act in January, 1936, consisted of eighteen members, representative of producers, processors, exporters and the Commonwealth Government. Provision was made for the appointment from within the Board of an Executive Committee and a Beef Committee. The Act provided for the control of the export of meat by licence. The Board was empowered to regulate shipments of meat and to arrange contracts in respect of freights and insurances; to promote oversea sales by advertising and to foster research into meat problems; and to supervise the issue of export licences. The Board also has power to appoint a London representative.

During the 1939–45 War the control of meat exports was under National Security Regulations which ceased to operate with the expiry of the National Security Act on 31st December, 1946. Control then reverted to the Board, which was reconstituted in August, 1946 by legislation amending the Meat Export Control Act. Membership of the reconstituted Board is on an industry basis in lieu of a State basis and the number of members has been reduced from eighteen to twelve. The powers and functions of the Board were *inter alia* extended to enable it to purchase and sell any meat, meat products or edible offal on behalf of the Commonwealth Government and subject to any direction of the Minister for Commerce and Agriculture.

The Meat Export Charges Act 1935–1946 provides for the imposition of a levy on all meats exported from Australia, the funds from which are used for the purpose of defraying expenses and charges incurred by the Australian Meat Board in the course of its business. The customary provision is made for exemption from the levy when recommended by the Board.

(ii) *War-time Marketing.* Details of arrangements for the marketing of meat during the 1939–45 War are given on page 1107 of Official Year Book No. 36.

(iii) *United Kingdom Long-term Purchase Agreements.* (*a*) *Up to 30th June,* 1952. Details of the long-term meat contracts with the United Kingdom Government from the outbreak of the 1939–45 War up to 30th September, 1950, were given on page 903 of Official Year Book No. 38, and page 1107 of Official Year Book No. 36.

Since the termination of the long-term contract on 30th September, 1950, annual arrangements have been entered into for the sale of Australia's exportable surplus of meat to the United Kingdom up to 30th June, 1952.

The following table sets out the prices of representative descriptions of Australian beef and lamb which have been sold to the United Kingdom on a Government-to-Government basis since the beginning of the 1939–45 War.

(*b*) *The Fifteen-year Meat Agreement.* Representatives of the United Kingdom and Australian Governments signed a fifteen-year meat agreement in London in October, 1951, which covers the period from 1st July, 1952 to 30th September, 1967.

The classes of meat included in the Agreement are chilled and frozen beef, frozen veal, frozen mutton and lamb, frozen cattle and sheep sundries and edible offals.

The principal objectives of the Agreement are to promote the production of meat in Australia, enabling increased exports to be made to the United Kingdom and providing for a satisfactory market for Australian meat in the United Kingdom for the period of the Agreement.

The first detailed Agreement for beef and veal covers the period of six years ending 30th September, 1958, and for mutton and lamb for three years ending 30th June, 1955. In both cases, 1950–51 prices will be the basic level.

The prices which have been agreed for the meat year 1951–52 represent substantial increases on those previously ruling. From July, 1951, lamb schedule prices have been increased by 17½ per cent., first quality mutton by 15 per cent. and other grades of mutton by 10 per cent. Beef prices have been increased by 3d. sterling per lb. for first quality ox and heifer, 2½d. sterling per lb. for second quality ox and heifer and first and second quality cow, and 1¼d. sterling per lb. for veal and other grades of beef.

Provision has also been made for reservation of quantities of meat for sale to other markets. This will be 3 per cent. of the quantity shipped to the United Kingdom, or such other amount as may be agreed annually between the two Governments.

Pig meats are not included in the Agreement, and negotiations are continuing in respect of this class of meat.

§ 2. Horses.

1. **Suitability of Australia for Horse-breeding.**—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognized. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages have been utilized to the fullest extent in breeding all classes of horses. As a consequence of this combination of advantages, the Australian horse, whether of the heavy draught, medium weight or light saddle variety, compares very favourably with the product of other lands.

2. **Distribution throughout Australia.**—The States of New South Wales, Queensland and Victoria together depasture about 80 per cent. of the total number of horses in Australia. In the following table figures are shown for each State and Territory for the years 1947 to 1951 in comparison with the average for the years 1935 to 1939 :—

HORSES : NUMBER.
('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Total.
Average, 1935 to 1939 ..	537	355	444	198	154	31	33	1	1,753
1947 ..	380	227	343	109	81	24	30	1	1,195
1948 ..	376	221	336	101	75	23	32	1	1,165
1949 ..	358	213	325	94	69	22	33	1	1,115
1950 ..	343	200	317	83	59	21	33	1	1,057
1951 ..	329	187	307	71	55	20	29	1	999

The number of horses attained its maximum in Australia during 1918, when a total of 2,527,149 was recorded. The United States of America made its highest recording in the same year and Canada in 1921. The number in Australia has declined considerably since 1918 owing to the mechanization of transport and farming. During the period 1918 to 1949 the decrease in numbers averaged 45,500 per annum, the rate of decline being 40,000 per annum during the five years ended 1951.

The number of horses in Australia from 1860 onwards may be obtained from the graph on page 872.

The percentages of the number of horses in the several States and Territories of the total for Australia for 1951 were :—New South Wales, 32.88 ; Victoria, 18.66 ; Queensland, 30.75 ; South Australia, 7.13 ; Western Australia, 5.54 ; Tasmania, 2.01 ; Northern Territory, 2.94 ; and Australian Capital Territory, 0.09 per cent.

3. **Oversea Trade in Horses.**—(i) *Exports.* The export of horses from Australia during the early years of this century was fairly considerable, averaging about 15,000 head per annum between 1901 and 1920, exclusive of those used for war purposes during the 1914–18 War. Since then, exports have gradually declined and averaged only about 4,000 for the five years ended 1938–39 and 845 for the five years ended 1949–50.

Each dot represents 1,000.

(ii) *Imports.* The few horses imported into Australia consist mainly of valuable stud animals from the United Kingdom and racehorses from New Zealand. The average value per head of the horses imported during the five years 1945–46 to 1949–50 was £898. The average number imported per annum was 343 and the average annual value, £308,004.

Details of the quantity and value of imports, exports and net exports of horses are shown in the following table for the years 1945–46 to 1949–50 compared with the average for the five years ended 1938–39.

HORSES: IMPORTS AND EXPORTS, AUSTRALIA.

NOTE.—The minus sign (−) signifies net imports.

§ 3. Cattle.

1. **Purposes for which Raised.**—Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry led to a considerable increase in numbers and an improvement in quality of the dairy herds in Victoria, New South Wales, and southern Queensland in particular, the portion of Australia in the temperate zone being the best adapted to this industry. On the other hand, beef-producing cattle are mainly raised in the tropical districts, i.e., in the northern parts of Queensland, in the Northern Territory, and in the Kimberley district in the north of Western Australia.

2. **Distribution throughout Australia.**—Until 1880, New South Wales was the principal cattle-raising State, but in that year Queensland occupied the leading position, which it has since maintained. There was a very rapid increase in the number of cattle in Australia up to the year 1894, when 12,311,617 head were depastured. From 1895 onwards, however, the effects of droughts and the ravages of tick fever reduced the number to 7,062,742 in 1902. Following the disastrous drought which terminated in the latter year the herds were gradually built up, and, despite recurring droughts, they continued to increase until the maximum number of 14,441,309 cattle was attained in 1921. After that year the number dropped continuously till 1929, largely owing to the decline in the oversea demand for frozen beef. With the expansion of dairying it recovered to 14,048,671 in 1934, but from that year declined continuously to 1939 when it stood at 12,861,781. The upward movement which commenced in 1940 was continued until 1944, the total number of cattle (14,183,679) in the latter year being at its highest level since 1923. Drought conditions and other factors during 1944–45 and 1945–46 caused a decline in numbers to 14,133,167 in 1945, to 13,878,006 in 1946 and to 13,426,646 in 1947. There has since, however, been a continuous upward movement in numbers to 15,229,000 in 1951, which is the highest number yet recorded. A graph showing the number of cattle in Australia from 1860 appears on page 872.

The numbers of cattle (beef and dairy) in the several States and Territories in each year 1947 to 1951 compared with the average for the years 1935 to 1939 are shown below.

CATTLE : NUMBER.
('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Total.
Average, 1935 to 1939 ..	3,198	1,952	6,018	331	819	262	889	9	13,478
1947	2,983	2,060	5,946	424	812	220	973	9	13,427
1948	3,130	2,174	5,976	445	816	244	991	9	13,785
1949	3,253	2,225	5,992	461	864	266	1,053	10	14,124
1950	3,440	2,231	6,305	464	865	275	1,049	11	14,640
1951	3,703	2,216	6,734	433	841	272	1,019	11	15,229

Although the proportion is not as high as it has been in the past, Queensland was carrying 44.21 per cent. of the cattle in Australia in 1951. The percentage in each State and Territory during that year was :—New South Wales, 24.31 ; Victoria, 14.55 ; Queensland, 44.21 ; South Australia, 2.84 ; Western Australia, 5.53 ; Tasmania, 1.79 ; Northern Territory, 6.69 ; Australian Capital Territory, 0.08.

Graphs indicating the distribution of beef and dairy cattle separately in Australia during 1947–48 are shown on pages 905–6 of this Year Book. A graph showing the distribution in 1924–25 of the total cattle in Australia appeared on page 660 of Official Year Book No. 22, while in Official Year Book No. 34 similar graphs respecting the distribution of total cattle and of dairy cows may be found on pp. 453–4.

3. **Classification of Cattle According to Purpose.**—Of the total number of cattle in Australia in 1951, 10,426,000 or 68.46 per cent. were classified as beef cattle. The numbers classified as beef cattle in the several States and Territories during the years 1943 and 1947 to 1951 were as follows :—

BEEF CATTLE : NUMBER.
('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Total.
1943	1,676	577	4,893	171	605	102	978	5	9,007
1947	1,756	648	4,613	162	588	88	973	6	8,834
1948	1,890	698	4,593	170	590	100	991	6	9,038
1949	1,994	711	4,569	182	634	111	1,053	7	9,261
1950	2,167	706	4,872	193	638	117	1,049	8	9,750
1951	2,457	727	5,293	189	618	115	1,019	8	10,426

A classification of numbers on this basis is not available prior to 1943.

Particulars relating to dairy cattle numbers will be found in Chapter XXI.—**Farmyard, Dairy and Bee Products.**

4. **Size Classifications of Cattle Herds.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1949–50 and published in *Primary Industries Bulletin* No. 44. The tables relating to beef and dairy cattle show classifications according to size of herd and area of the holdings.

5. **Comparison with other Countries.**—The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world for the years 1936–40 and at the latest available date. The figures, which have been compiled by the Food and Agriculture Organization of the United Nations, relate generally to areas embraced by post-war boundaries, but do not cover identical areas for the two periods in all cases.

CATTLE : NUMBER IN VARIOUS COUNTRIES.

('000.)

Country.	Average, 1936–40.(*a*)	Year and Month.	Number.

(*a*) Average for two to four years in some cases. (*b*) 1939. (*c*) Unofficial estimate. (*d*) 1937.

6. **Imports and Exports of Cattle.**—The products of the cattle-raising industry figure largely in the export trade of Australia, although the export of live cattle has never been large. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for stud purposes. Details for the years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39 are as follows :—

CATTLE : IMPORTS AND EXPORTS, AUSTRALIA.

1950	186	125	212	33	35	12	3	1	607

(a) Year ended March. (b) Year ended previous December.

9. **Consumption of Beef and Veal.**—For the three pre-war years 1936–37 to 1938–39 the average annual production of beef and veal in Australia was 569,000 tons of which 127,000 tons were exported, leaving a balance of 442,000 tons (or the carcass equivalent of 144 lb. per head per annum) available for consumption as fresh and canned meat.

In order to cope with the increasing demands by Australian and Allied Services based upon Australia and to supply as much beef as possible to meet the import requirements of the United Kingdom, it was necessary to introduce from January, 1944 a system of rationing limiting civilian consumption which has always been very high. As a result, the quantity of beef and veal entering civilian consumption per head decreased from the pre-war average of 144 lb. to 124 lb. in 1943, 92 lb. in 1944 and 87 lb. in 1945. Consumption subsequently increased to 93 lb. per head in 1946, 97 lb. in 1946–47 and 109 lb. in 1947–48. Following the termination of meat rationing from 21st June, 1948, the upward movement in beef and veal consumption has been more pronounced and reached 132.5 lb. per head in 1950–51. Increases in consumption in recent years have been associated with declining consumption of mutton and lamb.

In the following table details of the production and disposal of beef and veal are shown for the periods stated.

PRODUCTION AND DISPOSAL OF BEEF AND VEAL (BONE-IN WEIGHT): AUSTRALIA.

('000 tons.)

Year.	Changes in Stock.	Production.	Exports.	For Canning.	Consumption in Australia as Human Food.	
					Total.	Per Head per Annum.

(a) Included with exports. (b) Subject to revision.

10. **Exports of Frozen Beef and Veal.**—The export of frozen meat from Australia dates from about 1881, and since that year the trade has grown considerably. The quantity of frozen beef and veal exported in 1938–39 amounted to 271,963,829 lb., valued at £4,323,680, but there was a decline during the war years owing to reduced production and the diversion of supplies to meet the requirements of the Australian and Allied Services based on Australia. The quantity exported in 1949–50, although considerably above the war-time levels, was approximately 32.95 per cent. less than in 1938–39. In 1950–51 it was 158,309,727 lb. or 41.79 per cent. less than in 1938–39. The quantities and values of frozen beef and veal exported during the five pre-war years ended 1938–39 and in each year 1945–46 to 1950–51 are shown in the following table :—

EXPORTS OF FROZEN BEEF AND VEAL: AUSTRALIA.

Year.	Exports of Frozen and Chilled Beef.		Exports of Frozen Veal.	
	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£	'000 lb.	£
Average, 1934–35 to 1938–39	231,355	3,188,491	10,353	165,205
1945–46	106,060	2,711,077	4,732	122,906
1946–47	178,298	4,521,746	2,040	60,127
1947–48	234,593	6,110,568	2,557	82,047
1948–49	189,007	5,715,934	2,646	99,532
1949–50	178,128	6,522,476	4,233	182,175
1950–51	154,832	6,440,395	3,478	207,459

Prior to the war the largest purchaser of Australian beef and veal was the United Kingdom, which during 1938–39 took £3,901,691, or about 90.2 per cent., of the total shipments. Other countries importing Australian beef were, in order of importance, Egypt, Malaya (British), Malta, Philippine Islands and Hong Kong; these countries, together with the United Kingdom, accounted for 98.0 per cent. of the total value of exports. However, at the request of the United Kingdom Government there was a considerable diversion from that country to nearer British possessions during the war years. In 1950–51 shipments to the United Kingdom were valued at £4,310,178 or 64.8 per cent. of the total value of beef and veal exports, while exports to other British countries amounted to £1,783,915, equivalent to 26.8 per cent. of the total.

In view of the preference overseas for chilled beef, the Australian beef industry was at a serious disadvantage until investigations proved that beef could be successfully transported from Australia to United Kingdom in a chilled condition. Trial shipments of 254,000 lb. in 1932–33 and 1,515,000 lb. in 1933–34 were made, and the exports in subsequent years increased as follows :—1934–35, 21,570,928 lb., £322,239; 1936–37, 41,869,695 lb., £608,175; and 1938–39, 58,963,009 lb., £988,148. However, the advent of war seriously affected the export trade in chilled beef, which decreased from 12,786,859 lb. in 1939–40 to nil or negligible amounts in subsequent years.

§ 4. Sheep.

1. **Initiation of the Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool were, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and while it would appear that the introduction of the merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Movement in Sheep Numbers in Australia.**—Fluctuations in the number of sheep recorded for each year in Australia from 1860 onwards may be seen from the graph on page 872. Up to 1945 there were five marked periods of decline, but the losses were made up rapidly. In each of the years 1925 to 1945 the sheep flocks exceeded 100 million, reaching 125,189,129 in 1942, the greatest number recorded in Australia. At no previous period have such large numbers been depastured continuously, and the development has taken place despite an increase in the annual slaughter for the meat trade over this period, from about 10 million to 25 million.

However, a sharp decline to 105 million occurred in 1945, followed by a further reduction to 96.4 million in 1946 and to 95.7 million in 1947. This represented a loss from all causes other than slaughtering of about 37 million sheep (30 per cent.) since 1944 and was largely attributable to the severe drought conditions experienced during 1944, 1945 and 1946. The passing of the drought and consequent re-stocking resulted in a rise in sheep numbers to 108.7 million in 1949, 112.9 million in 1950 and 115.6 million in 1951.

The following table shows the approximate movement in sheep numbers in Australia in each season 1938–39 to 1950–51 :—

SHEEP AND LAMBS : ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA.
('000.)

Season.	Lambs marked.	Excess of Exports	Sheep and Lambs Slaughtered.	Estimated number of deaths from disease, drought, etc. (a)	Number at 31st March.	Annual Net Increase (+) or Decrease (−)
1938–39 ..	25,469	67	18,900	8,817	(b) 111,058	− 2,315

1950–51 ..	29,816	84	16,223	10,804	115,596	+ 2,705

(a) Balance figure. (b) As at commencement of last year shown.

3. **Distribution throughout Australia.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing about one half of the sheep of Australia.

A graph indicating the distribution of sheep in Australia during 1947–48 is shown on page 907 of this Year Book. Similar graphs for the years 1938–39 and 1924–25 were published in Official Year Books No. 34, page 452 and No. 22, page 659, respectively.

The numbers of sheep in the several States and Territories for each year 1947 to 1951 compared with the average for the years 1935 to 1939 are shown in the following table :—

SHEEP : NUMBER.
('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Total.
Average, 1935 to 1939 ..	51,774	17,555	21,061	8,515	9,839	2,312	23	240	111,319
1947	43,105	16,599	16,084	7,959	9,787	1,933	28	228	95,723
1948	46,065	17,931	16,743	9,055	10,444	2,087	19	215	102,559
1949	50,404	19,170	16,499	9,366	10,872	2,160	26	238	108,735
1950	53,298	19,161	17,582	9,477	10,923	2,170	26	254	112,891
1951	54,111	20,012	17,478	10,166	11,362	2,181	29	257	115,596

Except when affected by drought, the relative number of sheep depastured in the different States has remained fairly constant.

The percentage distribution in 1951 was :—New South Wales, 46.81 ; Victoria, 17.31 ; Queensland, 15.12 ; South Australia, 8.79 ; Western Australia, 9.83 ; Tasmania, 1.89 ; Northern Territory, 0.03 ; Australian Capital Territory, 0.22 per cent.

4. **Classification of Sheep According to Age, Sex and Breed.**—In the following table numbers of sheep in Australia are classified according to age and sex at 31st March of the years 1943 and 1948 to 1951. Data in this form are not available prior to 1943.

SHEEP : AGE AND SEX, AUSTRALIA.
('000.)

Description.	31st March—				
	1943.	1948.	1949.	1950.	1951.
Rams, 1 year and over ..	1,651	1,384	1,443	1,497	1,473
Breeding ewes (including ewes intended for mating)	56,674	49,771	50,855	52,122	52,794
Other ewes, 1 year and over	9,636	5,432	6,796	6,982	6,760
Wethers, 1 year and over..	31,986	22,932	26,199	29,251	31,516
Lambs and hoggets, under 1 year	24,667	23,040	23,442	23,039	23,053
Total, Sheep and lambs	124,614	102,559	108,735	112,891	115,596

Particulars relating to the principal breeds of sheep were collected uniformly for all States and the Australian Capital Territory at 31st March, 1950 and are shown in the following table. Later details are not available for all States :—

SHEEP : PRINCIPAL BREEDS, 31st MARCH, 1950.
('000.)

Breed.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T. (a)	A.C.T.	Australia.
Merino	40,017.8	6,870.4	17,326.5	7,717.9	9,666.6	284.6	25.4	224.9	82,134.1
Other recognized breeds ..	3,376.6	4,451.7	71.4	692.7	496.6	875.9	0.1	12.5	9,977.5

Crossbreds(c) ..	6,461.9	5,758.6	129.6	899.0	620.1	683.0	0.2	8.6	14,561.0
Total ..	53,298.0	19,161.0	17,582.1	9,477.0	10,923.2	2,170.3	25.8	253.5	112,890.9

(a) As at 31st December, 1949. Distribution between categories has been estimated. (b) Merino Comeback is the progeny of a crossbred merino ewe and a merino ram, i.e., finer than half-bred. (c) Half-bred and coarser.

5. **Numbers of Sheep on Rural Holdings.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1949–50 and published in *Primary Industries Bulletin* No. 44. The tables relating to sheep farming show classifications according to areas of the holdings on which the sheep were carried.

6. **Comparison with other Countries.**—As regards the size of its flocks and the quantity and quality of wool produced, Australia has long occupied a leading position amongst the sheep-raising countries of the world. As with a number of other important sheep-raising countries, it has, however, suffered a considerable reduction in sheep numbers since 1939, but still holds the leading position with 113 million sheep, followed by the U.S.S.R. (Russia) with about 80 million, Argentina with 47 million and India with 38 million.

The following table shows the number of sheep in Australia in relation to the numbers in some of the principal sheep-raising countries of the world for the last available pre-war year and at the latest date of enumeration for which figures are published. The figures have been compiled by the Commonwealth Economic Committee and the International Wool Textile Organization, who have estimated the world sheep numbers in 1949–50 at 717 million.

SHEEP : NUMBER IN VARIOUS COUNTRIES.

(*a*) Estimated. (*b*) No recent pre-war figures available. (*c*) Provisional. (*d*) Unofficial estimate.

7. **Oversea Imports and Exports of Sheep.**—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively little importance. During the last five years the principal consignments of ordinary sheep have been made to Malaya (British) from Western Australia. On 27th November, 1929, the export of stud sheep was prohibited, except with the approval of the Minister for Trade and Customs.

Sheep for breeding purposes, however, were being exported in increasing numbers up to the outbreak of war in the Pacific, and shipments in 1939–40 amounted to 23,329 sheep, valued at £79,955, compared with 1,351, valued at £24,038, in 1949–50. The chief countries to which sheep for breeding purposes were consigned in 1939–40 were New Zealand, South Africa, Japan and Korea and, in 1949–50, to New Zealand and Japan. The ordinary flock sheep exported from Australia were, for the most part, consigned to Malaya and the Pacific Islands. The following table shows the imports and exports of breeding and flock sheep for the years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39.

SHEEP: IMPORTS AND EXPORTS, AUSTRALIA.

9. **Production of Mutton and Lamb.**—Details of the production of mutton and lamb in each State and Territory are shown below:—

PRODUCTION OF MUTTON AND LAMB.
(Tons.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
Average, 1934–35 to 1938–39 ..	103,706	135,149	20,166	29,710	20,476	6,035	1	396	315,639
1945–46	122,278	86,615	24,913	25,989	22,170	7,909	36	752	290,662
1946–47	110,097	111,684	18,656	31,574	22,545	7,162	51	817	302,586
1947–48	102,818	108,610	18,664	33,289	24,120	6,906	59	814	295,280
1948–49	114,338	114,738	18,440	39,452	24,872	7,574	83	886	320,383
1949–50	119,815	148,254	17,673	39,913	22,446	8,926	57	1,049	358,133

10. **Consumption of Mutton and Lamb.**—For the three pre-war years 1936–37 to 1938–39 the annual production of mutton and lamb averaged 319,000 tons of which 89,000 tons were exported leaving a balance of 230,000 tons (or the carcass equivalent of 74.9 lb. per head per annum) available for consumption.

During the war the demand for meat by Australian and Allied Services and the desire to maintain, as far as possible, exports to the United Kingdom necessitated the restriction of local consumption by the introduction, in January, 1944, of a system of rationing.

As the service and export demand was principally for beef this class of meat was in shorter supply to civilians than was mutton or lamb. As a result, the coupon rating for beef fixed under the civilian ration scale was more restrictive, and had the effect of increasing the quantity of mutton and lamb entering civilian consumption to a level approximating that of beef. In 1946–47, however, mutton and lamb consumption declined to below the pre-war level as a result of heavy shipments overseas and decreased slaughterings. Consumption per head rose slightly from 67.8 lb. in 1946–47 to 69.8 lb. in 1947–48 and to 73.1 lb. in 1948–49, remained stationary at 73.1 lb. in 1949–50 but dropped to 65.2 lb. in 1950–51.

In the following table details of the production and disposal of mutton and lamb are shown for the periods stated :—

PRODUCTION AND DISPOSAL OF MUTTON AND LAMB (BONE-IN WEIGHT) : AUSTRALIA.

('000 tons.)

(*a*) Subject to revision.

11. **Exports of Frozen Mutton and Lamb.**—The export trade in mutton and lamb preserved by cold process expanded rapidly to 1913 when 205 million lb. were shipped. Progress was interrupted during the 1914–18 War and, owing probably to high wool prices, the exports of mutton and lamb for a number of years after were considerably less than earlier shipments. Exports commenced to rise again in 1929–30 and from that year onwards they continued to expand almost uninterruptedly until 1942–43, in which year 203,681,520 lb. of mutton and lamb, valued at £5,495,886, were exported. In earlier years shipments consisted mainly of frozen mutton, but in 1923–24 lamb supplanted mutton and the exports of lamb were largely responsible for the increase in total shipments during the ten years to 1942–43. Due to reduced production as a result of drought conditions and the diversion of supplies to meet the requirements of the Australian and Allied Services based in Australia, there was subsequently a marked decline in mutton and lamb exports, which fell to 56,574,651 lb., valued at £1,540,419, in 1945–46. Exports rose steeply to 164,302,923 lb. (£4,543,764) in 1946–47, but fell again in 1947–48 to 122,482,889 lb. (£4,248,695). In 1948–49, exports fell further to 114,863,908 lb. (£4,222,173) but rose considerably to 193,091,827 lb. (£7,452,675) in 1949–50.

The quantities and value of exports of frozen mutton and lamb in each year 1945–46 to 1949–50 compared with the average for the five years ended 1938–39 are shown in the following table :—

EXPORTS OF FROZEN MUTTON AND LAMB : AUSTRALIA.

Year.	Exports of Frozen Mutton.		Exports of Frozen Lamb.		Exports of Frozen Mutton and Lamb.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	lb.	£	lb.	£	lb.	£
Average, 1934–35 to 1938–39 ..	40,583,651	656,194	153,606,462	4,208,318	194,190,113	4,864,512
1945–46 ..	17,527,848	362,057	39,046,803	1,178,362	56,574,651	1,540,419
1946–47 ..	52,208,402	912,292	112,094,521	3,631,472	164,302,923	4,543,764
1947–48 ..	19,394,136	447,278	103,088,753	3,801,417	122,482,889	4,248,695
1948–49 ..	27,509,096	651,082	87,354,812	3,571,091	114,863,908	4,222,173
1949–50 ..	69,743,976	1,694,984	123,347,851	5,757,691	193,091,827	7,452,675

As with beef, the principal customer in this trade is normally the United Kingdom. In 1949–50 exports of mutton and lamb to the United Kingdom amounted to 91.6 per cent. and 93.5 per cent., respectively, of the total quantities exported.

§ 5. Wool.

1. **General.**—Australia is the leading wool-growing country in the world. With less than one-sixth of the world's sheep Australia produces one-quarter of the world's wool and of the total fine-quality merino wool, Australia produces about one-half. The bulk of the production is exported, but with the greater activity of Australian woollen mills the quantity used locally is increasing ; the amount so used represented more than 8 per cent. of the total production in 1949–50 compared with 7 per cent. in 1938–39.

The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the following table. Further particulars of wool production in principal countries and of world production of wool by type are included in paragraph 6, World Wool Production.

SHEEP AND WOOL : PRINCIPAL PRODUCING COUNTRIES, 1949–50.

Country.	No. of Sheep ('000,000).	Wool Production ('000,000 lb. in terms of greasy).
Australia	**112.9**	**1,110**
Argentina	(a) 47.0	415
New Zealand	33.9	390
United States of America	30.7	264
U.S.S.R. (Russia)	(a) 80.0	290
Union of South Africa	31.9	213

(a) Unofficial estimate.

Source : Commonwealth Economic Committee and International Wool Textile Organization.

2. **Greasy and Scoured Wool.**—Whether the weight of the wool clip should be stated as " in the grease " or as " scoured and washed " is a matter which seriously affects comparisons between the clips of different seasons and of different countries. The quantity of grease and other extraneous matter in a fleece differs, not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. There is, moreover, no clearly defined standard in regard to the clean content of wool described as scoured and washed.

A committee of experts in a report to the Central Wool Committee estimated in 1940 that the clean scoured wool content of the total production of Australia averaged between 51 and 53 per cent. of its greasy weight.

Wool scoured in Australia by wool-scouring works, however, yields only about 46 per cent. because the grade of greasy wool treated locally for export as scoured includes a large proportion of dirty and low-grade wool.

The quantity of scoured and washed Australian wool exported during the five years ended 1949–50 was approximately 16.9 per cent. of the total wool exports regarded as " greasy ".

3. **Production.**—The bulk of the Australian wool production is shorn from live sheep; approximately 6 per cent. is obtained by fellmongering and about 5 per cent. is on skins exported. Statistics of wool production are compiled from data received from growers, fellmongers, etc. The following table shows the production for the five years 1945–46 to 1949–50 compared with average production for the five years ended 1938–39. Particulars of the gross value of wool produced in Australia are also shown; for the pre-war years and for 1946–47 and later years these values are based upon the average price of greasy wool sold by brokers in Australia, while for 1943–44 to 1945–46 they are based upon the average appraised value plus certain adjustments as computed by the State Statisticians.

(*a*) For year ended previous December. (*b*) Estimated. (*c*) Subject to revision.

Production for 1950–51 was 1,093 million lb., valued at £651,396,000 (subject to revision).

4. **Care Needed in Comparing Clips.**—In comparing successive clips allowance must be made for the circumstance that, owing to climatic or other conditions, the time of shearing may be so far delayed in some areas that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth.

5. **Average Weights of Fleeces Shorn.**—The average weights of sheep and lamb fleeces shorn in each of the States of Australia and the Australian Capital Territory are shown in the following table for the five seasons 1934–35 to 1938–39 and each season 1945–46 to 1949–50 :—

AVERAGE WEIGHT OF SHEEP AND LAMB FLEECES SHORN.

(a) Mean of average weights in each season. (b) Excludes Northern Territory.

6. **World Wool Production.**—The following table shows particulars of total production of wool in terms of greasy in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred and carpet type wool for the five seasons 1934–38 and 1946–47 to 1949–50. The data for countries other than Australia have been taken from reports published by the Commonwealth Economic Committee compiled from questionnaires prepared by the Committee and the International Wool Textile Organization.

In 1949–50 Australia produced 29 per cent. of the world total of all types of wool, the share of the British Commonwealth exceeding 50 per cent. The principal wool producers other than Australia are Argentina with 11 per cent. of the world total, New Zealand, 10 per cent., United States of America, 7 per cent., U.S.S.R. (Russia), 8 per cent., and Union of South Africa, 6 per cent. World production of wool (all types) in 1949–50 was about 46 million lb. (1.2 per cent.) greater than the average for 1934–38.

Australia's wool clip is predominantly merino ; New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. (Russia) is largely of the carpet type. While world production of merino wool has declined by about 3.8 per cent since pre-war, the production of crossbred types has risen by about 6.6 per cent. Carpet wool production has fallen by about 1.3 per cent.

7. **War-time Contracts.**—(i) *Wool.* Details of the contract entered into between the Governments of Australia and the United Kingdom for the purchase of the surplus wool clip of Australia for the duration of the war and one full clip thereafter (1939–40 to 1945–46) will be found in Official Year Book No. 36, page 1106.

(ii) *Sheepskins.* Details of the war-time contract arrangements for the period April, 1940 to June, 1946 between the Australian and United Kingdom Governments for the purchase of Australia's exportable surplus of woolled sheepskins will be found in Official Year Book No. 37, page 875.

8. **Australian Wool Realization Commission.**—(i) *General.* The accumulation of Dominion wool in the hands of the United Kingdom Government as an outcome of the war-time arrangements and the disposal of these stocks concurrently with future clips were matters for discussion by a conference of officials and experts from the United Kingdom, the Commonwealth of Australia, the Dominion of New Zealand, and the Union of South Africa, held in London in April–May, 1945. At this conference it was decided that the only sound method of handling the gigantic task of disposing of these stocks was by means of a partnership between the countries concerned, under which the old wool would be marketed and the marketing of the current clip supported throughout the period of disposal of stocks. To ensure that stability of wool prices would be achieved, a reserve price appropriate to type and governed by the general trend of prices, and at which the wool would be bought in if commercial bidding did not attain the appropriate level, was agreed upon.

(ii) *United Kingdom-Dominion Wool Disposals Limited.* The formation, by the four Governments, of a Joint Organization under the title of "United Kingdom-Dominion Wool Disposals Limited" (commonly referred to as "J.O.") was, therefore, undertaken for the purposes of buying, holding and selling wool on behalf of the United Kingdom and the Dominion Governments concerned. The Australian Wool Realization Commission is the Australian subsidiary of this organization. An account of the detailed provisions of the plan and of the functions and operations of the Australian Wool Realization Commission was given on pages 921–3 of the previous issue of the Year Book, No. 38. An interim distribution of £23.6 million was made in November, 1949 to Australian wool-growers from profits arising from the Wool Disposals Plan.

(iii) *Stocks.* (*a*) *Total held by Joint Organization.* The stock of Dominion-grown wool in the ownership of the United Kingdom Government at 31st July, 1945 was transferred to the joint ownership of the United Kingdom Government and the Dominion Government concerned, and all wool subsequently acquired under the scheme was in the joint ownership of the United Kingdom and the Dominion concerned. Total stocks of United Kingdom wool transferred to the Joint Organization at 31st July, 1945 were :—

	Bales.
Australian-grown wool	6,796,000
New Zealand-grown wool	1,777,000
South African-grown wool	1,834,000
Total	10,407,000

By 30th June, 1951 these stocks had been reduced to 17,856 bales, whose origins, locations and types are shown in the following table :—

WOOL STOCKS HELD BY JOINT ORGANIZATION, 30th JUNE, 1951.

(Bales.)

Origin and Location of Stocks.	Type of Wool.			Total.

(*a*) Slipe.

(*b*) *Total held in Australia.* In the next table details are shown of the stocks of wool held in Australia by the Central Wool Committee and its successor, the Australian Wool Realization Commission, on the dates specified. The quantities, which distinguish between greasy, scoured and carbonized, refer to the amount of appraised wool actually held in store in Australia. Wool held by brokers prior to appraisement and any held by woollen mills or growers is not included.

(iv) *The Contributory Charge.* Associated legislation, viz., the Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 provides for a contributory charge to be imposed on all wool—

- (*a*) produced in Australia ; and
- (*b*) on or after a date to be fixed by proclamation—
  - (i) sold by a broker at auction or otherwise ;
  - (ii) purchased by a manufacturer ;
  - (iii) subjected by a manufacturer (whether or not he is the producer or owner of the wool) to a process of manufacture ; or
  - (iv) exported from Australia ;

the rate of the charge to be such percentage as is prescribed from time to time of the sale value of the wool, the percentage being such as is necessary to provide the amounts required to meet the share of the industry in the operating expenses of the Joint Organization, the payment of interest on moneys expended by the Commonwealth in purchases of wool in pursuance of the Disposals Plan and unrecouped, and payment into the Wool Use Promotion Fund as provided under the Wool Use Promotion Act 1945. The plan did not require that the Contributory Charge should operate during the 1945–46 season. For further particulars of the Wool Contributory Charge and the amounts collected *see* Chapter XVII.—Public Finance, pages 770–1.

(v) *Wool classified according to Quality.* It has not been possible to undertake any analysis of the wool produced in Australia because the data necessary to make such a tabulation effective were lacking. Under war-time control, however, records were kept which made it possible to classify each lot appraised according to quality, degree of fault and combing or carding type for each of the years 1940–41 to 1945–46.

Since the resumption of auctions in 1946–47 this analysis has been continued by the Australian Wool Realization Commission, but the basis of the data has been changed to the catalogues of auction sales, excluding wool to which Joint Organization's reserves were not applicable, and not upon appraisement as previously. The following table provides a detailed analysis of wool appraised or sold at auction according to quality, for the years 1947–48 to 1950–51 compared with 1940–41, according to the records compiled by the Australian Wool Realization Commission. " Quality " (" 64's, 60's, 58's ", etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1 lb. of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1 lb. of tops (combed wool) of that particular wool.

CLASSIFICATION OF GREASY WOOL APPRAISED OR SOLD AT AUCTION: AUSTRALIA.

(Bales of approximately 300 lb.).

(*a*) Appraised greasy wool. (*b*) Greasy wool sold at auction, excluding that to which Joint Organization's reserves were not applicable.

9. **Post-war Marketing of Wool.**—(i) *Minimum Reserve Price Plan.* A plan designed to continue reserve price operations on the termination of the Wool Disposals Plan, administered by the Joint Organization, was completed by the Governments of Australia, New Zealand, South Africa, and the United Kingdom in May, 1951. The plan was evolved following prolonged negotiations in which wool-growers' organizations in the three Dominions participated. It provided for the establishment of an organization to recommend reserve prices to participating Governments, to buy wool at these prices when commercial buyers were not prepared to do so, and to arrange for the later re-offering of wools so purchased. The scheme was to have operated initially for five years from 1951–52. The necessary funds to operate the plan were to be provided by each participating country whilst the Governments of the three Dominions agreed to provide guarantees if the initial capital should become absorbed in the purchase of wool. In Australia the initial funds were to be provided by the wool-growing industry, and to raise this money the Commonwealth Government imposed a levy of 7¼ per cent. on sales of wool in the 1950–51 season. From this levy about £45,000,000 was obtained. The completed plan was endorsed by the Commonwealth Government subject to its approval at a referendum of wool-growers. This referendum was held in August, 1951, when the majority of growers voted against the plan. Following rejection of the plan, the moneys collected by levy are being refunded to growers

(ii) *Subsidy on Woollen Goods*, 1950–51. In order to reduce the effects of greatly increased wool prices in the 1950–51 season (*see* para. 14 following), the Commonwealth Government paid a subsidy on woollen goods manufactured for consumption in Australia from wool sold during the 1950–51 season. The subsidy was equivalent to about 45d. per lb of all greasy wool (1950–51 clip) consumed in Australia, the total amount paid being approximately £17,000,000.

10. **Wool Publicity and Research.**—(i) *Wool Use Promotion.* Under the Wool Use Promotion Act 1945, provision was made for improving the production and increasing the use of wool. The Australian Wool Board was reconstituted and its functions (which previously included the administration and supervision of economic and scientific research) were defined as the promotion, by publicity or other means, of the use of wool throughout the world and the performance of other approved functions for the benefit of the industry.

The Board is represented on the International Wool Publicity and Research Secretariat, which was established in 1937 with head-quarters in London, by the Wool Boards of Australia, New Zealand and South Africa. The Wool Boards contribute jointly to the expenses of the Secretariat, whose main functions are to promote the use of wool through a broad programme of publicity, education and research. The Wool Bureau Incorporated, which comprises the same interests in partnership with American wool industry representatives, undertakes similar functions in the United States of America.

The activities of the Australian Wool Board are financed from the Wool Use Promotion Fund. The Wool Tax Act 1945 imposed a tax at the rate of 2s. per bale to provide this fund. This tax is not payable at present but an equivalent sum—approximately £350,000 per annum—is provided from the Wool Contributory Charge.

(ii) *Research.* In the field of wool research, the Commonwealth Scientific and Industrial Research Organization is responsible for scientific, technical, and biological research into sheep raising and wool production, as well as wool textile research. Economic wool research is the responsibility of the Bureau of Agricultural Economics, a division of the Commonwealth Department of Commerce and Agriculture. The economic research work falls into two main categories, viz., farm production economics dealing with economics of woolgrowing and sheep-station management generally, and commodity research dealing with the economic aspects of the wool industry in Australia and of wool as a commodity in world trade.

Finance for research is provided from a Wool Research Trust Account into which is paid annually from the Commonwealth Consolidated Revenue a sum equal to the amount which is raised by the Wool Tax or its equivalent. In addition, expenditure on items of a capital nature for the research programme may be met from the Wool Industry Fund which was constituted as a Trust Account from various moneys accumulated by the Central Wool Committee in war-time.

Ample opportunity is afforded for co-operation, in these research activities, with State Departments of Agriculture and other organizations.

11. **Consumption of Locally Processed Wool.**—Reliable estimates of the total consumption of wool in Australia are not available as quantities of manufactured woollen goods are imported whose contents in terms of wool cannot be ascertained. It is possible, however, to secure with reasonable accuracy the quantities of wool used in Australian factories and mills to produce woollen cloth and other woollen goods, such as blankets, rugs and knitted wear. Some difficulties arise in the aggregation of returns from individual mills concerned with only one process in manufacture and whose output constitutes the raw material of other mills, but the risk of duplication has been reduced to a minimum. Reference is made to the woollen mills established in Australia in Chapter XXIV.—Manufacturing Industry.

The factors used to convert scoured wool and woollen yarn processed in Australia into their greasy equivalent are now computed from the data furnished by woollen mills. In 1949–50 these factors were :—1 lb. of worsted yarn was taken to equal 2.10 lb. of greasy while the greasy equivalent of 1 lb. of scoured wool was 1.71 lb.

In the following table particulars are shown of the quantity of wool processed in Australian woollen mills, cotton mills, hosiery mills and other factories during the years 1938–39 and 1945–46 to 1949–50 :—

CONSUMPTION OF LOCALLY PROCESSED WOOL IN AUSTRALIA.

('000 lb.—in terms of greasy.)

Year.	Woollen Mills.	Cotton Mills.	Hosiery Mills.	Other Factories.	Total.
1938–39	52,376	533	13,327	2,208	68,444
1945–46	62,127	355	15,012	9,417	86,911
1946–47	60,672	343	17,302	10,345	88,662
1947–48	66,118	648	18,672	14,025	99,463
1948–49	66,222	632	21,912	13,620	102,386
1949–50	62,232	515	19,664	9,254	91,665

12. **Exports of Wool.**—(i) *Greasy—Quantities.* Prior to the 1939–45 War, greasy wool exported overseas was sent principally to the United Kingdom and other European countries. In 1938–39, 41.9 per cent. of total shipments were sent to the United Kingdom, other important consignees being France, 20.4 per cent., Belgium, 13.1 per cent., and Japan, 9.1 per cent. During the war, exports to the United Kingdom declined and shipments to the European continent and to Japan virtually ceased, while the quantity shipped to the United States of America showed great expansion. Of the total quantity of greasy wool exported overseas during the five years ended 1949–50, 19.8 per cent. was sent to the United States of America and 31.5 per cent. to the United Kingdom. Of the total shipments in 1949–50, 35.9 per cent. went to the United Kingdom, 13.5 per cent. to France, 11.0 per cent. to the United States of America, and 11.4 per cent. to Belgium. The following table shows the quantities of greasy wool exported, and the principal countries of recorded destination.

(iii) *Total Value of Exports.* The value of wool exported from Australia during the five years ended 1949–50 averaged 42.8 per cent. of the value of the exports of merchandise of Australian origin, and during 1949–50 the proportion was 51.5 per cent. The value during the period under review, together with the principal countries to which wool was exported, is shown in the following table.

VALUE OF WOOL EXPORTS : AUSTRALIA.

(£'000.)

Other Foreign Countries	1,859	3,156	12,787	13,386	25,727	28,660
Total	48,767	69,260	126,129	148,747	231,396	313,146

13. **Local Sales of Wool.**—Under pre-war conditions buyers from the United Kingdom, France, Belgium, Germany and other European countries, and from America, Japan, China and India attended the sales conducted in Sydney, Newcastle, Albury, Melbourne, Geelong, Ballarat, Brisbane, Adelaide, Perth, Hobart and Launceston. In 1946–47, following the cessation of the acquisition scheme which ended with the 1945–46 season, auction sales were resumed at these centres and commenced at Goulburn. Since the resumption of auction sales, there has been a greater quantity of wool disposed of locally, more than 95 per cent. of Australia's production being disposed of in this manner.

14. **Value.**—Wool is the chief factor in the pastoral wealth of Australia, and the nation's prosperity is largely dependent upon its satisfactory sale. During the three years ended 1950–51 the price of greasy wool sold in the selling centres of Australia averaged 85.2d. per lb. compared with the average United Kingdom contract price of 14.59d. per lb. during the years 1939–40 to 1945–46 and the average selling price of 11.5d. per lb. during the ten years ended 1938–39. The average for the nine years ended 1928–29 was 18d. per lb., and for the seven years ended 1913–14, 9d. per lb. The heavy decline in the price of wool which commenced in 1929–30 continued during the next three years. In 1933–34, prices rose in a remarkable manner, averaging 15.84d. per lb., compared with 8.72d. per lb. for the previous year, an increase of 81.6 per cent. A decline in 1934–35 was succeeded by a period of rising prices in the two years following, but in 1937–38 and in 1938–39 prices again receded.

As mentioned in paragraph 7 above, the price of wool during the 1939–45 War was determined by the British Government wool contract. The price fixed for the years 1939–40 to 1941–42 was 13.4375d. per lb., and for the years 1942–43 to 1945–46, 15.45d. per lb. With the return to auction sales since 1945–46, the average price of greasy wool sold rose to 24.49d. per lb. in 1946–47, 39.50d. per lb. in 1947–48 and 48.07d. per lb. in 1948–49. In 1949–50 it rose further to 63.35d. per lb. and in 1950–51 reached the unprecedented level of 144.19d. per lb. The average price in 1950–51 was nine times as great as the 1945–46 contract price and almost thirteen times as great as the average for the ten seasons ended 1938–39.

The effect of fluctuating wool values upon the national income is reflected in the following figures. Based upon appraisement in each State plus certain adjustments as recorded by the State Statisticians, the gross value of wool produced in Australia for 1942–43 amounted to £73,017,000 and for 1943–44 to £75,124,000 compared with £42,043,000 realized during 1938–39 under open market conditions. The value in 1944–45 and 1945–46 declined to £64,894,000 and £58,597,000 respectively, as a result of decreased production. In 1924–25 when the record pre-war price was realized, the value was £81,430,000, and in the year 1930–31, £34,804,000. With the remarkable increases in post-war wool prices, the value of production rose to £96,858,000 in 1946–47, to £156,998,000 in 1947–48, to £201,972,000 in 1948–49, to £288,623,000 in 1949–50, and to the all time record figure of £651,000,000 in 1950–51.

The following table shows the average auction-room price of greasy wool in Australia for 1938–39 and 1946–47 to 1950–51 as compiled by the National Council of Woolselling Brokers. This latter price represents the average price realized for all greasy wool of whatever type or quality marketed during the year indicated.

WOOL : AVERAGE MARKET PRICE PER LB.(a)

(d.)

Description.	1938–39.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51.
Greasy	10.39	24.49	39.50	48.07	63.35	144.19

(a) Average price realized for all greasy wool of whatever type or quality marketed in Australia during the year.

15. **United Kingdom Importation of Wool.**—The important position which Australia occupies in the supply of wool to the United Kingdom is indicated in the following statement of the quantities of wool imported into that country from the principal wool-producing countries during 1938 and each year 1946 to 1950.

WOOL (a) : IMPORTS INTO UNITED KINGDOM.

Country of Origin.	1938.	1946.	1947.	1948.	1949.	1950.

Total Quantity . .	881,326	475,257	620,585	674,900	814,357	704,036
Total Value (£'000 sterling)	40,996	37,744	59,882	86,227	126,781	185,746

(a) Greasy and scoured. (b) Includes Pakistan.

Australian wool represented 52.0 per cent. of the total quantity imported into the United Kingdom during the five years ended 1950. New Zealand supplied 30.8 per cent. and South Africa 8.3 per cent., while the total quantity received from British countries constituted 95.5 per cent. of all United Kingdom imports.

16. **Principal Importing Countries and Sources of Supply.**—On page 884 of Official Year Book No. 37 appeared a table which furnished, in respect of the principal importing countries, details of their production and imports of wool for 1938, together with the chief sources of supply. Complete details are not yet available for later years.

§ 6. Trade in Hides and Skins.

1. **Extent of Trade.**—In addition to the hides and skins treated locally, considerable quantities are exported: the value of cattle and horse hides, and sheep and other skins, sent overseas during the five years ended 1949–50 amounted to £66,989,920 or an average of £13,397,984 per annum.

2. **Sheepskins with Wool.**—The exports of sheepskins with wool, aggregating £37,090,737 during these five years, constitute the most important item in the values referred to in the preceding paragraph. During 1938–39 France was the largest purchaser of sheepskins with wool, taking 74 per cent. of the total consignments, while the United Kingdom ranked next with 15 per cent., followed by Germany with 7 per cent. In 1949–50, France obtained 53.2 per cent. of total exports, the United Kingdom 23.0 per cent., and the United States of America 14.5 per cent. The exports of sheepskins with wool during each of the years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39 were as follows:—

EXPORTS OF SHEEPSKINS WITH WOOL: AUSTRALIA.

Particulars.	Average, 1934–35 to 1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Number	12,009,135	18,811,654	18,189,641	11,232,934	11,255,426	14,918,878
Value .. £	2,779,523	4,363,835	7,090,560	7,420,682	7,339,103	10,876,557

3. **Sheepskins without Wool.**—Up to 1943–44 sheepskins without wool were exported chiefly to the United States of America. During the year mentioned this country accounted for 97 per cent. of the total shipments while the remaining 3 per cent. were exported to the United Kingdom, Canada and the U.S.S.R. There has, however, since been a decline in shipments to the United States of America and an increase in the quantities shipped to the United Kingdom and other countries; in 1949–50 the United States of America received 74 per cent. of total shipments; the United Kingdom 22 per cent. and other countries 4 per cent. Quantities and values for the five years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39 are shown in the table hereunder:—

EXPORTS OF SHEEPSKINS WITHOUT WOOL: AUSTRALIA.

Particulars.	Average, 1934–35 to 1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Number	807,690	2,850,201	2,538,287	906,512	814,315	3,441,317
Value .. £	69,600	243,126	439,059	148,675	107,667	826,110

4. **Hides.**—(i) *Exports.* The export trade in cattle hides during 1949–50 was distributed as follows:—Poland, £333,913; Turkey, £235,374; Japan, £183,286; Germany, £159,132; United Kingdom, £113,032; and other countries, £315,414.

The exports during each of the five years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39 are shown in the table below :—

EXPORTS OF CATTLE HIDES: AUSTRALIA.

Particulars.		Average, 1934–35 to 1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Number ..	..	956,552	189,863	117,164	101,681	270,514	272,197
Value ..	£	791,730	229,542	328,713	312,562	1,177,040	1,340,471

Calfskins exported during the five years ended 1949–50 numbered 48,674, valued at £38,483. Exports of horse hides during the same period numbered 182,069, valued at £451,174.

(ii) *Imports.* The imports of cattle hides and calfskins are fairly large, the chief source of supply being New Zealand and the Pacific Islands. The quantities and values of cattle hides, including calfskins, imported into Australia during the years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39 were as follows :—

IMPORTS OF CATTLE HIDES AND CALFSKINS: AUSTRALIA.

Particulars.		Average, 1934–35 to 1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Quantity ..	cwt.	70,781	60,600	62,615	26,554	14,245	13,490
Value ..	£	278,658	416,205	729,119	213,367	81,520	76,231

5. **Furred Skins.**—The exports of furred skins were valued as follows :—

EXPORTS OF FURRED SKINS: AUSTRALIA.

(£.)

Description.	Average, 1934–35 to 1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.

Total	1,640,492	187,182	6,516	54,241	1,888,431

(a) Includes hare skins.

6. **Marketing of Hides and Skins.**—(i) *Sheepskins with Wool.* Details of the war-time agreement between the United Kingdom and Commonwealth Governments for the purchase by acquisition of the "exportable surplus" of woolled sheepskins in Australia were given in Official Year Book No. 37, page 886. The contract expired on 30th June, 1946, and sheepskins are marketed at open auction.

(ii) *Sheep and Lamb Pelts.* Details of the marketing control of sheep and lamb pelts were given in Official Year Book No. 38, page 930. Pelts have reverted to open marketing without export restrictions.

(iii) *Hides and Leather.* A hide acquisition and marketing scheme has been in operation since November, 1939. Until 31st December, 1948, the scheme operated under the National Security Regulations. Since 1st January, 1949, it has continued under a Commonwealth Act and six supporting State Acts.

The Australian Hide and Leather Industries Board, which administers the scheme, acquires all cattle hides, yearling and calf skins at prices from 15 per cent. to 20 per cent. above August, 1939 levels, and these are allocated to tanners at these prices. Surplus hides are disposed of by tender or open auction. The Board retains the amounts realized in excess of appraised values, and supplements the price to the producers in cases where the realized amount is less than the appraisement values.

Pre-war, about 40 to 45 per cent. of Australian production was exported, but with the development of the local tanning industry, the proportion is approximately 12½ per cent.

Returns from export sales of hides and deferred payments levied on leather exported based on the difference between world and Australian prices for the hides involved are paid into a fund by the Board. From this fund, premiums are paid to producers as a proportion of appraised values. These premiums compensate hide producers to some extent for the margin between local and oversea prices. Further details of the war-time operations of the scheme will be found in Official Year Book No. 37, page 887 and Official Year Book No. 38, pages 930–1.

(iv) *Rabbit Skins.* A marketing control scheme for rabbit skins was introduced under the National Security (Rabbit Skins) Regulations on 10th June, 1940 and terminated in April, 1949. Details of the scheme will be found in Official Year Book No. 38, page 931.

§ 7. Tallow.

1. **Production.**—Australia's production of tallow is in excess of local requirements and considerable quantities are normally available for export. The recorded production in factories is incomplete as production in establishments which do not come within the definition of a factory is excluded. More complete details, but on a calendar year basis, are, however, available. These relate to production in all slaughtering establishments and are shown in the following table for each year 1945 to 1950.

TALLOW : PRODUCTION IN SLAUGHTERING ESTABLISHMENTS, AUSTRALIA.

(cwt.)

Type.	1945.	1946.	1947.	1948.	1949.	1950.
Edible	898,831	354,934	437,232	524,690	565,774	756,572
Inedible	222,533	712,840	618,990	670,631	784,259	812,796
Total ..	1,121,364	1,067,774	1,056,222	1,195,321	1,350,033	1,569,368

2. **Consumption.**—Details of net exports and consumption in factories are shown in the following table for the five years 1945–46 to 1949–50 in comparison with 1938–39 :—

TALLOW : NET EXPORTS AND CONSUMPTION IN FACTORIES, AUSTRALIA.

(cwt.)

Particulars.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Net Exports ..	*a*560,241	146,445	73,744	87,689	173,225	407,723
Consumption by Factories	539,095	850,095	819,947	946,279	1,054,003	1,063,000

(*a*) Inedible only.

3. **Marketing.**—A modified control operates on the marketing of tallow, tallow products and derivatives. Exports are closely regulated. In respect of tallow shipped overseas the excess returns received over the fixed Australian domestic prices are paid by the exporters into a pool or equalization fund, from which a distribution is made to tallow producers generally.

A contract with the United Kingdom has been entered into annually in recent years. The 1950–51 contract provided that the United Kingdom would purchase the whole of Australia's exportable surplus of tallow, but shipments of certain grades could be made available elsewhere. Ceylon received 1,000 tons in 1950–51, and significant quantities of white mutton tallow are sold to India.

Prices in Australia are fixed, and from 19th October, 1951, the price of prime bright mixed tallow for home consumption rose from £32 10s. to £47 10s. per ton. Under the present United Kingdom contract, the price of this grade of tallow has been increased from 1st October, 1951, from £99 to £122 per ton.

CHAPTER XX.

AGRICULTURAL PRODUCTION.

Note.—Except where otherwise stated the " agricultural " years hereafter mentioned are taken as ending on 30th June.

Values of Australian oversea trade shown throughout this chapter are expressed as f.o.b. Australian currency, except where otherwise indicated.

§. 1. Introductory.

A brief reference to the attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Official Year Book. (*See* No. 22, p. 670.)

§ 2. Progress of Agriculture.

1. **Early Records.**—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797", Governor Hunter gives the acreage of crops as follows :—Wheat, 3,361 acres ; maize, 1,527 acres ; barley, 26 acres ; potatoes, 11 acres ; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops :—Wheat, 6,874 acres ; maize, 3,389 acres ; barley, 544 acres ; oats, 92 acres ; peas and beans, 100 acres ; potatoes, 301 acres ; turnips, 13 acres ; orchards, 546 acres ; and flax and hemp, 37 acres.

By the year 1850 the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area of crops declining from 491,000 acres in 1850 to 458,000 acres in 1854. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres.

2. **Progress of Cultivation.**—The following table shows the area of crops in each of the States and Territories of Australia at decennial intervals since 1860 and during each of the eleven seasons ended 1949–50, and on page 973 there is a graph showing the area of crops in Australia from 1860 onward :—

AREA OF CROPS.

(*a*) Not available.

The progress of agriculture was practically uninterrupted from 1860 to 1915–16, when, as the result of a special effort to raise wheat during the 1914–18 War, 18,528,234 acres were cultivated in Australia. Four years later the area of crops declined to 13,296,407 acres owing to the accumulation of wheat stocks consequent upon the difficulty of securing freight space during the war years. After the termination of hostilities the area again began to expand and rose steadily to a new maximum of 25,163,816 acres in 1930–31. Thereafter the slump in wheat prices seriously depressed the agricultural industry and the area of crops receded to just under 20 million acres in 1935–36. Subsequently the area increased and reached a maximum of 23½ million acres in 1938–39. Thereafter it declined to less than 16 million acres in 1943–44, rising in each succeeding year up to and including 1947–48, when 22.3 million acres were under crop. A fall to 20.6 million acres was recorded in 1948–49, and this level was maintained in 1949–50. As the area under wheat in Australia constitutes a large proportion of the total areas cropped (58 per cent. during the ten years ended 1949–50), fluctuations in the latter follow broadly the same pattern as changes in wheat areas.

3. **Area under Sown Pastures.**—In all the States there are considerable areas of grasses mainly sown on land from which scrub has been cleared or on land which it is desired to rest from cultivation. These areas, which are not included in "area of crops", have expanded from 5¼ million acres in 1929–30 to 18.2 million acres in 1949–50.

4. **Australian Agricultural Council.**—Arising out of a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December, 1934, a permanent organization known as the Australian Agricultural Council was formed. The Council consists of the Commonwealth Minister for Commerce and Agriculture and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are:—(i) the promotion of the welfare and development of agricultural industries generally; (ii) exchange of information on agricultural production and marketing; (iii) the improvement of the quality of agricultural products and the maintenance of high grade standards; (iv) to ensure, as far as possible, balance between production and available markets; and (v) organized marketing, etc.

In addition, a permanent technical committee known as the Standing Committee on Agriculture was formed to act in an advisory capacity to the Council. Its functions, in addition to advising the Agricultural Council on the above-mentioned matters, include the following:—(i) to secure co-operation and co-ordination in agricultural research throughout Australia; (ii) to advise the Commonwealth and State Governments, either directly or through the Council, on matters pertaining to the initiation and development of research on agricultural problems; and (iii) to secure co-operation between the Commonwealth and States and between the States in respect of quarantine measures relating to pests and diseases of plants and animals, and to advise the Commonwealth and State Governments. The personnel of this Committee consists of the permanent heads of the State Departments of Agriculture, members of the Executive Committee of the Commonwealth Scientific and Industrial Research Organization, the Commonwealth Director-General of Health, the Secretary, Department of Commerce and Agriculture, the Director-General of Agriculture and a representative of the Commonwealth Treasury. The Council and the Standing Committee meet normally two or three times a year according to the nature and urgency of the problems to be discussed.

§ 3. Distribution, Production and Value of Crops.

1. **Distribution of Crops.**—The following table shows the areas in the several States and Territories of each of the principal crops for the season 1949–50. Similar details for the season 1948–49 appear in Part II. of *Production Bulletin* No. 43.

AREA OF PRINCIPAL CROPS, 1949–50.

(*a*) Excludes Northern Territory, details for which are not available. (*b*) Excludes 56,834 acres of pasture land sown to lucerne and 191,493 acres sown to oats, for grazing. (*c*) Not available for publication. Included with " All other Crops ". (*d*) Incomplete. (*e*) Not available. Included with " All other Crops ".

2. **Relative Areas of Crops in States and Territories.**—The proportion of each of the crops cultivated to the extent of over 100,000 acres in the various States and Territories on the total area of crops for the season 1949–50 is shown in the next table. Similar details for the season 1948–49 appear in Part II. of *Production Bulletin* No. 43. In four of the States, namely, New South Wales, Victoria, South Australia and Western Australia, wheat-growing for grain is by far the most extensive crop. In Queensland the most extensive crops are wheat, green fodder and sugar-cane, and in Tasmania, green fodder, hay and potatoes.

As pointed out previously, wheat is the main crop in Australia, the area thereof, for grain only, representing approximately 60 per cent. of the total area of crops in 1949–50.

RELATIVE AREAS UNDER CROP, 1949–50.

(Per Cent.)

Crop.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.(*a*)

(*a*) Market Gardens.

4. **Weights and Measures.**—The production of agricultural commodities in Australia is recorded in terms of either capacity or weight. When measured in terms of capacity the unit is the bushel of 2,218.192 cubic inches or gallon of 277.274 cubic inches. When measured in terms of weight, the unit adopted is either the long ton of 2,240 lb. (except in the case of flour, bran and pollard, when the short ton of 2,000 lb. is used), the hundredweight (cwt.) of 112 lb. or pound (lb.).

The production of cereals and fruit is recorded in bushels, the production of wine in gallons, while hay, vegetables, grapes and industrial crops are measured by weight, generally in terms of long tons or cwt.

In the following table the weights adopted per bushel are shown for the more important cereals, fruits, etc. Several types of cases are used for fruits, but in determining the average weights shown below, that with a capacity of 2,223 cubic inches was adopted. The packed weight of a bushel of fruit also is subject to considerable variation according to the kind and variety of fruit.

Data compiled by the State Departments of Agriculture made available to this Bureau were used in determining these average weights.

(*a*) Includes Governmental assistance. (*b*) Subject to revision. (*c*) Incomplete. (*d*) Market Gardens.

8. **Value of Production.**—(i) *Gross and Net Values*, 1948–49 *and* 1949–50. Uniform methods for arriving at the gross and net values of production in the various States were determined at a Conference of Statisticians held in March, 1935. The returns for the year 1933–34 and subsequent years have been valued on the new basis, and a revaluation

was made for the years back to 1928–29. A more detailed reference to the value of production of agriculture and other industries in Australia as well as a brief explanation of the terms used will be found in Chapter XXIX.—Miscellaneous.

In computing the net value of production no deduction has been made for the cost of maintenance of farm buildings and fences, nor for the depreciation of farm plant; consequently the figure stated is inflated to that extent.

GROSS, FARM AND NET VALUES OF AGRICULTURAL PRODUCTION, 1948–49 AND 1949–50.

§ 4. Wheat.

1. **Royal Commission on the Wheat Industry.**—A Royal Commission was appointed in January, 1934, to inquire into and report upon the economic condition of the industries of growing, handling and marketing wheat, and the manufacturing, distributing and selling of flour and bread. A searching inquiry was made by the Commission and the results of its investigations were submitted in a series of five reports. The first and second reports covered the wheat-growing industry, the third that of baking, the fourth the flour-milling industry, while the fifth, completed in February, 1936, dealt with the history of the Commission's investigations and traversed the principal recommendations submitted.

Reference to the financial assistance to the wheat industry will be found in § 20. Bounties, hereafter.

2. **Wheat Costs of Production Committee.**—A Wheat Costs of Production Committee was appointed by the Commonwealth Government in February, 1947, to enquire into and report upon :—(i) the reasonable costs of production of wheat per bushel in Australia's main wheat-growing districts, and (ii) whether basic items of costs could be established as an index to periodical variations in costs of the production of wheat. The Committee in its report to the Commonwealth Government in March, 1948, found that the cost of growing wheat in the Commonwealth was 6s. per bushel at sidings and advised that basic items of cost could be established as an index to periodical variations in wheat production costs.

3. **Licensing of Areas Sown to Wheat, and Acreages Sown.**—Details of the operations of the Wheat Stabilization Board in licensing wheat growing during the seasons 1941–42 to 1948–49 will be found in Official Year Book No. 38, pp. 940, 941. The Board ceased to function on 31st December, 1948.

4. **Legislation relating to Wheat Industry.**—(i) *Financial Assistance to Wheat Growers.* Details of financial assistance rendered by the Commonwealth Government to wheat growers between the years 1931–32 and 1944–45 were given on page 1296 of Official Year Book No. 37.

(ii) *Stabilized Marketing.* A detailed survey of legislation relating to stabilization of the wheat industry, including controls exercised during the 1914–18 and 1939–45 Wars and legislation establishing the permanent Wheat Stabilization Plan in 1948, were given in the Appendix to Official Year Book No. 37 (pp. 1295–99).

(iii) *Wheat Stabilization Plan.* Briefly, the principal provisions of the Wheat Stabilization Plan, which is operated by the Australian Wheat Board conjointly with State Wheat Boards and similar authorities nominated by State Governments, are as follows :—

(*a*) The Commonwealth Government has guaranteed a price for wheat grown and delivered to the Australian Wheat Board or other approved organizations for each season 1947–48 to 1952–53.

(*b*) The price guaranteed was 6s. 3d. per bushel f.o.r. ports, bulk basis (this being related to costs of producing wheat in the 1947–48 season), subject to variation, as agreed upon by the Commonwealth Minister for Commerce and Agriculture in consultation with the appropriate State Ministers, in accordance with variations in the cost of producing wheat in subsequent seasons. Following reviews of wheat production costs, the guaranteed price was increased to 6s. 8d. per bushel f.o.r. ports, bulk basis for the 1948–49 season and to 7s. 1d. per bushel for the 1949–50 season. For the 1947–48 and 1948–49 seasons the price of wheat fixed for home consumption was the guaranteed price of 6s. 3d. and 6s. 8d. per bushel respectively, but for the 1949–50 season it remained unchanged from the previous year at 6s. 8d. per bushel. The additional 5d. per bushel payable to growers for wheat for home consumption in 1949–50 was met by subsidy provided by the Commonwealth Government. For the 1950–51 season the subsidy was withdrawn and the guaranteed and home consumption prices fixed at 7s. 10d. per bushel (f.o.r. ports, bulk basis).

(*c*) The guaranteed price applies in respect of the export from any one season's crop up to a maximum of 100,000,000 bushels.

(*d*) A Wheat Prices Stabilization Fund has been established by means of a tax on wheat exported. The tax applies when the export price is greater than the guaranteed price, the rate of tax being 50 per cent. of the difference between the two but not exceeding 2s. 2d. per bushel.

(*e*) The Stabilization Fund will be drawn upon as required to meet the guaranteed price when this exceeds the export price. If amounts held in the Fund are at any time insufficient for this purpose, the deficiency will be provided by the Commonwealth Government from Consolidated Revenue.

(iv) *The Australian Wheat Board and the Stabilization Fund.* The Australian Wheat Board, as reconstituted under the Commonwealth Wheat Industry Stabilization Act 1948, commenced to perform its functions under the Act on 18th December, 1948.

The provisions of the Commonwealth Wheat Stabilization Plan relating to the levy of a tax on wheat exported and the establishment of a Stabilization Fund were implemented by the Commonwealth Government under legislation passed in 1946 in respect of the 1945–46, 1946–47 and 1947–48 harvests. Contributions to the Stabilization Fund from these harvests amounted to about £7,000,000, £4,000,000 and £16,400,000 respectively, these amounts having since been refunded to growers. Contributions to the Fund from the 1948–49 and 1949–50 (collected under the 1948 legislation) harvests were approximately £12,500,000 and £15,000,000 respectively. The 1948–49 harvest contributions were also refunded to growers early in 1952.

5. **War-time and Post-war Marketing of Wheat.**—(i) *General.* On page 908 of Official Year Book No. 37 an outline was given of the circumstances leading up to the establishment by the Commonwealth Government on 21st September, 1939 of the Australian Wheat Board under the National Security (Wheat Acquisition) Regulations.

(ii) *Australian Wheat Board.* Under the Wheat Acquisition Regulations the Board was empowered, subject to directions of the Minister for Commerce and Agriculture, to purchase, sell or dispose of wheat or wheat products, manage and control all matters connected with the handling, storage, protection, shipment, etc., of wheat acquired, and such other matters necessary to give effect to the regulations under which it was created. The Australian Wheat Board was reconstituted and vested with similar powers under the Commonwealth Wheat Stabilization Act 1948 for the purpose of administering the post-war Wheat Stabilization Plan (*see* paragraph 4 (iii) above). The reconstructed Board commenced operations on 18th December, 1948.

(iii) *Wheat Acquired and Disposed of.* (*a*) *Wheat Acquired.* Particulars of wheat acquired by the Australian Wheat Board up to 30th November, 1950 are shown in the following table :—

AUSTRALIAN WHEAT BOARD : WHEAT ACQUIRED TO 30th NOVEMBER, 1950.

(a) Rail freight was deducted from 2nd payment. (b) This Pool refers to low grade wheat (under 54 lb. per bushel) which was segregated from other wheat received in No. 11 Pool. (c) Rail freight was deducted from 1st payment.

6. **International Wheat Agreement.**—Following a series of unsuccessful attempts extending over a period of years to secure an arrangement for the stabilization of international trade in wheat, an International Wheat Agreement was signed in Washington, D.C., United States of America, on 6th March, 1948, by 33 importing nations and the three exporting countries of Canada, United States of America and Australia. However, principally owing to the failure of the Government of the United States of America to ratify the Agreement within the prescribed time, it was allowed to lapse.

A further International Wheat Agreement was signed in Washington in March and April, 1949 by the representatives of 41 nations, comprising all the important wheat importing countries excluding Germany and Japan and the wheat exporting countries of Canada, United States of America, Australia, France and Uruguay. The 1949 Agreement is similar to that proposed in 1948, its stated objectives being " to assure supplies of wheat to importing countries and markets for wheat to exporting countries at equitable and stable prices ".

The new Agreement covers a period of four years from 1st August, 1949 to 31st July, 1953, with provision for extension beyond that date, if desired. Under its terms, the exporting countries participating in the Agreement must sell specified minimum quantities of wheat each year if required by importing countries to do so at the maximum price quoted in the Agreement, while the importing countries are obliged to buy specified quantities if required by the exporter at the minimum price quoted for the relevant year. Expressed in Australian currency equivalent, the maximum price in respect of transactions under the Agreement is approximately 16s. 1d. per bushel for each year, while minimum prices range from 13s. 5d. per bushel in 1949–50 to 10s. 9d. per bushel in 1952–53.

The export and import quotas originally specified in the Agreement, totalling 456.3 million bushels, have subsequently been varied because of—(i) the withdrawal of certain countries from participation in the Agreement (Uruguay as an exporter, and China, principally, of the importing countries), and (ii) the admission of new members to the Agreement. The principal new participants were Germany (from late 1949) and Japan (from 1951–52), for which the United States of America had originally accepted responsibility for wheat supplied outside the provisions of the Agreement.

Details of the adjusted quotas (which totalled 562.5 million bushels for 1950–51) for the principal exporting and importing countries participating in the Agreement are shown in the following table. The table also shows transactions recorded under the Agreement for the year August, 1950 to July, 1951.

INTERNATIONAL WHEAT AGREEMENT: GUARANTEED ANNUAL SALES AND PURCHASES AND TRANSACTIONS RECORDED FOR 1950–51.

('000,000 Bushels.)

(*a*) Excludes Australian Capital Territory.

(ii) *Special Tabulations relating to Wheat Holdings.* With the co-operation of State Statisticians, a series of special tabulations relating to rural holdings was undertaken for all States for the year 1949–50. The tabulations, which covered, *inter alia*, a series of size classifications of wheat farms, have been published in detail in *Primary Industries Bulletin*, 1949–50, No. 44. A similar tabulation was made for the year 1947–48, a summary of the results being published in *Production Bulletin* No. 42, Primary Industries, and Official Year Book No. 38, page 947.

8. **Area, Production and Average Yield.**—(i) *Area.* Wheat is the principal crop raised in Australia, and its progress since 1860 has been almost continuous. Prominent features in its early development were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphate as an aid to production, and the introduction of new and more suitable varieties for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion. The most serious interruptions in more recent years were those occasioned by the two World Wars and the economic depression of the early 'thirties.

As previously mentioned, any variation in the acreage sown to this cereal materially affects the total area of crops. The area, production and average yield per acre of wheat for grain in each State are shown below for the years 1945–46 to 1949–50 in comparison with the averages for the decennial periods ended 1938–39 and 1949–50 :—

(*a*) 60 lb. per bushel.

A graph showing the expansion of the area sown to wheat for grain in Australia since 1860 appears on page 973 while a graph showing the distribution of areas growing wheat for grain throughout Australia in 1947–48 appears on pp.977–8. Similar graphs showing the distribution of wheat areas in 1924–25 and 1938–39 appeared in Official Year Book No. 22, p. 695, and Official Year Book No. 34, p. 451, respectively.

(ii) *Production.* Apart from the variations in the area sown, the size of the wheat harvest in Australia is largely determined by the nature of the season and inconsistencies in this respect are reflected in the yearly production.

It should be noted, however, that with improved farming methods, including the proper tillage of the soil, rotation of crops, the growing of suitable varieties and the application of fertilizers, average yields per acre during five decades to 1950 have shown a continued improvement.

Australia's wheat production in 1949–50 was 218.2 million bushels, representing an average yield of 17.83 bushels per acre. This was 72.6 million bushels more than the average for the decennium ended 1949–50 and 48.8 million bushels more than the average for the ten years ended 1938–39.

(iii) *Average Yield.* Short-term variations in this are due chiefly to the vagaries of the seasons. The best average yields for single seasons since 1901 were obtained in 1920–21, 16.08 bushels; in 1942–43, 16.78 bushels; and in 1949–50, 17.83 bushels.

(iv) *Decennial Averages,* 1861–70 *to* 1941–50. The following table shows the average area, production and yield per acre for decennial periods since 1861, together with the average wholesale price since 1871. Up to and including 1939 the price quoted represents the arithmetic mean of the annual averages at Melbourne (f.o.r. Williamstown), and may be accepted as fairly representative for Australia; from 1940 the price represents the average return to the grower for all wheat, bulk and bagged, f.o.r. ports basis.

WHEAT FOR GRAIN: AVERAGE AREA, PRODUCTION AND WHOLESALE PRICE, AUSTRALIA.

(*a*) Not available. (*b*) Subject to revision. *See* letterpress above.

(v) *Relation to Population.* The main wheat-producing States of Australia are New South Wales, Victoria, South Australia and Western Australia. Queensland production normally approaches local demands, but Tasmania imports from the mainland to satisfy its needs, though partly in exchange it ships flour made from local wheat which is particularly suitable for biscuits. Normally the production of wheat greatly exceeds Australian requirements, and from half to three-quarters of the crop is exported overseas.

0. **Varieties of Wheat Sown.**—(i) *General.* The breeding of wheat suitable to local conditions has long been established in Australia. Farrar (1845–1905) did invaluable work in pioneering this field and the results of his labour and the continued efforts of those who have since followed him have proved of immense benefit to the wheat industry of Australia. Their efforts have resulted in better average yields, a greater uniformity of sample, with which has accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of the principal varieties grown during each season is restricted to about 40.

(ii) *States*, 1950. Particulars of the varieties of wheat sown and the areas thereunder were collected annually up to 1940. The collection was then suspended but was resumed in 1946–47 and was collected again in the four main wheat States for the 1948–49 and 1950–51 seasons. Details of the nine principal varieties sown in 1950 in the four main producing States and the proportion each bears to the total area sown are given in the following table.

WHEAT: PRINCIPAL VARIETIES SOWN, 1950.

New South Wales.		Victoria.		South Australia.		Western Australia.

(*a*) Includes not stated.

Continued progress in the breeding of new and better wheats has resulted in many changes in the varieties sown. Bencubbin, although not as widely sown as in 1948, retained its position as leading variety in New South Wales and South Australia, being displaced by Bungulla in Western Australia. Quadrat is still the leader in Victoria at 38.27 per cent., although the area planted to Insignia increased considerably since 1948. The varieties which were second in importance in the other States were Gabo in New South Wales and South Australia, and Bencubbin in Western Australia.

10. **F.A.Q. Standard of Wheat.**—The Chambers of Commerce in each of the four main wheat States each year determine the "f.a.q." standard for the State. "F.a.q." means "fair average quality", and the standard is used as the basis for sales of the season's crop. It represents the average quality for the season, and this average varies from year to year, and from State to State. "F.a.q." is an Australian term, and the method differs from that of other countries which sell according to sample, or (as in Canada) according to grades which are fixed, and do not vary from year to year.

Samples of wheat are obtained by the Chambers of Commerce from the different wheat districts, and are mixed to give a representative sample of the whole crop. From this representative sample the f.a.q. weight is determined by the use of the Schopper one-litre scale chondrometer.

The following table sets out the f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States from 1946–47 to 1950–51.

F.A.Q. STANDARD WEIGHT OF A BUSHEL OF WHEAT.

(lb.)

Year.	New South Wales.	Victoria.	South Australia.	Western Australia.
1946–47	62½	63½	61½	63
1947–48	60½	60½	61	64½
1948–49	63½	63	63½	63½
1949–50	63	64	62	64½
1950–51	61½	62½	64½	64½

11. **Price of Wheat.**—(i) *Home Consumption.* The price charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed is shown in the table below for the years indicated.

AUSTRALIAN WHEAT BOARD'S PRICE FOR WHEAT FOR HOME CONSUMPTION : AUSTRALIA.

(s. d. per Bushel, Bulk Basis).

Particulars.	1939.	1946.	1947.	1948.	1949.	1950(*a*).	1951.
For Flour ..	(*b*)	(*c*) 3 11	(*c*) 3 11	6 3	6 8	6 8	7 10
For Stock Feed ..	(*b*)	(*d*) 4 3	4 11	6 3	6 8	6 8	7 10

(*a*) Excludes 5d. per bushel subsidy paid by the Commonwealth Government, making the total return to growers 7s. 1d. per bushel, bulk basis. (*b*) Not available. (*c*) Excludes 1s. per bushel recovered from Flour Tax and included in advances to growers. (*d*) Disregards subsidies paid by the Commonwealth Government which were included in advances to growers. These approximated 8d. per bushel.

(ii) *Export Wheat Prices.* (*a*) *Australian Wheat Board's Basic Selling Price.* Details of the export wheat prices are given in the table below for the years stated. Owing to changes which have occurred in the manner of selling export wheat, it is not possible to quote prices on a strictly comparable basis throughout the period covered by the table. The prices for 1939 represent the "weighted average shippers' limits f.o.r. ports for growers' bagged and bulk lots, Sydney, Melbourne and Adelaide." Following the acquisition of the 1939–40 and later wheat crops by the Commonwealth Government, it was no longer possible to record prices on this basis. The prices shown below for the years 1946 to 1951 are the basic export selling prices of the Australian Wheat Board.

The quotations are more or less nominal, as the market is "broad" and wheat is sold at times above and below this basic price, depending upon conditions of sale. Much of the wheat is sold at prices fixed under contract for delivery over lengthy periods. The prices shown below do not, therefore, necessarily represent the prices actually received for wheat currently being shipped. This matter is referred to in sub-paragraph (*b*) below.

With the introduction of the International Wheat Agreement (*see* par. 6 preceeding) from August, 1949, it has become necessary to distinguish between prices applicable under the Agreement and those applicable to excess wheat sold above the quota fixed under the Agreement. The price at which wheat is sold overseas, therefore, may be broadly classified as follows :—(i) wheat sold within the terms fixed by the International Wheat Agreement, and (ii) wheat sold in excess of the quota (at present 88.7 million bushels) fixed under the Agreement at prices negotiated on the "free" market.

As from August, 1949, under the terms of the International Wheat Agreement, Australia has undertaken to sell, if required, 80.8 million bushels (since increased to 88.7 million bushels) per year (August to July) to contracting importing countries. The prices at which Australia is prepared to sell wheat under the terms of the Agreement are shown in terms of Australian currency in the table below. To July, 1951, this has been the maximum price prescribed by the Agreement. As the prices were fixed basically in terms of gold the maximum prices expressed in terms of Australian currency rose from 11s. 2d. prior to devaluation to 16s. 1d. per bushel after devaluation (19th September, 1949). After commitments under the International Wheat Agreement have been met, Australia is free to sell any additional wheat available at any price which may find a market.

AUSTRALIAN WHEAT BOARD'S SELLING PRICE FOR WHEAT FOR EXPORT: AUSTRALIA.

(s. d.)

Year ended December.	Average price per bushel for bulk and bagged lots f.o.r. ports basis.	Year ended July.	Average price per bushel for f.a.q. bulk wheat, f.o.b. basis.	
			Wheat for sale under the International Wheat Agreement.	Wheat for sale other than under the International Wheat Agreement.
	s. d.		*s. d.*	*s. d.*
1939(*a*)	2 4	1950	15 5	18 6
1946	10 11	1951	16 1	18 9
1947	16 8			
1948	18 8			
1949(*b*)	15 1			

(*a*) Weighted average of shippers' limits for growers' bulk and bagged lots, Sydney, Melbourne and Adelaide, for eight months ended August, 1939. (*b*) Average for seven months ended July, 1949.

(*b*) *Average Bushel Value of Wheat Actually Exported.* The following table shows for the years indicated the wheat price used in compiling the Export Price Index. The figure for 1939 represents the weighted average of shippers' limits f.o.r. ports for growers' bagged and bulk lots, Sydney, Melbourne and Adelaide. For 1946 and succeeding years the prices are based on the average actual realizations for current shipments, as it was impossible to determine representative average prices at which current sales were being effected because a very large proportion of Australia's exportable wheat was sold forward on long-term contracts at widely differing prices outside the basic price shown in the table above. The prices shown in the following table, therefore, give the average realizations f.o.b. for wheat shipped during the years shown.

AVERAGE VALUE OF WHEAT ACTUALLY EXPORTED: AUSTRALIA.

(s. d.)

Particulars.	Year ended December.					Year ended July.	
	1939.	1946.	1947.	1948.	1949.(*a*)	1950.	1951.

(*a*) Average for seven months ended July.

(iii) *Payments to Growers.* Reference is made in par. 5 (v) of this section to the amounts paid to growers from the wheat pools.

12. **Value of the Wheat Crop.**—The estimated value of the wheat crop in each State and in Australia during the seasons 1948–49 and 1949–50 is shown below. The values are on a gross basis at the principal market in each State and are based upon payments made to producers. Pending the finalizing of the accounts of the Australian Wheat Board values for 1949–50 are subject to revision.

(a) Gross value of total crop, including drought relief and also seed used on farm, but excluding value of straw.

13. **Production and Disposal of Wheat in Australia.**—In the following table details are given of the production of wheat and its disposal during each of the cereal years ended 30th November, 1947 to 1951 in comparison with the average for the three years ended November, 1937 to 1939. The particulars respecting local consumption refer to sales actually executed by the Australian Wheat Board, whilst those respecting exports represent actual shipments. (For particulars of production and exports from 1860 *see* graph, p. 974.)

WHEAT : PRODUCTION AND DISPOSAL, AUSTRALIA.

('000,000 Bushels.)

Seed	14.6	2.13	12.2	1.54
Total as Wheat	54.8	7.98	68.6	8.65

(*a*) Ton = 2,000 lb. (*b*) One ton (2,000 lb.) of flour is taken to be equivalent to 46.3 bushels of wheat.

15. **Exports of Wheat and Flour.**—(i) *Quantities.* The following table shows particulars of the exports of wheat and flour and total of both in terms of wheat for each of the years 1945–46 to 1949–50 compared with the average for the five years ended 1938–39. For the sake of convenience, flour has been expressed at its equivalent in wheat, 1 ton of flour being taken as equal to 46.3 bushels of grain. Wheat and flour have been imported to tide over lean seasons on only two occasions since 1900; in 1902–3 the wheat harvest was as low as 12,378,000 bushels, and wheat and flour representing 12,468,000 bushels of wheat were imported, whilst an equivalent of 7,279,000 bushels was imported in 1914–15 to supplement the yield of 25 million bushels produced in that season. During the five years ended 1949–50 exports in terms of wheat averaged 83,466,000 bushels compared with the average of 106,432,000 bushels for the five years ended 1938–39.

WHEAT AND FLOUR : EXPORTS FROM AUSTRALIA.

Year.	Quantity.				Value (£'000.)		
	Wheat.	Flour.		Total as Wheat.	Wheat.	Flour.	Total.

(a) Includes wheatmeal for baking.

18. **Bulk Handling of Wheat in Australia.**—(i) *Development of the Bulk Handling System.* Methods of handling wheat in bulk have been discussed in Australia since the first exportable surpluses were produced, but no positive action was taken to implement any scheme until serious losses from vermin and weevils occurred in wheat which had been stacked during the 1914–18 War, when the bumper harvest of 1915, combined with the restriction on export movements, created serious storage difficulties.

Recommendations by many of the earlier investigators that some system of bulk handling be introduced were received with apathy on the part of most growers and met with so much determined opposition from millers, grain merchants and railway authorities that it was not until 1917 that the gravity of the storage situation led to the appointment by the Commonwealth Government of the Wheat Storage Commission. After extensive investigations, the Commission made certain recommendations which were incorporated in the Wheat Storage Act 1917, under which the Commonwealth Government made available the sum of almost £3,000,000 to finance State installation of bulk handling facilities. In New South Wales legislative action to inaugurate the system had been taken in 1916, but it was not until the 1920–21 season that the scheme became operative. Western Australia made studies of the system in operation in New South Wales, and evolved a system of horizontal storage as contrasted to vertical storage, and introduced this system in 1935. Victoria, having had the benefit of the New South Wales and Western Australian experience, introduced in the 1938–39 season a system combining the best features of both. South Australia, owing to the distribution of its wheatlands, and the relatively short hauls to the seaboard which can be economically effected by motor transport, decided that the establishment of bulk handling methods was unwarranted, while Queensland, because of similar conditions, and the small wheat producing State of Tasmania have not found bulk handling necessary.

(ii) *Advantages and Disadvantages of the Bulk Handling System.* Although the optimistic estimates of cost reductions envisaged by the early proponents of the scheme have not been realized, there is no doubt that considerable saving of time and money has occurred as a result of the installation of bulk handling systems. Briefly, the main advantages are :—

(*a*) Reduction of handling costs at farms, sidings and terminals. These savings have been made in the costs of the bags and their sewing and labour costs in stacking. At the terminals, the mechanical loading of ships has resulted in considerable saving in time, thus speeding up the turn-around and reducing the usual costs of shipping.

(*b*) Reduction in the deterioration of long standing stacks of bagged wheat.

(*c*) Protection of grain from mice, weevils, climatic conditions and leakage.

There are, of course, disadvantages, but there appears no doubt that the advantages outweigh the disadvantages, and, in fact, the more serious of the disadvantages can be overcome by positive action on the part of the authorities controlling the system. The main disadvantages of the New South Wales and Victorian systems are :—

(*a*) Heavy initial capital cost in erection of silos and terminals and construction of bulk waggons for transporting the bulk wheat.

(*b*) The system tends to choke in flush seasons or through deferment of sales by growers. It cannot hope to provide all the storage space required in flush years.

(*c*) In years of short crops, wheat receipts may fall short of silo capacity, which involves a loss on operating costs.

These disadvantages have been minimized in the Western Australian system because of its relatively low cost and flexibility.

(iii) *General Description of the Bulk Handling System.* Silos or elevators are erected at railway sidings in districts where the wheat harvest has been shown to be sufficiently heavy to warrant their installation. In New South Wales and Victoria, these silos are generally concrete and steel vertical storage bins, with mechanical loading devices which, in some cases, incorporate weighing machinery to check the wheat out as well as into the silo. In Western Australia, the silos are horizontal storage bins made of wood and corrugated iron, which are demountable, and the loading machinery is of a portable type.

At the terminals, the construction is generally of steel and concrete with loading booms which permit the wheat to be poured directly into the ships' holds, where it is subsequently " trimmed " either by a special wheat trimming machine or by hand.

Bulk wheat exports are effected by the following methods :—

(*a*) Discharge from orthodox terminal elevators at Sydney and Newcastle (New South Wales), Geelong (Victoria) and Bunbury and Fremantle (Western Australia) and from provisional installations at Geraldton (Western Australia).

(*b*) Transfer from bulk trucks to ships without going through terminal elevators, as at Geraldton.

(*c*) De-sacking into ships' holds at South Australian ports.

In addition to full cargoes, exports of bagged wheat comprise parcels in liners and quantities used under shipping rules for topping-up bulk cargoes.

(iv) *Bulk Handling in the States.* A brief history of the inauguration of bulk handling and particulars of the operation and projected extensions of the system in the three States concerned are set out below :—

(*a*) *New South Wales.* The Grain Elevator Act was passed on 16th August, 1916, but owing to war-time conditions and financial obstacles, progress was delayed. However, finance was obtained from the Commonwealth under the terms of the Wheat Storage Act 1917, and the work commenced in that year. The initial plans provided for 70 country silos with capacities ranging from 50,000 to 500,000 bushels with a total of 15.4 million bushels, and a terminal elevator at Sydney with a capacity of 6,500,000 bushels. Construction of North and North-western silos and the Newcastle terminal was deferred, and the short crops of the early 'twenties did little to boost the system. Progress was slow until 1925 when the system experienced its first good season, and Government approval for the construction of more silos was given. In 1929, a further programme of expansion was commenced, but it was not until after the profitable operations arising from the heavy crop of 1932–33 that the expansion became more rapid. Between 1927 and 1936, 102 country plants were added to the system, the terminal at Sydney was enlarged and a terminal erected at Newcastle. At present, there are 180 elevators situated at the more important wheat receiving stations throughout the State, with a storage capacity of 24,478,000 bushels, as well as terminal elevators at Sydney and Newcastle, which have a receiving capacity per day of 6,000 tons and 2,000 tons respectively.

Work is proceeding on additions to country silos and the extension to the Newcastle terminal. In addition, four wheat storage sub-terminals at Junee, Temora, Parkes and Werris Creek are being erected to overcome the shortage of sacks and the immediate difficulties involved in constructing permanent silos at country centres. Work is also proceeding on the erection of about 60 temporary country bulkheads, storing about 100,000 bushels each.

The following table illustrates the development of the bulk handling system in New South Wales from its inception in 1920–21 :—

GRAIN ELEVATORS : WHEAT RECEIVED, NEW SOUTH WALES.

Season.	Elevators in Country Districts.		Storage capacity of Elevators available in Country Districts. (*a*)	Wheat Received.			Proportion of Total Crop Received in Elevators.

(*a*) At one filling. (*b*) New South Wales wheat only. In addition, 5,377,386 bushels of Victorian wheat were handled through the country system. (*c*) Includes one leased silo not part of the system (*b*) *Victoria.* Although the recommendations of a Royal Commission were embodied in an enabling bill in 1916 it failed to pass, and despite great damage to war-stored grain from mice and weevils, no action was taken on the offer of Commonwealth aid in 1917. In 1922–23 a further attempt to establish the system failed. It appeared that a start would be made in 1925 when New South Wales had its first good crop since the inception of the bulk handling system, but subsequent experience in that State discouraged further action in Victoria. However, the severe depression of the early 'thirties, combined with the recurrent mouse plagues and the reduction in freight on bulk wheat gave rise to increasingly urgent demands from farmers for the installation of bulk handling facilities, and eventually other groups lent their weight in support. The Grain Elevators Board was constituted on 1st February, 1935, under the provision of the Grain Elevators Act 1934. The first group of elevators, comprising 48 country elevators and the Geelong terminal elevator commenced operations in 1938–39, when 10,782,190 bushels were handled. The construction of the balance of the elevators, as planned in the initial scheme, proceeded from year to year, until completed in the 1944–45 season.

In addition to the elevators erected by the Board, arrangements were made for the leasing of nine existing elevators owned by flour millers at country mills. These elevators are operated by the Board as part of the elevator system.

Amendments to the Grain Elevators Acts were passed in 1950 to permit the construction of elevators at a number of stations not yet provided with bulk handling facilities, and to erect additional bins at stations where the existing storage capacity is inadequate. The shortage of essential construction materials and labour has prevented a commencement of this new work.

Temporary means of extending bulk handling facilities have been adopted pending these extensions and owing to cornsack difficulties. Arrangements are in hand for the construction by the Australian Wheat Board of temporary bulkheads at approximately 50 stations for the 1951–52 season.

The following table sets out the development of the bulk handling system in Victoria for a series of years from 1939–40.

GRAIN ELEVATORS: WHEAT RECEIVED, VICTORIA.

Season.	Elevators.		Terminal.		Wheat Received.	Proportion of Total Crop Received in Elevators.
	Number.	Capacity at one filling.	Number.	Capacity at one filling.		
		'000 Bush.		'000 Bush.	'000 Bush.

1947–48 ..	138	14,159	1	4,100	34,948	74.4
1948–49 ..	138	14,159	1	4,100	38,739	79.0
1949–50 ..	138	14,159	1	4,100	45,341	78.9

(*c*) *Western Australia.* In 1920, a company known as the Western Australian Grain Growers Co-operative Elevators Ltd. was formed for the purpose of operating bulk handling of wheat, but the company did only exploratory work and was wound up.

Having observed New South Wales experience with vertical storage in concrete silos, Westralian Farmers Co-operative Ltd., in 1929, evolved a new method of horizontal storage, using simple structures of timber and galvanized iron. Simple structures for storage are quite adequate, owing to stable weather conditions and small liability to rain damage. Further, the method of construction allows easy dismantling, movement, and re-erection of bins in areas where they are more urgently required. In 1933, joint action by the Trustees of the Wheat Pool and Westralian Farmers' Co-operative Ltd. led to the registration of Co-operative Bulk Handling Ltd. on 5th April, 1933. The new company took over existing plants and leases and a Deed of Trust dated 24th October, 1933, was entered into between the company and a trustee appointed to represent all growers who put wheat through the system, whereby, after the company had completed its building programme of capital expenditure and the liabilities of the company were paid off, the management and control of the business of the company would be handed over to grower users. This was effected under the provisions of the State Bulk Handling Act, which was proclaimed on 1st February, 1936. In 1943, the building programme of the company having been completed so far as it was then considered necessary, the management and control of the company were handed over to the growers in accordance with the Deed of Trust. Subject to the provision of the Bulk Handling Act, the company is granted the sole right until 31st December, 1955, of receiving wheat in bulk at railway stations and sidings where the company has installations.

In addition to the 234 sidings equipped for bulk handling, the company operates at Geraldton a shipping gallery and conveyor belt, both of which are owned by the State Government, and a silo at Fremantle which had been erected by the Australian Wheat Board during the war for the fumigation of export wheat. Albany has not yet any terminal facilities, and wheat from that district is shipped through Bunbury, where the storage capacity is 8,000 tons.

Owing to the nature of the system in use in Western Australia, particulars of the capacity comparable with those published for New South Wales and Victoria do not exist. The table below sets out the number of sidings equipped for bulk handling, receipts of bulk wheat and the proportion of the marketable harvest represented by the receivals for the seasons indicated.

BULK WHEAT HANDLED : WESTERN AUSTRALIA.

Season.	Total Sidings Equipped.(*a*)	Total Bulk Receivals.	Receivals as a Proportion of Marketable Harvest.
	No.	Bushels.	%
1931–32	5	1,265,000	3.4
1936–37	102	10,376,000	58.3
1941–42	232	33,304,000	(*b*) 97.8
1946–47	234	20,204,000	(*b*) 99.0
1947–48	234	30,903,113	99.0
1948–49	234	32,815,119	(*c*) 100.0
1949–50	234	34,565,140	(*c*) 100.0

(*a*) These figures do not include four bins in Lakes District erected in 1940, a fifth point at Ravensthorpe equipped for the 1947–48 season, and two installations in East and West Yorkrakine built in 1949. These points are removed from the railway and wheat received is transported by road to the rail or direct to the port. They do not include six points at which wheat is directly loaded into railway wagons. (*b*) Quantities affected by war-time restrictions and difficulties. (*c*) In 1948, the Wheat Stabilization Act passed by the Western Australian Parliament as complementary legislation to the Federal Act provided for all bagged wheat to be treated. This is done by the company paying the grower the value of the bag when received and issuing him a bulk wheat receipt.

19. **World Area and Production of Wheat.**—The details in the following table of the world area and production of wheat by countries and continents have been compiled from official sources so far as they are available, but more particularly from the records published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Relations. The harvests shown for countries in the Northern Hemisphere are those garnered during the period March to October whilst those for the Southern Hemisphere cover the period November to February following.

(*a*) The figures of areas are, as far as possible, those of areas harvested. (*b*) Estimated total including the area and production of countries whose particulars are not shown separately. (*c*) Average of less than five years. (*d*) Not available. (*e*) Production estimates for the U.S.S.R. for the years 1933 and 1934 have been reduced 15 per cent. to take account of heavy harvesting losses. (*f*) Excludes native cultivation.

20. **Exports—Principal Countries.**—The following table shows the net quantities of wheat exported from the chief exporting countries for the period 1934–38 and the years 1948 and 1949 according to statistics recently published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Relations.

While Australia's production of wheat ranges between 2 and 4 per cent. of the world's total, its exports account for a much higher proportion of the total quantities shipped. During the five years 1934–38 Australia's share of world wheat exports was almost 20 per cent., but in 1949 the proportion fell to 13 per cent., although the actual quantity shipped was somewhat greater.

§ 5. Oats.

1. **Area, Production and Average Yield.**—Oats are usually next in importance to wheat amongst the grain crops cultivated in Australia, but while wheat grown for grain in 1949–50 accounted for 59.42 per cent., oats grown for grain represented only 8.48 per cent. of the area of crops. The area, production and average yield per acre of oats for the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown in the following table :—

OATS FOR GRAIN : AREA, PRODUCTION AND AVERAGE YIELD.

(*a*) 40 lb. per bushel.

The principal oat-growing States are New South Wales and Victoria, which produce, on the average, more than half the total quantity grown in Australia. Western Australia and South Australia also produce considerable quantities, but in Queensland and Tasmania the output is small.

Oats are mainly used in Australia as feed grain. During the ten years ended 1949–50 the average annual quantity consumed by stock was about 9.8 million bushels, leaving a balance of about 5.7 million bushels for seed purposes, about 3 million bushels for oatmeal and a small quantity for the production of spirits and for malting. Normally the exports of oats are small, but during the three years 1947–48 to 1949–50 heavy shipments, aggregating 28.3 million bushels, were made.

The smallest average yield per acre ever recorded for Australia was that experienced in the abnormally dry season 1944–45, namely, 4.41 bushels, while the largest in the last ten years was that of the season 1947–48, amounting to 19.33 bushels per acre, this being the highest yield since 1920–21.

2. **Price of Oats.**—The average wholesale prices in the Melbourne market for oats of good milling quality for the years 1945–46 to 1949–50 in comparison with 1938–39 are shown in the following table :—

OATS : MELBOURNE AVERAGE WHOLESALE PRICES.

(s. d.)

(*a*) Excludes the value of straw.

4. **Imports and Exports.**—The production of oats in Australia is sufficient to admit of a regular, though usually small, export trade. The quantities and values of oats imported into and exported from Australia during the years 1945–46 to 1949–50 compared with the average for the years 1934–35 to 1938–39 are shown hereunder :—

OATS : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
Average, 1934–35 to 1938–39	7,723	1,639	286,360	36,458	278,637	34,819
1945–46	1,231,085	251,878	429,163	112,931	— 801,922	— 138,947
1946–47	85	25	106,645	27,934	106,560	27,909
1947–48	177	61	6,803,427	3,945,807	6,803,250	3,945,746
1948–49	278	140	14,853,777	6,160,586	14,853,499	6,160,446
1949–50	797	462	6,625,560	2,303,566	6,624,763	2,303,104

NOTE.—Minus sign (—) denotes net imports.

The quantity of oats imported into Australia is usually not very large, although in 1945–46 imports exceeded exports by 801,922 bushels. Canada was the chief supplier. The previous year when imports exceeded exports was in 1927–28 (by 460,581 bushels) when New Zealand was the main supplier. In 1949–50 the principal countries of destination of the exports were Netherlands, Denmark, Belgium, Norway, Sweden and Italy.

5. **Oatmeal, etc.**—The production of oatmeal amounted in 1949–50 to 420,344 cwt., equivalent to about 2,400,000 bushels of oats, or about 10.2 per cent. of the total production. Prior to the 1939–45 War the exports of oatmeal were small, but in recent years a considerable export trade has developed and in 1949–50 the quantity shipped amounted to 167,307 cwt. or 33.7 per cent. of total production.

6. **World Production.**—The world's production of oats for the year 1950, excluding that produced in U.S.S.R., as compiled by the Food and Agriculture Organization of the United Nations, amounted to 3,242 million bushels. This quantity was harvested from 94 million acres, and represents an average yield of 34.49 bushels per acre. In comparison with this average return per acre, that of Australia for the same period (15.67 bushels) appears very small. Yields in excess of 40 bushels per acre are not uncommon and some European countries record averages in excess of 50 bushels per acre. The following table shows the world's production and average yield for the period 1935–39 and for each of the five years ended 1950.

OATS: WORLD PRODUCTION.

Year.	Area.	Production.	Average Yield per acre.
	Million Acres.	Million Bushels.	Bushels.
Average, 1935–1939	139	4,336	31.26
1946	129	3,920	30.39
1947	128	3,672	28.69
1948(*a*)	91	3,184	34.99
1949(*a*)	93	3,074	33.05
1950(*a*) (*b*)	94	3,242	34.49

(*a*) Excludes U.S.S.R. (*b*) Preliminary. Subject to revision.

§ 6. Maize.

1. **States Growing Maize.**—Maize is grown for grain chiefly in Queensland and New South Wales, the area so cropped in these States during the 1949–50 season being 188,422 acres, or 97 per cent. of the total for Australia. Of the balance, Victoria contributed 5,136 acres and Western Australia 20 acres. The climate of Tasmania is generally unsuitable for the growing of maize for grain although 10 acres were sown in this State in 1949–50. In the States mentioned the crop is also grown to a greater or lesser extent for green fodder, particularly in connexion with the dairying industry.

2. **Area, Production and Average Yield.**—Although maize for grain is grown extensively in other countries, the area sown to maize for grain in Australia has averaged only about 258,222 acres during the past decennium. Compared with the previous year, the area in 1949–50 increased by 11,633 acres but was considerably less than the comparatively large areas of 414,914 and 400,544 acres sown in 1910–11 and 1927–28 respectively.

The area, production and average yield per acre of maize for grain in each State for the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are given in the following table,

MAIZE FOR GRAIN: AREA, PRODUCTION AND AVERAGE YIELD.

Value per acre	..	£16/13/3	£24/0/10	£12/14/0	..	£21/14/0	£15/0/0	£5/0/0	£14/9/10

5. **Maize Products.**—Imports of cornflour into Australia are negligible. Exports of cornflour, which prior to the war were very small, increased considerably during the war years, the principal country of destination being New Zealand. In 1949–50, 1,986,901 lb., valued at £64,214, were exported, compared with an annual average of 36,761 lb., valued at £364, during the five years ended 1938–39. It should be noted that these figures include some quantities of " cornflour " made from wheat.

6. **Oversea Imports and Exports.**—Details of the imports and exports of maize for the five years ended 1949–50 compared with the five-yearly average ended 1938–39 are shown below.

MAIZE : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
Average, 1934–35 to 1938–39	20,609	4,209	57,432	8,571	36,823	4,362
1945–46	14	140	411	899	397	759
1946–47	389	871	1,468	6,147	1,079	5,276
1947–48	313	1,036	547,536	627,565	547,223	626,529
1948–49	601	656	126,686	105,786	126,085	105,130
1949–50	59	78	1,201,032	613,604	1,200,973	613,526

7. **World Production.**—The following table furnishes particulars of the world's acreage, production and average yield per acre of maize, according to records published by the Food and Agriculture Organization of the United Nations :—

MAIZE : WORLD PRODUCTION.

Year.	Area.	Production.	Average Yield per Acre.
	Million Acres.	Million Bushels.	Bushels.
Average, 1935–1939	216	4,725	21.88
1946	214	5,209	24.34
1947	215	4,772	22.20
1948(*a*)	208	5,929	28.50
1949(*a*)	208	5,456	26.23
1950(*a*) (*b*)	208	5,228	25.13

(*a*) Excludes U.S.S.R. (*b*) Preliminary. Subject to revision.

The United States of America is the most important maize-producing country in the world and during the three years ended 1950 the area sown to maize in that country averaged 85.3 million acres or 41.1 per cent. of the world total. During the same period production averaged 3,388 million bushels or about 61 per cent. of the world total. About 81 per cent. of the production is fed to live-stock on farms, 10 per cent. is used for human food, and approximately 4 per cent. is exported.

§ 7. Barley.

1. **Area, Production and Average Yield.**—(i) *Total Crop.* The area sown to barley for grain expanded considerably during the ten years preceding the 1939–45 War—from 383,000 acres in 1930–31 to 836,000 acres in 1939–40. This increase was followed by a decline to 443,000 acres in 1943–44, but the area sown has increased in succeeding years and reached the record level of 1,040,000 acres in 1949–50. Victoria was originally the principal barley-growing State, but since 1913–14 its place has been taken by South Australia which accounted for 65 per cent. of the Australian acreage in 1949–50. Victoria was next in importance with 25 per cent. leaving a balance of about 10 per cent. distributed among the other States. The totals here given relate to the areas harvested for grain; small areas are sown for hay, but more considerable quantities are cut for green forage. These, however, are not included in this section. The area, production and average yield per acre of barley for grain in the several States for the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown in the following table :—

BARLEY FOR GRAIN : AREA, PRODUCTION AND AVERAGE YIELD.

(*a*) 50 lb. per bushel.

(ii) *Malting (2–row) and Other (6–row) Barley.* (*a*) *Season* 1949–50. In the following table details of the area sown to barley of the 2-row or malting variety and 6–row or feed variety, and production therefrom for the season 1949–50 are given by States :—

BARLEY, MALTING (2-ROW) AND OTHER (6-ROW): AREA AND PRODUCTION, 1949–50.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
			Area ('000 Acres.)					
Malting (2-row) ..	9	212	17	651	34	4	..	927
Other (6-row) ..	4	24	8	43	34	..	..	113
Total ..	13	236	25	694	68	4	..	1,040
			Production ('000 Bushels).					
Malting (2-row) ..	203	4,406	390	11,976	475	119	..	17,569
Other (6-row) ..	62	470	188	750	493	11	..	1,974
Total ..	265	4,876	578	12,726	968	130	..	19,543

Taking Australia as a whole, about 89 per cent. of the area of barley for grain in 1949–50 was sown with malting or 2–row barley while the remainder consisted of 6–row, or feed varieties. The proportion, however, varied considerably in the several States. The disposal of barley during the season 1949–50 was as follows: malt works, 5,293,979 bushels; flour and other grain mills, 264,395 bushels; distilleries, 194,812 bushels; exports, 5,351,397 bushels; leaving a balance of 8,438,232 bushels for feed, seed and other purposes.

(*b*) *Area, Production and Average Yield.* The following table sets out the acreage and production of malting and other barley in Australia during the seasons 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50.

BARLEY, MALTING AND OTHER: AREA AND PRODUCTION, AUSTRALIA.

Season.	Area. ('000 Acres.)			Production. ('000 Bushels.)			Average Yield per Acre. (Bush.)		
	Malting (2-row).	Other (6-row).	Total.	Malting (2-row).	Other (6-row).	Total.	Malting (2-row).	Other (6-row).	Total.
Average, 1929–30 to 1938–39 ..	428	67	495	7,480	1,073	8,553	17.49	16.03	17.29
1945–46 ..	593	106	699	9,581	1,536	11,117	16.15	14.52	15.90
1946–47 ..	663	85	748	10,558	1,038	11,596	15.92	12.27	15.50
1947–48 ..	745	94	839	18,936	1,920	20,856	25.43	20.46	24.87
1948–49 ..	899	113	1,012	15,930	1,855	17,785	17.72	16.46	17.58
1949–50 ..	927	113	1,040	17,569	1,974	19,543	18.95	17.51	18.79
Average, 1940–41 to 1949–50 ..	634	105	739	11,184	1,509	12,693	17.64	14.37	17.18

During the past ten seasons the average area of barley of the malting, or 2-row class, was six times the corresponding figures for barley of the 6-row, or feed class. The average yield per acre for the last ten-yearly period for malting barley was 23 per cent. higher than that for 6-row barley.

2. **Australian Barley Board.**—Following the outbreak of war in 1939, the Australian Barley Board, representative of the industry, was formed, and the Commonwealth Government acceded to its request to acquire the entire 1939–40 barley crop, which was placed under the control of the Board. A pool was established from which proceeds were distributed with appropriate margins for different grades of barley.

The Board was responsible for the marketing and storage of barley, and, like the Australian Wheat Board, appointed licensed receivers to receive grain on its behalf and to act as agents for all local and oversea sales.

Following the decision of the Commonwealth Government not to acquire barley in smaller producing States after 1941–42, the Governments of Western Australia and Queensland established State Barley Boards to control marketing in these States.

Particulars of the barley acquired and sold, and of advances made to growers by the Australian Barley Board in respect of the 1945–46 to 1947–48 crops are given in the following table. The Commonwealth Government did not acquire barley after the 1947–48 crop, and the Victorian and South Australian Governments formed a joint board under the same name as the former Commonwealth board to market the 1948–49 and subsequent crops of the two States. Details of these acquisitions are also shown in the table below.

AUSTRALIAN BARLEY BOARD: BARLEY ACQUIRED, SOLD, ETC., TO 30th SEPTEMBER, 1951.

Pool.	Quantity Acquired.	Quantity Sold.(*a*)	Total Advances made per Bushel on 2-row No. 1 Grade excluding freight.	Total Payments to Growers.

(*a*) Excludes the value of straw.

5. **Imports and Exports.**—Australian exports of barley during the five years ended 1949–50 averaged 6,517,000 bushels, South Australia being the principal exporting State. Particulars of the Australian oversea imports and exports for the years 1945–46 to 1949–50 together with the average for the five years ended 1938–39 are shown in the following table :—

BARLEY : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.

1949–50	..	4	10,703	6,433,051	10,703	6,433,047

NOTE.—Minus sign (−) denotes net imports.

In addition to barley grain, there is also an export of Australian pearl and scotch barley, the total for 1949–50 amounting to 1,882,772 lb., valued at £37,223, and consigned mainly to Ceylon, Singapore and Malaya.

6. **Malt.**—(i) *Production.* The production of malt in Australia is sufficient to meet local requirements and to provide a margin for export as indicated below. Details of the quantity of grain used and the production of barley and other malt are given in the following table.

MALT : GRAIN USED AND MALT PRODUCED, AUSTRALIA.

Year.	Barley Malt.		Wheaten and Oaten Malt.	
	Grain used.	Malt produced.	Grain used.	Malt produced.
	Bushels.	Bushels.(*a*)	Bushels.	Bushels.(*a*)

1946–47	4,669,729	4,563,920	173,772	158,387
1947–48	4,976,615	4,879,145	186,772	170,877
1948–49	5,048,387	4,989,371	170,615	160,766
1949–50	5,293,979	5,437,539	186,092	174,872

(*a*) 40 lb. per bushel. (*b*) Not available.

(ii) *Imports and Exports.* The surplus production of malt in Australia, after meeting local requirements, is shipped chiefly to the Far East and New Zealand. Details of imports and exports for the years 1945–46 to 1949–50, together with the average for the five years ended 1938–39, are given in the next table :—

MALT : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
Average, 1934–35 to 1938–39	248	133	108,798	37,780	108,550	37,647
1945–46 ..	..	..	15,040	6,590	15,040	6,590

1948–49 ..	14,002	16,508	..	..	−14,002	− 16,508
1949–50 ..	98,132	110,295	2,672	2,654	−95,460	−107,641

NOTE.—Minus sign (—) denotes net imports.

7. **World Production.**—In comparison with the barley production of other countries, that of Australia is extremely small. World production in 1950 is placed at 2,113 million bushels, the main producers being China and the United States of America. Australian production in that year was less than one per cent. of the world total.

The following table shows the latest available details of the world's acreage of barley, together with the production and average yield per acre, according to the results compiled by the Food and Agriculture Organization of the United Nations :—

BARLEY : WORLD PRODUCTION.

Period.	Area.	Production.	Average Yield per Acre.
	Million Acres.	Million Bushels.	Bushels.
Average, 1935–1939	114.2	2,338	20.47

1947	110.7	2,122	19.17
1948(*a*)	92.4	2,044	22.12
1949(*a*)	93.2	1,957	21.00
1950(*a*) (*b*)	96.4	2,113	21.92

(*a*) Excludes U.S.S.R. (*b*) Preliminary. Subject to revision.

§ 8. Rice.

Rice growing is almost entirely concentrated in Asia and the extent to which this crop is grown in other countries is relatively small. In Australia experimental rice cultivation was carried on at the Yanco Experimental Farm in New South Wales for a number of years before 1924–25, but it was not until that year that an attempt was made to grow the crop on a commercial basis, 16,240 bushels being produced from 153 acres, or an average of 106 bushels per acre. Favoured by tariff protection and high average yields, the development of rice culture in the Murrumbidgee Irrigation Area made rapid progress, and production soon equalled Australian requirements and later provided a margin for export.

The area which growers may plant is subject to control. Each year representatives of the Rice Marketing Board, rice growers, the Department of Agriculture and the Water Conservation and Irrigation Commission of New South Wales meet to decide the maximum area which growers may plant in the following season, the extent of any expansion being determined by the limits imposed by the quantity of water available.

For the five years ended 1938–39 the area sown to rice in the Murrumbidgee Irrigation Area averaged 22,800 acres. No marked expansion occurred until after Japan's entry into the war in 1941. The area was increased to 34,300 acres in 1942–43 and to 36,500 acres in 1943–44. This expansion was not sufficient to meet the war-time demand and new areas in the Wakool and Benerembah Irrigation Districts of New South Wales were developed, bringing the total area for the State and for Australia to 40,690 acres in 1943–44. Owing to water shortage the area sown in 1944–45 fell to 24,596 acres, but rose to 28,372 acres in 1945–46 and to 31,995 acres in 1946–47. A decline to 26,208 acres was recorded in 1947–48, but the area expanded rapidly in 1948–49 to 32,689 acres, and to 37,540 acres in 1949–50.

The production of paddy rice reached its highest level in 1943–44 with more than 4 million bushels or an average yield of just under 100 bushels per acre. In 1944–45 it dropped to nearly 1.7 million bushels or 68.8 bushels per acre, owing to water shortage arising from severe drought conditions. In 1949–50 production amounted to 3.8 million bushels or an average of 100.78 bushels per acre.

Prior to 1938–39 the greater part of Australia's export of rice was consigned to the United Kingdom, but, because of shortages in Pacific areas arising from war damage in south-east Asia, exports from Australia have been diverted mainly to the islands in this region.

Details relating to area, production, and trade for the years 1945–46 to 1949–50 compared with the averages for the years 1934–35 to 1938–39 are shown in the following table :—

RICE : AREA, PRODUCTION AND TRADE, AUSTRALIA.(*a*)

(*a*) Rice growing in Australia has been confined to New South Wales. (*b*) Excludes the value of straw. (*c*) 42 lb. per bushel. (*d*) 1938–39 figure, previous years not collected.

§ 9. Sorghum for Grain.

1. **Area, Production and Average Yield.**—The growing of sorghum for grain on an extensive scale is a recent development in Australia. No details of the area and production of this cereal are available prior to 1939–40, but the output was of little importance. The climatic conditions of Queensland and northern New South Wales are particularly suited for the growing of sorghum and the development so far has been restricted to these areas, but more particularly to Queensland which accounts for the greater portion of the area sown. The grain produced is fed to live-stock and is becoming an important source of supply for supplementing other coarse grains for the feeding of live-stock. Other sorghums are grown in Australia mainly as green fodder, hay and for the production of brush for broom manufacture. Details of these are included in § 14 and § 19 hereinafter. Particulars of the area and production of sorghum grown for grain are given in the following table.

GRAIN SORGHUM : AREA, PRODUCTION AND AVERAGE YIELD, AUSTRALIA.

2. **Queensland-British Food Corporation Project.**—Early in 1948 an agreement was entered into between the Queensland Government and the Overseas Food Corporation of the United Kingdom Government to develop selected areas of Central Western Queensland for the growing of grain sorghum for pig-raising in Queensland and/or for export to the United Kingdom, and for sunflower and possibly other oilseed production. The Queensland-British Food Corporation was established in April, 1948 with head-quarters in Brisbane, some 300,000 acres of land being initially acquired for the project. The land acquired comprises the pastoral property known as "Peak Downs" and other similar properties in the Central Western District of the State and is estimated to embrace about 180,000 acres of arable land. The first year's operations of the Corporation consisted of developmental work, the seeding of 29,286 acres of grain sorghum, and the sowing of small areas with sunflower and other experimental crops on the "Peak Downs" property for 1949 cropping. During the 1950, 1951 and 1952 seasons the Corporation continued operations on sorghum and sunflower seed production, while two piggeries were established during the second half of 1950. In addition, beef cattle were run on certain areas suitable only for grazing. However, because of losses incurred, the United Kingdom and Queensland Governments decided, early in 1953, to abandon the project. Although the scheme has resulted in financial loss, the activities of the Corporation have done much to indicate ways by which grain sorghum production and beef cattle husbandry can be used as a basis for closer settlement of the great tracts of brigalow country in Queensland.

§ 10. Other Grain and Pulse Crops.

In addition to the grain crops already specified, the principal other grain and pulse crops grown in Australia are navy beans, blue peas and rye.

The recorded areas of crops of blue peas and navy beans for the season 1949–50 were 7,813 acres and 2,177 acres respectively, giving yields of 4,029 tons and 779 tons or averages of 0.52 tons and 0.36 tons respectively per acre. Details of these crops are incomplete as New South Wales did not collect particulars of area or yield of navy beans or blue peas.

The total area of rye in Australia during the season 1949–50 was 63,160 acres, yielding 410,536 bushels, or an average of 6.50 bushels per acre, as compared with the average of 5.74 bushels for the last ten seasons. Of the total area sown to rye in 1949–50, about 62.6 per cent. was in South Australia, 26.4 per cent. in Victoria, and 8.3 per cent. in Western Australia.

§ 11. Potatoes.

1. **Area, Production and Average Yield.**—Victoria possesses peculiar advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavorable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands, and the south-western and Gippsland districts. Tasmania comes next in order of acreage sown, although the production exceeded that of Victoria in some of the war years. New South Wales occupies third place in acreage and production. The area for these three States accounted for 81 per cent. of the total for Australia in 1949–50.

The area sown, production and average yield per acre of potatoes in each State during the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown hereunder :—

1949–50	2.97	3.31	2.64	5.66	5.72	3.58	5.90	3.52
Average, 1940–41 to 1949–50	2.66	3.63	2.19	4.88	5.11	3.78	5.36	3.54

The area sown to potatoes averaged 129,605 acres during the ten years ended 1938–39 and rose to 151,652 acres for the decennium ended 1949–50. After the outbreak of war in the Pacific in December, 1941, the area sown to potatoes rose rapidly and reached a peak of 241,803 acres in 1944–45. This was followed by a sharp fall to 176,079 acres in 1945–46 and to 144,729 acres in 1946–47. The acreage recorded in 1947–48 was slightly higher at 145,629 acres but this was followed by a further sharp decline to 119,682 acres in 1948–49. In 1949–50 the acreage increased to 134,002 acres.

Compared with the average yield per acre obtained in other countries, that returned for Australia is low ; the production in New Zealand, for example, in 1948–49 averaged 6.08 tons per acre from an area of about 20,000 acres, as compared with 3.84 tons per acre in Australia from 119,682 acres.

2. **Gross Value of Potato Crop.**—The estimated gross value of the potato crop of each State for the seasons 1948–49 and 1949–50 is shown in the following table :—

POTATOES : VALUE OF CROP, 1948–49 AND 1949–50.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1948–49—								
Aggregate value £	1,281,970	2,960,268	502,076	561,918	580,062	2,227,420	11,725	8,125,439
Value per acre ..	£70/16/6	£64/13/2	£44/17/10	£95/17/10	£91/8/8	£68/18/5	£131/14/10	£67/17/10
1949–50—								
Aggregate value £	1,766,390	3,259,460	690,322	774,598	755,895	1,878,800	16,238	9,141,703
Value per acre ..	£75/11/9	£64/7/0	£59/7/9	£106/18/4	£109/12/7	£55/1/7	£150/7/0	£68/4/5

3. **Consumption.**—The annual consumption of potatoes in Australia during each of the three years 1947–48 to 1949–50 amounted to 450,251 tons, 376,898 tons and 391,800 tons respectively, or 132.0 lb., 108.3 lb. and 109.0 lb. per head of population respectively. These figures exclude the quantities used for seed, which averaged about 60,000 tons annually over this period. Consumption during the three years ended 1938–39 averaged 318,500 tons (103.8 lb. per head of population) excluding 37,000 tons for seed. New South Wales, Queensland and, in some seasons, South Australia do not produce the quantities necessary for their requirements and must import from Tasmania and Victoria which have a surplus.

4. **Australian Potato Committee.**—Full details of the war-time potato marketing scheme operated under the National Security (Potatoes) Regulations by the Australian Potato Committee were shown on p. 929 of Official Year Book No. 37. The Committee ceased to function as from the close of the 1947–48 season.

5. **Post-war Marketing.**—Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948 with the completion of sales of the 1947–48 crop.

The 1948–49 crops have been marketed by Boards established in the respective States under State legislation. Although the State Boards operate separately they have a working arrangement for the interstate marketing of potato crops.

6. **Imports and Exports.**—Prior to the 1939–45 War, small quantities of potatoes were exported, principally to the Pacific Islands and Papua. Since the war, an expanded export trade has been developed, principally with Eastern countries, including Singapore, Ceylon, Hong Kong and Indo-China. Details showing the trade for the years 1945–46 to 1949–50 and the period 1934–35 to 1938–39 are given in the following table :—

POTATOES : IMPORTS AND EXPORTS, AUSTRALIA.

§ 12. Onions.

1. **Area, Production and Average Yield.**—Australia's supply of onions comes chiefly from Victoria, which accounted for 54.4 per cent. of the total area and 53.3 per cent. of the quantity produced in 1949–50. Queensland came next with nearly 31.5 per cent. of the area and 27.5 per cent. of the production, leaving a balance of about 14.1 per cent. of area and 19.2 per cent. of production distributed among the remaining four States. The Victorian crop consists almost entirely of brown onions of good keeping qualities, and the bulk of the crop is grown in a small section of the Western Division of the State, where soil conditions have been found to be particularly suitable for onion growing on a commercial scale. Details of the area, production and average yield per acre are given in the following table for the years 1945–46 to 1949–50 together with averages for the ten-year periods ended 1938–39 and 1949–50.

Details of the area and production of fresh vegetables other than potatoes and onions are given in § 18.

2. **Gross Value of Onion Crop.**—The gross value of the onion crop is shown in the following table for the years 1948–49 and 1949–50.

ONIONS : VALUE OF CROP, 1948–49 AND 1949–50.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
1948–49—								
Aggregate value £	23,370	533,439	145,965	82,850	72,438	4,270	508	862,840
Value per acre ..	£72/11/7	£96/1/0	£44/6/6	£166/7/4	£145/3/4	£137/14/11	£127/0/0	£88/12/6
1949–50—								
Aggregate value £	19,270	558,886	282,834	119,782	73,509	3,250	550	1,058,081
Value per acre ..	£85/12/11	£136/10/11	£119/5/9	£275/7/3	£198/2/9	£116/1/5	£183/6/8	£140/11/10

3. **Consumption.**—The annual consumption of onions in Australia averaged 50,400 tons or 14.5 lb. per head of population during the three years ended 1949–50 compared with 40,600 tons or 13.2 lb. per head during the three years ended 1938–39. These figures exclude an estimated wastage which averaged 7,900 tons and 4,500 tons respectively.

4. **Imports and Exports.**—Onions are the only root crop, other than potatoes, in which any considerable oversea trade is carried on by Australia. The last year in which onions imported was 1946–47 when approximately 100 tons were obtained, principally from New Zealand. During 1949–50 exports, which amounted to 5,901 tons, valued at £161,204, were shipped mainly to Singapore and the Pacific Islands.

§ 13. Hay.

1. **General.**—(i) *Area and Production.* As already stated, the chief crop in Australia is wheat grown for grain. In most years hay has been next in importance but in each of the three years ended 1949–50 it was third to oats (for grain).

In 1949–50 the hay area represented 7.8 per cent. of the total area cropped. A graph showing the area sown to hay since 1860 appears on page 973. In most European countries the hay consists almost entirely of meadow and other grasses, but in Australia a very large proportion consists of oats, wheat and lucerne. The area, production and average yield per acre of hay of all kinds in the several States during the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown below :—

HAY : AREA, PRODUCTION AND AVERAGE YIELD.

Owing to various causes, the principal being the variation in the relative prices of grain and hay and the favourableness or otherwise of the season for a grain crop, the area of hay is liable to fluctuate considerably. The area under hay in Australia during the season 1915–16, 3,597,771 acres, was the largest on record, whilst the average for the decennium ended 1949–50 was 2,184,140 acres.

(ii) *Varieties Grown.* Information regarding areas cut for hay is available for all States, and details for 1949–50 are given in the following table. Similar information for each year from 1943–44 to 1947–48 compared with 1938–39 may be found in Official Year Book No. 38, page 983, while details for 1948–49 appear in *Production Bulletin* No. 43, Part II.—*Primary Industries.*

HAY : AREA UNDER VARIOUS KINDS GROWN, 1949–50.
(Acres.)

State.	Wheaten.	Oaten.	Lucerne.	Other.	Total.
New South Wales ..	122,295	113,314	92,190	11,292	339,091
Victoria	39,117	272,100	(a) 46,976	248,332	606,525
Queensland	3,835	3,800	41,455	6,018	55,108

Total	335,673	683,585	191,785	394,197	1,605,240

(*a*) Includes barley ane rye hay.

For all States and the Australian Capital Territory combined the proportions of the areas sown to the principal kinds of hay in 1949–50 were 43 per cent. for oaten, 21 per cent. for wheaten, 12 per cent. for lucerne, and 24 per cent. for other hay. In that year, oaten hay predominated in the States of Victoria, South Australia and Western Australia, wheaten hay in New South Wales, and lucerne in Queensland.

2. **Value of Hay Crop.**—The following table shows the value, and the value per acre, of the hay crop of the several States for the seasons 1948–49 and 1949–50 :—

HAY : VALUE OF CROP, 1948–49 AND 1949–50.

3. **Farm Stocks of Hay.**—Details of stocks of hay held on farms are now collected at the annual census of farm production. Particulars of stocks so held at 31st March in each year 1946 to 1950 are given in the table below.

STOCKS OF HAY HELD ON FARMS.

(Tons.)

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1946 ..	504,521	1,026,581	86,722	307,494	156,841	78,414	2,123	2,162,696
1947 ..	226,926	1,019,728	58,507	388,993	156,908	113,740	950	1,965,752
1948 ..	825,821	1,059,842	96,158	478,142	164,425	95,147	3,676	2,723,211
1949 ..	691,608	969,242	84,170	404,813	167,433	88,098	3,345	2,408,709
1950 ..	680,498	1,014,747	101,222	341,888	179,783	116,549	2,530	2,437,217

4. **Imports and Exports.**—Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely amongst the imports and exports of Australia. During 1949–50, 5 tons were imported, while the exports amounted to 4,578 tons, valued at £45,665.

§ 14. Green Fodder.

1. **Nature and Extent.**—Considerable areas are devoted to the growing of green fodder, mainly in connexion with the dairying industry. The areas recorded in respect of green fodder include areas of crops cut for feeding to live stock as green fodder, together with areas fed off to stock as green forage. Included with the latter are areas which may have been sown with the intention of harvesting for grain, but which, due to adverse seasonal conditions, showed no promise of producing grain or even hay and were fed off to live stock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye and sugar-cane also are so used. In 1949–50 the area under green fodder (2,177,896 acres) consisted of oats (1,216,246 acres), lucerne (236,681 acres), wheat (138,496 acres), sorghum (65,614 acres), maize (48,053 acres), barley (70,327 acres), rye (30,469 acres), sugar-cane (5,855 acres) and other crops (366,155 acres). Particulars concerning the area of green fodder in the several States during each of the years 1945–46 to 1949–50 are given in the following table together with the average for the periods of ten years ended 1938–39 and 1949–50 :—

GREEN FODDER : AREA.

(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average, 1929–30 to 1938–39	482,989	120,355	347,804	106,820	189,332	24,255	656	1,272,211
1945–46	541,810	63,311	581,905	189,882	288,206	138,540	2,094	1,805,748
1946–47	462,894	49,659	543,030	121,800	319,181	103,607	2,091	1,602,262
1947–48	488,028	46,100	511,115	141,452	400,100	116,482	2,044	1,705,321
1948–49	548,106	50,847	544,669	291,688	447,411	125,961	2,150	2,010,832
1949–50	584,541	44,928	581,811	277,265	550,690	136,412	2,249	2,177,896
Average, 1940–41 to 1949–50	594,091	77,238	574,072	223,498	396,712	84,625	1,683	1,951,919

2. **Value of Green Fodder Crops.**—The value of these crops is variously estimated in the several States, and the Australian total for the season 1949–50, excluding Western Australia, may be taken approximately as £3,894,000.

§ 15. Sugar-cane and Sugar-beet.

1. **Sugar-cane.**—(i) *Area.* Sugar-cane growing appears to have commenced in Australia in or about 1862, and is confined to New South Wales and Queensland. A brief outline of the development of the industry was included in earlier issues of the Official Year Book (*see* No. 38, page 985). The area of sugar-cane in Australia for the seasons 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown in the following table. In 1949–50 the total area of sugar-cane (excluding areas cut for green fodder) was a record at 398,224 acres, an increase of 3.8 per cent. over the 1948–49 area of 383,501 acres.

SUGAR-CANE : AREA.(a)

(Acres.)

Season.	New South Wales.			Queensland.			Australia.			
	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Total.
Average, 1929–30 to 1938–39 ..	9,106	9,023	140	229,327	75,409	9,368	238,433	84,432	9,508	332,373

1949–50 ..	8,517	8,081	297	272,812	97,878	10,639	281,329	105,959	10,936	398,224
Average, 1940–41 to 1949–50 ..	8,095	8,597	287	237,648	83,511	12,186	245,743	92,108	12,473	350,324

(*a*) Excludes areas cut for green fodder.

(ii) *Productive and Unproductive Cane.* The areas shown in the preceding table do not include the small acreage cut for green fodder, which in 1949–50 amounted to 5,855 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and "stand-over" cane as well as a small quantity required for plants. Thus the season in which the highest acreage is recorded may not show the greatest area of productive cane cut for crushing.

(iii) *Production of Cane and Sugar.* For Queensland, statistics of the production of sugar-cane are not available prior to the season 1897–98. In that season the total for Australia was 1,073,883 tons, as against the maximum production of 6,848,780 tons in 1949–50.

The average production of cane during the ten seasons ended 1949–50 was 5,037,442 tons, and of raw sugar 709,930 tons. Particulars of the total production of cane and sugar for the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are as follows.

SUGAR-CANE : PRODUCTION OF CANE AND SUGAR.

(Tons.)

Season.	New South Wales.		Queensland.		Australia.	
	Cane.	Sugar.(a)	Cane.	Sugar (a)	Cane.	Sugar.(a)
Average, 1929–30 to 1938–39	241,402	30,317	4,461,988	626,789	4,703,390	657,106
1945–46	166,069	21,220	4,551,971	644,661	4,718,040	665,881
1946–47	309,605	39,768	3,717,330	512,086	4,026,935	551,854
1947–48	267,261	33,560	4,150,986	571,694	4,418,247	605,254
1948–49	273,974	33,003	6,433,556	910,049	6,707,530	943,052
1949–50	330,738	40,706	6,518,042	896,413	6,848,780	937,119
Average, 1940–41 to 1949–50	287,806	37,179	4,749,636	672,751	5,037,442	709,930

(a) Sugar at 94 net titre.

The production of raw sugar in Australia in 1949–50 amounted to 937,119 tons manufactured from 6,848,780 tons of cane, compared with the record production of 943,052 tons in 1948–49.

Official annual data are not available regarding the total number engaged in the sugar industry in Queensland, other than the number of separate holdings growing cane (6,309 in 1949–50) and of employees in sugar mills (5,898 in 1949–50).

According to data obtained from the population census of 30th June, 1947, the number of persons engaged in the sugar-cane industry in New South Wales and Queensland comprised 15,789 males and 287 females, a total of 16,076 persons, of whom 2,521 were employers and 4,549 were self-employed.

(iv) *Average Production of Cane Sugar.* Owing to climatic variation, comparison between the average yields of cane per productive acre in Queensland and New South Wales cannot be accurately made except on an annual basis. In New South Wales the crop matures in from 20 to 24 months, whereas in Queensland a period of from 12 to 14 months is sufficient. Allowing for the disparity in maturing periods the average annual yields of cane per productive acre during the ten years ended 1949–50 were 19.39 tons for New South Wales, and 18.45 tons for Queensland. Similarly, the yields of sugar per acre crushed for the same period were estimated at 2.50 tons and 2.61 tons respectively. Apart from the consideration mentioned above, the yields of cane and sugar per acre crushed for Australia for the ten years ended 1949–50 were 20.50 tons and 2.89 tons respectively, as compared with 19.73 tons and 2.76 tons for the decennium ended 1938–39.

(v) *Quality of Cane.* The quantity of cane required to produce a ton of sugar varies with the variety planted, the district and the season. For the ten years ended 1949–50 it required on the average 7.10 tons of cane to produce 1 ton of sugar, or 14.08 per cent. of its total weight, as compared with 7.15 tons for the ten years ended 1938–39. As the result of the systematic study of cane culture in Queensland and improvements in field and mill methods the sugar content of the cane has been considerably increased, and in 1937–38 only 6.78 tons of cane were required to produce one ton of sugar. It is believed that this is the highest sugar content obtained anywhere in the world.

The Bureau of Sugar Experiment Stations in Queensland is rendering useful service to the sugar industry by advocating and demonstrating better methods of cultivation, the more scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane.

(vi) *Production and Utilization.* Details of the production and utilization of raw sugar for the three years ended 1938–39 and each year 1946–47 to 1950–51 are shown below. It should be noted that the details of sugar production refer to the annual periods shown, without regard to the season in which the sugar was produced; they include beet sugar. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

RAW SUGAR: PRODUCTION AND UTILIZATION, AUSTRALIA.

(*a*) Includes Condiments, Pickles, etc. (*b*) Includes sugar consumed in the industrial and heavy chemicals and dehydrated fruit and vegetables industries. (*c*) Excludes raw sugar used in wineries and distilleries, details of which are not available for publication.

(viii) *Control of Cane Production in Queensland.* Agreements between the Commonwealth and Queensland Governments have fixed the wholesale price of sugar and sugar products from time to time. On 1st September, 1946, a Sugar Agreement Act came into operation, fixing the wholesale price at £33 4s. per ton (4d. per lb. retail). Subsequently this Act was twice amended, in December, 1947, when the price was raised to £37 6s. 8d. per ton (4½d. per lb. retail) and in October, 1949, when a further increase to £41 9s. 4d. per ton (5d. per lb. retail) was granted. This Act was due to expire on 31st August, 1951, but on 27th June, 1951, a new agreement was signed. This new agreement, which came into operation on 7th July, 1951, repealed the 1946, 1947 and 1949 agreements and increased the wholesale price to £53 6s. 8d. per ton (6½d. per lb. retail). The new agreement is intended to cover the period up to 31st August, 1956.

The net proceeds of all sugar sold in Australia and sugar sold abroad are pooled and a uniform price per ton is paid to the mills. This pooling is made possible by the acquisition by the Queensland Government of all sugar produced in the State, under legislation which has been in force since 1915. The small New South Wales production (about 5 per cent. of the whole) is also acquired by the Queensland Government by private agreement.

Sugar production, which in 1923 had scarcely been sufficient to cover Australian requirements, grew very rapidly in subsequent years. In 1925 the Queensland Government took steps to prevent, as a general rule, new land from being opened up for cane production. During that year 56 per cent. of the sugar production was consumed in Australia and 44 per cent. exported. After 1925, production remained stable for some years. In 1929 the operations of the pool, which had hitherto received at a uniform price all sugar offered it by the mills, were re-organized. After 1929, mills received the full pool price for sugar up to the amount of their previous maximum production only. Any further supplies were acquired at export price only.

Between 1929 and 1939 the export price was generally less than half the pool price. In spite of this, production increased by 72 per cent. during that period. In 1939, in view of the fact that the International Sugar Agreement imposed certain restrictions on the volume of Australian exports, the Queensland Parliament passed further legislation limiting the pool (mill peaks) to 737,000 tons in respect of production in Queensland. Any production in excess of this was to be acquired at a penalty price. This tonnage was divided up in quotas between the mills, on the understanding that the mills would allocate quotas of production to individual farmers. Proclamations issued by the Queensland Government, however, permitted the harvesting of the whole of the crops for the seasons 1939 to 1948.

In 1948 the mill peak was raised to 874,000 tons. As a result of the Commonwealth Countries Sugar Marketing Agreement, negotiated in London in December, 1949, the Queensland Government initiated a controlled expansion of the industry, and for the 1950 season mill peaks were increased to 942,300 tons. Further increases in mill peaks to 1,045,000 tons were subsequently announced, to operate from 1953.

2. **Sugar-beet.**—The production of sugar-beet, which in recent years has been confined to Victoria, fell from an average of 4,642 tons in the ten years ended 1938–39 to 584 tons in 1947–48. There was no production during 1948–49 and 1949–50.

3. **Sugar Agreement in Australia—Embargo on Imports, etc.**—Reference was made in Official Year Book No. 37 (pp. 940, 941) to the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. A new agreement operating from 7th July, 1951 covers the period up to 31st August, 1956.

4. **International Sugar Agreement.**—Delegates of 21 Nations, representing 90 per cent. of producers, met in London and entered into an agreement on 6th May, 1937, providing for the regulation of the production and marketing of sugar in the world during a period of five years from 1st September, 1937. The object of the agreement was to ensure an adequate supply of sugar at a price not exceeding the cost of production, including a reasonable profit to efficient producers. For this purpose, each exporting country was given a basic annual export quota which would be increased in proportion to any expansion in sugar consumption. By this means and by limitations on stocks and measures to encourage more consumption it was hoped that the International Sugar

Council, which was established to administer the agreement, would be able to hold in proper balance the supplies and requirements of sugar. The export quota originally allotted to Australia was 400,000 long tons. This figure could be increased, however, where the delivery from any British Colony fell short of its quota. In such circumstances, the deficiency could be allocated among other producing countries of the Empire, including Australia.

This agreement, which normally would have expired on 31st August, 1942, has proved of great benefit to Australia. In 1943, fourteen of the original 21 Nations signed a protocol continuing the agreement for another two years ending 31st August, 1944. Eight further protocols have since been signed, each extending the agreement for a period of one year, the last protocol extending the agreement to 31st August, 1952. The first protocol, signed in 1943, continued the agreement unchanged, while the latter protocols contained two new provisions. The first of these provisions was that during the period of the extension, the quotas fixed in the agreement should be inoperative. The second provision was that the signatories of the protocols recognized that revision of the agreement was necessary and should be undertaken when the time appeared opportune. The protocols prescribed that, in any negotiations for a new agreement, the existing agreement shall be taken as the starting point.

5. **Net Return for Sugar Crop.**—Calculations by the Sugar Board regarding the disposal of the crop, net value of exports and the average price realized during each of the years 1938–39 and 1945–46 to 1949–50 will be found in the following table :—

SUGAR : NET RETURNS, AUSTRALIA.

Year.	Proportion Exported. (a)	Net Value of Exports per Ton. (a)			Average Price per ton for Whole Crop. (a)			Estimated Value of Crop.
	Per cent.	£	s.	d.	£	s.	d.	£
1938–39	55.78	8	4	3	15	3	11	12,806,376
1945–46	31.53	16	17	9	20	6	5	13,674,661
1946–47	16.02	21	10	0	21	16	9	12,326,952
1947–48	17.61	29	12	6	24	19	9	14,879,144
1948–49	47.00	28	2	0	25	8	6	23,904,606
1949–50	46.92	29	7	6	26	13	8	25,362,288

(a) As supplied by the Queensland Sugar Board.

The estimated value of the raw sugar produced has been taken from the audited accounts of the Queensland Sugar Board. The values stated represent the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges, but not deducting concessions to the fruit industry and other rebates which in 1949–50 amounted to £216,000. The value thus obtained represents the net market value of all raw sugar sold, which, since 1933, has been divided between the growers and millers in the approximate proportions of 70 per cent. and 30 per cent. respectively. Prior to that year the distribution was about two-thirds to the grower and one-third to the miller.

6. **Imports and Exports of Sugar.**—Particulars showing the imports and exports of cane sugar (raw and refined) for the five years ended 1938–39 and each year 1945–46 to 1949–50 are as follows :—

SUGAR : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
Average, 1934–35 to 1938–39 ..	23	505	377,930	3,480,632	377,907	3,480,127
1945–46	..	3	150,972	3,059,599	150,972	3,059,596
1946–47	..	23	117,379	2,717,252	117,379	2,717,229
1947–48	..	21	100,351	3,062,450	100,351	3,062,429

1949–50	..	80	432,711	14,147,150	432,711	14,147,070

7. **Sugar By-products.**—Large quantities of molasses are produced as a by-product in the sugar mills. Details for a series of years of the quantities produced and the amounts used for distilling, fuel, manure and other purposes will be found in Chapter XXIV.—Manufacturing Industry.

Boards are now being made from the residue of crushed fibre after the removal of the sugar content from sugar-cane. These boards are used in the building industry for walls and ceilings and possess high insulating and sound-absorbing properties.

8. **Sugar Prices.**—The prices of sugar in Australia from 1939 to 1941 and 1947 to 1950 in the case of raw sugar, and from 1925 to 1936 and 1947 to 1956 in the case of refined sugar, are shown in the following table.

SUGAR : PRICES IN AUSTRALIA.

Year.	Raw Sugar, 94 Net Titre. Average Return per Ton received by millers and growers for— Home Consumption.	Exports. (a)	Whole Crop. (a)	Refined Sugar. Date of Determination.	Wholesale Price per ton.	Retail Price per lb.

(a) Including "Excess" Sugar.

9. **War and Post-war Arrangements.**—After the outbreak of war in September, 1939, the British Ministry of Food concluded arrangements with the Queensland Goverment for the purchase of Australia's surplus production of raw sugar for the season 1939. The price was fixed at £Stg.7 10s. per ton at United Kingdom ports plus the preference on dominion sugar of £Stg.3 15s. per ton under the existing tariff.

Similar agreements were negotiated for the disposal of the surplus raw sugar in subsequent seasons, the price in sterling currency per ton c.i.f. United Kingdom ports, basic 96° polarization being as follows :—1940 and 1941, £12 12s. 6d.; 1942, £13 15s. ; 1943, £14 5s. ; 1944, £15 5s.; and 1945, £17 5s.—inclusive of the existing preference of £3 15s. From the 1st January, 1946 the price was further increased by £Stg.2 5s. per ton and the United Kingdom agreed to absorb an additional 12s. 6d. per ton on the freight cost. The price was further increased to £Stg. 24 5s. per ton from 1st January, 1947 and to £Stg.27 5s. per ton from 1st January, 1948. Further price increases to £Stg.30 10s. as from 1st January, 1950 and to £Stg.32 17s. 6d. per ton as from 1st January, 1951 have since become operative.

In December, 1949, a Commonwealth Countries Sugar Marketing Agreement was formulated in London, the terms of which include an undertaking by the United Kingdom Government to find a market for the Australian exportable surplus sugar to the end of 1952.

For the six years 1953-1958, Australia is to plan for aggregate exports not exceeding 600,000 tons annually. Of this amount, the United Kingdom Government agreed to take 314,000 tons at guaranteed prices to be negotiated annually. The balance of 286,000 tons is expected to find a market in the United Kingdom or Canada at the world price plus United Kingdom or Canadian preference. Provision is made for extension of the term of the agreement, and for upward revision of the quotas, if necessary.

§ 16. Vineyards.

1. **Progress of Cultivation.**—(i) *Area of Vineyards.* The date of introduction of the vine into Australia has been variously set down by different investigators, the years 1815 and 1828 being principally favoured. It would seem, however, that plants were brought out with the first fleet in 1788; consequently the Australian vine is as old as Australian settlement. A report by Governor Hunter gives the area of vines in 1797 as 8 acres. From New South Wales the cultivation spread to Victoria and South Australia, and these States have now far outstripped New South Wales in the area of this crop. In Western Australia an expansion of area under vineyards has occurred in recent years, but in Queensland, where vine-growing has been carried on for many years, little progress has been made. The purposes for which grapes are grown in Australia are (*a*) for wine-making, (*b*) for table use, and (*c*) for drying. The total area of vines in the several States during each of the years 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown in the following table :—

VINEYARDS : AREA.
(Acres.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	A.C.T.	Australia.
Average, 1929–30 to 1938–39 ..	15,777	40,563	2,142	54,156	5,666	..	118,304
1945–46	15,983	42,843	3,003	57,440	9,583	3	128,855
1946–47	16,338	42,948	2,945	58,221	9,857	3	130,312
1947–48	16,541	43,784	3,087	58,885	10,025	9	132,331
1948–49	16,568	45,609	3,265	59,806	10,014	10	135,272
1949–50	16,931	45,386	3,135	60,253	9,676	10	135,391
Average, 1940–41 to 1949–50 ..	16,348	43,462	3,110	58,345	9,749	4	131,018

(ii) *Report on the Wine Industry.* An investigation into conditions in the wine industry was undertaken by the Commonwealth Director of Development and the Senior Inspector of Excise, Department of Trade and Customs, and a comprehensive report was presented to Parliament on the 17th July, 1931.

During 1944 the Minister for Trade and Customs referred a number of matters to the Tariff Board for inquiry and report. Subsequently four reports were issued during 1944–45 which dealt with the following subjects, viz. :—Use of cane sugar in sauterne, spirit for fortification of wine, prices for grapes and fortifying spirit and control of liquor order.

(iii) *Wine Production, Bounties, etc.* The production of wine has not increased as rapidly as the suitability of soil and climate would appear to warrant. Production for the ten years ended 1949–50 averaged 24.8 million gallons compared with 16.3 million gallons produced during the ten years ended 1938–39. This seems to arise from two causes. In the first place, Australians are not a wine-drinking people : it is estimated that prior to the 1939–45 War they consumed approximately 4.1 million gallons only, or 0.6 gallons per head per annum, and while this had risen to 12.1 million gallons (1.5 gallons per head of population) in 1949–50, the local market is nevertheless restricted. Secondly, the comparatively new and unknown wines of Australia must compete in the markets of the old world with the well-known and long-established brands from other countries. Continued efforts are being made to bring the Australian wines under notice both here and abroad, and with the assistance of a Commonwealth bounty on the export of fortified wine of specified strength the industry has been greatly stimulated. Further development, however, was interrupted by the war. The loss of the United Kingdom market due to the lack of shipping space placed the wine industry of Australia in a most difficult position, but this was partly offset by the increase in local consumption due to the availability of supplies, the restriction on the production of beer and the presence of large numbers of defence personnel.

The Wine Export Bounty Act 1930 which provided for payment at the rate of 1s. 9d. per gallon was replaced in 1934 by a new Act which fixed the rate at 1s. 3d. per gallon for the two years ended 28th February, 1937, and thereafter at a reduction of 1d. per gallon for each succeeding year until 1940. The payment of a bounty at the rate of 1s. per gallon for a period of five years to 28th February, 1945, subsequently extended to 28th February, 1947, was provided for under the Wine Export Bounty Act of 1939–1944. This Act was repealed by the Wine Export Bounty Act 1947 which made provision for payment of bounty, subject to certain conditions, on wine sold overseas prior to 30th October, 1946 and exported after 28th February, 1947.

The quantity of wine produced in the several States during the 1945–46 to 1949–50 seasons, together with the averages for the ten-year periods ended 1938–39 and 1949–50, is shown in the following table :—

WINE : PRODUCTION.

('000 Gallons.)

Season.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Australia.
Average, 1929–30 to 1938–39	2,099	1,449	36	12,349	397	16,330
1945–46 ..	2,968	1,916	35	20,213	726	25,858
1946–47 ..	3,905	3,082	30	25,422	751	33,190
1947–48 ..	4,500	2,958	28	26,000	673	34,159
1948–49 ..	4,127	3,081	36	26,295	644	34,183
1949–50 ..	5,185	3,230	45	24,978	528	33,966
Average, 1940–41 to 1949–50	3,586	2,012	32	18,552	573	24,755

2. Imports and Exports of Wine.—(i) *Imports.* The principal countries of origin of wine imported into Australia were, before the 1939–45 War, France, Spain, Portugal and Italy, the bulk of the sparkling wines coming from France. The bulk of the post-war wine imports have been obtained from France. The imports for the five years ended 1949–50 compared with average imports for the years 1934–35 to 1938–39 are shown hereunder :—

WINE : IMPORTS INTO AUSTRALIA.

Year.	Quantity (Gallons).			Value (£).		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
Average, 1934–35 to 1938–39	8,119	28,566	36,685	20,245	19,332	39,577
1945–46 ..	40	479	519	213	1,433	1,646
1946–47 ..	1,719	1,585	3,304	7,909	3,041	10,950
1947–48 ..	14,768	4,158	18,926	54,098	8,282	62,380
1948–49 ..	24,679	19,098	43,777	67,450	27,020	94,470
1949–50 ..	6,599	19,814	26,413	25,245	28,812	54,057

(ii) *Exports.* Before the 1939–45 War practically all wine exported was sent to the United Kingdom, only 200,000 gallons (approximately) being sent elsewhere. Exports in 1949–50 totalled 1,103,318 gallons, of which the United Kingdom received 613,698 gallons, New Zealand, 205,233 gallons, Canada, 193,659 gallons, and other countries 90,728 gallons.

Exports for the five years ended 1949–50 are shown in the following table in comparison with average exports during the five years ended 1938–39 :—

WINE : EXPORTS FROM AUSTRALIA.

Year.	Quantity (Gallons).			Value. (£)		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
Average, 1934–35 to 1938–39	3,772	3,559,094	3,562,866	5,400	938,195	943,595
1945–46 ..	7,984	1,776,452	1,784,436	10,619	729,969	740,588
1946–47 ..	3,244	2,717,355	2,720,599	4,975	1,176,626	1,181,601
1947–48 ..	5,935	2,682,431	2,688,366	8,071	1,421,861	1,429,932
1948–49 ..	5,180	1,873,083	1,878,263	11,558	982,401	993,959
1949–50 ..	6,093	1,097,225	1,103,318	6,323	509,516	515,839

3. **Overseas Marketing of Wine.**—(i) *The Wine Overseas Marketing Act* 1929–1945. This Act was introduced at the request of the viticultural interests in Australia with the object of placing the oversea marketing of Australia's surplus wine on an orderly basis. The Wine Overseas Marketing Board was appointed to supervise the exports, and the sale and distribution after export, of Australian wine.

The name of the Board was changed to the Australian Wine Board in 1936. An amendment to the Act in 1945 made provision for eleven members on the Board, comprising five representatives of proprietary and privately-owned wineries and distilleries, two representatives of co-operative wineries and distilleries, three representatives of grape-growers supplying to wineries and distilleries, and one representative of the Commonwealth Government. No wine may be exported except by means of a licence which is issued under conditions recommended to the Minister by the Board ; these include the withholding of shipments as directed by the Board. The Board has a London agency which advises on marketing conditions. The methods of marketing adopted by the Board have resulted in the widening of the distribution of Australian wines overseas.

(ii) *The Wine Grapes Charges Act* 1929–1941. This Act provides for the imposition of a levy on all grapes used in Australia for the manufacture of wines or spirit used for fortifying wine. The proceeds of the levy are used to defray the administrative and other expenses of the Board, and provision is made for such exemptions from the levy as the Board may recommend.

4. **Other Viticultural Products.**—(i) *Table Grapes.* Grapes for table use are grown in all the States except Tasmania, but the area cultivated to this variety is only about 7 per cent. of the productive area of grapes. The greatest development in the industry has taken place in the drying of raisins and currants, particularly in Victoria and South Australia. The quantities of table grapes grown during the seasons 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are as follows.

TABLE GRAPES : PRODUCTION.

(Tons.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Australia.
Average, 1929–30 to 1938–39	4,354	3,884	2,060	738	2,874	13,910

1949–50	4,023	3,690	2,191	934	1,683	12,521
Average, 1940–41 to 1949–50	4,705	4,082	2,576	1,137	2,491	14,991

(ii) *Raisins and Currants.* The quantities of raisins (sultanas and lexias) and currants dried during each of the seasons 1945–46 to 1949–50 and the averages for the ten-year periods ended 1938–39 and 1949–50 are shown in the following table. The production of 103,410 tons for the 1943–44 season represents the greatest output recorded in any year. Due to adverse seasonal conditions, heavy crop losses occurred during the three succeeding years. Production in 1946–47 amounted to 65,197 tons, in 1947–48 it rose to 84,828 tons, but fell again to 64,904 tons in 1948–49 and rose slightly to 67,856 tons in 1949–50.

(*a*) Sultanas and lexias.

5. **Production and Disposal of Dried Vine Fruit.**—As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export overseas. Details of the quantities disposed of in Australia and overseas, as recorded by the Commonwealth Dried Fruits Control Board, are given in the table below. Australian consumption includes amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

DRIED VINE FRUIT : QUANTITIES DISPOSED OF, AUSTRALIA.

(Tons.)

Season ended December—	Australian Consumption.	Overseas.					Grand Total.
		United Kingdom.	Canada.	New Zealand.	Other Countries.	Total.	
1944	35,071	44,570	16,000	6,756	1,820	69,146	104,217

(*a*) Estimated.

6. **Exports of Raisins and Currants.**—The following table shows the oversea exports of raisins and currants during each of the years 1945–46 to 1949–50 compared with the average for the five years ended 1938–39. As the quantities of imports were practically negligible they have been omitted.

RAISINS AND CURRANTS : EXPORTS, AUSTRALIA.

Year.	Raisins.		Currants.		Total Raisins and Currants.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
Average, 1934–35 to 1938–39	43,191	1,686,447	15,054	548,838	58,245	2,235,285
1945–46 ..	30,022	1,547,688	9,307	403,645	39,329	1,951,333
1946–47 ..	35,248	1,913,574	5,606	243,508	40,854	2,157,082
1947–48 ..	31,364	1,795,358	10,066	468,684	41,430	2,264,042
1948–49 ..	37,077	2,369,216	13,696	740,762	50,773	3,109,978
1949–50 ..	28,558	1,818,662	7,063	408,962	35,621	2,227,624

Since 1912 Australia has not only produced sufficient raisins and currants for home consumption but has been able to maintain a large export trade. The chief countries importing Australian raisins and currants are the United Kingdom, New Zealand and Canada, the quantities exported thereto in 1949–50 being 9,822 tons, 4,034 tons and 20,556 tons respectively. Exports to Canada increased from 4,600 tons in 1928–29 to 16,944 tons in 1939–40 and to 25,955 tons in 1944–45, but decreased to 20,556 tons in 1949–50.

7. **War-time Contract.**—At the outbreak of war in 1939 the Government of the United Kingdom purchased all available surpluses after provision had been made for Canadian and New Zealand requirements. During the 1944 and 1945 seasons prices fixed under these contracts represented a substantial increase over pre-war prices.

8. **Post-war Contract.**—A long term agreement was negotiated between the Governments of the United Kingdom and Australia for the purchase of the exportable surplus of the dried vine fruit crop for the 1946, 1947 and 1948 seasons. A further agreement has been reached between the Governments of the United Kingdom and Australia under which Australian dried vine fruits will be purchased by the United Kingdom during the years 1949 to 1953. The contract provides that the quantity of fruit to be purchased each year shall not exceed a value of £2,500,000 sterling currency on an f.o.b. basis. Export prices have been fixed for the first two years, but during the remaining three years they are to be the subject of annual agreement by the two Governments. The contract prices for currants, sultanas and lexias sold to the United Kingdom during the war years 1943, 1944 and 1945, as well as the prices fixed under the post-war contracts covering the years 1946 to 1951, are shown in the following table.

DRIED VINE FRUITS : CONTRACT PRICES PER TON TO UNITED KINGDOM.

(£A. *s. d.*, f.o.b. Australian Ports.)

Lexias ..	4 and 5 Crown ..	50 12 6	54 7 6	55 18 9	64 7 6	64 7 6	125 0 0

9. **Oversea Marketing of Dried Fruits.**—(i) *The Dried Fruits Export Control Act* 1924–1938. This Act was passed by the Commonwealth Parliament at the request of the dried fruits industry to organize the overseas marketing of Australian dried vine fruits. The Dried Fruits Control Board, consisting of eight members—including five growers'

representatives, two members with commercial experience and one Government nominee—was appointed to control the export, and the sale and distribution after export, of Australian sultanas, currants and lexias. In conjunction with its London agency, the Board has improved the marketing of Australian dried fruits overseas, and has increased the demand for the product. Its system of appraisement has resulted in more satisfactory realizations. Its methods of ensuring continuity of supply and regulating shipments and its participation in the advertising campaign of the Australian Overseas Trade Publicity Committee have benefited the industry considerably. No dried fruits may be exported except by means of a licence, which is issued subject to conditions recommended by the Board.

(ii) *Dried Fruits Export Charges Act* 1924–1929. This Act provides for the imposition of a levy on all sultanas, currants and lexias exported from Australia for the purpose of defraying the administrative expenses of the Board and the cost of advertising, etc. The rate of the levy is fixed by regulation. Under an amendment made in 1927 provision was made for the exemption of sultanas, currants and lexias from the levy upon recommendations by the Board.

(iii) *The Dried Fruits Act* 1928–1935. In previous issues of the Official Year Book reference has been made to the Dried Fruits Act and its provisions have been outlined (*see* p. 894 of Official Year Book, No. 28).

§ 17. Orchards and Fruit-Gardens.

1. **Area.**—The largest area of orchards and fruit-gardens prior to the 1939–45 War was attained in 1933–34 when 281,899 acres were planted. From that year until 1942–43, when 260,384 acres were under fruit, there was a gradual decline. In each subsequent year there was a continuous upward movement to 1947–48 when the area reached a new peak of 290,320 acres. The area has since declined to 286,751 acres in 1948–49 and to 279,928 acres in 1949–50. The total area of orchards and fruit-gardens in the several States during the years 1945–46 to 1949–50 compared with the averages for the ten seasons 1929–30 to 1938–39 and the ten seasons 1940–41 to 1949–50, is shown in the following table:—

ORCHARDS AND FRUIT-GARDENS: AREA.

(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Average, 1929–30 to 1938–39	84,025	76,643	32,437	29,365	20,703	32,627	69	275,869

2. **Varieties of Crops.**—The varieties grown differ in various parts of the States, ranging from such fruits as the pineapple, papaw, mango and guava of the tropics, to the strawberry, the raspberry and the currant of the colder parts of the temperate zone. In New South Wales, citrus fruits (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears and cherries are extensively grown. The principal varieties grown in Victoria are the apple, peach, pear, orange, plum and apricot. In Queensland, the banana, pineapple, apple, orange, mandarin, peach and plum are the varieties most largely cultivated. In South Australia, in addition to the apple, orange, apricot, plum, peach and pear, the almond and the olive are extensively grown. In

Western Australia, the apple, orange, lemon, pear, plum, peach, apricot and fig are the chief varieties. In Tasmania, the apple occupies over two-thirds of the fruit-growing area, but small fruits, such as the currant, raspberry and gooseberry, are extensively grown, while the balance of the area is mainly taken up with the pear, apricot and plum. The following table shows the acreage—bearing and non-bearing—of the principal kinds of fruit, and the quantity and value of fruit produced.

ORCHARDS AND FRUIT-GARDENS, 1949–50.

Total Fresh Fruit Equivalent ..	173.7	183.9	183.5	164.2	173.4

(a) Subject to revision. (b) Includes table grapes.

6. **Imports and Exports of Fruit.**—(i) *General.* The imports of fresh fruits into Australia are negligible, whilst those of dried fruits consist mainly of dates.

A considerable export trade in both fresh and dried fruits is carried on by Australia with oversea countries. The values of the shipments in 1949–50 amounted to £3,933,663 and £2,888,259 respectively. Apples formerly constituted the bulk of the fresh fruit exported, although the exports of citrus fruits and pears were fairly considerable. Shipments of raisins and currants have increased greatly since 1914–15 and are mainly responsible for the growth in the dried fruits exports, although dried tree fruits also figure amongst the exports. Owing to shipping difficulties and other factors the exports of fresh fruit were seriously curtailed during the 1939–45 War.

(ii) *Fresh Fruits.* Particulars of the Australian oversea trade in fresh fruits are shown in the following table :—

FRESH FRUITS: IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Centals.	£	Centals.	£	Centals.	£
Average, 1934–35 to 1938–39	45,554	20,289	2,520,842	1,981,483	2,475,288	1,961,194
1945–46 ..	1,088	3,110	813,179	1,264,681	812,091	1,261,571
1946–47 ..	5,459	3,703	673,485	1,549,890	668,026	1,546,187
1947–48 ..	500	995	1,899,863	3,886,059	1,899,363	3,885,064
1948–49 ..	754	1,502	1,509,330	3,116,571	1,508,576	3,115,069
1949–50 ..	354	669	1,901,988	3,933,663	1,901,634	3,932,994

(iii) *Exports of fresh Apples, Pears and Citrus Fruits.* The quantity and value of fresh apples, pears and citrus fruits exported during each of the five years ended 1949–50, compared with the average for the five years 1934–35 to 1938–39, are shown in the following table :—

FRESH APPLES, PEARS AND CITRUS FRUITS : EXPORTS FROM AUSTRALIA.

Year.	Apples.		Pears.		Citrus Fruits.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Centals.	£	Centals.	£	Centals.	£
Average, 1934–35 to 1938–39	1,928,282	1,396,083	284,203	268,347	255,538	233,552
1945–46 ..	698,185	1,010,243	20,938	54,412	68,468	135,027
1946–47 ..	387,458	766,007	80,736	176,490	167,910	438,627
1947–48 ..	1,407,789	2,694,789	179,782	365,842	273,257	603,628
1948–49 ..	888,833	1,771,372	279,373	603,524	292,796	552,023
1949–50 ..	1,264,313	2,437,843	328,545	638,726	269,672	649,694

(iv) *Dried Fruits.* The quantity and value of oversea imports and exports of dried fruits, other than raisins and currants, for the five years ended 1949–50, compared with the average for the five years 1934–35 to 1938–39, are shown below. Normally, the bulk of the imports consists of dates obtained almost entirely from Iraq. This trade was prohibited during the war years but has since been resumed.

DRIED FRUITS(*a*) : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£	'000 lb.	£	'000 lb.	£
Average, 1934–35 to 1938–39	12,225	80,121	4,315	117,222	−7,910	37,101
1945–46 ..	7,556	150,100	3,078	198,087	−4,478	47,987
1946–47 ..	7,070	150,745	4,214	273,502	−2,856	122,757
1947–48 ..	11,835	253,971	4,508	294,932	−7,327	40,961
1948–49 ..	11,316	239,857	4,796	343,067	−6,520	103,210
1949–50 ..	10,125	212,216	10,218	660,635	93	448,419

(*a*) Excludes raisins and currants referred to separately under Vineyards, § 16, par. 6.

NOTE.—Minus sign (−) denotes net imports.

(v) *Jams and Jellies.* The exports of jams and jellies have reached large proportions since the 1939–45 War. In 1949–50 shipments totalled 65,229,000 lb. valued at £2,473.095 compared with average exports of 7,118,000 lb. valued at £137,707 during the five years ended 1938–39. Small quantities of jam were imported before the war but the quantities involved now are negligible. Particulars of imports and exports during each of the five years ended 1949–50, compared with the average for the five years 1934–35 to 1938–39, are as follows,

JAMS AND JELLIES : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£	'000 lb.	£	'000 lb.	£

1947–48 ..	1	136	59,642	2,232,168	59,641	2,232,032
1948–49 ..	85	6,666	53,603	2,049,224	53,518	2,042,558
1949–50 ..	30	2,178	65,229	2,473,095	65,199	2,470,917

(vi) *Preserved Fruit.* The total quantity of fruit preserved in liquid, or partly preserved in liquid or pulped, imported into Australia during 1949–50 was 2,987,923 lb. valued at £186,355. Large quantities of fruit preserved in liquid are normally exported from Australia, the value of shipments in 1938–39 amounting to £1,271,525. Exports were considerably reduced during the recent war owing to the prior claims on Australia's output by the Australian and Allied Services based on Australia, but in 1949–50 the value of exports had increased to £4,017,962. In addition, the exports of pulped fruits during 1949–50 amounted to 15,060,631 lb. valued at £566,216. Particulars of the quantities and values of fruit preserved in liquid exported from Australia for each of the five years ended 1949–50 compared with the average for the five years 1934–35 to 1938–39 are shown in the following table :—

FRUIT PRESERVED IN LIQUID : EXPORTS FROM AUSTRALIA.

1949–50 ..	339,610	1,160,623	1,082,749	1,434,980	4,017,962

7. **Marketing of Apples and Pears.**—(i) *Apple and Pear Organization Act* 1938–1948. This Act, which was passed by the Commonwealth Parliament at the request of the apple and pear industry, provides for the establishment of an Australian Apple and Pear Board for the purpose of organizing and controlling the export trade in fresh apples and pears.

The Board originally comprised sixteen members but by an amendment of the Act in 1947 the members were reduced to twelve, representative of the following interests :—one member to represent the Commonwealth Government ; seven members to represent growers of apples and pears on the basis of two for Tasmania and one each for the other

States; three members to represent exporters of apples and pears on the basis of one each for Tasmania and Western Australia and one for the other States; and one member to represent the employees engaged in the apple and pear industry.

The Board has power to regulate the shipment of apples and pears from Australia by licensing exporters and issuing permits to export. Power is also given to determine export quotas and to allocate the consignments from each State. The Board may appoint persons to represent it overseas.

The Apple and Pear Publicity and Research Act 1938 and the related Apple and Pear Tax Acts, referred to in earlier issues of the Official Year Book, have now been repealed by the 1947 amendment to the Apple and Pear Organization Act. The latter Act was subject to a further minor amendment in 1948.

(ii) *Apple and Pear Export Charges Act* 1938–1947. This Act provides for the imposition of a levy on all apples and pears exported from Australia for the purpose of providing the funds necessary to meet the administrative and other expenses of the Board.

(iii) *Apple and Pear Acquisition.* Exports of apples and pears were seriously curtailed as a result of the war, and during the 1940 to 1948 seasons crops were acquired and marketed under the National Security (Apple and Pear Acquisition) Regulations and Regulations issued under the Defence (Transitional Provisions) Act 1946. During the 1949 season in Tasmania and the 1949 and 1950 seasons in Western Australia the crops were marketed under State schemes, but crops in all States have since been marketed on a normal commercial basis. Details of the acquisition scheme which operated during the 1940 to 1948 seasons will be found on pages 1003 and 1004 of Official Year Book No. 38 and in earlier issues of the Year Book.

8. **Oversea Marketing of Canned Fruit.**—(i) *The Canned Fruits Export Control Act* 1926–1938. This legislation was introduced at the request of canners and representative organizations of fruit-growers with the object of organizing the oversea marketing of canned fruit. The original Act referred to canned apricots, peaches and pears only, but canned pineapples and canned fruit salads consisting of not less than 75 per cent. of specified fruits were subsequently brought within the scope of the Board's operations. The personnel of the Australian Canned Fruits Board consists of one representative each from proprietary and privately owned canneries, co-operative canneries, State-controlled canneries, pineapple interests and the Commonwealth Government. No canned fruits to which the Act applies are permitted to be exported except under a licence issued in accordance with conditions recommended by the Board. The system of marketing adopted by the Board, including the fixation of minimum selling prices overseas, the appointment of a London agency and the engaging in oversea trade publicity, has resulted in the satisfactory disposal of the annual exportable surplus of canned fruits. The distribution of canned fruits has been widened and the exporting side of the industry placed on a sounder basis through the Board's operations.

(ii) *The Canned Fruits Export Charges Act* 1926–1938. This Act provides for the imposition of a levy on the export of canned fruits to meet the administrative and other commitments of the Board. The rate of the levy is fixed by regulation from time to time. An amendment in 1929 provided for certain exemptions from payment of the levy when recommended by the Board.

(iii) *War-time Contracts.* During 1940 and 1941 purchases of canned fruit were made by the British Ministry of Food at prices fixed on an f.o.b. basis, Australian ports. From 1942 to 1945 the requirements of the Defence Services and other Governmental orders necessitated official control of disposals, and commercial shipments of canned fruits virtually ceased, while quantities available for civilian consumption were considerably below normal requirements. In 1946 commercial shipments were resumed and approximately one million cases of canned fruits were exported to the United Kingdom under an official arrangement which was virtually on a merchant-to-Government basis. A similar arrangement has operated in respect of exports to the United Kingdom during each of the years 1947 to 1951 inclusive.

§ 18. Vegetables for Human Consumption.

1. **Area and Production of Fresh Vegetables.**—The pre-war production of vegetables in Australia, which had been sufficient to meet the needs of the population, was, generally speaking, supplied by growers whose holdings were adjacent to centres of consumption. These areas were classified for statistical purposes as market gardens and were tabulated as such. Details of the areas planted and production respecting individual kinds of vegetables were not collected.

Consequent upon the outbreak of war in the Pacific, extensive development of vegetable growing in Australia was undertaken, resulting in an expansion from the peace-time need of about 100,000 acres to more than 200,000 acres, exclusive of potatoes, onions, navy beans and blue peas, details of whose production are referred to in §§ 10, 11 and 12 of this Chapter.

Since the close of the war there has been a considerable reduction in vegetable growing and the area of the crops dealt with in this section declined from the war-time peak of 240,282 acres in 1944–45 to 141,082 acres in 1949–50.

Details of the area and production of vegetables for the seasons 1947–48 to 1949–50 are given in the following table. Similar details for the years 1942–43 to 1943–44 were given in earlier issues of the Year Book (No. 36, p. 839 and No. 37, p. 956). Owing to the difference in collection already referred to, comparable figures prior to 1942–43 are not available.

FRESH VEGETABLES(a) FOR HUMAN CONSUMPTION : AUSTRALIA.

Vegetable.	1947–48.		1948–49.		1949–50.	
	Area Sown.	Production.	Area Sown.	Production.	Area Sown.	Production.

All Other	13,689	..	12,367	..	8,869	..
Total ..	156,431	..	156,264	..	141,082	..

(a) Excludes potatoes, onions, blue peas and navy beans.

2. **Production of Canned Vegetables.**—As a corollary to the development mentioned above, a considerable expansion occurred in the processing of vegetables. New canning factories were established in many parts of the Commonwealth, and a new industry for the processing of vegetables by the dehydration method was commenced. After the close of hostilities there was a sharp decline in the output of canned vegetables but some recovery has been evident since 1947–48. Quantities canned in each post-war year have been considerably higher than in 1938–39.

The development in the vegetable-canning industry is indicated in the table below :—

PRODUCTION OF CANNED VEGETABLES : AUSTRALIA.

('000 lb.)

Vegetable.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.	1950–51. (a)

Total ..	10,255	106,962	58,286	46,331	51,279	73,534	76,489

(a) Subject to revision. (b) Included in "Other Vegetables". (c) Includes Parsnips, Potatoes, Turnips, Sweet Corn, etc. (d) Includes particulars of vegetables marked (b).

3. **Production of Dehydrated Vegetables.**—The dehydration of vegetables was not undertaken in Australia until after the outbreak of war in the Pacific towards the close of 1941. With the termination of Commonwealth contracts for dehydrated vegetables in October, 1946, a number of plants ceased to operate and output for commercial purposes in the remaining plants was drastically curtailed. Details of the quantities of fresh vegetables used for dehydration and the output of dehydrated vegetables during the years 1942–43 to 1946–47 were shown on page 957 of Official Year Book No. 37.

4. **Imports and Exports of Vegetables.**—Oversea exports of pulse and fresh vegetables during 1949–50 consisted of :—Pulse, 6,081 tons, £288,109 ; onions, 5,901 tons, £161,204 ; potatoes, 15,183 tons, £340,747 ; other vegetables, 2,643 tons, £144,573. Imports totalled 9,792 tons, valued at £532,977, of which pulse comprised 9,778 tons, valued at £528,364.

In 1949–50 exports of vegetables preserved in liquid consisted of :—Peas, 3,356,539 lb., £142,243 ; tomatoes, 867,254 lb., £42,545 ; other vegetables, 25,170,187 lb., £1,076,126.

5. **Consumption of Vegetables.**—Details of the estimated consumption of vegetables for a series of years ending with 1950–51 are shown in Chapter XXIX.—Miscellaneous of this Year Book.

§ 19. Minor Crops.

1. **General.**—There are many other crops which do not occupy so prominent a position as those already enumerated. Some of the more important of these are included under the headings—Tobacco, Hops, Flax, Peanuts, Cotton and Sorghum.

2. **Grass Seed.**—Particulars of the area of grass crops grown for seed cannot be accurately determined as seed is obtained from certain crops such as clover, lucerne, etc., at a second cutting. The production of seed recorded in 1949–50 was :—clover, 25,187 cwt. ; lucerne 13,139 cwt. ; other grass seed, 32,492 cwt. ; a total of 70,818 cwt.

3. **Other Grains from Sorghums.**—In addition to the grass seed referred to in paragraph 2 above and grain sorghum in § 9, a considerable area has been sown to Japanese Millet, Panicum and Setaria. Particulars of the area and production for the years 1944–45 to 1949–50 are given in the table following.

SORGHUMS: AREA AND PRODUCTION OF GRAIN, AUSTRALIA.

Year.	Japanese Millet.(*a*)		Panicum, Millet and Setaria.(*b*)	
	Area.	Production.	Area.	Production.
	Acres.	Tons.	Acres.	Bus.
1944–45	2,948	964	16,570	178,612
1945–46	2,628	1,526	22,172	325,194
1946–47	1,393	678	39,372	407,482
1947–48	748	225	16,086	236,430
1948–49	823	254	14,103	250,614
1949–50	909	310	14,832	265,734

(*a*) Victoria only. (*b*) Queensland only.

4. **Tobacco.**—(i) *General.* Tobacco-growing years ago promised to occupy an important place amongst the agricultural industries of Australia. As early as the season 1888–89, the area of this crop amounted to 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. This promise was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2,000 acres, and that in Queensland to over 1,000 acres, the total area declined considerably.

(ii) *States, Area and Production.* The expansion of the tobacco-growing industry was hoped for as a war-time measure but, although the acreage planted increased slightly during the first three war years, it has since decreased considerably, being in 1949–50 only 41 per cent. of the annual average for the ten years ended 1938–39. Owing to improvement in average yields, however, the production of dried leaf in 1949–50 was 81 per cent. of the pre-war average. The area of 4,584 acres and production of 4,138,000 lb. represented a decrease on 1941–42 of 4,236 acres and of 3,903,000 lb.

In the following table particulars of the area and production of tobacco are given by States for each of the years 1945–46 to 1949–50, together with averages for the ten-year periods ended 1938–39 and 1949–50 :—

TOBACCO: AREA AND PRODUCTION.

Average, 1940–41 to 1949–50 ..	524	967	1,927	..	731	1	4,150

(iii) *Australian Tobacco Board.* The Australian Tobacco Board was constituted in May, 1941 under the National Security (Australian Tobacco Leaf) Regulations for the purpose of controlling the marketing of Australian-grown tobacco leaf, which was required to be submitted to the Board for appraisement. The Board ceased to function towards the end of 1948 and subsequent crops have been marketed at open auction in the respective States.

(iv) *Tariff Board Inquiries.* The tobacco industry has been the subject of a number of investigations. The Tariff Board inquired into the industry in 1926, 1931 and 1940 and reports were issued.

(v) *Tobacco Inquiry Committee.* The Tobacco Inquiry Committee, which was appointed by the Commonwealth Government to investigate certain aspects of the industry in North Queensland, presented its report in 1933. Recommendations included that for payment of a sum of £20,000 annually for a period of five years to assist the States to continue economic and scientific investigations. This recommendation was adopted and the distribution was spread between the years 1934–1938 as follows :—£5,000 to the Council for Scientific and Industrial Research (now the Scientific and Industrial Research Organization), £3,750 to each of the States of New South Wales, Victoria and Queensland, and £1,250 each to South Australia, Western Australia and Tasmania.

A further grant of £62,500, which was increased by £11,250 in 1941, was allotted by the Commonwealth Government to be paid periodically between the years 1939 to 1943. The amount of £73,750 was allocated as follows :—Council for Scientific and Industrial Research, £25,000, and £10,000 annually among the States for the years 1939 and 1941 to 1943, and £8,750 for 1940. In August, 1946 the Commonwealth Cabinet approved a grant of £10,000 per annum for five years on a £ for £ basis to be allocated among producing States for experimental and demonstration work in connexion with tobacco leaf production ; particularly in regard to control and elimination of diseases and pests. The annual grant of £10,000 has been allocated to States on the following basis :—Queensland, £3,750 ; New South Wales, £1,500 ; Victoria, £2,250 ; Western Australia, £2,500.

The Scientific and Industrial Research Organization is investigating diseases affecting the tobacco plant, including work on disease-resisting varieties, and is making tests of smoking quality. In spite of delays due to the war, the Organization has been successful in discovering effective means of preventing blue mould, which has seriously retarded the development of the industry. The States are carrying out field investigations on disease resistance, selection, yield and quality improvement, and are conducting instructional, demonstrational and field experimental work.

(vi) *Tobacco Factories.* In 1949–50 the quantity of stemmed leaf used in tobacco factories in Australia amounted to 27.4 million lb. of which 3.3 million was of local origin the balance being imported, chiefly from the United States of America.

(vii) *Oversea Trade.* Imports of tobacco and manufactures thereof into Australia during 1949–50 were valued at £12,394,839, including 24,124,967 lb. of unmanufactured tobacco valued at £6,887,766. Exports of tobacco during 1949–50 were valued at £308,823.

5. **Hops.**—Hop-growing in Australia is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for 1949–50 being 1,593 acres, of which 1,315 acres were in Tasmania, and 278 acres in Victoria. A small area was also grown in Western Australia, but the details are not available for publication. The Tasmanian area, though still small, has increased during the present century, the total for 1901–2 being 599 acres. The cultivation of hops was much more extensive in Victoria some 60 years ago than at present, the area in 1883–84 being 1,758 acres.

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production, imports and exports of hops and the quantity of hops used in breweries are shown for each of the years 1945–46 to 1949–50 in comparison with the average for the five years ended 1938–39.

HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA.

Year.	Production.		Imports.	Exports.	Net Available Supplies. (a)	Quantity used in Breweries.
	Quantity.	Gross Value.				
	Cwt.	£	Cwt.	Cwt.	Cwt.	Cwt.
Average, 1934–35 to 1938–39	20,576	173,253	1,020	78	21,518	18,992
1945–46	19,835	225,946	2,402	55	22,182	22,436
1946–47	22,278	278,144	4,832	6	27,104	25,813
1947–48	24,449	317,531	9,823	15	34,257	25,050
1948–49	17,073	283,608	6,159	..	23,232	29,543
1949–50	22,993	465,158	12,047	..	35,040	31,997

(a) Disregards movements in stocks.

The Tariff Board conducted an inquiry into the hop-growing industry and issued a report on 12th June, 1945.

6. **Flax.**—For many years flax was grown intermittently in parts of Victoria and unsuccessful attempts were made to introduce its cultivation in some of the other States.

During the 1914–18 War there was an acute shortage of flax fibre and expansion of production was encouraged by the Commonwealth Government. The area sown reached its maximum in 1919–20 at 1,600 acres, but had declined to less than 200 acres in 1928–29. A further attempt to establish the industry was made in 1935 and as a result the area in Victoria had increased to 1,358 acres by 1938–39. Following the outbreak of the 1939–45 War the area sown increased rapidly, reaching over 54,000 acres in 1941–42 and over 61,000 acres in 1944–45. In 1945–46, however, the area sown fell by 32 per cent. to 41,413 acres. Victoria is the chief producing State, but South Australia, Western Australia and Tasmania also contributed to the war-time expansion which was necessary to ensure Australia's supplies of flax and, in accordance with an agreement negotiated between the two Governments, to provide an export to assist in meeting the urgent needs of the United Kingdom. The arrangement concluded on 31st October, 1946, and the area under flax for fibre declined to 18,354 acres in 1946–47 and to 9,455 acres in 1949–50.

Details of the area under flax and the production of straw are given in the following table :—

FLAX FOR FIBRE: AREA AND PRODUCTION.

1949–50..	6,925	1,511	2,629	..	11,065

(a) Includes nine acres of unproductive flax in Queensland.

Although the growing of flax on a large scale was established as a war-time measure, it is proposed to continue the industry at a level sufficient to meet local requirements, providing that it can be efficiently maintained in competition with other countries. To stimulate the production of flax fibre, on 16th July, 1950, the Flax Canvas Bounty Act was passed, authorizing the payment of £60 per ton of scutched flax fibre used. Also, for the season 1951, the price of flax straw was increased from £9 to £13 10s. per ton of standard straw.

The industry is under the control of the Flax Production Committee appointed under the Supply and Development (Flax Production) Regulations. The Committee has, amongst other things, organized the growing and harvesting of the crop and the processing of the flax, as well as disposing of the resultant products to spinners and others in Australia and overseas. In 1943–44 in the four producing States there were 31 mills under the control of the Committee. The number of flax mills operating in 1949–50 was sixteen.

Prior to 1948–49, the growing of flax for oil had not been developed extensively in Australia, and in 1947–48 the area devoted to this purpose was only 1,844 acres, from which 273 tons of linseed were obtained. Action is being taken to develop this industry, however, and in 1949–50 the area had risen to 28,855 acres. Up to the present, crops are mainly being held for seed purposes with a view to further expansion of the industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements.

The flax industry was the subject of two investigations, one in 1933 and the other in 1936 (*see* Official Year Book No. 32, p. 658).

7. **Peanuts.**—The production of peanuts, or groundnuts, in Australia is mainly confined to Queensland, although small quantities are grown in New South Wales and Western Australia. Details of the area and production are given in the table below.

PEANUTS : AREA AND PRODUCTION, AUSTRALIA.

Year.	Area (Acres).				Production (Tons).			
	N.S.W.	Q'land.	W. Aust.	Total. (*a*)	N.S.W.	Q'land.	W. Aust.	Total. (*a*)

(*a*) Excludes Northern Territory. (*b*) Average for five years.

The gross value of the 1949–50 crop was £414,043.

In addition to the production shown above, considerable quantities of peanut kernels were formerly imported annually, chiefly from India, for oil expression purposes. This was suspended from 1946 to 1949, but has since been resumed on a smaller scale. Details of Australia's available supplies in terms of kernels are given for the years 1938–39 and 1946–47 to 1950–51.

PEANUTS (IN TERMS OF KERNELS) : AVAILABLE SUPPLIES, AUSTRALIA.

(*a*) Crop harvested in April-May of the preceding year and available for consumption during year shown.

8. **Broom Millet.**—The total area devoted to broom millet in 1949–50 was 3,100 acres, of which 2,815 acres were in New South Wales, 94 in Victoria and 191 in Queensland. The total production from these areas was 16,210 bushels of grain and 19,168 cwt. of fibre.

9. **Nurseries.**—In all the States fairly large areas are occupied as nurseries. The acreages under flowers, fruit-trees, etc., in 1949–50 in the various States were as follows :— New South Wales, 1,216 acres ; Victoria, 3,266 acres ; Queensland, 193 acres ; South Australia, 136 acres ; Western Australia, 252 acres ; Tasmania, 77 acres ; and Australian Capital Territory, 5 acres ; a total for Australia of 5,145 acres.

10. **Cotton.**—(i) *General.* The production of cotton in Australia is restricted to Queensland, where cultivation began in 1860, and ten years later the area cropped had increased from 14 acres to over 14,000 acres. The reappearance of American cotton in the European market on the conclusion of the Civil War gave a severe setback to the new industry, and the area declined continuously until 1888, when only 37 acres were planted. Later on the industry was revived, and manufacturing on a small scale was undertaken on two separate occasions at Ipswich, but low prices over a period of years checked development.

(ii) *Bounties, etc.* In 1913 the Queensland Government made an advance of 1½d. per lb. on seed cotton and ginned it on owner's account, the final return being equal to about 1¾d. per lb. The rise in price enabled the Government to offer a guarantee of 5½d. per lb. for seeded cotton of good quality for the three years ended 31st July, 1923, and the areas picked increased from 166 acres in 1920 to 50,186 acres in 1924. Guarantees were continued until 1926, when the Commonwealth Government granted a bounty varying from ¾d. to 1½d. per lb. according to grade. In addition, the cotton-manufacturing industry received a graduated bounty on all cotton yarn manufactured in Australia which contained 50 per cent. of home-grown cotton. This bounty, however, ceased to operate after 30th June, 1932. The cotton-growing industry was further assisted by the Bounty Act of 1934, which extended the period to 1940 at varying rates of bounty.

The Raw Cotton Bounty Act 1940 provided an extension of assistance until 31st December, 1946. The Act was amended in August, 1946 to provide a guaranteed net average return to cotton-growers of 15d. per lb. of raw cotton for five years from 1st January, 1947. It has been superseded by the Cotton Bounty Act 1951, which guarantees a net average return of 9½d. per lb. of seed cotton for five years from 1st January, 1951.

The Tariff Board carried out an investigation into the cotton-growing industry in 1945.

(iii) *Expansion of the Cotton-growing Industry.* Australia produces only portion of its requirements of raw cotton, the balance being obtained chiefly from the United States of America, India, Pakistan and Brazil. Efforts have been directed towards increasing production by an extension of area and the introduction of irrigation methods, but the results so far have not met with much success. Production was increased during the war years but has since fallen away. The expansion of the industries connected with the spinning and weaving of cotton is referred to in Chapter XXIV.—Manufacturing Industry.

The area under cultivation and the production in Queensland for the years 1946 to 1949 are shown hereunder together with the averages for the periods of ten years ended 1939 and 1949 :—

COTTON : AREA AND PRODUCTION IN QUEENSLAND.

1949–50	255	28,357	28,612	33,823

11. **Other Crops.**—Miscellaneous small crops grown in Australia include chicory, coffee, cut flowers, herbs, ginger, liquorice and vegetable seeds.

§ 20. Bounties, etc.

NOTE.—*See also* Chapter XVII.—Public Finance, pages 786–7, in this connexion.

1. **Bounties.**—The bounties paid by the Commonwealth Government during the year ended 30th June, 1951, amounted to £110,407, comprising £89,898 under the Tractor Bounty Acts 1939–1947, and £20,509 under the Flax Canvas Bounty Act 1950. This amount refers only to bounties paid under the Bounty Acts and does not include financial assistance given to wheat-growers and other primary producers under other Acts. Particulars of the assistance so rendered by the Commonwealth Government are furnished hereafter. Details of the amounts paid as bounty for the years 1946–47 to 1950–51 are set out in *Primary Industries Bulletin*, 1949–50, No. 44.

2. **Other Financial Assistance to Primary Producers.**—(i) *General.* In addition to the payment of bounties mentioned in the preceding paragraph, financial assistance has been granted by the Commonwealth Government for the relief of wheat-growers, fruit-growers, and other primary producers. The amounts shown exclude such items

as the expenditure on cattle tick control, banana industry, tobacco investigation and apple and pear research, which indirectly benefits the industries concerned, and exclude payments made to the States from loan fund to alleviate hardship suffered by primary producers in consequence of drought. The distribution as bounty, relief or subsidy for 1938–39 and 1946–47 to 1949–50 is as shown in the following table. Details of payments made prior to 1938–39 are given on page 847 of Official Year Book No. 36, while particulars for the years 1939–40 to 1945–46 will be found on page 965 of Official Year Book No. 37.

(a) Includes special grant to Tasmania. (b) Includes Wheat Acreage Restriction Grant. (c) Growers of apples, pears and mandarins. (d) Includes subsidy payments of £180,049 on nitrogenous fertilizers. (e) Includes subsidy payments of £129,683 on nitrogenous fertilizers. (f) Includes subsidy payments of £163,573 on nitrogenous fertilizers. (g) Includes subsidy payments of £780,794 on nitrogenous fertilizers. (h) Includes £3,454,729 recovered from the United Kingdom Government. (i) Includes £1,849,115 recovered from the United Kingdom Government. (j) Includes £150,000 recovered from the United Kingdom Government.

Minus sign (—) denotes an adjustment due to overpayment in previous years.

(ii) *Wheat-growers.* Details of payments made prior to 1938–39 will be found in Official Year Book No. 36. In 1938–39 a sum of £1,808,693, collected through the medium of a flour tax, was allocated for distribution as relief to wheat-growers.

Allocations to the States for the same purpose during the years 1944–45 to 1948–49 were £1,995,775 in 1944–45, £1,779,238 in 1945–46, £1,747,383 in 1946–47, £985,327 in 1947–48 and £1,319 in 1948–49. The rate of flour tax has been nil since December, 1947.

In addition to the foregoing amounts paid from flour tax, compensation was paid to wheat-growers in Western Australia, where acreage restrictions applied in respect of the 1942–43 to 1945–46 harvests. The amounts so paid during each year 1942–43 to 1947–48 were £535,000, £599,348, £586,964, £243,828, £2,619 and £97 respectively.

(iii) *Artificial Fertilizers Subsidy.* Prior to the 1939–45 War, assistance was given to primary producers, other than wheat-growers, in the form of a subsidy on artificial fertilizers generally; subject to certain provisions, the rate was 15s. for each ton of artificial manure used in the production of primary produce, but in 1936–37 this was reduced to 10s. per ton. The payment of this subsidy ceased on 30th June, 1939.

Because of the substantial increases in the price of superphosphate and their effect on the efficiency of the farming industry, the Commonwealth Government introduced a bounty on superphosphate produced and sold in Australia after 1st July, 1941. The rate of bounty was fixed at 25s. per ton, payable to manufacturers, who were required to adjust their prices so that consumers received the full benefit of the subsidy. From July, 1942 to September, 1948 a revised basis of subsidy payments operated under which payment was made to manufacturers under a system designed to stabilize the price of superphosphate in the face of rising costs and to return to producers a reasonable margin of profit. In September, 1948 a flat rate system was re-introduced, the rates of subsidy being £2 15s. per ton in Western Australia, £2 10s. per ton in Eyre Peninsula and £2 5s. 6d. per ton elsewhere. Subsidy has also been paid on nitrogenous fertilizers from 1943–44. From that year proceeds from sales under the equalization scheme, under which these fertilizers are handled, have been less than expenditure incurred by the equalization pool, and the deficiency in each year has been met by Commonwealth subsidy.

Details of the amounts paid in respect of subsidy on both superphosphate and nitrogenous fertilizers are shown in the table above.

(iv) *Dairying Industry.* The war-time demand for butter, cheese and processed milk products was such as to necessitate production being increased to the limit of existing resources. With this object in view the Commonwealth subsidized production and so encouraged dairy farmers to maintain output at the highest level possible. The amounts paid since the introduction of the subsidy are shown above. These do not include the subsidies paid on the production of whole milk which is consumed directly, and which amounted to £319,000 in 1943–44, £1,786,000 in 1944–45, £2,520,000 in 1945–46, £2,249,000 in 1946–47, £2,157,000 in 1947–48 and £564,000 in 1948–49. This subsidy was discontinued from 30th September, 1948.

(v) *Farmers' Debt Adjustment.* In addition to the assistance outlined above, the Loan (Farmers' Debt Adjustment) Act 1935 made provision for grants, totalling £12 million, to be made available to the States for the adjustment of farmers' debts. Of this amount, £10 million was allocated as follows :—New South Wales, £3,450,000; Victoria, £2,500,000; Queensland, £1,150,000; South Australia, £1,300,000; Western Australia, £1,300,000; and Tasmania, £300,000. The remaining £2 million was allocated in the same proportion, and was subject to review at a later date.

§ 21. Fertilizers.

1. **General.**—In the early days of settlement in Australia scientific cultivation was little understood. It was common, as in other new countries, for the land to be cropped continuously to a degree of exhaustion. This practice is very much less in evidence now than in the early days of Australian agricultural development. Under the guidance of the State Departments of Agriculture, scientific farming is now much more widely practised. The importance of fallowing, crop rotation, and the application of suitable fertilizers in adequate quantities is now appreciated by farmers. The introduction of the modern seed-drill, acting also as a fertilizer-distributor, has greatly facilitated the use of artificial manures and much land formerly regarded as useless for cultivation has now been made productive.

2. **Fertilizers Acts.**—In order to protect the users of artificial fertilizers, legislation has been passed in each of the States regulating the sale and prohibiting the adulteration of fertilizers. A list of these Acts and their main features is given in Official Year Book No. 12, p. 378.

3. **Imports.**—The Australian output of prepared fertilizers is derived chiefly from imported rock phosphates and is sufficient for local requirements.

The chief sources of Australia's pre-war supplies of rock phosphate were Nauru and the Gilbert Islands Group. The war in the Pacific interrupted supplies from these sources and the bulk of the imports until 1946–47 came from Algeria, Egypt, Morocco and the Makatea Islands. Since 1948–49, however, supplies have been obtained mainly from Nauru, Gilbert Islands Group and Christmas Island. Sodium nitrate is obtained chiefly from Chile.

The imports of manures during the five years ended 1949–50, compared with average imports for the period 1934–35 to 1938–39, are shown in the following table :—

FERTILIZERS : IMPORTS INTO AUSTRALIA.

Fertilizer.		Average, 1934–35 to 1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.

5. **Quantities Locally Used.**—Information regarding the area fertilized with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the year 1949–50 is given in the following table. Details of the area manured with natural manure (stableyard, etc.) are no longer collected.

AREA FERTILIZED AND QUANTITY OF FERTILIZERS USED, 1949–50.

State or Territory.	Area Fertilized (Acres).			Fertilizers Used (Cwt.).		
	Crops.	Pasture Lands.	Total.	Crops.	Pasture Lands.	Total.
New South Wales	3,209,312	1,288,832	4,498,144	2,269,897	1,213,532	3,483,429
Victoria	3,839,014	6,726,723	10,565,746	3,511,176	7,489,225	11,000,401
Queensland..	315,606	1,730	317,336	1,443,152	2,805	1,445,957
South Australia	3,121,981	1,792,334	4,914,315	2,962,993	1,912,357	4,875,350
Western Australia	4,251,299	2,736,146	6,987,445	4,316,282	2,836,361	7,152,643
Tasmania	196,933	461,635	658,568	506,442	571,047	1,077,489
Australian Capital Territory ..	8,711	11,623	20,334	11,093	10,860	21,953
Total	14,942,856	13,019,023	27,961,888	15,021,035	14,036,187	29,057,222

Particulars of the quantity of artificial fertilizers used in each State and Territory during each of the years 1945–46 to 1949–50, compared with the average for the five years ended 1938–39, are shown in the next table. These details include the quantity used in the top-dressing of pasture lands.

The serious diminution in the output of superphosphate during the war caused by the interruption of imports of rock phosphate necessitated the introduction of a system of rationing of supplies which adversely affected the yields from those crops which are mainly dependent upon the use of superphosphate.

QUANTITY OF ARTIFICIAL FERTILIZERS USED.

(Tons.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.
Average, 1934–35 to 1938–39 ..	148,277	305,969	50,651	200,566	230,713	30,272	276	966,724

As mentioned in § 20 the Commonwealth Government has encouraged the use of artificial fertilizers by providing subsidies to primary producers.

6. **Local Production.**—Complete information regarding local production of fertilizers is not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1949–50 was 51, made up as follows :—New South Wales 14 ; Victoria, 9 ; Queensland, 7 ; South Australia, 7 ; Western Australia, 6 ; and Tasmania, 8. The production of superphosphate in Australia during 1949–50 amounted to 1,483,458 tons, the largest producing States being Victoria, Western Australia and South Australia.

§ 22. Ensilage.

1. **Government Assistance in Production.**—The several State Governments devote a considerable amount of attention to the education of the farming community in regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connexion with the design of the silos and the cutting and packing of the ensilage.

2. **Quantity Made.**—Information regarding the quantity of ensilage made during each of the seasons 1946–47 to 1949–50, together with respective averages for the five years ended 1938–39, is given in the following table :—

ENSILAGE MADE.
(Tons.)

State.	Average, 1934–35 to 1938–39.	1946–47.	1947–48.	1948–49.	1949–50.
New South Wales ..	109,278	51,783	119,453	91,519	73,047
Victoria	30,594	24,644	21,873	20,945	25,687
Queensland	10,291	13,146	15,635	11,123	10,622
South Australia	8,493	4,739	6,531	5,793	5,545
Western Australia ..	15,779	8,809	13,267	9,077	11,091
Tasmania	1,114	2,890	3,514	3,902	8,271
Australian Capital Territory	..	5	349	110	64
Australia.. ..	175,549	106,016	180,622	142,469	134,327

The drought of 1902–3 drew increased attention to the value of stocks of ensilage, and during the four seasons ended 1909–10 there was an increase both in the number of holdings on which ensilage was made and in the quantity produced. The accumulated stocks proved of great value during the 1914 drought, though far less than would have been the case if more attention had been paid to production during the previous years when there was a surplus of green fodder. The quantities made since that date have fluctuated considerably, but the output increased up to 1939–40 in which year the production of 303,495 tons was the highest yet recorded. During subsequent seasons output declined noticeably and reached the extremely low level of 94,744 tons during the drought year 1944–45, but rose to 180,622 tons in 1947–48, and fell again to 134,327 tons in 1949–50.

3. **Stocks Held on Farms.**—Details of farm stocks of ensilage, which were collected for the first time as at 31st March, 1943, are shown in the following table as at 31st March, 1946 to 1950 :—

ENSILAGE : FARM STOCKS.
(Tons.)

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.

§ 23. Agricultural Colleges and Experimental Farms.

Agricultural colleges, administered by State Departments of Agriculture, have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agricultural work and live stock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural research and experimentation. To a lesser degree they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying or animal husbandry, according to the course undertaken.

Experimental farms have been set up by State Departments of Agriculture in all States. They are primarily concerned with agricultural research and experimentation, each farm concentrating on problems specific to the district in which it is located. The results of the work undertaken are passed on to farmers at field days, which are held at regular intervals, through publication in various agricultural or scientific journals and through the agricultural extension officers of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations scattered throughout Australia, and sometimes undertakes joint research with the appropriate State authorities. In general, however, the Commonwealth Scientific and Industrial Research Organization concentrates on fundamental research, except when otherwise specifically invited, while the State Departments of Agriculture study problems of particular significance within their own boundaries. The universities also carry out valuable research work on their own experimental farms.

§ 24. Tractors on Rural Holdings.

The growth of mechanization in agriculture is indicated by the increase in the number of tractors on rural holdings from 41,943 in 1939 to 103,795 in 1950, or by 147 per cent. Since 1943, the first year in which the collection was made by types, wheeled type tractors have increased by 106 per cent., and crawler types by 43 per cent.

The table below sets out the total numbers of tractors on rural holdings in 1939, and the number of wheeled type and crawler tractors for the five years ended 1950.

TRACTORS ON RURAL HOLDINGS.

§ 25. Number and Area of Rural Holdings and Permanent Employment Thereon.

1. **General.**—The statistical data included in the chapters relating to agricultural, pastoral and dairying activities are obtained at an annual census taken in each State under the direction of the State Statisticians. This census is taken as early as practicable after the conclusion of the main harvest and covers every holding within the boundaries of each State.

A holding in Australia has been defined by the States on a more or less uniform basis and discrepancies which exist are not of sufficient importance to vitiate any comparisons. For the purpose of these statistics, a holding may be defined as land of one acre or more in extent, used in the production of agricultural produce, the raising of live stock or the products of live stock.

With the exception of Queensland, particulars of the number of holdings included in these censuses are available for all States over a series of years. It was not until 1938–39, however, that a complete tabulation became available for Queensland.

2. **Number and Area.**—The following table shows the number and area of the holdings in each State for the years 1938–39 and 1945–46 to 1949–50.

RURAL HOLDINGS : NUMBER AND AREA.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australian Capital Territory.	Total.

3. **Analysis of Holdings.**—(i) *General.* It is not possible to classify these holdings according to the purpose for which they are used. This arises from a number of factors, the chief of which is mixed farming. The general trend in Australia is for farmers to diversify their activities and consequently it is very difficult to determine whether the purpose of many holdings is mainly agricultural, pastoral or dairying, or any of these in combination.

(ii) *New South Wales.* Such an analysis has been made in New South Wales but, as pointed out by the Statistician, it should be regarded as an approximation. It was compiled from the description of purpose given by the occupier of the holding at the time of the annual census. This tabulation reveals that there were 71,165 holdings so classified in New South Wales during 1945–46. Of this number 10,447 described their main purposes as agricultural only, 21,590 as pastoral only, 12,157 dairying only, 3,973 as poultry, pig or bee farming, while the main purpose of the remaining 22,098 holdings was stated to be a combination of two or more of these activities. Holdings used mainly for residential or other purposes but which were used partly for the production of rural products were omitted. These numbered 3,008 during 1945–46.

4. **Special Tabulation Relating to Rural Holdings, 1949–50.**—With the co-operation of State Statisticians, the second series of special tabulations relating to rural holdings was undertaken for all States for the year 1949–50. These tabulations have been published in detail in *Primary Industries Bulletin* No. 44, 1949–50. The following table shows particulars of the number and area of rural holdings classified according to the size of holdings.

RURAL HOLDINGS : NUMBER AND AREA CLASSIFIED IN AREA SERIES, 1949–50.

5. **Permanent Employment on Rural Holdings.**—The following table shows for each State of Australia the recorded number of persons permanently engaged full-time on rural holdings as at 31st March, 1950. Additional particulars relating to the number of males employed in agriculture are available up to 1941–42 in Official Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

CHAPTER XXI.

FARMYARD, DAIRY AND BEE PRODUCTS.

NOTE.—Values of Australian oversea trade shown throughout this chapter are expressed as f.o.b. Australian currency, except where otherwise indicated.

§ 1. Introductory.

1. **General.**—The introduction of cattle into Australia and the early history of the dairying industry are referred to in some detail in earlier issues of this publication. It may here be noted that the original stock has been crossed with specially imported stud cattle, while further judicious crossings of strains have resulted in an increased and improved milk supply. In Australia dairy cattle thrive in the open throughout the year, local climatic conditions demanding no protection other than tree plantations for shelter, and in certain districts rugging in the coldest weather. Indigenous and imported grasses furnish food during the greater part of the year, and winter fodder, when necessary, is given to the cattle in the fields. With the wider application of scientific methods in the treatment of animals and pasturages and in the processes of manufacture, coupled with herd testing and effective State supervision, the dairying industry has shown rapid expansion. It has been demonstrated that Australian production and marketing methods do not adversely affect the vitamin content of the butter and that the loss during ~~cold storage even for as long as two~~ years is insignificant.

Milk production in Australia has fallen to some extent from the peak of 1,254 million gallons recorded in 1939–40, owing to the effects of drought and labour shortages during the 1939–45 War, and, more recently, as a result of a diversion of resources to the wool industry caused by the spectacularly high wool prices in 1950–51.

2. **Mixed Farming.**—Dairying is not, as formerly, wholly confined to agriculturists, since many graziers in a large way of business also give it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established. The extent to which dairy cattle were run in conjunction with pig raising and wheat growing in 1949–50 is shown in the relevant tables published in the section "Special Tabulations Relating to Rural Holdings: 1949–50" of *Primary Industries Bulletin* No. 44, 1949–50.

3. **Employment.**—The numbers of persons employed in primary industry are ascertained at the annual census of rural production. The particulars collected are in respect of those persons who were permanently engaged in the actual work of the farm and include owners, lessees, tenants or sharefarmers, relatives over 14 years of age not receiving wages, and other permanent employees, including managers and relatives, working for wages or salary. Details of the numbers so engaged are given in Chapter XX.—Agricultural Production, § 25.

For the years up to 1939–40, information was also collected which enabled the classification of each holding according to the chief purpose for which it was used, thus obtaining a distribution of employment in the three main classes, viz., Agriculture, Pastoral and Dairying. However, because of difficulties in determining with precision the chief purpose for which holdings are used, this information has since been omitted from the schedules. Consequently it has not been possible to continue to compile details of employment in the dairying industry from data obtained from this source.

Details of the number of persons who described themselves at the population census of 30th June, 1947 as being engaged in dairy farming were shown for each State in Official Year Book No. 38, page 1025. They comprised 96,508 males and 10,018 females, a total of 106,526 persons.

4. **Growth of the Dairying Industry.**—The following table gives some indication of the growth of the dairying industry since 1918–19 :—

DAIRYING INDUSTRY : AUSTRALIA.

Year.	Number of Dairy Cows.		Total Milk Produced for all Purposes.	Production of Butter.	Production of Cheese.	Milking Machines (No. of Stands).(a)
	In Milk.	Dry.				
			Mill. gals.	Tons.	Tons.	
1918–19 ..	1,319,588	582,448	529.6	81,162	10,621	(b)
1928–29 ..	1,744,728	600,342	815.4	129,817	13,490	(b)
1938–39 ..	2,600,707	608,812	1,189.2	203,500	29,304	(b)
1946–47 ..	2,227,022	786,119	1,079.6	143,308	42,350	125,720
1947–48 ..	2,267,221	818,044	1,173.1	162,055	41,478	134,774
1948–49 ..	2,339,885	818,725	1,212.6	165,830	43,202	144,916
1949–50 ..	2,354,217	837,218	1,241.8	173,599	44,796	155,218
1950–51 ..	2,252,741	895,930	(c) 1,199.7	(c) 164,971	(c) 44,578	165,788

(a) "Number of Stands" indicates the number of cows that can be milked simultaneously—i.e., the cow capacity of installed milking machines. (b) Not available. (c) Subject to revision.

5. **Official Supervision of Dairying Industry.**—Dairy experts of the various State Agricultural Departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce. A high standard of cleanliness, both of *personnel* and *materiel*, prevails.

The export trade is regulated by the terms of the Commonwealth Commerce (Trade Descriptions) Act 1905–1933, and regulations thereunder. It will be sufficient to state here that the true trade description, etc., must be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

§ 2. Dairy Cattle and Dairy Products.

1. **Dairy Herds.**—Due to the lack of uniformity in the schedules used by the several States in the collection of live-stock statistics, it is not possible to measure with precision the growth of the dairy herds of Australia prior to 1943. However, statistics of dairy cows, which provide a reliable measurement of this development, show that in 1918–19 there were 1,902,036 dairy cows (in milk and dry), compared with 2,345,070 in 1928–29 and 3,209,519 in 1938–39. The numbers remained at this level until March, 1944, but have since declined, the number recorded at 31st March, 1951, being 3,148,671. In New South Wales, Victoria, South Australia and Tasmania the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory and Western Australia there is a great preponderance of other cattle, the main object in these areas being the production of beef. Dairying, however, has developed greatly in southern Queensland since 1914–15, and the largest contribution to the Australian increase in dairy production has been made by this State. Since 1939 the number of dairy cows has declined in both Queensland and New South Wales while significant increases have occurred in Victoria and South Australia. The numbers of dairy cows for 1947 to 1951 shown in the following table refer to those recorded by farmers as being in milk and dry as at 31st March. The figures shown for the years 1935 to 1939 cover the same categories, but the period differs in some States (*see* footnote (*a*)). To this extent the figures lack comparability.

NUMBER OF CATTLE AND DAIRY COWS (IN MILK AND DRY).

State.		Average, 1935–39. (a)	31st March— 1947.	1948.	1949.	1950.	1951.

(a) Includes other milking cows not in registered dairies. (b) Excludes Northern Territory.

A graph showing the distribution of dairy cattle in Australia at 31st March, 1948 appears on page 906 of this issue.

2. **Size of Dairy Herds.**—A series of special tabulations relating to rural holdings, undertaken for all States for the year 1949–50, covered, *inter alia*, a classification of holdings with dairy cattle according to size of herd. Details of these tabulations are published in *Primary Industries Bulletin* No. 44, 1949–50.

3. **Factory System.**—(i) *General.* Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories has resulted in a considerable reduction in the cost of manufacture, since improved appliances such as refrigerators, etc., may be profitably worked at the larger establishments. The product is also of a more uniform quality, and few farmers prefer to convert the cream rather than send it to the factory. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires less than 2½ gallons.

(ii) *Number of Factories.* The factories in Australia for the manufacture of butter, cheese and condensed milk numbered 428 in 1949–50. They were distributed among the States as follows :—New South Wales, 99 ; Victoria, 144 ; Queensland, 95 ; South Australia, 45 ; Western Australia, 18 ; and Tasmania, 27. More details regarding numbers of factories, output, etc., are given in Chapter XXIV.—Manufacturing Industry.

4. **Butter and Cheese—Stabilization Schemes.**—(i) *Voluntary Plan.* During the period from January, 1926 to April, 1934, a voluntary scheme known as the " Paterson Plan " was in operation and had the effect of stabilizing the price of butter in Australia. Details of this scheme may be found on page 1028 of Official Year Book No. 38 and in earlier issues.

(ii) *Compulsory Plan.* On 1st May, 1934 the " Paterson Plan " was superseded by a compulsory price equalization plan details of which were shown on page 1029 of Official Year Book No. 38 and earlier issues. This compulsory plan was invalidated by the decision in 1936 of the Privy Council which declared in the James (Dried Fruits) Case that the Commonwealth had no power under the Constitution to regulate trade between the States.

(iii) *Equalization Scheme.* Since the Privy Council decision, the butter price stabilization scheme has continued to operate by voluntary action based on the agreements between the manufacturers and the Commonwealth Dairy Produce Equalisation Committee Limited. The Committee, which comprises members of the State Dairy Products Boards and other persons representing the industry, enters into agreements with manufacturers to secure to them equal rates from sales of butter and cheese, and for this purpose may fix basic prices at which these products sold in Australia or abroad are to be taken into account. The effect is that local and export trade are distributed in equitable proportions among the manufacturers by means of quotas. The Committee fixes basic prices and equalizes returns to factories through an Equalisation Fund. The States originally participating in the scheme were New South Wales, Victoria, Queensland and Tasmania in respect of both butter and cheese, and South Australia in respect of cheese. South Australia and Western Australia entered the scheme in respect of butter on 1st April, 1946 and Western Australia extended its participation to include cheese in January, 1947.

The home consumption prices of butter and cheese were fixed by the Commonwealth Prices Commissioner up to 19th September, 1948, from which date prices have been controlled by State Governments.

5. **Commonwealth Subsidies.**—(i) *Butter, Cheese and Processed Milk Products.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter, cheese and processed milk products. Subsidies were paid on a seasonal basis prior to 1st April, 1946, but from that date have been on a flat rate basis. Subsidies are distributed by the Commonwealth Dairy Produce Equalisation Committee Limited through factories to milk producers by payments on butter,

cheese and processed milk products manufactured. Subsidy on milk supplied for the manufacture of processed milk products was discontinued from 1st July, 1948, but was resumed from 1st July, 1949.

The following table shows particulars, in respect of butter and cheese, of the rates realized on local, interstate and overseas sales and the average equalization and subsidy rates in operation for the years ended June, 1939 and 1947 to 1951.

BUTTER AND CHEESE: RATES REALIZED ON SALES, AVERAGE EQUALIZATION RATES AND RATES OF COMMONWEALTH SUBSIDY UNDER DAIRY INDUSTRY ASSISTANCE ACTS.

(*a*) Interim rates. (*b*) Not yet available. (*c*) Lower rates were determined for cheese sold in these years for processing for local consumption.

Following representations by industry organizations, the Commonwealth Government established the Joint Dairy Industry Advisory Committee in November, 1946, comprising a chairman nominated by the Government, four representatives of Commonwealth Government Departments and four industry representatives from the several States. The Committee's functions, broadly, are to advise and assist in conducting cost and other surveys of dairy farm production and to act as an advisory body to the Government in these matters. Since 1st April, 1947, the rates of over-all return to milk producers determined by the Commonwealth Government for the purpose of subsidy payments have been based on recommendations made by the Committee following surveys of production costs in the dairy industry.

For the years 1948–49 and 1949–50 and the period July to November, 1950, export prices for butter, including those applicable under the United Kingdom Dairy Products Contract were in excess of the f.o.b. equivalent of the basic return to the factory. Cheese was in the same position in 1948–49. Since July, 1949, in respect of cheese and since December, 1950, in respect of butter, the United Kingdom contract prices have been below the f.o.b. equivalent of the respective basic returns to factories. Amounts realized on exports in excess of the basic return to factories have been credited to the Dairying Industry Stabilization Fund, which was established in July, 1948, for the purpose of stabilizing returns from exports for the period of the United Kingdom Contract. At 30th June, 1951 contributions to the Fund amounted to approximately £4,000,000.

Subsidy payments by the Commonwealth Government since July, 1948 have applied to butter and cheese for local consumption and are paid through factories to dairy farmers to bring total returns for milk used for those purposes to the guaranteed prices.

(ii) *Whole Milk.* In addition to the subsidies referred to above, the Commonwealth Government has also subsidized the production of whole milk consumed directly. The subsidy rates varied according to States, regions within the State and the seasonal period. Commonwealth subsidy on whole milk was paid during the year 1948–49 in respect of milk supplied up to 30th September, 1948, but was discontinued after that date. Details of the amounts distributed during each year will be found in Official Year Book No. 38, page 1031.

6. **Total Dairy Production.**—The dairy production for each State in 1949–50 is shown below:—

DAIRY PRODUCTION, 1949–50.

(*a*) Includes 2,903,000 gallons of milk, the produce of New South Wales, sent as cream to factories in Victoria and Queensland. (*b*) Includes 708,000 gallons of milk, the produce of Victoria, sent as cream to New South Wales. (*c*) Includes 831,000 gallons of milk, the produce of Queensland, sent as cream to New South Wales. (*d*) Not available for publication. (*e*) Includes particulars for States marked (*d*). (*f*) Includes milk used in the production of condensed, concentrated and powdered milk, etc. (*g*) Includes 335 tons of butter made from cream, the produce of Victoria and Queensland. (*h*) Includes 504 tons of butter made from cream, the produce of New South Wales. (*i*) Includes 120 tons of butter made from cream, the produce of New South Wales. (*j*) Estimated. (*k*) Includes 172 tons of cheese made in establishments not classified as factories.

7. **Whole Milk.**—(i) *Production and Utilization.* During the five years ended 1938–39 approximately 80 per cent. of Australia's milk supply was used for butter-making, 4 per cent. for cheese manufacture, 2 per cent. for condensary products and 14 per cent. for fluid consumption and other purposes. There has since been a considerable decline in the proportion of milk used for butter-making with corresponding increases in the quantities used for other purposes. In 1949–50, 65·0 per cent. of the total milk supply was used for butter, 7.8 per cent. for cheese, 7.1 per cent. for condensary products and 20.1 per cent. for other purposes.

Details of the production of whole milk for various purposes are shown in the following table for each year 1945–46 to 1949–50 in comparison with the average for the years 1934–35 to 1938–39 :—

PRODUCTION AND UTILIZATION OF WHOLE MILK : AUSTRALIA.

('000 gallons.)

Year.	Total Production.	Quantity used for—			
		Butter (Factory and Farm).	Cheese (Factory and Farm).	Condensary Products.	Other purposes.
Average, 1934–35 to 1938–39	1,149,559	913,754	48,595	28,116	159,094
1945–46	1,077,469	701,819	89,555	65,313	220,782
1946–47	1,079,640	678,293	91,086	70,450	239,811
1947–48	1,173,105	763,049	90,121	78,113	241,822
1948–49	1,212,644	781,230	93,720	87,653	250,041
1949–50	1,241,759	806,682	96,757	88,034	250,286

In the following table, particulars of production of whole milk in the several States are shown for the years 1945–46 to 1949–50, compared with the average for the five years ended 1938–39. Victoria is the principal milk-producing State and in 1949–50 output from that State, viz., 469.3 million gallons, represented 37.8 per cent. of total production. Output from New South Wales was 311.6 million gallons or 25.1 per cent. of the total and that of Queensland 281.1 million gallons (22.6 per cent.). Production in the remaining States accounted for 14.5 per cent. of the total Australian output.

TOTAL PRODUCTION OF WHOLE MILK.

('000 gallons.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.
Average, 1934–35 to 1938–39 ..	331,963	402,447	278,226	63,538	40,394	32,659	332	1,149,559
1945–46 ..	278,885	375,639	269,390	79,370	43,004	30,714	467	1,077,469

(ii) *Production per Cow.* The annual quantity of milk produced per dairy cow reaches as high as 1,000 gallons, varying greatly with breed, locality and season. For the whole of Australia for all dairy cows and for all seasons prior to 1916 it averaged considerably under 300 gallons per annum. In recent years not only has there been an improvement in the quality of the cattle, but the application of scientific methods has been continually extended, and the 300-gallon average has been exceeded in each year since 1924, the yield of 392 gallons in 1931 constituting a record. In 1949-50 the yield was 391 gallons. The annual average yields per cow shown in the following table are based on the number of dairy cows which were in milk during any part of the year. The average shown is, therefore, below that for cows which were yielding during the greater part of the year. It should be noted that there are many difficulties attending the collection of particulars of the total quantity of milk obtained during any year. In addition, there is the further difficulty of ascertaining with reasonable accuracy the average number of cows in milk during the same period. The average yield per cow shown hereunder may be accepted as sufficiently reliable to show the general trend :—

(a) Mean for the year. (b) Excludes Northern Territory.

8. **Butter Production.**—There was a steady increase in the annual output of butter for many years prior to the 1939–45 War. The average annual production rose from 126,000 tons for the five years ended 1928–29 to 195,000 tons for the five years ended 1938–39.

Following the record output of 212,000 tons in 1939–40 the general trend of butter production declined until 1946–47, when 143,300 tons were produced. The factors contributing to this decline include unfavorable seasons, transfer of man-power owing to the war, shortages of fertilizers for pastures and change in some factories from butter production to the manufacture of cheese and preserved whole milk products. Output increased to 162,100 tons in 1947–48, to 165,800 tons in 1948–49 and to 173,600 tons in 1949–50. The foregoing figures include butter produced on farms which has shown a decline from about 8,700 tons in 1938–39 to 5,154 tons in 1949–50.

The following table shows production of butter in factories in each State for the years 1945–46 to 1949–50, compared with the average for the five years ended 1938–39.

BUTTER PRODUCTION IN FACTORIES.

9. **Cheese Production.**—Until 1916 the annual production of cheese had not reached 10,000 tons. From 1916 to 1926–27 it ranged between 10,000 and 13,000 tons with two years (1921 and 1924) having more than 14,000 tons. For the next five years between 13,500 and 14,800 tons were produced each year. Then (in 1932–33) production rose to 16,500 tons, and, with some reversals of trend, has continued to rise to reach the record output of 44,800 tons in 1949–50. The States contributing chiefly towards this increase over the years are Victoria, Queensland and South Australia.

The following table shows production of cheese in factories in each State in the years 1945–46 to 1949–50 in comparison with average output during the years 1934–35 to 1938–39 :—

CHEESE PRODUCTION IN FACTORIES.

10. **Condensed, Concentrated and Powdered, etc. Milk Production.**—The manufacture of these products has expanded greatly since 1938–39—to meet the needs of the Services during the 1939–45 War and for export purposes since the war. The output of condensed milk (sweetened and unsweetened) in 1949–50 was 186.9 per cent. higher than in the three years ended 1938–39 while that of powdered milk (full cream and skim) was 236.2 per cent. higher. Over the same period the quantity of whole milk used in the manufacture of the products shown below increased from 28.1 million gallons to 88.0 million gallons or by 213.1 per cent. These products are manufactured mainly in Victoria, which produced 61.8 per cent. of the total in 1949–50. New South Wales accounted for 22.0 per cent. of the total in that year, the remaining States producing 16.2 per cent.

The following table shows details of the output of condensed, concentrated, powdered, etc. milk during the years 1945–46 to 1949–50, compared with the available details for the years 1936–37 to 1938–39.

PRODUCTION OF CONDENSED, CONCENTRATED AND POWDERED, ETC. MILK : AUSTRALIA.

(Tons.)

Year.	Condensed Milk (Sweetened and Unsweetened).	Concentrated Whole Milk. (*a*)	Powdered Milk.		Infants' and Invalids' Foods (including Malted Milk and Milk Sugar).	Total.
			Full Cream and Skim.	Buttermilk and Whey.		
Average, 1936–37 to 1938–39	17,347	(*b*) 1,355	9,464	(*b*) 701	(*b*) 1,131	(*b*)29,998

1949–50	49,767	17,270	31,932	2,989	10,282	112,240

(*a*) Mainly for ice-cream manufacture. (*b*) Incomplete.

11. **Local Consumption of Butter and Cheese.**—The production of butter and cheese less net exports and adjusted to account for movements in stocks, represents the quantity available for consumption in Australia.

As previously mentioned, the quantity of butter required by the Armed Services based upon Australia limited supplies during the war years for export overseas and for consumption in Australia. The former had diminished to such an extent that, in order to prevent further decline, it became necessary to introduce a system of butter rationing on 7th June, 1943. The rate was fixed at 8 oz. per head per week, but was reduced to 6 oz. per week as from 7th June, 1944. Butter rationing was discontinued from 16th June, 1950.

As a result of rationing, butter consumption in 1949–50 was 25.3 lb. per head per annum compared with an average of 32.9 lb. during the years 1936–37 to 1938–39. The rationing of butter has been associated with increased cheese consumption which amounted to 6.3 lb. per head in 1949–50 compared with 4.4 lb. pre-war. Preliminary estimates of butter and cheese consumption in 1950–51 are 31.2 lb. and 6.6 lb. respectively.

The following table shows details of the production and disposal of butter and cheese for the periods 1946–47 to 1949–50, compared with the average for the years 1936–37 to 1938–39.

PRODUCTION AND DISPOSAL OF BUTTER AND CHEESE: AUSTRALIA.

(a) Figures for butter include dry butter fat, ghee and tropical spread expressed as butter as well as butter shipped as ships' stores. Figures for cheese include ships' stores after allowance for a small quantity of cheese imported. (b) Not available. (c) Includes allowance for movements in stocks other than those held in main cold stores.

12. **Marketing of Dairy Products.**—(i) *The Dairy Produce Export Control Act* 1924–47. Introduced at the request of the dairying industry this Act was passed by the Commonwealth Parliament with the object of organizing the oversea marketing of Australian dairy produce. A Dairy Produce Control Board was appointed and was in existence from 1924 to 1935. It dealt with matters relating to the organization and supervision of oversea marketing of dairy produce. In the course of its functions the Board regulated shipments to ensure regularity of supply in the London market, controlled forward selling, obtained reductions in oversea freights and insurance rates and participated in an advertising campaign in the United Kingdom.

Prior to the appointment of the Dairy Produce Control Board a voluntary body—the Australian Dairy Council—was established to advise and make recommendations to the Governments on problems connected with the production, manufacture and quality of dairy produce, pasture improvement and diseases of dairy cattle.

Following a recommendation by the Australian Agricultural Council the functions of these bodies were combined by an amending Act of 1935 under the Australian Dairy Produce Board and provision was made for the allocation of money from the Board's funds for research and investigation into pastures, diseases of dairy cattle and the quality of butter. The functions of the Board were later extended to enable it to advise the Government in connexion with the transport of dairy produce, the securing of new markets, the expansion of existing markets and other matters.

The Australian Dairy Produce Board was re-constituted in 1947 by an amendment to the Dairy Produce Export Control Act, reducing its membership from seventeen to twelve. The functions of the Board were extended to enable it to purchase and sell, on behalf of the Commonwealth, dairy produce intended for export, and to control all matters concerning the handling, storage, protection, treatment, transfer and shipment of the produce so purchased or sold.

(ii) *The Dairy Produce Export Charges Act* 1924–1937. This Act provides for the imposition of a levy on all butter and cheese exported from Australia to cover the administrative expenses of the Board and for advertising and other purposes. The rate of the levy is fixed by regulation.

(iii) *War-time Marketing.* Reference to the marketing arrangements which operated during the 1939–45 War was made in Chapter XXVIII.—Miscellaneous, pp. 1108–1110 of Official Year Book No. 36.

13. **Butter and Cheese Contracts.**—(i) *General.* Details of the war-time contracts arranged between the United Kingdom and Australian Governments whereby the former undertook to purchase Australia's surplus butter and cheese were shown on pp. 985 and 986 of Official Year Book No. 37. The purchase of butter and cheese in 1944–45 and subsequent years has been covered by the Long-Term Purchase Agreement (*see* sub-par. (ii) following).

For the years 1943–44 to 1947–48 the United Kingdom Government reimbursed the Australian Government to the extent of subsidy paid on butter and cheese exported on Ministry of Food account. From 1st July, 1948 to 30th November, 1950 in respect of butter, and for the year 1948–49 in the case of cheese, however, contract prices paid by the United Kingdom Government have been in excess of the basic return to the Australian manufacturer. As a result, subsidy on butter and cheese exported was discontinued from that date and returns from export sales in excess of the basic return to the producer have been credited to the Dairying Industry Stabilization Fund (*see* par. 5 (i) *ante*). The Fund is to be drawn upon to cover the deficiencies in export prices from July, 1949 for cheese and from December, 1950 for butter.

The following tables indicate the prices per cwt. f.o.b. Australian currency for the various grades of butter and cheese for the several war-time contracts, together with the prices payable under the Long-Term Purchase Agreement up to the year 1950–51.

(ii) *Long-Term Purchase Agreement.* Early in 1945 an agreement was completed between the United Kingdom and Australian Governments covering the sale to the former of Australia's surplus butter and cheese for the four years 1944–45 to 1947–48. The agreement was later extended to cover the period up to 30th June, 1955. In the original agreement, prices were stipulated for the initial two years ended June, 1946, while any variation in price for the succeeding years was not to exceed 7½ per cent. of the price paid for the preceding year. In accordance with the terms of the agreement, prices were increased for the year 1946–47 and further increases were agreed upon for the years 1947–48 to 1950–51 following representations from the Australian Government after having considered recommendations by the Joint Dairy Industry Advisory Committee (*see* par. 5 above).

The United Kingdom undertakes responsibility for storage costs if unable to provide ships to lift butter and cheese from store after 90 days, and makes advances against stored stock in this event.

The usual provisions relative to quality, packing, etc., continued to obtain, but in regard to payment the United Kingdom now pays the whole of the value on shipment, instead of 97½ per cent. on shipment and 2½ per cent. 60 days after the date of the last bill of lading, as formerly.

14. **Oversea Trade in Butter, Cheese and Milk.**—(i) *General.* The production of butter and cheese in Australia is considerably in excess of local requirements and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon the seasonal conditions. In the immediate pre-war period the quantity of butter and cheese consumed annually in Australia was about 101,000 tons and 13,400 tons respectively, and production in excess of these amounts was available as surplus for export. In the post-war period, rationing (until June, 1950) restricted Australian consumption of butter to about 85,000 tons but production is still considerably below the pre-war level, the net result being reduction in the exportable surplus.

Because of war-time requirements due to the presence of Australian and Allied Servicemen in the South-West Pacific Area, exports of butter to the United Kingdom were reduced to a level lower than that attained in any year since 1926–27. During

1938–39, 97,000 tons, or 95 per cent. of all butter exported, was shipped to the United Kingdom, but by 1944–45 exports to this country had decreased to 37,000 tons or 86 per cent. of the total quantity exported. In 1949–50 the quantity shipped to the United Kingdom was 69,700 tons (88 per cent. of the total exports).

With cheese, increased production during the war was accompanied by decreased exports. In 1938–39, exports totalled 16,000 tons of which 15,500 tons were exported to the United Kingdom. By 1944–45, however, the quantity exported to the United Kingdom had declined to 2,800 tons or 18 per cent. of the total of 15,000 tons exported. Since the war, cheese exports have increased greatly and in 1949–50 a total quantity of 22,900 tons was exported, of which 18,000 tons or 78 per cent. was shipped to the United Kingdom.

The following tables show the total imports, exports and net exports of butter, cheese and condensed, concentrated, etc., milk and cream.

BUTTER, CHEESE, MILK, ETC. : IMPORTS AND EXPORTS, AUSTRALIA.

(*a*) The average imports of butter for the years 1934–35 to 1938–39 amounted to 2,743 lb. valued at £161. In 1945–46 and each of the following years imports were less than 200 lb. and value less than £30.

(ii) *Butter and Cheese Exports graded according to Quality.* All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to the supervision, inspection and examination of officers appointed for that purpose. These commodities are graded according to quality which has been fixed by regulation as follows :—Flavour and aroma, 50 points ; texture, 30 points ; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality ; at 90 to 92 points, first quality ; at 86 to 89 points, second quality ; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, are to be found in *Primary Industries Bulletin* No. 44, 1949–50.

BULK BUTTER AND CHEESE GRADED FOR EXPORT: AUSTRALIA.
(Per cent.)

Grade.	Butter.			Cheese.		
	1947–48.	1948–49.	1949–50.	1947–48.	1948–49.	1949–50.

(*a*) Included with Second Quality. (*b*) Includes rejected.

§ 3. Pigs and Pig Products.

1. **Pigs.**—Between 1928–29 and 1938–39 the number of pigs fluctuated around one million. In the latter year an upward movement commenced and continued until the record number of 1,797,340 was recorded in 1940–41. There was a decline in the following two years but the numbers rose again to 1,746,721 in 1943–44; thereafter, there was a continuous decline to 31st March, 1950 when the number recorded was 1,123,267. This was followed by a slight rise to 1,133,588 at 31st March, 1951. The distribution of pigs among the States and Territories at 31st March, 1951 was—New South Wales, 316,833; Victoria, 237,127; Queensland, 374,901; South Australia, 67,517; Western Australia, 89,910; Tasmania, 45,446; Northern Territory, 1,122; Australian Capital Territory, 642.

A more accurate index of the development of pig-raising in Australia is provided in the following table, which combines, for each of the years 1938–39 to 1950–51, the number of slaughterings with the total number recorded.

NUMBER OF PIGS AND NUMBER SLAUGHTERED(*a*): AUSTRALIA.

Year.	Number of Pigs.	Number Slaughtered.	Year.	Number of Pigs.	Number Slaughtered.
1938–39 ..	1,155,591	1,829,392	1945–46 ..	1,425,709	1,650,926
1939–40 ..	1,455,341	1,849,582	1946–47 ..	1,273,011	1,591,627
1940–41 ..	1,797,340	2,335,801	1947–48 ..	1,254,683	1,550,163
1941–42 ..	1,414,893	2,581,859	1948–49 ..	1,196,321	1,675,807
1942–43 ..	1,563,000	2,072,921	1949–50 ..	1,123,267	1,556,918
1943–44 ..	1,746,721	1,841,198	1950–51 ..	1,133,588	1,516,270
1944–45 ..	1,630,855	1,922,388			

(*a*) The numbers slaughtered relate to slaughterings for human consumption.

Further details relating to pig numbers are given in Chapter XIX.—Pastoral Production. A graph showing the distribution of pigs in Australia at 31st March, 1948 appears on p. 908 of this Year Book.

2. **Size of Pig Herds.**—A series of special tabulations relating to rural holdings undertaken for all States for the year 1949–50 covered, *inter alia*, a classification of holdings carrying pigs according to size of herd. Full details of these tabulations are published in *Primary Industries Bulletin* No. 44, 1949–50.

3. **Pork.**—(i) *Production.* With Allied Servicemen in Australia during the war years, the demand for pork was considerably increased and producers were encouraged to increase production to the highest level attainable in order to meet Service requirements and maintain exports as far as possible. After these requirements had been met, the quantity available for civilian consumption was much less than that normally consumed. In some States the civilian consumption of pork was negligible, but in other parts of Australia, where transport difficulties precluded the marketing of pork in the main centres, civilian consumption was not prohibited. In the following table details of production in each State are shown for the years 1945–46 to 1949–50 compared with average production during the years 1934–35 to 1938–39.

PRODUCTION OF PORK (BONE-IN WEIGHT).

(Tons.)

Year.	New South Wales.	Victoria	Queensland.	South Australia.	Western Australia.	Tasmania.	Northern Territory.	Australian Capital Territory.	Total
Average, 1934–35 to 1938–39 ..	9,938	12,236	9,867	3,215	1,741	1,240	7	38	38,282
1945–46 ..	6,335	9,595	9,363	4,072	4,749	986	17	3	35,120
1946–47 ..	6,364	7,153	9,011	2,978	3,446	1,039	17	18	30,026
1947–48 ..	6,448	7,138	7,134	2,954	2,234	1,391	28	34	27,361
1948–49 ..	9,831	8,623	12,254	2,358	2,649	1,442	27	56	37,240
1949–50 ..	10,260	6,645	12,911	2,009	1,793	1,208	42	90	34,958

(ii) *Consumption.* For the three pre-war years ended 1938–39 the average annual production of pork was 45,500 tons, of which 13,700 tons were exported, leaving 31,800 tons, or the carcass equivalent of 10.4 lb. per head per annum, available for local consumption.

As in the case of other meats, the demand for pork for the Armed Services and for exports was so great that it was necessary to divert supplies from civilian consumption under the rationing scheme introduced in January, 1944. This resulted in the consumption of pork per head declining from the pre-war average of 10.4 lb. to 9.0 lb. in 1943, to 6.4 lb. in 1944 and to 4.9 lb. in 1945. After 1945 there was a reduction in exports and supplies to the Armed Services and in September, 1946, pork was made available to civilians in all States. Together with other meats, pork was, however, subject to coupon rationing until 21st June, 1948. As a result, consumption per head rose to 5.9 lb. in 1946, 6.8 lb. in 1946–47, 7.1 lb. in 1947–48, and 7.4 lb. per head in 1948–49 and 1949–50. A preliminary estimate of consumption in 1950–51 is 7.0 lb. In the following table details of the production and disposal of pork are shown for the years 1946–47 to 1949–50, compared with corresponding averages for the three years 1936–37 to 1938–39.

PRODUCTION AND DISPOSAL OF PORK (BONE-IN WEIGHT): AUSTRALIA.

('000 tons.)

Year.	Changes in Stock.	Production. (*a*)	Exports.	Canning.	Consumption in Australia.	
					Total.	Per head per annum.

1949–50	+[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	7.4

(*a*) Includes an estimate of trimmings from baconer carcasses.

4. **Bacon and Ham.**—(i) *Production.* As in the case of pork, the increased demand for bacon and ham during the war years stimulated production to a level not previously attained. Production reached its peak in 1944–45 when 56,246 tons of bacon and ham were cured. This has been followed by a continuous decline in output in each succeeding year to 40,603 tons in 1949–50. Details of production are shown by States in the following table for the five pre-war years ended 1938–39 and each year 1945–46 to 1949–50.

PRODUCTION OF BACON AND HAM (CURED WEIGHT).

(Tons.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
Average, 1934–35 to 1938–39	9,963	7,614	9,269	2,950	2,013	970	1	32,780
1945–46	17,409	9,377	10,699	5,239	4,608	1,255	..	48,587
1946–47	15,830	10,998	9,983	5,069	4,638	1,150	..	47,668
1947–48	14,175	11,159	10,142	4,884	4,232	1,317	..	45,909
1948–49	13,302	10,204	9,412	3,788	3,756	1,122	..	41,584
1949–50	12,955	9,779	10,018	3,318	3,542	991	..	40,603

(ii) *Consumption.* For the three pre-war years ended 1938–39 the annual production of bacon and ham averaged 32,500 tons of which 1,000 tons were exported, leaving 31,500 tons, or 10.2 lb. per head per annum, available for local consumption. The presence of large numbers of Allied Servicemen in Australia during the 1939–45 War necessitated the diversion of civilian supplies. Bacon and ham were not included in the list of rationed meat but supplies to be placed on the civilian market were determined after the demands of the Services and export requirements had been met. Consumption per head declined in the early stages of the war but by 1944 it had been restored to the pre-war level and subsequently increased to 12.7 lb. in 1946–47. This was followed by a fall in consumption to 12.0 lb. in 1947–48, to 10.4 lb. in 1948–49 and to 9.6 lb. in 1949–50. An estimate of consumption in 1950–51 is 8.4 lb. per head. Details of production and disposal of bacon and ham for the periods 1936–37 to 1938–39 and 1946–47 to 1949–50 are shown in the following table.

PRODUCTION AND DISPOSAL OF BACON AND HAM (CURED WEIGHT): AUSTRALIA.

('000 tons).

Year.	Changes in Stock.	Production.	Exports.	Canning.	Consumption in Australia.

§ 5. Poultry-Farming.

1. **General.**—Poultry-farming has been carried on in Australia for many years and the State Departments of Agriculture have encouraged its development by appointing experts to advise on the care and management of poultry and by conducting egg-laying competitions.

Originally the industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialized and distinct industry and it is from this source that the bulk of the commercial production is obtained. Practically all farms keep poultry for the purpose of supplying their own domestic requirements and in many cases some supplies from this source are also marketed. In addition many private homes keep small numbers of fowls in backyard runs and this helps to maintain domestic needs particularly when eggs are in short supply.

2. **Numbers of Poultry.**—In pre-war years the numbers of the principal kinds of poultry were a normal feature of the annual census of live-stock in all States except Victoria and Tasmania. These data were collected on a restricted scale by all States in 1942–43, the details obtained being confined to farms of 1 acre or more producing eggs or poultry for sale. The collection has since been discontinued in some States. Because of their incompleteness, details of poultry numbers are not published.

3. **Recorded Production and Disposal of Eggs.**—(i) *Shell Eggs.* Available statistics of the production and disposal of eggs in Australia are restricted to those recorded by the Egg Boards of the several States.

Egg Boards, or authorities appointed to control the marketing of eggs, have operated in the States of New South Wales, Victoria and Queensland for some years, whilst in South Australia the Board commenced to operate in August, 1942. It was not until August, 1943 that Advisory Committees were established in Western Australia and Tasmania. These authorities were created under National Security Regulations. Statistics of recorded production of eggs for Australia as a whole are not available, therefore, prior to 1943–44.

In the following table details of receivals and disposals of eggs, as recorded by these authorities, are shown for Australia for the years 1945–46 to 1949–50.

SHELL EGGS: RECEIVALS AND DISPOSALS RECORDED BY EGG BOARDS, AUSTRALIA.

Total	113,053	122,518	119,427	120,209	115,686

(a) Receivals from consignors and sales by producer agents.

(ii) *Egg Pulp*. Prior to the 1939–45 War, production of egg pulp was about 7 million lb. per annum. This was used almost entirely for the manufacture of cakes, pastry and biscuits, only negligible quantities being exported. Production was expanded greatly during the war years to meet the requirements of the Armed Services and has since been maintained at a high level for export purposes and to meet increased local requirements.

Particulars of the production of whole egg pulp as recorded by the Egg Boards in the several States are shown in the following table.

LIQUID WHOLE EGG : PRODUCTION RECORDED BY EGG BOARDS.
('000 lb.)

State.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
New South Wales ..	11,930	14,576	14,600	15,966	14,760
Victoria..	8,296	12,854	16,139	14,579	8,565
Queensland	2,526	1,650	3,240	4,560	4,498
South Australia	7,122	7,073	8,510	7,663	6,574
Western Australia ..	1,122	1,295	1,834	1,782	1,837
Tasmania	519	247	189	129	407
Total	31,515	37,695	44,512	44,679	36,641

In addition to liquid whole egg, production was also recorded of liquid egg whites and liquid egg yolks. Output in 1949–50 amounted to 517,000 lb. and 333,000 lb. respectively compared with 485,000 lb. and 323,000 lb. respectively in the previous year.

(iii) *Egg Powder*. The production of dried egg powder was not established in Australia until 1942, when the industry was introduced to treat Australia's surplus eggs so as to maintain exports to the United Kingdom. The shortage of refrigerated shipping space precluded the export of shell eggs so they were converted into powdered form. Since the termination of hostilities in 1945, the manufacture of egg powder has been continued for export purposes, but has been considerably curtailed since 1946–47. Owing, no doubt, to the availability of fresh eggs, a market has not yet been established in Australia. The product now consists almost entirely of sugared egg powder, and recorded production was 908,000 lb. in 1948–49 and 931,000 lb. in 1949–50, the bulk of the production being confined to South Australia.

4. **Production and Consumption of Eggs.**—Statistics of egg production must necessarily be accepted with some reserve. Owing to the difficulties experienced in obtaining a complete census of output, it is more expedient to compute a figure based on the best data available. The production shown in the following table, which shows also details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control plus an estimate of production from uncontrolled areas and an estimate of the production of "back-yard" poultry-keepers. The estimates of total production obtained have been checked with data from other sources and found to be reasonably in accord.

ESTIMATED PRODUCTION AND DISPOSAL OF EGGS IN SHELL: AUSTRALIA.

(*a*) In terms of weight of shell eggs. (*b*) The average weight of an egg in Australia is taken as 1.75 oz.

5. **Marketing of Eggs.**—(i) *United Kingdom Contracts.* Details of the annual contracts entered into between the United Kingdom and Australian Governments will be found in Official Year Book No. 38, pp. 1048–9.

Negotiations with the United Kingdom Government in respect of the 1950–51 season's prices resulted in an increase of 1.325d. per lb. in the price of frozen whole egg pulp. Prices for eggs-in-shell and egg products other than pulp remained unchanged. The increase in the price of pulp was conditional upon the cessation of packing eggs-in-shell for the United Kingdom by 30th November, in lieu of 24th December as in previous seasons.

In reviewing contract prices for the 1951–52 season, the United Kingdom Government agreed to waive the stipulation that the prices for the 1951–52 season should not exceed those for the previous season by more than 7½ per cent. and granted increases of approximately 25 per cent. on eggs-in-shell and 18 per cent. on egg products.

The prices stipulated in the several contracts for eggs and egg products for the years 1947–48 to 1951–52 are shown in the following table. Contract prices in operation for the years 1939–40 to 1944–45 were shown on page 997 of Official Year Book No. 37, and those for 1945–46 and 1946–47 on page 1049 of Official Year Book No. 38.

1951–52	3 3	2 4.75	8 10.25	6 1.75

(a) Price for pack of 15 lb. per long hundred (ten dozens); proportionate adjustments made for other packs.

(ii) *War-time Marketing.* Details of the war-time control of egg marketing under Commonwealth legislation were given on page 998 of Official Year Book No. 37.

(iii) *Egg Export Control Act* 1947. Following the termination of Commonwealth control over the production and marketing of eggs on 31st December, 1947, functions relating to the local marketing of eggs reverted to State Egg Boards which became responsible for stabilizing prices and marketing of eggs produced in the respective States. In order to assist in marketing Australia's surplus production of eggs under the Long-Term Purchase Agreement with the United Kingdom, the Commonwealth established the Australian Egg Board under the Egg Export Control Act 1947. The Board, which commenced to operate on 1st January, 1948, is empowered to buy and sell, on behalf of the Commonwealth Government, eggs and egg products intended for export which comply with the provisions of the Export (Dairy Produce) Regulations. In addition, the Board is authorized to deal with all matters relating to the export of eggs and egg products from Australia, to make such experiments as are likely to lead to the improvement of the quality of Australian eggs and to promote their sale overseas. The Board consists of ten members, including six representatives of egg producers and one representative of the Commonwealth Government.

6. **Oversea Trade in Poultry Products.**—The Australian oversea export of poultry products has in the past been confined chiefly to eggs in shell and egg contents, which are consigned mainly to the United Kingdom. New South Wales, Victoria and South Australia are at present the largest exporters. Exports of eggs from Australia rose from less than 3 million dozen valued at £219,000 in 1928–29 to 21.7 million dozen valued at more than £1.1 million in 1934–35, but declined to 10.3 million dozen in 1939–40. A

high level of exports in 1940–41 was followed by a steep decline down to almost negligible quantities in 1942–43 and 1943–44. Following a slight increase in 1944–45, exports rose to 17.5 million dozen in 1946–47, but fell to 14.5 million dozen in 1947–48. In 1949–50 exports reached the record level of 23.0 million dozen, valued at £2,948,889.

Prior to the 1939–45 War, exports of egg contents were small and in 1939–40 there was an excess of imports. During the war years, exports expanded greatly, mainly to meet Service requirements, and since the close of the war there has been further expansion, although the latest year, 1949–50, shows a considerable decline from the peak year, 1947–48.

Since the close of the war there has also been a remarkable increase in the exports of frozen poultry, which rose from 283,107 pair in 1945–46 to 2,875,641 pair in 1949–50. The average for the pre-war years 1934–35 to 1938–39 was only 37,913 pair.

The oversea trade during the five years ended 1949–50 in comparison with the average for the five years ended 1938–39 was as follows :—

7. **Value of Poultry Products.**—(i) *Gross and Net Values*, 1949–50. Difficulty is experienced in obtaining complete figures for the production of poultry products. The following table sets out the values accruing to the poultry industry in Australia on a gross, local and net basis for the year 1949–50, and has been compiled from data actually collected or carefully estimated by the State Statisticians :—

GROSS, LOCAL AND NET VALUE OF POULTRY PRODUCTS, 1949–50.

(£'000.)

State.	Gross Production valued at Principal Markets.	Marketing Costs.	Gross Production valued at Farm.	Feed and Other Costs.	Net Value of Production. (a)

§ 6. Bee-Farming.

1. **General.**—Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming, but its place in Australia's rural economy is not very significant. The returns of honey from productive hives during 1949–50 showed an average of 78.25 lb. per hive and the average quantity of wax was 0.99 lb. per productive hive.

2. Production of Honey and Bees-wax.—The number of hives and the production of honey and bees-wax during the year 1949–50 are shown in the following table. As these details have been collected from holdings of one acre and upwards, any production from smaller areas is omitted and consequently the production is understated to that extent. In Victoria and South Australia, however, the compulsory registration of bee-keepers enables the collection to cover all producers and the production for these States is considered to be complete.

BEEHIVES, HONEY AND BEES-WAX, 1949–50.

State.	Beehives.			Honey Produced.		Bees-wax Produced.	
	Productive.	Unproductive.	Total.	Quantity.	Gross Value.	Quantity.	Gross Value.
	'000.	'000.	'000.	'000 lb.	£	lb.	£
New South Wales ..	113	66	179	9,227	288,344	117,939	17,691
Victoria	82	33	115	7,744	258,129	78,124	11,719
Queensland ..	24	17	41	1,187	37,103	22,162	3,694
South Australia ..	83	28	111	5,179	151,038	70,442	9,686
Western Australia	22	5	27	2,041	42,978	32,045	5,007
Tasmania ..	4	1	5	285	10,700	3,724	700
Australia(*a*) ..	328	150	478	25,663	788,292	324,436	48,497

(*a*) Excludes Australian Capital Territory.

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora of the eucalypts, which varies greatly from year to year. However, in recent years there has been a pronounced upward trend in the output of honey and figures for 1948–49 were an all-time record at 53,203,000 lb. In 1949–50, recorded production was 25,663,000 lb.

The table hereunder shows the production of honey and bees-wax for the five years ended 1949–50 in comparison with the averages for the years 1934–35 to 1938–39.

(*a*) Excludes Australian Capital Territory.

3. **Value of Production.**—(i) *Gross and Net Values*, 1949–50. The following table shows the gross, local and net values of production which have been compiled by the Statisticians of the several States by uniform methods. These data are based upon actual records but, as previously explained, it is known that the production in some States is understated. As production costs are not known they are not taken into account, and consequently, the gross production valued at the farm and net values shown are identical :—

GROSS, LOCAL AND NET VALUE OF BEE PRODUCTS, 1949–50.

(£'000.)

State.	Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Farm.	Net Value of Production.(*a*)
New South Wales	306	26	280	280
Victoria	270	34	236	236
Queensland	41	6	35	35
South Australia	161	20	141	141
Western Australia	48	8	40	40
Tasmania	11	..	11	11
Total	837	94	743	743

(*a*) No deduction has been made for depreciation and maintenance.

(ii) *Net Value of Production*, 1934–35 *to* 1949–50. In the following table the net value of bee products and the net value per head of population are shown by States for the years 1945–46 to 1949–50 compared with the average for the five pre-war years ended 1938–39 :—

NET VALUE OF BEE PRODUCTS.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
NET VALUE.(£'000.)(*a*)

1949–50	1 9	2 2	0 7	4 1	1 6	0 10	1 10

(*a*) No deduction has been made for depreciation and maintenance nor for the value of other materials used in the process of production.

4. **Oversea Trade in Bee Products.**—Prior to the 1939–45 War the production of honey exceeded Australian requirements and a small quantity was available for export. As a result of increased production, exports have risen considerably since 1938–39, when a quantity of 687,000 lb. of honey, valued at £13,957, was shipped. In 1948–49 the record quantity of 32.09 million lb., valued at £1,217,193, was exported, and in 1949–50, exports were 20.77 million lb., valued at £814,115.

The wider use of frame hives reduced the production of wax, and as a result the quantity imported exceeded that exported, but in recent years production has been high on account of exceptionally good seasons, and exports have exceeded imports by substantial margins.

Particulars of the oversea trade in honey and bees-wax are shown in the following table for the five years ended 1949–50 in comparison with the average of the years 1934–35 to 1938–39.

Eggs in shell	..'000 doz.	283,315	81,330	115,615	151,764	209,814	167,618
	£'000	12,835	9,287	13,460	21,577	30,522	21,515

2. **Butter.**—(i) *Imports.* Australia has for many years supplied a large proportion of the butter imported into the United Kingdom. The quantity in 1950 amounted to 1,319,614 cwt., or 19.68 per cent. of the total importation. The Australian contribution was valued at £17,410,329 and was exceeded by that received from New Zealand and Denmark. Australia and New Zealand combined supplied 57.77 per cent. of the total quantity imported during 1950 and Denmark, 37.65 per cent.

In the following table particulars of the quantity and value of butter imported into the United Kingdom are shown for the years 1938 and 1950 according to country of origin.

BUTTER: IMPORTS INTO UNITED KINGDOM.

Country from which Imported.	1938.		1950.	
	Quantity.	Value.	Quantity.	Value.
	Cwt.	£	Cwt.	£
New Zealand	2,592,251	14,524,140	2,554,414	33,861,826
Australia	1,797,811	9,629,939	1,319,614	17,410,329
Other British Countries	422,704	2,454,725	5,002	67,056
Argentine Republic..	89,876	407,678	..	..
Denmark	2,364,799	12,960,434	2,524,474	34,922,068
Netherlands	711,910	3,465,835	299,697	4,059,242
Other Foreign Countries	1,538,562	7,430,382	2,639	36,171
Total	9,517,913	50,873,133	6,705,840	90,356,692

(ii) *London Prices.* In the following table the prices shown up to and including September, 1939 represent the mean of the top prices quoted weekly for choicest salted Australian butter together with their f.o.b. equivalents in Sydney and Melbourne in terms of Australian currency. Since September, 1939, the price represents that fixed in accordance with the contract between the Governments of Australia and the United Kingdom for choicest Australian Butter. Pence have been omitted throughout.

AVERAGE PRICE PER CWT. OF AUSTRALIAN CHOICEST BUTTER IN LONDON (WITH F.O.B. EQUIVALENTS IN AUSTRALIAN CURRENCY).

(a) Sydney and Melbourne. (b) Contract price f.o.b. Australian ports. (c) Equivalent of contract price.

3. **Cheese.**—The value of cheese imported into the United Kingdom in 1950 was £27,593,837. Of this, £12,452,665 represented imports from New Zealand, £4,921,806 imports from Canada, £2,487,331 from Australia, and £1,011,444 from the United States of America.

4. **Bacon.**—Of a total import in 1950 of bacon valued at £54,706,357, the value of that supplied by Denmark was £31,368,320, Canada, £9,179,974, and the Netherlands, £4,701,154.

5. **Pork.**—The value of the United Kingdom imports of pork (frozen and chilled) was £5,189,031 in 1950. Imports from New Zealand, valued at £1,119,342, and Australia, £707,443 comprised 35.21 per cent. of the imports into the United Kingdom.

6. **Eggs.**—In 1950 the value of eggs imported into the United Kingdom was £29,278,492, comprising eggs-in-shell, £21,515,330, liquid or frozen eggs, £4,791,548, and dried eggs, £2,971,614. The Australian share in this trade amounted to £2,938,427. Eggs-in-shell were supplied by Denmark, £13,104,069 and Irish Republic, £4,731,061. The principal exporters of dried eggs to the United Kingdom were the United States of America, £1,945,139 and Canada, £873,750.

7. **Milk Products.**—In 1950 the value of powdered and preserved milk imported into the United Kingdom was £6,259,217, comprising condensed milk, sweetened, £1,421,381, condensed milk, unsweetened, £1,011,162 and powdered milk, £3,826,674. Australia supplied unsweetened milk powder valued at £1,162,508.

8. **Other Products.**—The imports into the United Kingdom from Australia of poultry and frozen rabbits and hares amounted to £2,052,344, and £945,714 respectively, while those of bees-wax, game, lard and honey in 1950 were unimportant.

CHAPTER XXII.

FORESTRY.[*]

§ 1. General.

1. **Objects of Forestry.**—Forestry is a profession based on science, art and economic and business principles, which aims to protect and treat forests as restorable resources to provide their maximum direct and indirect benefits to a country.

The direct benefits lie in the providing of essential commodities such as structural timber, poles, piles, sleepers, pulpwood, firewood, tans, oils, resins, etc. and the provision of an avenue for the employment of labour in forestry and associated and dependent industries. The indirect benefits include the regulation of stream flow from catchment areas, by providing conditions ideal for the maximum penetration into the soil of rainfall and other precipitations. Floods, the effects of reduced and/or intermittent flow of streams, and the ravages of water erosion are thereby minimized, and the effects of aeolian or wind erosion are lessened. Neither the direct nor the indirect benefits of forests are fully appreciated until they are seriously reduced or until their absence brings about a situation which is a matter of public concern.

Australia has a particular interest in water and soil conservation because the area suitable for agricultural and pastoral development is not so large that material reduction in extent or deterioration of productive capacity cannot but limit expansion and retard development, and because of the potential susceptibility of many parts to water and wind erosion; moreover, the water conservation and irrigation schemes, constructed at the cost of millions of pounds to ensure the successful cropping of very large areas, are ultimately dependent on regular stream flow and minimum siltation.

Forestry aims to protect existing forests from the ravages of fire, insect, fungus and destructive agencies generally; to improve the quality and condition of forests by carrying out judicious fellings; to control exploitation so that the forest increment and not the forest capital is removed; to regenerate cut over areas; to afforest with native or exotic species denuded lands, or those which for protection or other reasons are from a national point of view better under forest than under any other crop.

2. **General Account of Forests and Timbers.**—Compared with Australia's land area of approximately three million square miles, the area of forest land capable of producing commercial timber has always been very small, occupying in the main the wetter belts of the coastal areas and the near coastal highlands. In the early days of settlement the forests, however, appeared to the small population to be practically inexhaustible. In those early days timbers were exploited chiefly on account of their accessibility, ease of working and general utility regardless of their intrinsic merits, and so it was that what are now regarded as superlative furniture and cabinet timbers were often put to quite inferior uses. Clearing of forest land by axe and fire stick to make room for crops and pastures has bitten deeply into the original forest estate which has been further degraded by recurrent forest fires. In retrospect, the damage and waste of the past is appalling, but it marked a phase of forest and timber loss which has been paralleled in the vigorous pioneering activity of the early history of many countries.

Predominantly the forests of Australia consist of relatively coarse bluish green foliaged evergreen hardwoods. The characteristic genus is Eucalyptus, embracing five to six hundred species, which with few exceptions are endemic to Australia. The genus includes such species as the mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, both of which for height and grandeur have few equals in the world. At the other end of the scale of size of species of this genus are dwarf types, including the small multiple stemmed species collectively known as the " mallees ", which thrive in some of the drier belts. Probably not more than 80 to 90 of the eucalypts are used for sawmilling in Australia and, for one reason or another, not more than 30 to 40 are extensively exploited.

---

[*] A specially contributed article dealing with Forestry in Australia appeared as part of this chapter in Official Year Book No. 19 (*see* pp. 701–12 therein). *See* also "The Commercial Timbers of Australia, Their Properties and Uses" by I. H. Boas, published by the Council for Scientific and Industrial Research in 1947, "Timbers and Forest Products of Queensland" by E. H. S. Swain, published in 1928 and "Australian Standard Nomenclature of Australian Timbers" published by the Standards Association of Australia.

Among these outstanding eucalypts are—

> Blackbutt (*E. pilularis*) of New South Wales and Queensland; Tallowwood (*E. microcorys*) of New South Wales and Queensland; Spotted Gum (*E. maculata*) of New South Wales and Queensland; Ironbarks (*E. spp.*) of New South Wales, Victoria and Queensland; Alpine Ash (*E. gigantea*) of New South Wales, Victoria and Tasmania; Redgum (*E. camaldulensis*) of New South Wales, Victoria and South Australia; Mountain Ash (*E. regnans*) of Victoria and Tasmania; Messmate, Stringybark or Tasmanian Oak (*E. obliqua*) of New South Wales, Victoria and Tasmania; Jarrah (*E. marginata*) of Western Australia; Karri (*E. diversicolor*) of Western Australia.

The range and properties of eucalypt timbers are very great indeed. They fulfil all Australia's requirements where strength and durability are required, for example in such uses as railway sleepers, poles, piles, beams, girders, telegraph crossarms, waggon scantlings, posts, house blocks, wheelwright timber, as well as for fuel, etc. In large measure they also meet general building requirements and, to a lesser extent perhaps, export packaging requirements. In recent years certain of the eucalypts have been extensively pulped for paper-making and, less widely, for the manufacture of hardboard.

A large number of other genera represented in the Australian forest flora also produce commercial hardwoods. Among the outstanding furniture cabinet and veneer timbers are red cedar (*Cedrela toona var. australis*), Queensland maple (*Flindersia brayleyana*), Southern and Northern silky oak (*Grevillea robusta* and *Cardwellia sublimis*, respectively), Queensland walnut (*Endiandra palmerstoni*), blackwood (*Acacia melanoxylon*), rose mahogany (*Dysoxylum fraseranum*), etc. Turpentine (*Syncarpia laurifolia*) ranks with the world's best as a harbour piling timber and swamp box (*Tristania suaveolens*) is almost as good. Coachwood (*Ceratopetalum apetalum*) came into prominence for rifle furniture and for aircraft ply during the last war. The foregoing are but a few examples indicating the range of use of the timbers of the Australian hardwood forests.

Indigenous softwood resources have never been large and are now seriously depleted. A remnant only remains of the forests of hoop pine (*Araucaria cunninghamii*), bunya pine (*Araucaria bidwilli*) of New South Wales and Queensland, kauri (*Agathis spp.*) of Queensland, and huon pine (*Dacrydium franklinii*), celerytop pine (*Phyllocladus rhomboidalis*) and King William pine (*Athrotaxis selaginoides*) of Tasmania.

There are still considerable areas of the slow-growing but useful white ant resisting cypress (*Callitris spp.*) in the forests of the inland areas of Queensland, New South Wales and Victoria, but many of them are being overcut and in some localities regeneration of the forests presents difficulties.

The savannah forests of the interior yield minor products such as sandalwood and tan barks, and the leaves of some of the mallees are used for oil distillation.

3. **Extent of Forests.**—According to data submitted by State Forestry authorities for the Empire Forestry Conference in 1947, the total area of forest is 119,402 square miles, or about 4 per cent. of the total land area of Australia. This forest area is distributed between the different States as follows:—New South Wales and Australian Capital Territory, 19,364 square miles; Victoria, 27,025; Queensland, 27,050; South Australia, 5,909 (excluding 4,600 square miles of mallee containing firewood only); Western Australia, 27,154; Tasmania, 12,900; total, 119,402 square miles.

The South Australian authorities especially emphasize that, after excluding the mallee firewood areas, the percentage of the remaining forest comparable with even mediocre forest land in other States is so small as to be almost negligible. Apart from this specific case it seems clear that there is considerable variation in the standards adopted for the definition of forest land. Also it should be emphasized that the figures given are stated to be rough estimates only. Furthermore, it is generally agreed that the figures for forest areas given are often far in excess of those which are both suitable for reservation and likely to be maintained for timber production. Considering these facts the proportion of Australia carrying commercial forests is very low. On the other hand it should be noted that approximately 68 per cent. of the area of the continent is practically uninhabited and carries less than one person in every eight square miles.

The table below shows a classification of the estimated total forest area referred to above :—

CLASSIFICATION OF FOREST AREA : AUSTRALIA.

(Square miles.)

Class of Forest.	State Forest.	Communal Forest.	Private Forest.	Total.	
				Area.	Proportion of Total Forest Area.
					Per cent.
Exploitable—					
Softwood	3,858	16	1,832	5,706	4·8
Mixed wood	1,033	..	94	1,127	0·9
Hardwood	32,016	780	13,146	45,942	38·4
Total	36,907	796	15,072	52,775	44·1
Potentially Exploitable—					
Softwood	200	..	278	478	0·4
Mixed wood	100	..	..	100	0·1
Hardwood	16,853	141	7,848	24,842	20·9
Total	17,153	141	8,126	25,420	21·4
Other Land Classed as Forest	34,798	..	6,409	41,207	34·5
Grand Total	88,858	937	29,607	119,402	
Proportion of Total Forest Area .. ..Per cent.	74·3	0·8	24·9	..	100·0

The bulk of the softwood forest areas of approximately 4,000 square miles are in Queensland and New South Wales. The softwood forest areas given for these States represent natural forest, a large proportion of which consists of slow-growing native cypress (*Callitris spp.*) in low rainfall areas, and the per acre volume of which is comparatively low.

4. Forest Reservations.—The rate at which the original forest estate was being diminished had exercised the minds of far-sighted individuals as long ago as the eighties of last century and it was about that time that the first large forest reservations were made. Over the years recognition that forest reservations were inadequate became more general. It was not, however, until an Interstate Forestry Conference was held at Hobart in 1920 that a specific target to be aimed at was mentioned. The figure then agreed upon was an area of 24½ million acres of indigenous forest, which it was considered should be permanently reserved to meet the future requirements of Australia.

The forest reservations in Australia at 30th June, 1950 totalled 27,856,655 acres of which 20,452,579 acres are described as Dedicated State Forests, and 7,404,076 acres as Timber and Fuel Reserves. The distribution of these areas is shown by States in § 4. 2 hereafter.

In general the timber and fuel reserves are temporary only and are liable to be alienated after the timber on them has been exploited. Some of these areas contain land of high value for forestry purposes, but the greater part does not justify permanent reservation.

If the permanently reserved areas were all of good quality, accessible, and fully productive forests supplying the class of timber required, they could be regarded as adequate for a much larger population than exists in Australia at the present time. Actually, however, a considerable proportion is in inaccessible mountainous country and many of the forests contain a mixture of species, some only of which are at present of commercial value: a good proportion consists of inferior forest and a large proportion of the whole has been seriously degraded by recurrent fires. Also the indigenous forest does not contain adequate supplies of softwoods producing commercial timbers, of which our needs have to be largely met by softwood timber imported from other countries.

It is freely acknowledged by Australian forestry authorities that information on forest resources is very imperfect. It is not possible at present to give a reliable estimate of the forest areas needed to meet all future demands because of the number of unknown variables involved; in particular the yield capacity per acre, future consumption of different classes of timber per head, and the future population. It would appear, however, that all available potentially good forest country, including adequate areas for plantations of conifers, will need to be reserved, protected and systematically managed, if Australia is to approach the goal of self sufficiency in timber supplies in the future. One of the most urgent requirements in this connexion is a comprehensive, if provisional, estimate of forest resources.

5. **Plantations.**—The inadequacy of indigenous softwood supplies has been referred to. This fact has long been recognized by the various forest authorities and considerable progress has been made in experimental planting of exotic conifers and also some substantial progress made in the establishment of commercial plantations. It was natural that this aspect of forestry received earliest attention in South Australia as it is the State most poorly endowed with natural forest and it now has the largest plantation area. For some years South Australia has been exploiting considerable quantities of timber from its plantations and these quantities will increase very substantially during the next decade.

According to statements provided by State authorities, the total effective area of plantations in Australia as at the 30th June, 1950 was 294,223 acres. Details by States are given under § 4. 3.

§ 2. Forestry Activities of the Commonwealth.

1. **Prior to 1925.**—When the Commonwealth of Australia was established on the 1st January, 1901, forestry was not included among the matters transferred from the States to the control of the Commonwealth, and Federal jurisdiction was therefore restricted to the then relatively unimportant forests of the Australian Territories. After the 1914–18 War these Territories (including Papua-New Guinea and Norfolk Island) covered a large area, and in the aggregate contained a substantial forest resource. In the early twenties of this century a professional forester was appointed as forestry adviser to the Commonwealth Government, and he submitted preliminary reports on the forest resources of Papua-New Guinea, Norfolk Island and the Australian Capital Territory, with suggestions for future policy.

2. **Commonwealth Forestry Bureau.**—In 1925 the Commonwealth Forestry Bureau was instituted and the Commonwealth Forestry Adviser became the Inspector-General of Forests. At this stage it was considered that the most useful contribution that the Commonwealth could make to Australian forestry was: (*a*) to provide better facilities than then existed for the higher training in forestry for recruits to the professional ranks of the State services and for forestry research workers; and (*b*) to initiate research into problems connected with silviculture, forest management and forest protection, which fundamentally were common to most, if not all of the States.

By deciding to build, equip and staff the Australian Forestry School on its own Territory the Commonwealth Government ended a long standing controversy as to the site of a National School which successive Interstate Forestry Conferences had unanimously resolved was necessary. All States sent students to the Australian Forestry School when its career commenced in Adelaide in 1926, pending completion of the school in Canberra in the following year. At this time also a nucleus of selected and qualified officers was sent abroad to undergo special courses of instruction and to obtain experience for the purpose of staffing the research side of the Bureau, which received statutory powers by an Act passed in 1930. These powers and functions, subject to the regulations and the direction of the Minister, were as follows :—(*a*) advising the Administrations of the Territories on all matters pertaining to the management of forests ; (*b*) the management of forests placed under its control by the Governor-General ; (*c*) the establishment of experimental stations for the study of silviculture, forest management and forest protection ; (*d*) the provision of educational facilities for the training of professional foresters ; (*e*) the establishment and awarding of forestry scholarships ; (*f*) the collection and distribution of forestry information ; (*g*) the publication of reports and bulletins dealing with forestry ; and (*h*) such other functions as are prescribed.

3. **Wartime Control of Timber.**—In previous issues reference is made to the steps leading up to the war-time control, by the Controller of Timber, of all phases in the production, treatment and use of timber.

4. **Forestry and Timber Bureau.**—(i) *General.* At the end of the war the war-time organization of Commonwealth Timber Control lapsed and the direction of timber supplies within the boundaries of each State became the responsibility of the respective State Governments. The Commonwealth Government decided, however, to continue certain advisory functions previously carried out by War-time Timber Control and such functions were incorporated in the Forestry and Timber Bureau Act 1946 under which the title of the Bureau was altered from Forestry Bureau to Forestry and Timber Bureau, its administration was placed under the charge of a Director-General in lieu of an Inspector-General of Forests, and the powers and functions of the Bureau were extended to embrace the following :—(*a*) Collecting statistics and information regarding timber supplies and requirements in Australia, and formulating programmes in respect of the supply, production and distribution of timber in Australia, and the importation into, and exportation from, Australia of timber ; (*b*) advising the Government of the Commonwealth or any instrumentality of that Government, or, when so requested, the Government of any State, or any instrumentality of the Government of any State, or any body or person, on matters relating to the supply, production and distribution of timber in Australia, and the importation into, and exportation from, Australia of timber ; and (*c*) carrying out investigations and research relating to the supply, production, distribution and use of timber. The activities of the Bureau under its statutory functions are summarized below under four main headings.

(ii) *Forestry Education—Australian Forestry School.* The genesis of the Australian Forestry School situated in Canberra in the Australian Capital Territory, which was established by the Commonwealth Government primarily to meet the demand of the States for an institution which would give professional training at least equal to that given by the recognized Forestry Schools abroad, has been referred to in § 2.2 above.

For information on the conditions required for enrolment as a student, the methods of entry and the scholarships available, *see* previous issues of this Year Book.

A Board of Higher Forestry Education advises in regard to the maintenance of the standard of the school diploma course and regarding pre-requisite university courses leading to the diploma course. Students who have passed the approved two-year university preliminary science course and two years of diploma course at the school may be granted the degree of B.Sc.F. by their universities.

For various reasons the number of students attending the School each year almost since its inception has been well below the number which events have since shown were necessary to meet the demand for trained personnel. This position was naturally aggravated during the six years of war, while demands for timber and the need for expansion in all phases of forest developmental work, better protection, transport and more intensive management, have accentuated the shortage of trained staffs. The attendance at the Australian Forestry School has consequently increased substantially to 80 students during 1950. It is not anticipated that this large attendance will be maintained but it has been estimated that in order to meet the future requirements of professional foresters in Australia, the annual attendance at the School for some years to come should be at least 40 to 50 students.

(iii) *Silvicultural Research.* Although a considerable amount of research work had been carried out by the Forest Services of the States, it was recognized that there existed a wide field of research in problems of the living tree and the forest crop which could be most usefully undertaken by the Commonwealth.

The Bureau was accordingly charged with the responsibility of initiating research into problems connected with silviculture, forest management and forest protection. However, the financial situation in the years immediately following the constitution of the Bureau and, later, the impact of the 1939–45 War delayed development in these activities, but some progress was made by the establishment of a small Central Research Station at Canberra. Experimental forest research stations were also established at Mt. Burr in the south-east of South Australia and in Tasmania on a co-operative basis with the Forest Services of those States.

With its present limited staff, the research work of the Bureau has been concentrated largely upon studies of forest and climatic conditions, the genetical relationships and silvicultural requirements of various species, forest nutrition and the improvement of forest yields.

A considerable expansion in the research activities is envisaged over the next few years as suitable trained staff becomes available.

The activities of the Central Research Station are in course of expansion and an Experimental Forest Research Station has been opened at Dwellingup, Western Australia, in co-operation with the Forests Department of that State. It is proposed to extend further the field of this class of work by the establishment of Research Stations in other States and Papua-New Guinea in co-operation with the respective Forest Services.

(iv) *Timber Supply.* The value of reliable statistical data covering availability of timber and timber requirements was so forcibly demonstrated during the 1939–45 war that it was considered essential to maintain at least a skeleton organization against times of future national emergency. Apart from this it became clear that for many years to come shortages of timber on the one hand and heavy post-war reconstruction demands on the other, accentuated by a rapidly increasing population, necessitated assessment of requirements and availability of supplies being kept constantly under review as a basis for short and long term policies of timber supply and distribution.

Advice is currently provided to Government Departments and the trade in matters pertaining to timber supply, including—(*a*) the availability of total quantities and quantities of particular grades and specifications required to meet Australia's housing and other constructional projects; (*b*) the quantity of timber that should be imported to assist in meeting such requirements; (*c*) the extent to which exports of timber and related products might be allowed without detriment to local needs in order to maintain oversea markets; and (*d*) distribution of timber within Australia from those States having surplus production to those with insufficient production.

Considerable progress has been made on investigations into timber requirements of the many industries dependent on timber, but shortage of trained and experienced staff still hampers the development of this important work.

(v) *Research and Investigation regarding Forest Resources.* Production of timber from native grown species has considerably increased since 1939 in order to assist in meeting the heavy demands, firstly for war purposes, and more latterly for building and other constructional projects of the post-war era.

The extent to which the present rate of production can be continued is dependent upon our forest resources. In the national interests it is essential that overcutting of our forests should be avoided and in consequence it is a matter of primary importance that reliable information be available as to the country's forest resources and potentialities.

To this end a national forest stocktaking is being carried out by the Bureau in co-operation with the Forest Services of the States and, to assist in the work of forest assessment, special consideration is being given to the development of the use of aerial surveys.

Consideration is also being given, in co-operation with the State Forest Services, to the establishment of increased areas of plantations of exotic pines with a view to providing additional supplies of softwood timber to meet requirements.

5. **Commercial Forests.**—The forest areas under Commonwealth control include the following :—

(*a*) *Australian Capital Territory.* The forests of the Australian Capital Territory are administered by a Division of the Forestry and Timber Bureau. Further information is contained in Chapter X.—The Territories of Australia.

(*b*) *Northern Territory.* The forests of the Northern Territory are administered by the Administrator of that Territory under ordinance. The native forests of the Territory are very limited, consisting only of a limited area of rain forest in the North, patches of cypress pine, river fringing forests of paper bark, titree and savannah woodland. A Forestry Officer has recently been appointed to the Territory and efforts are to be made to protect and extend the forests.

(*c*) *Norfolk Island.* The forests of Norfolk Island are administered by the Administrator of that Territory. The area reserved for forest covers 1,037 acres, of which the main species is Norfolk Island pine.

(*d*) *Papua-New Guinea.* The forests are under the control of a Forestry Department and administered under ordinance of the Territorial Administration. Forestry in the Territory of Papua-New Guinea commenced with the appointment of two Forestry Officers to the Administration of New Guinea in 1938. Plans for the expansion of forestry activities are being prepared by the Director of the Forestry Department. This planning has been somewhat hampered by the loss of all records through enemy activities in 1942. Further information is contained in Chapter X.—The Territories of Australia.

6. **Forest Products Research.**—Fundamental investigations connected with the properties and uses of timber and forest products generally are carried out by the Forest Products Division of the Commonwealth Scientific and Industrial Research Organization. These investigations cover a very wide field, e.g., pulp, paper, seasoning, structure and chemistry of wood, tans, etc.

Details can be obtained from the annual reports and publications of the Division.

§ 3. Forest Congresses.

Reference to the various forestry conferences held in Australia and elsewhere is given in Official Year Book No. 22, page 742. The first British Empire Forestry Conference was held in London in 1920. Subsequent conferences were held in Ottawa in 1923, Australia, 1928 and South Africa, 1935, but the Fifth Conference which was to have been held in India in 1940 was postponed because of the war. The Fifth Conference was eventually held in London in 1947, at which statements were presented on a more uniform basis than formerly by the various forest authorities of the British Commonwealth of Nations. These statements included references to the part played by forestry in the different parts of the Empire in the war effort. Publications issued in connexion with these conferences are available on application to the various State and Commonwealth forestry authorities.

The first session of the Food and Agriculture Organization of the United Nations held at Quebec in 1945 drew attention to the need for statistics on forest resources and the supply of, and demand for, forest products; sound forest policies; sound forest management; afforestation; forest research; forest education; integration of forest industries and avoidance of waste; and forest products research, particularly in the direction of extending utilization to little known woods.

At the second session held at Copenhagen in 1946, the Director-General of the Forestry and Timber Bureau attended the conference as alternate delegate and adviser in forestry matters for the Commonwealth.

The Third World Forestry Congress was held in Helsinki in 1949 and was attended by the Officer-in-charge of the Division of Forest Resources of the Forestry and Timber Bureau, who also attended the United Nations Scientific Conference on Conservation and Utilization of Resources, held at Lake Success, United States of America, in the same year.

§ 4. State Forestry Departments.

1. **Functions.**—With the exception of Queensland, the powers and functions of State forest authorities are laid down under Forestry Acts and Regulations. In each State there is a department or commission to control forestry work. The functions of these administrations are as follows:—(*a*) The securing of an adequate reservation of forest lands; (*b*) the introduction of proper measures for scientific control and management of forest lands; (*c*) the protection of forests; (*d*) the conversion, marketing and economic utilization of forest produce; and (*e*) the establishment and maintenance of coniferous forests to remedy existing deficiency in softwoods. Annual reports are issued by each State forest authority.

In Queensland, forestry is a sub-department of the Department of Public Lands.

For many years Victoria has possessed a forestry school at which recruits are trained for the forestry service of the State.

2. **Forest Reservations.**—As mentioned in § 1. 4 *ante*, State forest authorities agreed that, in order to secure Australia's future requirements, an area of 24½ million acres should be permanently reserved. In June, 1950 the area of State forests reserved in perpetuity totalled 20,452,579 acres or 83 per cent. of the area recommended as the goal to be attained.

In addition to the work of permanently reserving areas in each State, foresters are endeavouring to survey all timbered lands with a view to the elimination of those unsuitable for forestry. Considerable areas have been revoked in certain States, while dedications of new areas have resulted in gains to the permanent forest estate.

The Forestry Departments also control more than 7,000,000 acres, recorded as temporary timber and fuel reserves, but, while these areas contain some land of high value for forestry purposes, the greater part does not justify permanent reservation.

In the following table details of forest areas as recorded by State Forest Authorities, distinguishing between Dedicated State Forests and Timber and Fuel Reserves, are shown for each State as at 30th June, 1950.

AREA OF FOREST RESERVATIONS, 30th JUNE, 1950.

(Acres.)

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
Dedicated State Forests ..	5,926,782	4,975,056	4,101,347	(a) 254,695	3,410,406	1,784,293	20,452,579
Timber and Fuel Reserves ..	1,301,917	(b)	c 3,127,473	..	2,837,658	(c) 137,028	d 7,404,076
Total ..	7,228,699	4,975,056	7,228,820	254,695	6,248,064	1,921,321	27,856,655

(a) Includes Timber and Fuel Reserves. (b) Not available. (c) Excludes Fuel Reserves. (d) Incomplete.

3. **Reforestation, Afforestation, etc.**—In the table below details are shown of the area of indigenous forest improved or regenerated, the area of forest plantations and the number of persons employed by Forestry Departments for the year 1949–50.

FORESTRY AREAS, AND NUMBERS EMPLOYED BY FORESTRY DEPARTMENTS, 1949–50.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Total area of indigenous forest improved or regenerated .. acres	1,525,685	1,087,189	521,605	9,928	1,992,000	406,000	5,542,407
Total area of effective plantations—							
Hardwoods .. .. acres	742	2,955	3,323	4,157	17,865	105	29,147
Softwoods .. .. „	39,122	52,096	43,138	113,464	13,108	(a) 4,148	265,076
Number of persons employed in Forestry Departments—							
Office staff .. .. No.	(b) 418	210	172	85	61	72	1,018
Field staff .. .. „	181	361	2,307	670	(c) 131	(d) 79	3,729

(a) Includes 30 acres of nurseries. (b) Includes Wood Technology staff totalling 54. (c) Excludes 410 other employees. (d) Excludes 316 other employees.

4. **Revenue and Expenditure.**—The revenue of State Forestry Departments for 1949–50 was £4,155,672, as compared with £3,604,905 in 1948–49 and £1,466,781 in 1938–39; State details for 1949–50 were as follows:—New South Wales, £1,016,428; Victoria, £1,130,307; Queensland, £1,010,460; South Australia, £580,596; Western Australia, £318,940; and Tasmania, £98,941.

The expenditure of the Departments for 1949–50 was £7,606,512, as compared with £6,328,530 in 1948–49 and £1,840,088 in 1938–39; State details for 1949–50 were as follows:—New South Wales, £1,689,947; Victoria, £2,574,197; Queensland, £1,881,048; South Australia, £660,300; Western Australia, £470,410; and Tasmania, £330,610.

§ 5. Forestry Production.

1. **Timber.**—Particulars of logs treated and the production of rough sawn timber by sawmills and other woodworking establishments are shown in the following table by States for the year 1949–50.

OUTPUT OF NATIVE TIMBER : ALL MILLS, 1949–50.

('000 sup. feet.)

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
LOGS TREATED, INCLUDING THOSE SAWN ON COMMISSION.(*a*)							
Hardwood ..	404,080	466,689	216,632	6,359	313,413	230,063	1,637,236
Softwood	111,423	25,482	174,997	93,754	3,615	6,441	415,712
Total ..	515,503	492,171	391,629	100,113	317,028	236,504	2,052,948
SAWN TIMBER PRODUCED FROM LOGS ABOVE.(*b*)							
Hardwood ..	270,630	292,714	137,589	4,081	136,585	123,543	965,142
Softwood	70,513	16,078	113,538	52,694	1,492	3,603	257,918
Total ..	341,143	308,792	251,127	56,775	138,077	127,146	1,223,060

(*a*) Includes logs used for plywood and veneer production. (*b*) Includes the sawn equivalent of timber peeled or sliced for plywood and veneers.

The following table shows logs used and the sawn timber produced in Australia for the years 1938–39 and 1945–46 to 1949–50.

OUTPUT OF NATIVE TIMBER : ALL MILLS, AUSTRALIA.

Particulars.	Unit.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Logs used—							
Hardwood ..	'000 super. feet (hoppus measure)	1,015,136	1,140,719	1,333,098	1,436,654	1,544,601	1,637,236

(*a*) Not available for publication ; included with softwoods.

The next table shows the sawn output of native timber in sawmills and other wood-working establishments in each State for the years 1938–39 and 1945–46 to 1949–50.

SAWN OUTPUT (*a*) OF NATIVE TIMBER: ALL MILLS.

('000 sup. feet.)

State.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
New South Wales ..	179,350	252,108	300,945	332,591	353,685	341,143
Victoria	120,197	212,611	253,266	260,502	281,852	308,792
Queensland.. ..	193,250	189,912	219,745	235,214	250,355	251,127
South Australia ..	14,537	37,113	46,479	47,700	51,633	56,775
Western Australia ..	125,453	107,647	124,198	131,597	126,859	138,077
Tasmania	84,228	90,579	102,449	109,709	119,704	127,146
Total ..	717,015	889,970	1,047,082	1,117,313	1,184,088	1,223,060

(*a*) Includes the sawn equivalent of timber peeled or sliced for plywood and veneers.

In addition to the sawn timber shown in the preceding table, a large amount of other timber, e.g., sleepers, piles, poles, fencing material, timber used in mining, and fuel, is obtained from forest and other lands. Complete information in regard to the volume of this output is, however, not available. In Western Australia particulars are obtained of the quantities of timber hewn by contractors for the Railway Department, mines, etc., as well as of the quantities produced by other agencies, but the figures have not been included in the preceding tables. The quantities so produced in Western Australia in the five years shown in the preceding table were as follows:—1938–39, 35,862,540 sup. feet.; 1945–46, 10,348,458 sup. feet.; 1946–47, 15,604,008 sup. feet.; 1947–48, 17,210,844 sup. feet.; 1948–49, 16,331,835 sup. feet.; and 1949–50, 16,823,566 sup. feet. The annual reports of the Forest Departments of the States contain particulars of the output of timber from areas under departmental control, but owing to lack of uniformity in classification and measurement, accurate determination of total production cannot be made. Moreover, there is a moderate quantity of hewn timber produced from privately owned land, but information regarding output is not available.

2. **Paper and Wood Pulp.**—(i) *Tasmania.* The manufacture of paper from Australian-grown timber has been established in three States. In Tasmania two large mills are making paper from indigenous hardwoods. The first of these started production of paper from imported pulp at Burnie in August, 1938, and so continued until the pulp mill, using local hardwood, came into operation a few months later. At this mill, pulp is produced by the soda process and the caustic soda necessary for cooking the wood and chlorine for bleaching the pulp are produced by a separate plant located alongside the mill. Late in 1951, three paper machines were in operation, with widths of 200, 120 and 90 inches and maximum speeds of 800, 1,000 and 400 feet per minute respectively. A fourth machine similar to the existing 120 inch machine was to be completed early in 1952. The paper produced covers a wide range of high class printing, writing, drawing, duplicating and blotting papers. At Boyer on the River Derwent, 20 miles from Hobart, production of newsprint commenced in February, 1941. The newsprint is manufactured from locally ground wood pulp to which is added a small proportion of sulphite pulp imported from Canada. Two paper machines are installed. Widths are 230 inches and 160 inches and the present operating speed of both machines is 1,200 feet per minute. When running at full capacity total production is 1,560 tons per week. At Boyer, logs are taken from the forest by means of tractors and transported to the mill by rail. The same practice will be followed at Burnie when a large sawmill at present under construction is completed, but in the meantime deliveries to the mill are in the form of split billets. Power is supplied by the Tasmanian Hydro-electric Commission under contract, but since the introduction of power rationing early in 1951 some curtailment of production

has been enforced, and at Boyer one machine was idle on this account. Hardwood not suitable for pulping and Tasmanian coal are used as fuels. During 1949–50, 59,871 cords of pulpwood and 24,082 cords of firewood were delivered to these mills.

(ii) *Victoria.* In Victoria the production of wood pulp for paper-making commenced in January, 1937, with a pilot plant having the capacity of about 3,000 tons of air-dried pulp per annum. In October, 1939 the main plant at Maryvale, with a capacity of 27,000 tons of pulp per annum, commenced operations. Associated with the pulp mill is a paper-making plant capable of producing about 20,000 tons of kraft paper per annum. The timber used at this mill consists mainly of hardwoods at present unsuitable for other purposes and, in addition, a small quantity of pine, mainly thinnings, mill waste, and special softwood for production of cellulose. During 1948–49 the wood taken from Crown Lands for the production of wood pulp and cellulose amounted to 3,373,704 cubic feet of which 3,347,467 cubic feet were hardwood and 26,237 cubic feet were radiata pine.

(iii) *South Australia.* In South Australia a pulp and paper board mill commenced operations during 1941–42 near Millicent. The mill uses considerable quantities of softwoods from the Mount Burr and Penola pine plantations. During 1949–50, 8,611,357 super. feet of pulp wood were produced, 4,515,717 super. feet for local use and 4,095,640 super. feet for use in an interstate mill.

3. **Other Forest Products.**—(i) *Veneers, Plywood, etc.* Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. Recently, however, this has been considerably extended in all States, and much greater use has been made of local-grown timbers, both hard and softwoods. In recent years special attention has been paid to the selection of logs suitable for peeling.

The following table shows the production of plywood for each of the years 1938–39 and 1945–46 to 1949–50 :—

PLYWOOD PRODUCED.

('000 square feet $\frac{3}{16}$ in. basis).

State.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
New South Wales ..	24,194	19,545	22,323	23,726	25,572	28,008
Queensland.. ..	66,100	73,581	87,180	99,823	104,262	111,048
Other States ..	14,511	10,731	13,770	15,528	16,451	17,977
Total ..	104,805	103,857	123,273	139,077	146,285	157,033

During 1949–50, 469.7 million square feet ($\frac{1}{16}$-in. basis) of veneers were produced by the rotary process for the manufacture of plywood, and 46.2 million square feet ($\frac{1}{16}$-in. basis) were sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 23.4 million square feet were produced by slicing. Comparable figures for earlier years are not available.

(ii) *Charcoal.* During the 1939–45 War, charcoal was widely used as a substitute fuel for petrol, and production was considerably increased ; it fell from this level, however, when more petrol supplies became available.

(iii) *Eucalyptus Oil.* Oil may be distilled from the foliage of all varieties of eucalyptus, and several of them furnish a product widely known for its commercial and medicinal uses. Complete information regarding Australian production and consumption of eucalyptus oil is not available, but considerable quantities are manufactured, particularly in Victoria. The value of oversea exports of eucalyptus oil distilled in Australia amounted in 1938–39 to £86,714; in 1945–46 to £201,948; in 1946–47 to £408,451; in 1947–48 to £323,800; in 1948–49 to £138,304; and in 1949–50 to £147,355. The quantities exported in the years 1946–47 to 1949–50 were 1,680,461 lb., 1,481,418 lb., 765,195 lb., and 680,802 lb., respectively. Particulars of quantities for earlier years are not available. The bulk of the product is shipped to the United Kingdom and the United States of America, Victoria being the principal exporting State.

(iv) *Sandalwood and Sandalwood Oil.* Most of the sandalwood is produced in Western Australia where considerable quantities are gathered each year for export to Asiatic countries. Small quantities are also produced in South Australia, Queensland and New South Wales. Details of exports of sandalwood are shown in paragraph 3 (ii), § 6. Oil distilled from Western Australian sandalwood has a medicinal value and is used extensively in the manufacture of perfumes. Quantities of this oil are exported annually to the eastern States of Australia and oversea countries, principally the United Kingdom. Oversea exports of Australian sandalwood oil amounted in 1938–39 to £13,964; in 1945–46 to £19,560; in 1946–47 to £59,145; in 1947–48 to £38,327; in 1948–49 to £16,118; and in 1949–50 to £22,889.

(v) *Grass Tree or Yacca Gum.* South Australia is the chief State producing this gum, which is used in the preparation of varnishes and lacquers. Quantities are also obtained in New South Wales and Western Australia but these are small. The production in South Australia during 1949–50 amounted to 779 tons, whilst the exports from Australia amounted to 715 tons valued at £17,873.

(vi) *Tanning Barks.* The forests of Australia are capable of yielding a wealth of tanning materials; many species of eucalyptus and other genera contain varying proportions of tannin, chiefly in the bark, but also in the wood and twigs. Although many of these species contain higher percentages of tannin than are found in the barks of oak, chestnut and hemlock, formerly the chief source of tannin material in the northern hemisphere, scattered distribution has resulted in the richest tan-bearing species only being used in Australia. These are :—Golden wattle (*Acacia pycnantha*), black or green wattle (*Acacia decurrens* or *mollissima*), and mallet (*Eucalyptus astringens*).

Up to 1913 the production of wattle bark was more than sufficient for local requirements, and an export trade was built up. The supply diminished during the six years ended 1926–27, and Australia imported on the average about 2,900 tons each year from Natal, where the plantations were originally started from Australian seed. From 1927–28 to 1938–39 exports exceeded imports in every year except 1936–37, but since 1939–40 there has been a considerable excess of imports. This matter is referred to in tables appearing in § 6 following. The other valuable tanning bark, mallet (*Eucalyptus astringens*) of Western Australia, is not extensively used in Australian tanneries, but it is exported to Europe and other countries, where it is used for producing a tannin extract. A brief account of work done by the Council for Scientific and Industrial Research in connexion with tanning materials is given in Official Year Book No. 22, p. 743. The production of extract from the bark of karri (*Eucalyptus diversicolor*), of which very large quantities are available at karri sawmills, has passed the experimental stage, and private enterprise has started production on a commercial scale. The experimental work in kino impregnated marri (*Eucalyptus calophylla*) bark is not yet complete. The production of tanning bark in Australia approximated 25,000 tons per annum in the years prior to 1939. Since then production has declined and in 1945–46 reached the level of about 8,800 tons recovering to about 11,000 tons in the years subsequent to 1946–47. However, this diminution is offset by the increased use of vegetable tanning extract which rose from 3,686 tons in 1938–39 to 10,714 tons in 1949–50.

4. **Value of Production.**—(i) *Gross, Local and Net Values,* 1949–50. The values of forestry production on a gross, local and net basis are shown in the following table for the year 1949–50.

GROSS, LOCAL AND NET VALUE OF FORESTRY PRODUCTION, 1949–50.
(£'000.)

State.	Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Place of Production.	Net Value of Production. (a)
New South Wales	7,447	262	7,185	7,185
Victoria	6,159	589	5,570	5,570
Queensland	4,700	680	4,020	4,020
South Australia	2,437	137	2,300	2,300
Western Australia	2,251	230	2,021	2,021
Tasmania	2,339	240	2,099	2,099
Total	25,333	2,138	23,195	23,195

(a) No deduction has been made for depreciation and maintenance nor for the value of other materials used in the process of production.

(ii) *Net Values*, 1934–35 *to* 1949–50. In the following table the net value of forestry production and the net value per head of population are shown by States for the years 1945–46 to 1949–50 in comparison with the average for the five years ended 1938–39.

NET VALUE OF FORESTRY PRODUCTION.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
NET VALUE.(a) (£'000.)							
Average, 1934–35 to 1938–39	2,094	837	2,226	547	1,176	394	7,274
1945–46	3,745	2,411	2,502	1,170	1,459	973	12,261
1946–47	4,508	2,946	3,037	1,383	1,496	1,327	14,697
1947–48	5,741	3,493	3,394	1,700	1,605	1,833	17,766
1948–49	6,561	3,940	3,804	2,104	1,791	2,105	20,305
1949–50	7,185	5,570	4,020	2,300	2,021	2,099	23,195
NET VALUE PER HEAD OF POPULATION. (£ *s.* *d.*)							
Average, 1934–35 to 1938–39	0 15 7	0 9 1	2 5 2	0 18 7	2 11 8	1 13 9	1 1 4
1945–46	1 5 6	1 3 11	2 6 2	1 17 1	2 19 6	4 19 10	1 13 9
1946–47	1 10 5	1 8 11	2 15 4	2 3 2	3 0 2	5 4 3	1 19 1
1947–48	1 18 2	1 13 9	3 1 0	2 12 1	3 3 1	7 0 1	2 6 6
1948–49	2 2 10	1 17 4	3 7 1	3 3 3	3 8 7	7 16 11	2 12 1
1949–50	2 5 4	2 11 4	3 9 2	3 7 0	3 14 1	7 11 4	2 17 8

(a) No deduction has been made for depreciation and maintenance nor, for the year 1949–50, for the value of other materials used in the process of production; in earlier years deductions were made on this account for one or two States only.

5. **Employment.**—(i) *Forestry Operations.* The estimated number of persons employed in forestry operations as at June, 1950 is shown in the following table. These estimates, which have been based upon pay-roll tax and other data, include working proprietors, but exclude those employed in the sawmilling industry whose particulars are shown in the next table.

ESTIMATED NUMBERS EMPLOYED IN FORESTRY, JUNE, 1950.
(Excluding Sawmilling Industry).

Sex.	N.S.W. (a)	Victoria.	Q'land.	S. Aust. (b)	W. Aust.	Tasmania.	Total.
Males	7,522	7,044	5,627	1,637	1,854	1,708	25,392
Females	39	20	4	10	10	4	87
Total	7,561	7,064	5,631	1,647	1,864	1,712	25,479

(a) Includes Australian Capital Territory. (b) Includes Northern Territory.

(ii) *Milling Operations.* Details of the number of persons employed, including working proprietors, in the milling operations of sawmills during the year 1949–50 are shown in the next table. Further details regarding the operations of these mills are shown in Chapter XXIV.—Manufacturing Industry.

SAWMILLS: PERSONS EMPLOYED, 1949–50.

Sex.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total. (a)
Males	8,923	6,094	6,226	1,747	3,016	2,236	28,242
Females	302	111	202	107	21	23	766
Total ..	9,225	6,205	6,428	1,854	3,037	2,259	29,008

(a) Excludes Northern Territory and Australian Capital Territory.

§ 6. Oversea Trade.

1. **Imports.**—(i) *Dressed Timber.* The quantities and values of timber imported into Australia during the years 1938–39 and 1947–48 to 1949–50 inclusive are shown in the following table according to countries of origin :—

DRESSED TIMBER: IMPORTS INTO AUSTRALIA.

Country of Origin.	Quantity ('000 sup. ft.).				Value (£).			
	1938–39.	1947–48.	1948–49.	1949–50.	1938–39.	1947–48.	1948–49.	1949–50.
United Kingdom ..	1	2	21	6	44	425	1,194	383
Canada	8,927	3,297	1,707	398	90,833	137,916	68,518	12,316
Other British Countries ..	3	155	183	773	21	6,113	8,881	30,111
Norway	4,209	2,094	6.604	9.242	43,297	90,924	273,734	374,718
Sweden	1,978	5,075	32,033	33,189	24,290	220,817	1,302,495	1,297,208
U.S. of America.. ..	2,242	2,245	550	..	22,029	122,060	31,081	1
Other Foreign Countries ..	418	103	1,021	546	6.163	4,057	42,019	21,946
Total	17,778	12,971	42,119	44,154	186,677	582,312	1,727,922	1,736,683

The figures in the table above exclude items such as architraves, veneers, plywood, staves, etc., quantities for which are either not shown, or are expressed in dissimilar units in the Customs entries. The total value of the items so excluded amounted to £587,084 in 1949–50.

The bulk of the imports of dressed timber now comes from Norway and Sweden and consists of softwoods cut for making boxes, and tongued and grooved timber, weatherboards, etc.

(ii) *Undressed Timber.* Australian imports of undressed timber for the years 1938–39 and 1947–48 to 1949–50 are shown hereunder :—

UNDRESSED TIMBER (a): IMPORTS INTO AUSTRALIA.

Country of Origin.	Quantity ('000 sup. ft.).				Value (£).			
	1938–39.	1947–48.	1948–49.	1949–50.	1938–39.	1947–48.	1948–49.	1949–50.
United Kingdom ..	115	104	181	181	9,984	24,014	33,586	27,137
Canada	296,948	48,148	78,761	80,201	1,115,562	1,414,520	2,012,413	1,997,618
Malaya (British) ..	165	311	840	2,167	1,264	6.311	29,820	92,250
New Zealand	11,193	13,956	26,588	15,085	157,967	342,614	704.552	447,086
Other British Countries ..	10,840	10,421	25,350	34,454	68,387	206,274	431,599	572,444
Indonesia, Republic of ..	20	257	..	17	118	1,584	..	582
New Caledonia	1,671	6	867	450	5,796	55	19,399	11,613
Philippines Republic ..	6,879	2	..	..	66,371	34	..	..
Sweden	4,654	3,168	23,046	23,115	36,946	98,530	799,750	696,590
United States of America..	12,245	57,735	36,545	46,368	191,221	1,453.164	955,227	1,311,309
Other Foreign Countries ..	3,368	297	11,723	11,819	34,708	29,106	421,248	437,132
Total	348,098	134,405	203,901	213,857	1,688,324	3,576,206	5.407,594	5,593,761

(a) Includes logs not sawn and excludes timber not measured in super. feet.

By far the larger proportion of the undressed timber imports consists of softwood such as oregon, redwood, hemlock, western red cedar and yellow pine from Canada and the United States of America; kauri, red and white pine from New Zealand and other softwoods from Sweden. Amongst the hardwoods imported are mahogany from the United States of America, teak from Burma and other hardwoods from the Pacific Islands.

2. **Exports.**—(i) *Undressed Timber (excluding Railway Sleepers).* The quantity and value of undressed timber, exclusive of railway sleepers, exported during the years 1938–39 and 1947–48 to 1949–50 are shown below, together with the countries of destination.

UNDRESSED TIMBER (EXCLUDING RAILWAY SLEEPERS) (*a*): EXPORTS FROM AUSTRALIA.

Country to which Exported.	Quantity ('000 sup. ft.).				Value (£).

(*a*) Excludes timber not measured in super. feet.

The bulk of the exports of undressed timber were consigned to New Zealand, the United Kingdom, South Africa and the United States of America, and consisted largely of the Western Australian hardwoods, jarrah and karri, which have earned an excellent reputation for such purposes as harbour works and wood paving, etc.

(ii) *Railway Sleepers.* Particulars of the quantities and values of railway sleepers exported, which are excluded from the previous table relating to undressed timber, are shown below.

(*a*) Not separately recorded.

NOTE.—Minus sign (−) denotes an excess of exports.

(ii) *Sandalwood.* A considerable quantity of sandalwood is exported, principally from Western Australia, to Singapore and Hong Kong, where it is highly prized and largely used for artistic and ceremonial purposes. Particulars for the five years 1947–48 to 1949–50 are compared with 1938–39 in the following table :—

SANDALWOOD : EXPORTS FROM AUSTRALIA.

(iii) *Tanning.* For a number of years prior to 1927–28 Australia had to import large quantities of tanning bark, but thereafter imports dropped to negligible quantities and exports rose annually to 89,061 cwt. in 1931–32. Since 1931–32 there has been a diminution of exports and by 1941–42 these had reached the low level of 421 cwt. The quantity imported did not rise appreciably until 1939–40 when imports were more than three times that of the previous year. Since that year there has been a considerable excess of imports, the Union of South Africa being almost the sole source of supply. During recent years exports have been negligible.

A comparison of the imports and exports of tanning bark during 1938–39 and the five years ended 1949–50 is shown in the following table :—

TANNING BARK : IMPORTS AND EXPORTS, AUSTRALIA.

Exports	8,630	6	13,032	..	119	..
Excess of imports over exports ..	— 6,312	56,980	36,424	64,696	36,690	25,316

NOTE.—The minus sign (—) denotes an excess of exports.

The imports consist almost exclusively of wattle bark from the plantations in South Africa. One species of Australian wattle, *Acacia mollissima*, is chiefly relied upon for the production of wattle bark in the South African plantations. Seed has been tried from New South Wales, Tasmania and Victoria, but it is stated that most of the seed is obtained from the best wattle bark areas in eastern Tasmania and western Victoria.

Two reasons are given to account for the success of the industry in the Union of South Africa :—(*a*) It is found that the treeless, grassy highlands of Natal are specially suitable for wattle culture, and the trees can therefore be grown in rows and economically attended to, while the necessary bark sheds and other appurtenances can be placed in the most advantageous positions ; and (*b*) the availability of native labour.

(iv) *Other Tanning Substances.* Considerable quantities of tanning substances other than bark are imported annually into Australia. The total value in Australian currency of the importations in 1949–50 was £334,767, and was composed as follows :— Tanners' Bates, £5,439 ; wattle bark extract, £283,571 ; other extract, £4,915 ; and volonia, myrobalans, cutch, etc., £40,842.

Exports of tanning extracts from Australia amounted to £240,818 in 1949–50.

CHAPTER XXIII.

FISHERIES.

§ 1. General.

1. **Fish Stocks.**—Australia possesses a varied native fauna of freshwater and marine fish, including tropical and temperate species. In addition, certain exotic species have become acclimatized in the freshwater streams. The commercial fisheries exploit on-shore, demersal (bottom) and pelagic (surface) stocks. The on-shore stocks are at present of greatest importance.

The Australian marine fauna includes also a number of mollusca (oysters, scallops) and crustacea (crabs, prawns, crayfish) groups which are commercially exploited.

In winter whales of various species, of which the humpback is the most common, appear off the western and eastern coasts.

2. **Fishing Areas.**—The principal fishing areas at present are the coastal lakes, streams, estuaries and beaches, from Cairns in Queensland to Ceduna in South Australia, and from Esperance to Geraldton in Western Australia. There are interruptions of variable size ; for the most part, these fishing grounds are associated with the coastal streams. The demersal grounds fall into two classes—(*a*) the reefs from which cod and other tropical species are taken in tropical waters, and snapper in temperate waters ; and (*b*) the grounds from which flathead, morwong, etc., are taken. The reefs extend intermittently from northern Queensland around the southern part of the continent to Shark's Bay in Western Australia. The flathead grounds lie on the continental shelf off south-east Australia, chiefly from Crowdy Head to south of Cape Everard and further off the east Tasmanian coast from Babel Island southwards to Storm Bay. Other demersal grounds exist in the Great Australian Bight but have only begun to be exploited. The demersal shark grounds lie principally in Bass Strait and on the continental shelf off eastern South Australia. Other grounds have been located off southern Western Australia.

The grounds of existing pelagic fisheries include that for the Spanish mackerel off the north-eastern coast from about Coff's Harbour to Cairns and that for barracouta in Bass Strait and off eastern Tasmania. Jack mackerel is found in the waters of eastern Tasmania, the south-east coast of New South Wales, and Western Australia. Tuna is now being taken in commercial quantities off the south coast of New South Wales, and off the western and South Australian coasts.

Pearl shell and trochus are fished in the northern and western coastal waters from Cape York to Shark Bay. Edible oysters are found in the temperate waters of Queensland, New South Wales and Victoria. Some cropping of natural resources takes place in Queensland, but the principal cultivation grounds are found in New South Wales. The scallop is taken commercially only in Tasmanian waters.

Crabs of various species are found in practically all coastal waters. Prawns are taken in the temperate waters of Queensland and New South Wales. Crayfish are taken on reefs of the continental shelf in the waters of all southern States, the fishery extending (with a major interruption in the Bight) from Port Macquarie in New South Wales to Geraldton in Western Australia. Considerable development has taken place in the crayfish fisheries, particularly in South Australian and Western Australian waters, owing to the opening up of markets in the United States of America for frozen crayfish tails.

The whale appearances occur off the south of the continent, extending as far north as southern Queensland in the east and to beyond Shark's Bay in the west. Two whaling stations are operating on the Western Australian coast, one at Pt. Cloates and the other at Babbage Island, near Carnarvon.

3. **Fishing Boats and Equipment.**—The fishing equipment includes almost every possible type of gear, and appropriate boats are employed. The on-shore equipment includes mesh-nets, trawl-nets, and traps of various types. The demersal reef-fishery is worked with traps, hand lines and other long lines. The demersal flathead-fishery

is worked by both otter trawl (with V.–D. gear) and Danish seine; in addition some hand-lining is carried out. The demersal shark fishery is worked by long lines. The pelagic mackerel-fishery employs trolling gear with lures of various types, while the pelagic barracouta fishery employs principally barbless jigs. Tuna is taken by trolling and, more recently, by pole fishing with live bait, and jack mackerel and pilchards are taken with purse-seine and lampara nets.

The boats for the on-shore fisheries are almost invariably small vessels fitted with low-power petrol engines. The vessels working the reefs are larger (up to 50 feet) and have more power. The otter trawl vessels are steam trawlers, and the Danish seine vessels are 40 to 70 feet in length with diesel engines. The shark boats have diesel power and range from 35 to 50 feet in length. For the operation of the purse-seine nets larger vessels are used.

4. **Administration.**—The fisheries are administered by State Departments implementing State laws. This administration includes licensing of men and boats, and restriction of fishing by prohibitions against fishing at certain times and places and by certain methods. In some States the quantity, type and construction of gear is subject to limitations and legal minimum sizes are prescribed.

In October, 1946 the Commonwealth Government appointed a Director of Fisheries and established the Commonwealth Fisheries Office as a division of the Department of Commerce and Agriculture to co-ordinate fisheries administration and develop the fisheries of Australia.

The Commonwealth Scientific and Industrial Research Organization, through its Fisheries Division, is responsible for fishery research (*see* § 4, par. 2 hereafter).

§ 2. Development and Present Condition of the Fishery.

1. **Fisheries Proper.**—(i) *General.* The earliest Australian fishery was on-shore. To this was soon added the demersal reef fishery using lines. At each centre of population this sequence has almost invariably been followed, and expansion of the industry up to about the year 1900 consisted chiefly of the extension of these operations into hitherto unworked areas. The taking of barracouta in Tasmanian waters was begun at least by 1880, if not earlier, but the main development of this fishery occurred between 1915 and 1925.

The first major development of the fishery came with the institution of trawling operations off the New South Wales coast in 1918 by the New South Wales Government, as a consequence of the results obtained from the exploratory work of the Federal Investigation ship *Endeavour*. The State enterprise failed, but the fishery was found very profitable by private enterprise, which had as many as sixteen steam trawlers operating at one time. In 1936 the use of Danish seine vessels began and the fleet of these vessels rapidly expanded, being given an exceptional opportunity by the requisitioning of the steam trawlers by the Navy. Subsequently, practically all the Danish seine vessels were also requisitioned. After the war, vessels requisitioned by the Services were returned to the industry and in 1946 a peak was reached and thirteen steam trawlers and 120 Danish seine vessels were licensed. The total catch of trawled fish in 1946–47 was 16,000,000 lb. However, by the end of 1947 many of these vessels, which had made satisfactory catches in 1946, found that the fish stocks, particularly of flathead, appeared to be seriously depleted. Of the species taken by the trawl fishery, tiger flathead, morwong and nannygai are the most important, and of these flathead may be regarded as the prime fish and commands a higher price. Since 1947 the composition of the catch has changed, because of depletion of the flathead stocks, and the lower priced fish have become a larger proportion of the catch. In 1951 twelve steam trawlers (all in New South Wales) and 105 Danish seine vessels (76 in New South Wales and 29 in Victoria) were registered.

In Queensland waters the Spanish mackerel is taken by line fishermen, operating in off-shore waters out to the Barrier Reef between Gladstone and Cairns, with Townsville as the centre. This fishery started in 1930 and by 1942 production had risen to about 1,000,000 lb. The catch decreased considerably during the war and post-war period, but in 1949–50 it had increased again to the 1942 level of approximately 1,000,000 lb.

In 1930 the fishery for snapper shark was started in south-eastern waters, particularly off the Victorian and Tasmanian coasts. This fishery extended rapidly its area of operations, particularly in the Bass Strait area and the south-east coast of South Australia, and the catch increased from 23,131 lb. in 1930 to a steady 3,000,000 lb. catch in each year since 1942. Great impetus was given to the fishery during war years by the demand for livers for fish oil production for medicinal purposes. This demand has eased with the return of cod-liver oil, and the production overseas of synthetic vitamin "A". However, shark is still fished for the flesh, which is sold as "flake", mainly in the Melbourne Fish Market.

Pilchards occur in the southern waters of Australia from Port Stephens to the south-west of Western Australia. Catches have been made by commercial crews using a lampara net and a small purse-seine at Jervis Bay on the New South Wales coast, in Port Phillip Bay in Victoria, at Coffin Bay in South Australia and at Albany in Western Australia. Anchovies in Port Phillip Bay and sprats in Tasmanian waters are caught in payable quantities though there is usually some difficulty in finding a market for them. Jack mackerel have been caught in commercial quantities off the east coast of Tasmania and off Eden in New South Wales.

The tuna fishery was established on the New South Wales coast during the second half of 1949, when fishermen, using improvised trolling gear, caught 1,000 tons of southern blue-fin tuna. The catch was canned at Narooma and Eden, and samples of both canned and frozen fresh tuna were sent to California, where it met with approval. Owing to adverse marine conditions, 1950 was a very poor tuna year. The American-owned tuna clipper *Senibua*, whose operations were subsidized by the Commonwealth, proved that Australian tuna could be caught by pole fishing with live bait. As tuna come close to the coast, ice can be used instead of refrigeration to preserve the catch to the landing port. This means that smaller and less expensive vessels can be used.

(ii) *Production.* Production of fresh fish, which for the year 1947–48 was about 76,000,000 lb., fell slightly to 75,000,000 in 1948–49 and further to 70,000,000 in 1949–50.

Production for the years 1938–39 and 1945–46 to 1949–50 is shown by States, in the following table:—

RECORDED PRODUCTION OF FRESH FISH.

('000 lb.)

State.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
New South Wales	(a)29,382	30,668	34,157	32,813	29,506	27,985

Total ..	68,626	71,713	74,915	76,169	75,414	69,958

(a) Year ended December previous. (b) Not available.

2. **Oysters and Shell Fisheries.**—Initially the Australian oyster fisheries depended solely upon the harvesting of naturally grown stock in littoral and submarine areas. However, the stocks soon deteriorated and attention was turned to methods of cultivation. These have not been successful in Queensland, but in New South Wales there has been constant improvement in methods and the present technique in certain areas is highly efficient. The production for Australia in 1949–50 was 83,097 cwt. Scallops are taken by dredge in the D'Entrecasteaux Channel in Tasmania.

Cray fisheries have developed greatly in recent years and the development has been such as to permit an export trade of crayfish tails to America to meet the off-season demand for frozen tails. The catch of 412,172 dozen for 1949–50 was a record. Details of production in each State for the years 1938–39 and 1945–46 to 1949–50 are shown in the following table :—

RECORDED PRODUCTION OF CRAYFISH.
(doz.)

State.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.

Total ..	163,757	124,300	180,435	258,928	316,597	412,172

(*a*) Year ended December previous.

3. **Pearl-shell, Trochus and Bêche-de-mer.**—The industry, which ceased operations on Japan's entry into the war in December, 1941, did not resume on a commercial basis at Queensland centres until late in 1945, and at Western Australian centres until 1946, while operations off the Northern Territory coast were not resumed until 1948.

Before the war a large proportion of the key men were Japanese ; the others included Malays, Chinese, Koepangers, Filipinos, Papuans and Torres Straits Islanders. On the resumption of operations without the Japanese, the labour available was, with few exceptions, inefficient. Queensland with a more ready source of labour from the Torres Strait Islands and the mainland was able to expand its fishing more rapidly, and in the 1949 season, achieved its second highest pearl shell production on record. The expansion of the industry at Darwin has been retarded by the fact that the key men lack the local knowledge acquired by the Japanese. Western Australian centres, with so few proficient key men and lacking a source of labour suitable for training are also experiencing difficulties.

Tables showing the principal statistics relating to pearl-shell, trochus and bêche-de-mer are shown in § 5, para. 1, sections (ii) and (iii) hereafter.

Reference to inquiries into the pearl-shell fishing industry by a Royal Commission in 1912 and by the Tariff Board in 1935, appears on page 1031 of Official Year Book No. 37.

§ 3. Marketing and Distribution.

1. **Marketing.**—The greater portion of Australian fish is sold in metropolitan markets. In Queensland, fish marketing is under the control of a Fish Board, which has representatives of producers, wholesalers, consumers, and a Government nominee as chairman. A central market is located in Brisbane and there are branch markets or depots at 14 centres along the coast. The organization ensures that all fish is marketed through the correct channels, and the board has encouraged to a very marked extent the steadily increasing annual fish production of the State. The fish marketing methods in this

State have proved most successful. In New South Wales the central market in Sydney is conducted by the Chief Secretary's Department, and the port depots in various centres along the coast by fishermen's co-operatives. These co-operatives distribute some of their fish to local centres and to inland country districts, and send the balance to the central market in Sydney. In Victoria, South Australia, and Western Australia fish is sold in central markets by agents. The greater part of the catch of fish in Tasmania is either processed in canneries in that State or exported to the mainland. There is some interstate movement of fish from the northern rivers of New South Wales to Queensland, from Tasmania to New South Wales and Victoria, and from South Australia to Victoria.

2. **Consumption of Fish.**—Prior to the 1939–45 War, Australians consumed annually the fresh and canned equivalent of about 131,000,000 lb. of round fish, or 19.0 lb. per person. About 70,000,000 lb. was produced locally and the remainder was imported; that is, the average Australian ate about 10.2 lb. of Australian fish a year and the equivalent of 8.8 lb. of imported fish. During the 1939–45 War, however, the quantity of fish entering civilian consumption in Australia was reduced to approximately 6 lb. (weight in the round) per person annually owing to the decline in local production, the steep drop in the imports of canned fish and the allocation of supplies for the Services and other priority needs. Although fish was in increased demand during the period of meat rationing, it is not, as in many countries, a staple item in the diet of Australians, and is still regarded rather as a luxury. The consumption per head of population during 1949–50 amounted to 6.2 lb. edible weight of fresh fish and 2.8 lb. of canned fish or a total of 16.4 lb. expressed in terms of fish in the round. This represents a total quantity consumed of 132,000,000 lb. in the round, of which nearly 82,000,000 lb. was produced locally.

3. **Processing, including Canning.**—The equipment for handling fish has in the past been rather inadequate, but in most States since the war cold storage facilities have been improved and increased. In Queensland and New South Wales particularly, the depots which have been established at fishing ports have been equipped with cold storage space. In several States there has been a development of establishments equipped for snap freezing of fish, in particular the freezing of crayfish tails for export. A number of vessels has been equipped with freezing plants to process crayfish at sea.

In all States there has been a development of facilities for light processing of fish.

Reference to the production of processed fish and number of factories operating will be found in § 5, par. 3 hereafter. Considerable expansion has taken place in the industry, particularly since 1945–46. In 1938–39, three factories processed 603,302 lb. of fish valued at £13,700, whereas in 1949–50 fifteen factories processed 7,442,521 lb., valued at £676,812.

4. **By-Products.**—Processing of offal for fish-meals, etc., has been established in certain States. The processing of livers for vitamin-rich oils has been undertaken in several States and oil-production has been favourably developed.

§ 4. Inquiries and Research.

1. **General.**—The Australian fishing industry has been the subject of a number of official inquiries seeking an explanation of the very slow rate of development and the unfortunate conditions prevailing within the industry as well as the paucity of supplies available to the public. Details of the inquiries undertaken, the recommendations arising from them and subsequent developments will be found in Official Year Book No. 38, page 1082.

2. **Commonwealth Scientific and Industrial Research Organization, Division of Fisheries.**—Details of the establishment, organization and functions of the Division of Fisheries of the Commonwealth Scientific and Industrial Research Organization will be found in Official Year Book No. 38, page 1083.

Since its inception, the work of the Division has extended, and there are field stations at Melbourne, Perth, Hobart, Dunwich (Queensland) and Thursday Island. The Division has three research vessels, F.R.V. *Warreen*, working in Western Australian waters, F.R.V. *Derwent Hunter*, working in South Australian waters and a ketch recently commissioned as a pearling lugger in the Thursday Island area.

As a result of the exploratory investigations and the research of the Division, together with the collaboration of commercial fishermen, it has been shown that important species of pelagic fish can be taken in commercial quantities in Australia. It has been shown too that crayfish, mullet, shark, white bait and New South Wales trawl fish stocks need the protection of regulations to preserve them. In all but the last mentioned, restrictions have been imposed by the administrative departments to preserve the stocks.

Research on oysters has been aimed at cultivation methods, including the fertilization of mud to increase the output. It has been determined that the Pacific oyster from Japan can be established and grown satisfactorily in Tasmanian waters. Experiments are being carried out with Australian species of pearl-shell in the Thursday Island area to determine whether the cultivation methods used in Japan can be established.

3. **Commonwealth Fisheries Authority.**—The Commonwealth Fisheries Office, a section of the Department of Commerce and Agriculture, was established as a result of a recommendation in 1941 by the Tariff Board, after a public inquiry into the fishing industry, that a Commonwealth developmental authority should be established. Details of the establishment, organization and functions of the Authority will be found in Official Year Book No. 38, page 1084.

In accordance with the Tariff Board report, scientific research, as distinct from developmental and administrative functions, was left to the Commonwealth Scientific and Industrial Research Organization which had established a Division of Fisheries for the purpose in 1937.

After the revocation of the Commonwealth war-time powers, the Commonwealth and State spheres were fixed at an interstate conference in February, 1947. The Commonwealth is responsible for extra-territorial waters, whaling, pearling, rehabilitation of ex-servicemen in the fishing industry, fishery training schools, commercial development of fisheries, promotion of uniform conditions governing catches of various species of fish, statistics, information and publications.

4. **North Australia Development Committee.**—In 1946 the North Australia Development Committee gave considerable attention to the fisheries resources of North Australia and recommended that a hydrological and oceanographical survey should be made of the area. It also suggested that a biological survey should be made of pearl shell with particular reference to the possibility of instituting pearl shell culture. It recommended that all information regarding the area should be compiled and made available for scientific workers. It also recommended that an economic survey of the fisheries resources should be made, comparing them particularly with those of the Netherlands East Indies.

5. **Whaling.**—The Commonwealth Fisheries Office carried out extensive investigational and preparatory work for the establishment of an Australian whaling industry. A commission of three members was established in 1949, and a station was built at Babbage Island in Western Australia. Operations did not begin until the 1950 season, when 40 whales were processed. In 1951, with three catcher boats, it was expected that 600 whales would be processed.

Other companies have begun operations in Western Australia, and whaling stations have been established at Pt. Cloates and Albany. At Pt. Cloates, 190 whales were treated during the 1949 season, and 348 were treated in the 1950 season. A catch of 600 whales was expected in 1951. In addition, stations have been established at Moreton Island (Queensland) and Byron Bay (New South Wales).

The Director of Fisheries represents Australia on the International Whaling Commission, which controls whaling throughout the world.

§ 5. The Fishing Industry.

1. **Boats and Men Engaged, and Take.**—(i) *General Fisheries.* The returns have been compiled from particulars supplied by the State Departments, and while the data do not generally lend themselves to presentation on a uniform basis, the principal facts are shown in the following tables. The number of men employed during 1949–50 was 1,803 less than during the previous year, the reductions occurring in New South Wales, Victoria and Tasmania. There were increases in South Australia and Western Australia, while numbers in the Northern Territory remained unchanged. In this connexion it should be noted that the New South Wales element in this figure relates to the number of fishermen's licences issued and not to the number of men engaged. This marked decrease in fishermen's licences was due principally to the enforcement of the law restricting the issue of such licences to persons deriving a substantial portion of their income from personal exertion from the capture and sale of fish. The decline in the number and value of boats engaged and the number of men engaged during 1949–50 is due, in part, to the fact that from December, 1949, new regulations were issued in Victoria providing for two types of licences, viz., " amateur " and " professional ". Figures for Victoria for 1949–50 relate to " professional " fishermen only, whereas previously they had included " amateur " also.

(a) *See* letterpress above.

(ii) *Edible Oyster Fisheries.* Edible oyster fisheries are of small dimensions outside New South Wales and Queensland. The available returns show the following takes during 1949–50 in these States :—New South Wales, 72,661 cwt., value £381,472 ; Queensland, 6,165 cwt., value £20,601. In Tasmania the scallop is far more important than the oyster, and in 1949–50 the take was valued at £23,580.

Figures for Australia for the years 1938–39 and 1945–46 to 1949–50 are shown in the following table :—

EDIBLE OYSTER FISHERIES : AUSTRALIA.

Particulars.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
No. of boats engaged	754	892	845	815	833	1,132
No. of men engaged ..	850	883	666	626	768	878
Oysters obtained—						
Quantity (*a*) cwt.	89,145	71,062	75,632	72,456	63,060	83,097
Gross value (*b*) £	132,201	238,919	266,815	295,763	291,470	425,745

(*a*) Includes scallops in Tasmania, 8,857 cwt. in 1945–46 ; 7,920 cwt. in 1946–47 ; 7,470 cwt. in 1947–48 ; 5,969 cwt. in 1948–49 ; and 4,211 cwt. in 1949–50 ; 1938–39 weight not available. (*b*) Includes scallops in Tasmania, valued at £14,500 in 1938–39 ; £30,750 in 1945–46 ; £37,256 in 1946–47 ; and £33,115 in 1947–48 ; £26,460 in 1948–49 ; and £23,580 in 1949–50.

(iii) *Pearls, Pearl-shell and Bêche-de-mer—States.* At the outbreak of war in the Pacific in December, 1941, the pearling industry ceased to operate. Operations were resumed in Queensland in 1944–45 but in Western Australia and Northern Territory not until 1946–47. There is no pearl-shell industry in the other States. The following table shows particulars of equipment used, men engaged and production for the year 1949–50 :—

PEARL, PEARL-SHELL AND BÊCHE-DE-MER FISHERIES, 1949-50.

State or Territory.	Boats Engaged.	Value of Boats and Equipment.	Men employed.	Pearl-shell.		Gross Value of Pearls obtained. (*c*)	Gross Value of Bêche-de-Mer obtained.	Trochus-shell.	
				Quantity obtained.	Gross Value.			Quantity obtained.	Gross Value.

(*a*) Queensland only available. (*b*) Incomplete ; as returned.

2. **Value of Production.**—(i) *Gross and Local Values*, 1949–50. Although statistics of the value of production of the fishing industry have been on an established basis for some years, attention is drawn to the fact that the actual collection of statistics of the quantity of fish taken presents many difficulties and consequently any defects which may occur in their collection must necessarily be reflected in the value of production. Particulars of the value of other materials used in the process of production are not available for all States, so the values can only be stated at the point of production and not on a net basis as has been done with other industries. Variations in the relative proportions of marketing costs to gross production suggest that complete uniformity in method has not yet been attained.

GROSS AND LOCAL VALUE OF FISHERIES PRODUCTION, 1949–50.

(£'000.)

State.	Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Place of Production.	Value of other Materials used in process of Production.	Net Value of Production.(a)
New South Wales	1,728	279	1,449	157	1,292
Victoria..	727	112	615	(b)	(b)
Queensland	990	230	760	210	550
South Australia	329	42	287	(b)	(b)
Western Australia ..	716	19	697	118	579
Tasmania	426	..	426	(b)	(b)
Total (c)	4,916	682	4,234	(b)	(b)

(a) No deduction has been made for depreciation and maintenance. (b) Not available. (c) Excludes production in the Northern Territory.

(ii) *Local Values*, 1934–35 *to* 1949–50. In the following table the local value of fisheries production and the local value per head of population are shown by States for the years 1934–35 to 1938–39 and 1945–46 to 1949–50. Local value is gross value less marketing costs and is the value at the place of production. The value of materials used in the course of production is not available for all States and consequently production is valued at that point. These values therefore overstate the net values by the extent of these costs.

LOCAL VALUE OF FISHERIES PRODUCTION.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
			LOCAL VALUE.(a) (£'000.)				
Average, 1934–35 to 1938–39 ..	588	159	292	182	229	80	1,530
1945–46 ..	1,046	466	437	231	203	217	2,600
1946–47 ..	1,302	535	543	253	313	347	3,293
1947–48 ..	1,224	451	561	214	564	490	3,503
1948–49 ..	1,479	522	704	232	679	558	4,174
1949–50 ..	1,449	615	760	287	697	426	4,234

LOCAL VALUE OF FISHERIES PRODUCTION—*continued.*

Local Value per Head of Mean Population.

(*s. d.*)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Average, 1934–35 to 1938–39 ..	4 5	1 9	5 11	6 3	10 0	6 11	4 6
1945–46 ..	7 2	4 7	8 1	7 4	8 4	17 4	7 0

1949–50 ..	9 2	5 8	13 1	8 4	25 7	30 9	10 6

(*a*) No deduction has been made for depreciation and maintenance.

3. **Fish Preserving.**—The attempt to establish the fish preserving industry at the commencement of this century met with little success although a bounty was paid to encourage production. The industry, however, continued to operate, but there was no marked development until about 1945–46 when the production of canned fish amounted to 1,700,000 lb. Since that year production has increased considerably and reached a peak of 10,886,254 lb. in 1948–49 but dropped to 7,442,521 lb. in 1949–50.

In addition to the canning of fish, other fish products are obtained. The quantities produced during 1949–50 were 946,482 lb. of smoked fish and 1,039,294 lb. of fish paste.

In 1939 New South Wales and Tasmania were the only producing States, but by 1941 the industry had been extended to South Australia and Western Australia. Details of production are given in the following table for the years 1938–39 and 1945–46 to 1949–50.

PRODUCTION OF CANNED FISH : AUSTRALIA.

Particulars.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Number of factories operating(*a*) ..	3	11	12	16	16	15
Quantity .. lb.	603,302	1,683,612	3,717,248	9,731,702	10,886,254	7,442,521
Value .. £	13,700	147,016	326,078	727,660	973,027	676,812

(*a*) Including factories engaged in the canning of fish loaf.

The varieties canned in the various States differ according to the catch available, but separate details for each variety are not available. In New South Wales salmon is the principal variety, while in South Australia there are more varieties, including mullet, salmon, garfish, etc. In Western Australia herrings, crayfish and mullet are included, and in Tasmania salmon and crayfish.

4. **State Revenue from Fisheries.**—The revenue from fisheries during the year 1949–50 was £45,554 compared with £45,010 in 1948–49 and £34,273 in 1938–39. Of the total of £45,554 in 1949–50 New South Wales collected £22,050, Victoria £3,483, Queensland £10,243, South Australia (year ended December, 1949) £3,384, Western Australia (year ended December, 1949) £3,644, Tasmania (year ended March, 1950) £2,559 and Northern Territory £191.

§ 6. Oversea Trade in Fishery Products.

1. **Imports of Fish.**—The equivalent, in the round, of imported fish consumed in Australia in 1949–50, was 38 per cent. of the total consumption. Particulars of the imports of fish are shown below for the years 1945–46 to 1949–50 in comparison with 1938–39.

FISH AND FISH PRODUCTS : IMPORTS INTO AUSTRALIA.

(*a*) Not recorded separately.

Canned fish constituted the largest proportion of the imports; salmon from Canada, herrings from Canada and the United Kingdom, pilchards from the Union of South Africa and sardines from Norway were the chief varieties imported. The potted fish came chiefly from the United Kingdom and New Zealand, which also supplied a considerable proportion of the fresh fish imported in 1949–50; the bulk of the remainder came from the Union of South Africa. The small import of oysters was supplied by New Zealand, which has also furnished the bulk of the crustaceans imported in recent years.

2. **Exports of Fish.**—During 1949–50 the exports of fish of Australian origin were as follows:—oysters in shell, 888 cwt., £6,668; other fresh or preserved by cold process, 18,029 cwt., £414,108; potted or concentrated, 147 cwt., £7,576; fish preserved in tins, 19,256 cwt., £200,917; shell fish in tins, 293 cwt., £7,002; smoked or dried, 143 cwt., £1,838 and other fish, 13 cwt., £163.

3. **Exports of Pearl and other Shell.**—The exports of pearl, tortoise and trochus-shell of Australian origin are shown hereunder for the years 1938–39 and 1945–46 to 1949–50:—

PEARL, TORTOISE AND TROCHUS-SHELL: EXPORTS FROM AUSTRALIA.

CHAPTER XXIV.

MANUFACTURING INDUSTRY.

§ 1. General.

1. **Introduction.**—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given owing to the fact that prior to 1906 the necessary statistics were not collected by the several States upon a definite and uniform basis. A standard classification of manufacturing industries was formulated at a conference of Australian Statisticians in 1902 and adopted by all States in 1906. Figures upon this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was primarily engaged in the production of goods for local use, mainly of food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914–18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery began, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia.

A check was made in this expansion by the world-wide economic depression of 1929–33, but returning general prosperity and the opportunities opened to local manufacturers by import restrictions, initiated revival in 1933 and, with depreciation of Australian currency, gave renewed stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties, and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for Empire countries east of Suez, and in meeting these demands, as well as those arising locally because of interruption of oversea importations, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibilities for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but from 1945–46 onward, there was renewed expansion of the manufacturing industries to which an inflow of capital from overseas contributed.

2. **Decentralization of Manufacturing Industries.**—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945 to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy affecting the development and location of industry, to investigate in association with the States the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth has assisted decentralization by allocating to private industry munitions and other defence buildings in decentralized areas and accommodating migrants in provincial centres with prospects of development. Overseas firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

3. **Commonwealth Division of Industrial Development.**—The Secondary Industries Commission was established in 1943 to investigate post-war uses for munitions factories, to plan for the transition of secondary industries from war-time to peace-time activities, and generally to seek to increase industrial efficiency and to explore opportunities for new industries. The Commission was disbanded in April, 1950.

The functions of the Division of Industrial Development (formed in February, 1945 as the Secondary Industries Division of the Department of Post-war Reconstruction) were extended in August, 1948 to include the encouragement of industrial development, the exercising of Commonwealth responsibilities for the decentralization of industry, the promotion of industrial efficiency (especially the study of technical, production, and managerial problems and the dissemination and application of new knowledge and methods), the encouragement of the development of technological institutes and the publication of studies of the structure and operation of Australian manufacturing industries. The Division was attached to the Ministry of National Development when formed in March, 1950 to plan the development of national resources and to promote decentralization and regional development in conjunction with the States.

4. **Customs and Excise Tariffs and Bounties on Manufactures.**—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter XII.—Trade of this volume.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The Statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturers' net profit in production of the commodity exceeds a certain rate or if rates of wages ard conditions of employment in production of the commodity do not conform to prescribed standards.

5. **Scientific Research and Standardization.**—(i) *The Commonwealth Scientific and Industrial Research Organization.* The function of this Organization, more detailed reference to which appears on p. 1274, is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research studentships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research.

(ii) *The Standards Association of Australia.* This Association, which is referred to in greater detail on p. 1279, acts as the national standardizing organization of Australia and issues standard specifications for materials and codes of practice. Specifications and codes are prepared and revised periodically in accordance with the needs of industry, and standards are evolved and accepted by general consent.

(iii) *The National Association of Testing Authorities.* The National Association of Testing Authorities organizes national testing facilities throughout Australia to serve private and governmental needs. Laboratories may register voluntarily in respect of tests within their competence and the Association is to ensure the maintenance of their standards of testing. It is expected that there will be general acceptance of certificates of tests issued in the name of the Association by the registered laboratories.

6. **Definitions in Factory Statistics.**—The statistics relating to factories have been compiled from returns supplied annually by manufacturers to, and tabulated by, the several State Statisticians, in the terms of the Statistical Acts of the States. A return must be supplied in respect of every factory, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries) but does not cover smallgoods makers, laundries, farriers, photography studios, florists and seedsmen, and most abattoirs.

If a manufacturing business is conducted in conjunction with any other activity particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained if practicable for each industry.

Manufacturers are requested to state in their returns particulars as to the number, age, wages, etc., of their employees, the value of premises and equipment, the horse-power of machinery, the value, and in most cases the quantities, of raw materials and fuel used, and quantities and values of principal materials and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income or expenditure of factories nor to show the profits or losses of factories collectively or individually.

The average number of persons employed is quoted on two different bases: the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working proprietors are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

The value of factory output is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The value of production is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel, and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of Government factories and workshops, the value of output is estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

7. **Classification of Factories.**—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian statisticians in 1902 and revised from time to time, was used until the year 1929–30. A new classification was introduced in 1930–31, and this in turn, was revised and extended (principally in regard to the placement and composition of sub-classes) in accordance with decisions of the Statisticians' Conference, 1945.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or total factory activity. Particulars of certain of the sub-classes shown below are published in the latter portion of this chapter and full details for all sub-classes may be found in the *Secondary Industries Bulletin*, published annually.

The principal classes and sub-classes in the current classification of factories are as follows :—

CLASSIFICATION OF FACTORIES.

CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS.

Coke Works.
Briquetting and Pulverized Coal.
Carbide.
Lime, Plaster of Paris, Asphalt.
Fibrous Plaster and Products.
Marble, Slate, etc.
Cement.
Asbestos Cement Sheets, etc.
Other Cement Goods.
Other.

CLASS II.—BRICKS, POTTERY, GLASS, ETC.

Bricks and Tiles, Fire Bricks and Fire-clay Goods.
Earthenware, China, Porcelain, Terra-cotta.
Glass (other than Bottles).
Glass Bottles.
Other.

CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE.

Industrial and Heavy Chemicals and Acids.
Pharmaceutical and Toilet Preparations.
Explosives.
White Lead, Paints, Varnish.
Oils, Vegetable.
Oils, Mineral.
Oils, Animal.
Boiling Down, Tallow Refining.
Soap and Candles.
Chemical Fertilizers.
Inks, Polishes, etc.
Matches.
Other.

CLASS IV.—INDUSTRIAL METALS, MACHINES, IMPLEMENTS AND CONVEYANCES.

Smelting, Converting, Refining, and Rolling of Iron and Steel.
Foundries—Ferrous.
Plant, Equipment and Machinery.
Other Engineering.
Extracting and Refining of other Metals, Alloys.
Electrical Machinery, Cables and Apparatus.
Construction and Repair of Vehicles (10 groups).
Ship and Boat Building and Repairing, Marine Engineering.
Cutlery and Small Hand Tools.
Agricultural Machines and Implements.
Non-Ferrous Metals—
  Rolling and Extrusion.
  Foundries, Casting, etc.
Iron and Steel Sheets.
Sheet metal Working, Pressing, and Stamping.
Pipes, Tubes and Fittings—Ferrous.
Wire and Wire Netting (including Nails).
Stoves, Ovens and Ranges.
Gas Fittings and Meters.
Lead Mills.

CLASS IV.—INDUSTRIAL METALS, MACHINES, IMPLEMENTS AND CONVEYANCES—*continued.*

Sewing Machines.
Arms, Ammunition (excluding Explosives).
Wireless and Amplifying Apparatus.
Other Metal Works.

CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE.

Jewellery.
Watches and Clocks (including Repairs).
Electroplating (Gold, Silver, Chromium).

CLASS VI.—TEXTILES AND TEXTILE GOODS (NOT DRESS).

Cotton Ginning.
Cotton Spinning and Weaving.
Wool—Carding, Spinning, Weaving.
Hosiery and other Knitted Goods.
Silk, Natural.
Rayon, Nylon and other Synthetic Fibres.
Flax Mills.
Rope and Cordage.
Canvas Goods, Tents, Tarpaulins, etc.
Bags and Sacks.
Other.

CLASS VII.—SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR).

Furriers and Fur Dressing.
Woolscouring and Fellmongery.
Tanning, Currying, and Leather Dressing.
Saddlery, Harness, Whips.
Machine Belting.
Bags, Trunks, etc.

CLASS VIII.—CLOTHING (EXCEPT KNITTED).

Tailoring and Ready-made Clothing.
Waterproof and Oilskin Clothing.
Dressmaking.
Millinery.
Shirts, Collars, Underclothing.
Foundation Garments.
Handkerchiefs, Ties, Scarves.
Hats and Caps.
Gloves.
Boots and Shoes (not rubber).
Boot and Shoe Repairing.
Boot and Shoe Accessories.
Umbrellas and Walking Sticks.
Dyeworks and Cleaning.
Other.

CLASS IX.—FOOD, DRINK AND TOBACCO.

Flour Milling.
Cereal Foods and Starch.
Animal and Bird Foods.
Chaffcutting and Corn Crushing.
Bakeries (including Cakes and Pastry).
Biscuits.
Sugar Mills.

CLASS IX.—FOOD, DRINK AND TOBACCO—*continued.*

Sugar Refining.
Sugar Confectionery (including Chocolate).
Jam, Fruit and Vegetable Canning.
Pickles, Sauces, Vinegar.
Bacon Curing.
Butter Factories.
Cheese Factories.
Condensed and Dried Milk Factories.
Margarine.
Meat and Fish Preserving.
Condiments, Coffee, Spices, etc.
Ice and Refrigerating.
Salt Refining.
Aerated Waters, Cordials, etc.
Breweries.
Distilleries.
Wine Making.
Cider and Perry Making.
Malting.
Bottling.
Tobacco, Cigars, Cigarettes, Snuff.
Dehydrated Fruit and Vegetables.
Ice-cream.
Sausage Skins.
Arrowroot.
Other.

CLASS X.—WOOD WORKING AND BASKETWARE.

Sawmills.
Plywood and Veneer Mills.
Bark Mills.
Joinery.
Cooperage.
Boxes and Cases.
Basketware and Wickerware (including Sea-grass and Bamboo Furniture).
Perambulators.
Wall and Ceiling Boards (not Plaster or Cement).
Other.

CLASS XI.—FURNITURE, BEDDING, ETC.

Billiard Tables, Cabinet and Furniture Making and Upholstery.
Bedding and Mattresses.
Furnishing Drapery, etc.

CLASS XI.—FURNITURE, BEDDING, ETC.—*continued.*

Picture Frames.
Blinds.
Other.

CLASS XII.—PAPER, STATIONERY, PRINTING, BOOKBINDING, ETC.

Newspapers and Periodicals.
Printing—
  Government.
  General, including Bookbinding.
Manufactured Stationery.
Stereotyping and Electrotyping.
Process and Photo Engraving.
Cardboard Boxes, Cartons and Containers.
Paper Bags.
Paper Making.
Pencils, Penholders, Chalks, Crayons.
Other.

CLASS XIII.—RUBBER.

Rubber Goods and Tyres Made.
Tyre Retreading and Repairing.

CLASS XIV.—MUSICAL INSTRUMENTS.

Gramophones and Gramophone Records.
Pianos, Piano-Players, Organs.
Other.

CLASS XV.—MISCELLANEOUS PRODUCTS.

Linoleum, Leather Cloth, Oil Cloth, etc.
Bone, Horn, Ivory and Shell.
Plastic Moulding and Products.
Brooms and Brushes.
Optical Instruments and Appliances.
Surgical and other Scientific Instruments and Appliances.
Photographic Material, including Developing and Printing.
Toys, Games and Sports Requisites.
Artificial Flowers.
Other.

CLASS XVI.—HEAT, LIGHT, AND POWER.

Electric Light and Power.
Gas Works.

8. **Factory Development since 1901—Australia.**—The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table :—

FACTORIES : AUSTRALIA.

Year.	Factories.	Employment.(*a*)	Salaries and Wages Paid.(*b*)	Value of—				
				Materials and Fuel Used.	Output.	Production. (*c*)	Land and Buildings.	Plant and Machinery.
	No.	'000.	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
1901	11,143	198	(*d*)	(*d*)	(*d*)	(*d*)	(*d*)	(*d*)
1911	14,455	312	27,528	81,763	133,022	51,259	32,701	31,516
1920–21	17,113	367	62,932	213,579	323,993	110,434	60,831	68,655

1938–39	26,941	565	106,743	297,004	500,420	203,416	130,930	143,662
1943–44	27,674	767	216,874	495,504	891,739	366,235	177,147	180,993
1944–45	28,930	751	207,652	523,722	886,005	362,283	182,580	183,917
1945–46	31,184	745	205,819	515,325	867,648	352,323	186,939	185,545
1946–47	34,768	805	237,174	600,164	1,011,026	410,862	193,152	189,693
1947–48	37,356	849	285,765	720,822	1,210,119	489,297	211,143	213,710
1948–49	40,070	890	339,287	856,610	1,425,325	568,715	232,740	246,494
1949–50	41,596	918	385,896	983,923	1,645,411	661,488	259,549	285,602

(*a*) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors included in all years. (*b*) Excludes drawings by working proprietors. (*c*) Value of output less value of materials and fuel, etc., used. (*d*) Not available.

Single year tables in this issue relate to the year 1949–50 and in the immediately preceding issue to the year 1947–48. Corresponding tables for 1948–49 may be found in the Production Bulletin 1948–49, No. 43, Part 1—Secondary Industries.

§ 2. Number of Factories.

1. **Number of Factories in each State.**—The following table shows the number of factories in each State for the five years 1945–46 to 1949–50 compared with 1938–39 :—

FACTORIES : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938–39 ..	9,464	9,250	3,087	2,067	2,129	944	26,941
1945–46 ..	12,287	10,195	2,945	2,395	2,280	1,082	31,184
1946–47 ..	13,961	10,949	3,367	2,707	2,615	1,169	34,768
1947–48 ..	15,194	11,642	3,642	2,865	2,788	1,225	37,356
1948–49 ..	16,087	12,702	4,083	2,927	2,925	1,346	40,070
1949–50 ..	16,346	13,231	4,494	3,046	3,023	1,456	41,596

2. **Number of Factories in Industrial Classes.**—(i) *Australia.* The next table shows the number of factories in Australia during 1938–39 and the years 1945–46 to 1949–50 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. This classification, which was introduced during 1930–31, superseded the grouping which had been in use since 1902. Details of some of the principal industries included in the table will be found in § 11 hereinafter.

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
I. Treatment of Non-metalliferous Mine and Quarry Products	564	591	743	933	1,025	1,126
II. Bricks, Pottery, Glass, etc.	471	410	481	517	544	561
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease	666	886	929	975	1,010	1,006
IV. Industrial Metals, Machines and Conveyances	7,255	8,816	10,055	10,910	11,801	12,362
V. Precious Metals, Jewellery and Plate..	290	337	465	555	623	619
VI. Textiles and Textile Goods (not Dress)	611	883	930	982	1,065	1,155
VII. Skins and Leather (not Clothing or Footwear)	533	651	703	727	746	751
VIII. Clothing (except Knitted)	4,314	5,215	5,733	6,069	6,533	6,620
IX. Food, Drink and Tobacco	5,202	5,865	6,236	6,475	6,659	6,796
X. Woodworking and Basketware ..	2,822	3,148	3,608	4,001	4,530	4,893
XI. Furniture of Wood, Bedding, etc. ..	1,149	1,140	1,407	1,568	1,726	1,820
XII. Paper, Stationery, Printing, Bookbinding, etc.	1,816	1,703	1,779	1,852	1,942	1,981
XIII. Rubber	299	308	345	371	391	404
XIV. Musical Instruments	34	41	48	56	64	59
XV. Miscellaneous Products	413	714	832	899	947	985
Total, Classes I. to XV. ..	26,439	30,708	34,294	36,890	39,606	41,138
XVI. Heat, Light and Power	502	476	474	466	464	458
Grand Total	26,941	31,184	34,768	37,356	40,070	41,596

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. Except for the two war years 1941–42 and 1942–43, where there were decreases, the number of factories increased each year from 1931–32 to 1949–50; in the latter year the number of factories in Australia reached the record total of 41,596 or 54.4 per cent. greater than in 1938–39.

(ii) *States,* 1949–50. The following table shows the number of factories in each State in 1949–50, classified according to the nature of the industry :—

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, 1949–50.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-Metalliferous Mine and Quarry Products ..	396	365	86	129	100	50	1,126
II. Bricks, Pottery, Glass, etc. ..	268	135	46	56	41	15	561
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	500	298	64	68	53	23	1,006
IV. Industrial Metals, Machines, Conveyances	4,931	3,898	1,293	942	948	350	12,362
V. Precious Metals, Jewellery and Plate	254	218	40	51	49	7	619
VI. Textiles and Textile Goods (not Dress)	414	621	31	45	30	14	1,155
VII. Skins and Leather (not Clothing or Footwear)	330	276	54	45	36	10	751
VIII. Clothing (except Knitted) ..	2,895	2,373	458	412	409	73	6,620
IX. Food, Drink and Tobacco ..	2,356	1,918	1,022	643	561	296	6,796
X. Woodworking and Basketware ..	1,813	1,213	811	260	318	478	4,893

§ 3. Classification of Factories according to Number of Persons Employed.

1. **General.**—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors). Prior to 1945–46 there was no dissection of the "over 100 employees" group, but for that and subsequent years this group was subdivided into the seven size groups as shown in the table below.

2. **States, 1949–50.**—The following table shows, for each State, the number of factories classified according to the average number of persons employed in 1949–50 :—

FACTORIES : CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1949–50.

Size of Factory (Persons employed).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
			NUMBER OF FACTORIES.				
Under 4	4,771	3,944	1,323	826	1,287	553	12,704
4	1,399	1,168	451	306	171	167	3,662
5 to 10	4,585	3,387	1,276	793	793	392	11,226
11 to 20	2,434	1,983	652	486	362	164	6,081
21 to 50	1,898	1,653	479	370	262	106	4,768
51 to 100.. ..	661	581	147	143	95	47	1,674

§ 4. Power Equipment in Factories.

1. **General.**—In 1936–37 statistics of power equipment in factories were collected on a basis different from that previously in use. Information now obtained relates to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables Central Electric Stations have been treated separately from other factories.

In par. 2 below, 982 factories are shown in 1949–50 as using no power other than hand-power, the distribution of these factories among the various industries being as follows: Lime, Plaster and Asphalt, 12; Industrial and Heavy Chemicals and Acids and Pharmaceutical and Toilet Preparations, 11; Galvanized Ironworking, Tinsmithing, 36; Tailoring and Ready-made Clothing, 297; Dressmaking, 79; Millinery, 24; Bakeries, 126; Cabinet and Furniture Making, 32; all others industries, 265.

2. **Rated Horse-power of Engines in Factories other than Central Electric Stations.**—The following table shows the number of factories using power-driven machinery, those using manual labour only, and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1949–50 :—

FACTORIES(*a*): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1949–50.

State.	Number of Establishments.			Rated Horse-power of Engines and Motors.	
	Using Power.	Others.	Total.	Ordinarily in use.	In Reserve or Idle (omitting obsolete).
New South Wales ..	16,158	96	16,254	1,285,130	179,247
Victoria	12,890	274	13,164	863,075	112,674

§ 5. Employment in Factories.

1. **Number Employed.**—(i) *General.* All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and "outworkers" (*see* par. 4 (ii) hereinafter) are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen are excluded. Prior to 1945–46 the occupational grouping collected was (i) working proprietors ; (ii) managers and overseers ; (iii) accountants and clerks ; (iv) enginedrivers and firemen ; (v) workers in factory, skilled and unskilled ; (vi) carters and messengers ; and (vii) persons working regularly at home for the establishment. This grouping did not record separate details for technical staff (e.g., chemists, draftsmen, etc.) and supervisory staff and in 1945–46 the set-up on the collection form was amended to obtain the following groupings :—(i) Working proprietors ; (ii) managerial and clerical staff including salaried managers and working directors ; (iii) chemists, draftsmen and other laboratory and research staff ; (iv) foremen and overseers ; (v) skilled and unskilled workers ; (vi) carters (excluding delivery only), messengers and persons working regularly at home.

Prior to the year 1928–29 average employment in factories was computed by dividing the sum of the number employed each week by the number of weeks worked. The figures therefore, represented the average number employed over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928–29 the figure represents the equivalent average number employed over a full year of fifty-two weeks. The classification of factories according to the number of persons employed (*see* § 3 *ante*), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) *Australia*, 1938–39 *to* 1949–50. Particulars of the number employed, the increase in employment and the rate per cent. of such increase are given for years 1938–39 to 1949–50 in the following table :—

FACTORIES : EMPLOYMENT, AUSTRALIA.

Year.	Males.			Females.			Persons.		
	Number Employed.	Increase on Previous Year.		Number Employed.	Increase on Previous Year.		Number Employed.	Increase on Previous Year.

NOTE.—Minus sign (−) indicates decrease.

3. **Persons Employed in Classes of Industry.**—(i) *Australia.* The following table shows the average number of persons employed in factories in each industrial group in Australia for the years 1938–39 and 1945–46 to 1949–50.

FACTORIES : PERSONS EMPLOYED IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
I. Treatment of Non-metalliferous Mine and Quarry Products	10,343	9,929	12,673	14,263	15,572	16,598
II. Bricks, Pottery, Glass, etc.	15,709	13,466	16,535	17,536	18,702	19,241
III. Chemicals, Dyes, Explosives, Paints Oils and Grease	19,816	31,471	31,252	31,808	33,355	34,525
IV. Industrial Metals, Machines, Conveyances	177,677	292,477	300,921	320,948	333,313	344,313
V. Precious Metals, Jewellery and Plate ..	3,726	3,240	4,921	6,069	6,414	6,638
VI. Textiles and Textile Goods (not Dress)	46,082	55,008	59,810	61,911	64,855	65,528
VII. Skins and Leather (not Clothing or Footwear)	10,767	14,492	16,080	15,624	15,902	16,277
VIII. Clothing (except Knitted)	86,092	93,370	106,894	111,693	118,133	118,757
IX. Food, Drink and Tobacco	83,846	105,878	109,840	113,595	118,259	122,783
X. Woodworking and Basketware ..	30,739	38,346	43,457	47,052	51,206	53,169
XI. Furniture of Wood, Bedding, etc. ..	15,287	13,107	16,579	18,546	20,024	21,021
XII. Paper, Stationery, Printing, Bookbinding, etc.	39,913	39,905	46,651	47,813	50,571	53,002
XIII. Rubber	7,502	8,699	10,173	10,753	11,808	12,382
XIV. Musical Instruments	451	459	788	887	1,250	1,456
XV. Miscellaneous Products	7,727	14,838	17,059	18,235	18,123	18,561
Total, Classes I. to XV. ..	555,677	734,685	793,633	836,733	877,487	904,251
XVI. Heat, Light and Power	9,429	10,573	11,296	12,143	12,745	13,410
Grand Total	565,106	745,258	804,929	848,876	890,232	917,661

Following the outbreak of war in the Pacific in 1941, the transfer of man-power to the more essential industries became apparent, and industries not directly concerned with Australia's war effort showed a marked decline. The industries which declined were those in Class I., Mine and Quarry Products ; Class II., Bricks, Pottery, Glass, etc. ; Class V., Precious Metals ; Class VIII., Clothing ; Class XI., Furniture ; and Class XII., Paper, etc., while industries where the war-time expansion in employment occurred were those in Class III., Chemicals, etc.; Class IV., Metals, etc.; Class VI., Textiles; Class VII., Skins and Leather; and Class IX., Food.

Following some downward movement from war-time levels of employment which occurred in Class III., Chemicals, etc.; Class IV., Metals, etc.; and Class VI., Textiles in 1945–46, there was a general upward trend in 1946–47, and this continued in respect of each class of industry in each successive year.

(ii) *States.* Particulars of the numbers employed in each industrial class are shown in the following table for each State :—

FACTORIES : PERSONS EMPLOYED IN INDUSTRIAL CLASSES, 1949–50.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-metalliferous Mine and Quarry Products	6,763	4,998	1,508	1,368	1,267	694	16,598

4. **Persons Employed According to Occupational Status.**—(i) *General.* In the following table the average number of persons employed in each State during 1949–50 are classified according to their occupational status. As mentioned previously, persons employed in factories are now classified on a basis different from that adopted prior to 1945–46. The nature of this change is indicated in § 5 par. 1.

PERSONS EMPLOYED : OCCUPATIONAL STATUS, 1949–50.

State.	Average Number of Persons Employed.						
	Working Proprietors.	Managerial and Clerical Staff, etc.(*a*)	Chemists, Draftsmen, etc.	Foremen and Overseers.	Workers in Factory (Skilled and Unskilled).	Carters (excluding Delivery only) and Messengers, etc. (*b*)	Total.
New South Wales ..	13,064	39,254	4,644	15,142	307,716	2,565	382,385
Victoria	11,456	29,469	3,462	12,615	244,052	2,422	303,476
Queensland ..	3,936	7,742	635	2,943	73,021	686	88,963
South Australia ..	2,121	8,313	1,109	3,091	63,596	368	78,598
Western Australia ..	2,224	2,925	295	1,460	33,695	134	40,733
Tasmania ..	984	2,120	307	967	19,014	114	23,506
Australia ..	33,785	89,823	10,452	36,218	741,094	6,289	917,661

(*a*) Includes salaried managers and working directors. (*b*) Includes persons working regularly at home.

(ii) *Outworkers.* The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and embraces only persons to whom work is given out by factories to be done at home. Owing to the amended employment groupings adopted in 1945–46 (*see* § 5. 1.) persons working regularly at home for factories are now included with carters, messengers and others and separate details are no longer available. The number of "outworkers" employed by factories in 1944–45 was 1,049.

5. **Monthly Employment, 1938–39, 1945–46 and 1947–48 to 1949–50.**—The following table shows the number of persons (excluding working proprietors) employed in factories on the pay-day nearest to the 15th of each month for years up to 1949–50.

FACTORIES : MONTHLY EMPLOYMENT, AUSTRALIA.

6. **Distribution of Employees According to Age.**—(i) *States.* The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups from 1945–46 onwards, instead of three as in previous years. The particulars are collected as at June. The numbers employed in each age-group in June, 1950 are given below :—

FACTORIES : DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1950.

§ 6. Sex Distribution in Factories.

1. **Distribution According to Sex of Persons Employed.**—(i) *General.* In New South Wales the ratio of the number of females engaged in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and in 1949–50 was one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one to three, and in 1949–50 was about two to five, For Australia as a whole the ratio of females employed in factories was highest in 1943–44 at about two females to five males but by 1949–50 the ratio had declined to the level of one female to three males.

(ii) *Average Number of Males and Females Employed.* The following table shows the average number of males and females employed in factories in each State for 1938–39 and the five years 1945–46 to 1949–50 :—

FACTORIES : MALES AND FEMALES EMPLOYED.

NOTE.—The minus sign (—) indicates decrease.

3. **Masculinity of Persons Employed in Factories.**—The extent to which females are employed in the factories of Australia may perhaps be more clearly shown by giving the masculinity of persons employed in each State. The following table shows particulars for the years 1938–39 and 1945–46 to 1949–50 :—

FACTORIES : MASCULINITY(*a*) OF PERSONS EMPLOYED.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
1938–39	271	208	432	445	415	420	271
1945–46	273	232	451	362	405	366	280
1946–47	293	245	483	406	443	432	301
1947–48	300	251	480	414	458	434	308
1948–49	294	248	470	408	475	452	304
1949–50	289	248	455	414	480	459	302

(*a*) Number of males per 100 females.

For a number of years prior to 1926–27 there were on the average 300 males employed in factories for every 100 females, but in that year the proportion of males began to fall with the increasing activity in the clothing and textile industries, in which the number of females to males is relatively high. As these trades were not so seriously affected by the depression as the heavier industries, the proportion of males continued to fall, until in 1932–33 there were only 239 males employed to every 100 females. With the recovery of employment in the heavier industries subsequent to that year, the proportion of males per 100 females had increased to 271 in 1937–38 and 1938–39.

The decrease in masculinity from 1938–39 to 1943–44 resulted from the enlistment of men in the armed services and the expansion of industry caused by the war. In many industries the younger men were released for service in the defence forces and large numbers of women were absorbed as an adjustment to the industrial effort of Australia. Following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased. In 1949–50 there were 302 males per 100 females employed in factories, compared with 271 in 1938–39.

4. **Employment of Females in Particular Industries.**—(i) *General.* The greater number of females in manufacturing industries are employed in four classes, namely :—IV., Industrial Metals, Machines, etc. ; VI., Textiles ; VIII., Clothing ; and IX., Food, Drink and Tobacco. In 1949–50 these industries accounted for 80.63 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 118 females to every 100 males and in Class VIII., Clothing, with 246 females per 100 males. The following tables show the average number of males and females employed in each of these classes in 1949–50 :—

MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1949-50.

(a) Number of females per 100 males.

§ 7. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.

2. **Number of Children Employed, 1939 and 1946 to 1950.**—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940 to 13,867 in June, 1950, which is most marked in all States excepting Western Australia, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate which occurred about 1929, and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years 1939 and 1946 to 1950.

FACTORIES: CHILDREN EMPLOYED, JUNE.

(a) Excludes working proprietors.

5. **Apprenticeship.**—In all the States, acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

§ 8. Salaries and Wages Paid and Value of Production.

Note.—In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

1. **General.**—The importance of the manufacturing industries of Australia is indicated by the fact that the total value of the output for 1949–50 was £1,645,411,497, of which amount £929,094,287 represented the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £54,829,516 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the value of the output, namely £661,487,694, represents the value of production as defined by the Conference of Statisticians at Sydney in 1925, i.e. "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production." The total amount of salaries and wages paid in factories in 1949–50 was £385,895,806. This figure, which excludes amounts drawn by working proprietors, was the highest ever recorded and shows an increase of £46,608,646 or 13.74 per cent. on that for the previous year.

2. **Salaries and Wages Paid.**—(i) *In Classes of Industry*, 1949–50. The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table :—

FACTORIES : SALARIES AND WAGES PAID, 1949–50.

Grand Total ..	162,147,094	130254694	34,747,789	33,806,729	15,293,241	9,646,259	385,895,806

(ii) *Totals and Averages*, 1938–39 *and* 1945–46 *to* 1949–50. The following statement shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each of the years indicated. The average wage paid is not comparable with that shown in similar tables in issues of the Official Year Book prior to No. 23, 1930, on account of the change in the method of computing the average number of hands employed, as explained earlier. The figures exclude working proprietors and the amounts drawn by them :—

FACTORIES : TOTAL AND AVERAGE SALARIES AND WAGES PAID.

(£.)

Year.	Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.

	Average per employee	439.04	446.05	408.67	442.05	397.13	428.30	436.59

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there is a large number of hands employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1949–50 were paid in Victoria, South Australia and New South Wales in that order.

The average earnings per employee rose annually from 1938–39 to 1943–44 when a record high level of £291 was attained as a result of war-time conditions. In 1944–45 the average dropped to £285 and remained at this level in 1945–46. From 1945–46 average earnings rose each year and in 1949–50 reached a new record level of over £436.

(iii) *Earnings of Males and Females*, 1949–50. The following table shows the amount of salaries and wages paid to males and females in each class of industry in each State during the year 1949–50 :—

SALARIES AND WAGES : MALE AND FEMALE FACTORY EMPLOYEES, 1949–50.

3. Power, Fuel and Light Used.—(i) *In Classes of Industry*, 1949–50. The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance ; in 1949–50 it amounted to a new high level of £54,829,516, an increase of £8,767,694 as compared with the previous year and approximately three and one half times the corresponding value in 1938–39. The following table shows the value of power, fuel and light, etc., used in the different classes of industry in 1949–50 :—

FACTORIES : VALUE OF POWER, FUEL AND LIGHT USED (*a*), 1949–50.

5. **Value of Output.**—(i) *In Classes of Industry*, 1949–50. The value of the output of factories in the various classes in each State in 1949–50 is shown in the following table. It represents the selling value at the factory of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the real value of factory production (*see* par. 6).

FACTORIES : VALUE OF OUTPUT, 1949–50.

6. **Value of Production.**—(i) *In Classes of Industry*, 1949–50. The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production".

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". All these deductions with the exception of depreciation are included in the items "value of materials used" and "value of fuel used" as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was agreed that no deduction should be made on this account for the present. The value of production as given in the following tables is obtained, therefore, by deducting "value of materials used" and "value of fuel used" from the "value of the output".

The figure thus calculated is, however, not the net value of production. The deduction for depreciation, particulars of which are shown in § 9, par. 4, was estimated at £29,103,162 for 1949–50. Many miscellaneous expenses, such as taxation, insurance, advertising and other sundry charges have not been taken into account. Therefore, it must not be inferred that when wages and salaries are deducted from the value of production the whole of the "surplus" is available for interest and profit.

The value of factory production therefore approximates "net value added" in the manufacturing process. It amounted in 1949–50 to £661.5 million to which Class IV., Industrial Metals, etc., with £246.2 million or almost four times the value of production of this class in 1938–39, made the greatest contribution. This total value of production in 1949–50 represented an increase of £92.8 million over the figure for 1948–49 and £458 million (225 per cent.) over the value of production recorded in 1938–39.

The following table shows the value of production in 1949–50 in each State for the various classes of industry :—

(ii) *Total and Averages,* 1938–39 *and* 1945–46 *to* 1949–50. The value of production and the amount per person employed and per head of population are shown in the following table for the last five years compared with 1938–39. For Australia as a whole the value of production per head of population increased from £29.41 per head in 1938–39 to £82.18 per head in 1949–50. For value per person employed, the increase was not so pronounced (from £360 per head in 1938–39 to £721 in 1949–50) owing to the considerable increase in the numbers of persons employed in 1949–50 as compared with 1938–39.

7. **Value of Output and Cost of Production.**—As the total value of the output for Australia for 1949–50 was estimated at £1,645,411,497, there remained, after payment of £929,094,287 for the value of the materials used, £385,895,806 for salaries and wages, and £54,829,516 for power, fuel and light, a balance of £275,591,888 to provide for all other costs and overhead expenses such as rent, interest, insurance, pay-roll tax, income tax, depreciation etc., as well as drawings by working proprietors and profit. The following table gives corresponding particulars for each State expressed absolutely and as percentages of the total value of the output for the year 1949–50 :—

FACTORIES: VALUE OF OUTPUT AND COST OF PRODUCTION, 1949–50.

State.	Materials Used. (*a*)	Power, Fuel and Light. (*b*)	Salaries and Wages.	Balance (Output less Materials, Fuel and Wages.)(*c*)	Total Value of Output.

§ 9. Value of Land, Buildings, Plant and Machinery.

1. **General.**—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1949–50:—

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(*a*), 1949–50.
(£.)

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
Land and buildings	110,597,506	84,123,892	20,806,450	24,316,806	11,055,002	8,649,734	259,549,390
Plant and machinery	113,864,379	92,748,475	28,903,570	24,900,949	11,456,767	13,728,161	285,602,301
Total ..	224,461,885	176,872,367	49,710,020	49,217,755	22,511,769	22,377,895	545,151,691

(*a*) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified.

2. **Value of Land and Buildings.**—(i) *Total for Australia,* 1938–39 *and* 1945–46 *to* 1949–50. The following table shows for Australia as a whole the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938–39 and 1945–46 to 1949–50.

FACTORIES : VALUE OF LAND AND BUILDINGS(*a*), AUSTRALIA.

1949–50 ..	110,597,506	84,123,892	20,806,450	24,316,806	11,055,002	8,649,734	259,549,390

(a) Includes estimated value of rented premises.

Prior to 1929–30 the increase in the value of land and buildings was uninterrupted. rising from £23 million in 1903 to £118 million in 1929–30, a growth of £95 million in 27 years. During the three years ended 1932–33, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and stood at £259.5 million in 1949–50.

3. **Value of Plant and Machinery.**—(i) *Total for Australia,* 1938–39 *and* 1945–46 *to* 1949–50. The following table shows for Australia the approximate value of plant and machinery used in factories in 1938–39 and each of the five years ended 1949–50 :—

FACTORIES : VALUE OF PLANT AND MACHINERY(a), AUSTRALIA.

(a) Includes estimated value of rented plant and machinery.

Except for the years 1930–31 to 1933–34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in Australia. The increase in 1949–50 of £39.1 million over 1948–49 extended over all industrial classes. The greatest increase occurred in Class XVI., Heat, Light and Power.

(ii) *Totals in each State.* The following table shows the value of plant and machinery in each State during the years 1945–46 to 1949–50 compared with 1938–39. During 1949–50 increases occurred in all States, Victoria showing the largest increase, £16.7 million.

(a) Includes estimated value of rented premises, plant and machinery.

§ 10. Principal Factory Products.

The monthly factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau and in the *Secondary Industries Bulletin.*

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1948 to 1950. A more complete list, together with values, where available, is published in the *Secondary Industries Bulletin.*

§ 11. Individual Industries.

1. **General.**—Particulars in pages 1089–1118, §§ 2–9 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one or two establishments in a particular industry in the State or the Commonwealth, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

Details of some of the principal articles produced in factories in Australia during the years 1947–48 to 1949–50 are shown in the table in the preceding pages (§ 10).

2. **Portland Cement and Cement Goods.**—The manufacture of portland cement and cement goods is an important industry included in Class I. Particulars for the three industries under this general heading are shown for 1949–50 in the following table.

PORTLAND CEMENT, ASBESTOS CEMENT SHEETS ETC., AND OTHER CEMENT GOODS: AUSTRALIA, 1949–50.

Items.		Portland Cement.	Asbestos Cement Sheets and Mouldings.	Other Cement Goods.	Total.
Number of factories		11	14	425	450
Number of persons employed		2,152	1,946	3,935	8,033
Value of land and buildings ..	£	932,060	378,548	972,134	2,282,742
Value of plant and machinery ..	£	2,415,503	362,199	1,192,198	3,969,900
Salaries and wages paid	£	1,048,476	970,182	1,654,028	3,672,686
Value of power, fuel, etc., used ..	£	1,322,734	56,258	64,893	1,443,885
Value of materials used	£	1,949,178	1,919,643	2,802,345	6,671,166
Total value of output	£	5,421,613	3,465,498	5,767,721	14,654,832
Value of production	£	2,149,701	1,489,597	2,900,483	6,539,781

The principal articles produced in factories included in the foregoing table during 1949–50 were :—Portland cement 1,167,189 tons, valued at £5,400,048 ; Asbestos cement building sheets 18,344,694 square yards, £2,380,216 ; cement roofing tiles 39,082,000, £1,047,867 ; cement bricks and blocks £434,187 ; concrete pipes £1,549,756 ; ready-mixed concrete 296,361 cubic yards, £927,699.

3. **Chemicals, Drugs and Medicines.**—In 1945–46 the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations, which previously had been combined. Details for each of these industries are given in the next two tables for 1949–50. However, it should be noted that in order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the Explosives industry.

INDUSTRIAL AND HEAVY CHEMICALS AND ACIDS (INCLUDING EXPLOSIVES), 1949–50.

(iii) *Materials Used and Production.* The following statement shows the quantities of certain materials used and the production in soap and candle factories in Australia for the years 1945–46 to 1949–50 compared with 1938–39 :—

SOAP AND CANDLE FACTORIES : MATERIALS USED AND PRODUCTION, AUSTRALIA.

Particulars.		1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Tallow used ..	cwt.	535,511	834,057	768,939	893,826	972,474	994,011
Alkali used ..	,,	229,881	160,304	153,036	156,042	177,162	170,470
Coconut oil used—refined and unrefined	cwt.	138,954	86,576	57,191	80,518	98,751	78,261
Soap(*a*)	,,	978,113	1,065,439	1,046,826	1,150,774	1,149,868	1,174,605
Soap Extracts and Powders	,,	191,232	469,865	432,051	529,971	609,631	697,848
Candles made ..	,,	27,459	23,194	10,539	11,298	13,619	21,245

(*a*) Soap made in all factories including those not classified as "Soap and Candles" factories.

The output for the year 1949–50 comprised the following quantities of soap :—Household, 599,422 cwt. ; Flakes and Chips, Household, 52,562 cwt. ; Flakes and Chips, Industrial, 7,688 cwt. ; Sand, 44,981 cwt. ; Toilet and Hand, 267,793 cwt. ; Shaving (including Sticks and Creams), 8,995 cwt. ; Industrial, 79,927 cwt. ; Soft, 19,561 cwt. ; Liquid, 84,503 cwt. ; Shampoo (Powder), 577 cwt. ; Shampoo (liquid), 8,596 cwt. ; Soap Extract and Powders—Household, 686,288 cwt., Industrial, 11,560 cwt. This includes 168,580 cwt. of soap made in establishments not classified as Soap and Candle Factories.

6. **Chemical Fertilizers.**—(i) *Details for each State.* The following table shows particulars of the factories engaged in the manufacture of chemical fertilizers in each State during 1949–50. Details of the consumption, imports and exports of fertilizers will be found in Chapter XX.—Agricultural Production.

CHEMICAL FERTILIZERS, 1949–50.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Number of factories ..	..	14	9	7	7	6	8	51

7. **Iron and Steel Works and Engineering.**—(i) *General.* In 1945–46 the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers, not elsewhere included.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table particulars are shown for 1949–50 for each State for the group Smelting, Converting, Refining and Rolling of Iron and Steel.

SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL, 1949–50.

(ii) *Total for Australia.* The increased output of electrical energy in Australia within recent years, referred to in par. 39 below, caused a corresponding demand for electrical equipment. Difficulties, due to war, in obtaining electrical equipment from abroad have been responsible for considerable development in the manufacture of electrical goods and equipment in Australia, as shown in the following table.

ELECTRICAL MACHINERY, CABLES AND APPARATUS : AUSTRALIA.

Items.		1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.

12. **Agricultural Machines and Implements.**—(i) *General.* Owing to the extensive agricultural activities conducted in Australia and the demand for modern mechanized farm equipment, the manufacture of agricultural implements constitutes an important branch of Australian industry. The articles manufactured include a wide range of implements for tillage, seeding and planting and the harvesting of crops. Other farm machinery made includes windmills, chaff-cutters and machinery used in the dairying industry.

(ii) *Details for States.* The following table shows details of agricultural implement works in each State for 1949–50:—

AGRICULTURAL MACHINES AND IMPLEMENTS, 1949–50.

13. **Wireless and Amplifying Apparatus.**—The introduction of wireless broadcasting in 1923 gave rise to a new industry in Australia. Early statistical details of the industry are not available as they were grouped together with other electrical apparatus. In 1930–31 a new classification of factories was adopted and "Wireless Apparatus" was shown as a separate industry. The industry is confined mainly to New South Wales and Victoria, but is becoming increasingly important in South Australia. The number of broadcast listeners' licences increased from 331,128 in 1930–31 to 2,245,307 at December, 1951, and this increase reflects the advancement of the industry during that period. During the war years considerable expansion took place in the industry to meet the requirements of the fighting services and apart from a slight drop in output in 1945–46, this expansion has continued.

14. **Cotton.**—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced during the five years ended 1938–39 was 18 million lb. and slightly under 2 million lb. in the five years ended 1949–50. Arising out of the development in the local manufacture of cotton materials and the further expansion following the outbreak of war in 1939, plans were completed for an extension of the area devoted to the cultivation of this crop, but since the commencement of the Pacific War there has been a definite downward trend. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XX.—Agricultural Production.

(ii) *Ginning.* The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly from India, Brazil and the United States of America.

(iii) *Spinning and Weaving.* The recent expansion in the spinning and weaving section of the cotton industry marks an important event in its development. New factories have been established and Australia is now producing an extensive range of cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the five years ended 1949–50 in comparison with 1938–39.

15. **Wool Carding, Spinning and Weaving.**—(i) *Details for each State.* The importance of this industry is emphasized by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed, worsted cloth, rugs, blankets and yarn, all of which have acquired a reputation for purity and durability. The following table shows particulars for 1949–50.

(iii) *Materials used and Production*, 1949–50. The following quantities of yarn were used in these establishments during 1949–50, viz. :—Worsted, 8,524,701 lb. ; woollen, 142,828 lb. ; cotton, 8,773,975 lb. ; mercerised cotton, 568,023 lb. ; rayon, 6,512,710 lb. ; silk, 196,136 lb. ; nylon, 530,742 lb. ; other, including mixtures, 216,893 lb. Production comprised 42,094,068 garments, valued at £15,844,571 ; and 3,524,213 dozen pairs of socks and stockings, valued at £9,220,238.

17. **Tanning, Currying and Leather Dressing.**—(i) *Details for each State.* In Class VII. the most important industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. **Boot and Shoe Making.**—(i) *Boot and Shoe Factories.* The boot and shoe factories hold an important place both in regard to employment afforded and extent of output. The following table relates to 1949–50 and refers to boot and shoe factories as distinct from those devoted to repairing. It has been necessary to include details of Boot and Shoe Repairing in Tasmania, in order to conceal confidential information for that State. Factories engaged in the manufacture of rubber boots and shoes are excluded, being classified under Rubber Goods, *vide* par. 38.

BOOT AND SHOE FACTORIES, 1949–50.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas. (a)	Australia.

(ii) *Production of Flour and By-products.* The production of flour by the mills in each State for the years 1938–39 and 1945–46 to 1949–50 was as follows :—

FLOUR-MILLING : PRODUCTION OF FLOUR.

(Tons of 2,000 lb.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938–39 ..	547,162	436,829	84,314	146,262	138,583	19,582	1,372,732
1945–46 ..	451,895	315,525	96,984	164,986	166,791	22,657	1,218,838
1946–47 ..	541,469	449,170	98,232	202,366	176,727	21,695	1,489,659
1947–48 (*a*)	552,784	501,325	108,022	215,155	197,104	23,753	1,598,143
1948–49 (*a*)	667,645	479,288	110,843	211,787	183,143	26,484	1,679,190
1949–50 (*a*)	597,491	447,784	112,995	162,259	161,251	27,243	1,509,023

(*a*) Includes Wheatmeal for Baking.

The 1949–50 production of 1,509,023 tons of flour in Australia was valued at £24.478,856. In addition, 590,131 tons of bran and pollard, valued at £6,306,905, were made. The quantity of wheat ground was 71,891,045 bushels.

23. **Bakeries.**—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on in the year 1949–50 is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory as explained in § 1, par. 6, page 1086. For that reason the table does not give complete details of the industry, as a large number of bakehouses not coming within the definition are excluded. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

BAKERIES (INCLUDING CAKES AND PASTRY), 1949–50.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.(*a*)	Australia.
Number of factories	1,144	897	435	194	266	128	3,064
Number of persons employed ..	6,864	4,846	2,566	1,216	945	1,488	17,925

Value of production .. £	5,031,234	3,587,399	1,792,137	872,698	599,010	1,104,875	12,987,353

(*a*) Includes confectionery.

24. **Sugar-mills.**—(i) *General.* Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XX.—Agricultural Production.

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following two tables refer to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown ; consequently the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XX.—Agricultural Production, which relate to harvest years.

(ii) *Details for New South Wales.* The following table shows details of the operations of sugar mills in New South Wales for the years 1938–39, and 1945–46 to 1949–50 :—

SUGAR-MILLS : NEW SOUTH WALES.

25. **Sugar Refineries.**—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1949–50 there were two sugar refineries in the States of Victoria and Queensland, and one in each of the States of New South Wales, South Australia and Western Australia. The quantity of raw sugar treated amounted to 440,871 tons, for a yield of 422,675 tons of refined sugar, valued at £16,232,309.

26. **Confectionery Factories.**—(i) *Details for each State.* The figures for 1949–50 are shown hereunder :—

CONFECTIONERY FACTORIES, 1949–50.

During the 1939–45 War, production of jams expanded greatly and a high level of output of 171 million lb. was attained in 1943–44. Production afterwards receded, but attained a new record of 198.5 million lb. in 1947–48. It dropped to 134.6 million lb. in 1949–50. The peak output of fruit preserved occurred in 1949–50 with 208.4 million lb., compared with the previous highest level of 189.1 million lb. attained in 1947–48.

There has also been a marked development in the production of canned vegetables. In 1938–39 output totalled 10,255,000 lb. but, as a result of the war-time demand by the armed services, production reached the record level of 119,149,000 lb. in 1944–45. However, it has since declined to 70,583,000 lb. in 1949–50.

(iii) *Production.* The following table shows the total quantity and value of jams, pickles, sauces and other items manufactured in each State in 1949–50 :—

JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES : OUTPUT, 1949–50.

(a) Not available for publication; figures are included in total for Australia. (b) Includes Whole Milk equivalent of cream and butter fat purchased as such. (c) Includes 172 tons of cheese valued at £23,126, made in establishments not classified as factories.

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXI.—Farmyard, Dairy and Bee Products.

30. **Meat and Fish Preserving Works.**—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported has already been referred to in Chapter XIX.—Pastoral Production. In recent years there has been considerable expansion in the canning of meat and fish.

MEAT AND FISH PRESERVING WORKS, 1949–50.

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XIX.—Pastoral Production.

31. **Breweries.**—(i) *Details for each State.* The following table gives particulars of breweries in each State for the year 1949–50. It should be noted, however, that the data shown below are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not connected with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

BREWERIES, 1949–50.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.

Total value of output £	9,030,309	10,476,340	12,267,499	11,954,243	13,526,477	15,850,582
Value of production £	5,372,451	5,869,472	6,843.745	6,392,984	6,742,864	7,562,789

The quantity of ale, stout and beer brewed fell from 73.7 million gallons in 1928–29 to 49.8 million gallons in 1931–32, but thereafter increased each year to 109.2 million gallons in 1941–42. Under the Control of Liquor Order which operated between March, 1942 and March, 1946, the production of beer was restricted and consequently output remained static at about 100 million gallons from 1942–43 to 1944–45. Production rose to 154 million gallons in 1949–50 and to 173 million gallons in 1950–51.

The average annual consumption of ale, stout and beer prior to the economic depression of the early thirties exceeded 11 gallons per head of the population; it dropped to 7.32 gallons in 1931–32, increased to 13.76 gallons in 1941–42 and declined again to about 13 gallons during the period of control. The consumption per head increased to 18.23 gallons in 1949–50 and to 19.73 gallons in 1950–51.

(iii) *Materials Used and Production.* The table below shows the quantities of raw materials used and the quantity and value of ale, stout and beer brewed in each State during 1949–50 :—

BREWERIES : MATERIALS USED AND PRODUCTION, 1949–50.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
RAW MATERIALS USED.							
Malt .. bushels	1,587,665	1,550,126	472,435	(a)	554,651	(a)	4,801,636
Hops .. lb.	1,321,337	1,060,133	342,689	(a)	337,088	(a)	3,583,623

(a) Not available for publication; figures are included in total for Australia.

(ii) *Total for Australia.* This industry was among the first to be established in Australia. In 1861 New South Wales had eleven factories and Victoria one. The Australian market has for many years been largely supplied with local manufactures from the imported leaf. Imports during 1949–50 comprised—manufactured tobacco 773,772 lb., cigars 34,599 lb., and cigarettes 8,273,974 lb., and the quantities manufactured in

Australian factories were respectively 20,168,000 lb., 169,000 lb., and 10,341,000 lb. The following tables show the extent of the industry in Australia for the five years 1945–46 to 1949–50 compared with 1938–39 :—

TOBACCO, CIGAR AND CIGARETTE FACTORIES : AUSTRALIA.

Items.	1938–39.	1945–46.	1946–47.	1947–48.	1948–49.	1949–50.
Number of factories	30	26	31	33	37	37
Number of persons employed ..	5,544	5,255	5,641	5,470	5,219	5,167
Value of land and buildings £	1,041,798	959,192	1,159,772	1,143,363	1,174,503	1,275,897
Value of plant and machinery £	942,644	723,962	840,171	932,616	1,008,889	1,060,076
Salaries and wages paid £	1,095,912	1,300,481	1,536,796	1,676,954	1,827,819	1,992,095
Value of power, fuel, etc., used £	34,483	52,174	61,127	62,339	73,941	88,461
Value of materials used £	7,080,574	10,602,035	13,657,489	14,492,198	13,750,779	15,016,360
Total value of output £	9,800,413	13,042,558	16,364,165	17,915,412	17,613,106	18,974,086
Value of production .. £	2,685,356	2,388,349	2,645,549	3,360,875	3,788,386	3,869,265

LEAF USED AND PRODUCTION ('000 lb).

Leaf used—						
Australian (stemmed) ..	4,489	4,685	3,611	2,924	3,084	3,313
Imported (stemmed) ..	16,011	18,822	23,441	23,675	22,775	24,043
Tobacco made	16,305	17,901	20,190	19,715	19,256	20,168
Cigars made	238	125	139	163	169	169
Cigarettes made	6,731	8,482	10,082	10,147	9,701	10,341

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw material. Increased import duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929–30 to over 3 million lb. in 1930–31. During the 1939–45 War about 4.7 million lb. of Australian-grown leaf was used annually, but in subsequent years the figure fell to the 1949–50 level of 3.3 million lb. In this connexion, *see* Chapter XX.—Agricultural Production.

34. **Sawmills, etc.**—(i) *Details for States.* The most important industry in Class X. is that of sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town, they have been combined in the following tables, together with plywood and bark mills.

SAWMILLS, PLYWOOD AND BARK MILLS, 1949–50.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.

Total value of output £	14,537,888	21,707,972	27,889,108	34,958,061	41,590,009	48,550,975
Value of production .. £	5,789,211	9,158,519	11,438,555	14,452,657	17,505,264	20,727,091

The sawmill output of native timber, which declined from 740 million super. feet in 1925–26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938–39 and rose to 1,223 million super. feet in 1949–50. Further reference is made to the sawmilling industry in Chapter XXII.—Forestry.

35. **Cabinet and Furniture Making and Upholstery Factories.**—These industries constitute the principal manufactures in Class XI. The following table shows particulars for each State in 1949–50 :—

CABINET AND FURNITURE MAKING AND UPHOLSTERY FACTORIES, 1949–50.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.

36. **Printing Works.**—Printing and bookbinding works rank high in importance among the industries of Australia and in 1949–50 afforded employment for 34,213 employees, and paid £15,169,000 in salaries and wages, while the value of output amounted to £49,664,000. The first table below gives particulars of establishments engaged in general printing in each State for 1949–50. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table to follow :—

37. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years it was not until the manufacture of paper pulp from indigenous timber commenced in 1938–39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp rose from 6,000 tons in 1938–39 to 88,000 tons in 1946–47, dropped slighty in the two succeeding years and recovered to 88,000 tons in 1949–50.

The number of factories operating in 1949–50 comprised two in New South Wales, seven in Victoria, one in Queensland, South Australia and Western Australia and two in Tasmania. In the latter State, newsprint, writing and printing papers are produced, and in the other States wrappings, other papers and boards. Particulars for this industry are shown in the following table for the years 1938–39 and 1945–46 to 1949–50.

(a) Not available for publication; figures are included in total for Australia. (b) In addition, 1,182,773 tons of metallurgical coke were made in Coke Works in 1949–50.

Since 1938–39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached nearly 35 thousand million cubic feet in 1949–50.

CHAPTER XXV.

ELECTRIC POWER GENERATION AND DISTRIBUTION.

The following article, which is designed to remedy a serious deficiency in the range of subjects dealt with in the Official Year Book, has been contributed by the Division of Industrial Development of the Commonwealth Ministry of National Development. The article is divided into four major parts, viz. :—A.—Introduction, which deals generally with the resources, generation and distribution, and future developments, of electric power in Australia ; B.—a part describing the Snowy Mountains Hydro-electric Scheme ; C.—a part dealing with the origins, development, present situation and new projects of electrical systems in each Australian State and Territory (internal and external) ; and D.—the Conclusion, which refers briefly and generally to plans for increased generating capacity in Australia and the tariff policies of electricity supply authorities. A Statistical Summary (E) and a Bibliography (F) re appended. The Synopsis at the beginning of this volume provides an outline in detail of the contents of the article.

A great deal of research was required in the preparation of this article, as sources of historical material were scanty. Information presented herein has been checked, wherever possible, by the organization concerned, but in spite of the care exercised in the preparation and checking of data, it is possible that errors may have occurred, and advice of any discovered would be appreciated. It should be remembered, however, that the information relates to situations existing and projects contemplated early in 1952 and may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

It is intended to advance the statistical matter in this article in future issues of the Year Book, also to keep the descriptive matter up-to-date by including information on developments in works in progress and in new projects.

A. INTRODUCTION.

1. **General.**—The geographical pattern of electric power generation and distribution in Australia has been affected by two main influences—the distribution of population, with a resulting distribution of industry, and the location of fuel and water resources. The growth of population, especially in country areas, has, of course, been itself much influenced by the availability of water and fuel.

On the other hand, the extent of power development in a country depends in general on the size of the population, the degree of industrialization and the magnitude of the resources available for power production.

2. **Population.**—Between 1939 and 1949, the Australian population increased by approximately one million, to reach a total of eight million. For the latter year, the rate of growth was estimated at 3.3 per cent., of which natural growth contributed 1.4 per cent. and net migration 1.9 per cent. By far the greater portion of this increase occurred between 1945 and 1949, when both natural increase and immigration were accelerated—particularly the latter.

Australia, including Tasmania, has an area of 2,974,581 square miles. The average population density in 1949 was therefore roughly 2.7 persons per square mile. This measure, however, can be misleading in view of the very sparse population in wide areas and the great concentration in capital cities. In fact, some 89 per cent. of the total population lies to the south-east of an area enclosed by an arc drawn from a point west of Whyalla in South Australia and curving north-easterly to the Queensland coast a little north of Brisbane. Outside this area, the only significant concentrations of population are in the south-west of Western Australia and along the more northerly Queensland coast. Within it (about one-sixth of the total area of Australia) lie all the Australian capitals except Perth, and practically the whole of Australia's manufacturing activities. The density per square mile in this sector of the continent is about fifteen persons, but, again, this figure would be considerably less if the populations of the five State capital cities included in it (totalling almost four million) were excluded from the calculation.

The two principal centres of population and industry, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power. Their growth has been associated with the development of large deposits of coal located in relatively close proximity to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of the Commonwealth, is of paramount significance in influencing the distribution of industrial population and the location of major electric power stations.

3. **Power Resources.**—The principal sources of energy utilized in the production of electric power in Australia are coal, water and petroleum products. This last is of least importance, being chiefly used in local stations in small country towns in which power is generated by internal combustion engines, large in number, but small in total capacity. It is also employed for stand-by and peak load plant by some central authorities. As there are no known significant oil deposits in Australia, practically all supplies of liquid fuel must be imported from external sources.

By far the most important source of energy used in the production of electric power in Australia is coal. In 1949, thermal power stations represented 82.4 per cent. of the total installed generating capacity. The balance, 17.6 per cent., was distributed between hydro and internal combustion equipment in the proportions of 13.2 per cent. and 4.4 per cent., respectively.

It has been estimated that Australia's probable coal reserves are of the order of 53,000 million tons, of which 14,000 million tons are black coal and 39,000 million tons brown or sub-bituminous coals. Whilst these reserves may appear small by comparison with those of many other countries, they are, at present, high per head of population. The known deposits are unevenly distributed throughout the continent, about 85 per cent. of the black coal reserves being in New South Wales and 95 per cent. of the brown in Victoria. However, the potential reserves in Queensland may prove as great, if not greater, than those of New South Wales, but owing to the lack of precise data it is difficult to obtain a reasonably accurate estimate of their extent.

Most of Australia is poorly supplied with water, only 15.2 per cent. receiving an annual rainfall of 30 inches and over. This is confined to the narrow coastal strip on the east coast and to Tasmania. The possibility of establishing large thermal stations in inland areas is therefore strictly limited by the lack of sufficient water for feed and condensing purposes.

The deficiency of water resources is even more significant in relation to the generation of hydro-electric power, which is thereby restricted to a very small proportion of the continent's total area. Furthermore, because of the large fluctuations which occur in rainfall, no hydro-electric plant can be depended on for a firm output, unless considerable provision is made for storage. Even in Tasmania, where the rainfall is on the whole much more uniform than on the mainland, deficient rainfall has at times caused a considerable reduction in the available water from natural storages. There are two alternatives for improving the degree of utilization, namely, additional use of unregulated stream flow or artificial storage.

Furthermore, this paucity of water necessarily causes the quantity available to be divided so that the various uses for which it is required—domestic, stock, irrigation, power generation, etc.—shall receive their due proportion. In a project which combines irrigation and power generation as its objective, therefore, power can only be produced when water is released from the storage for irrigation—unless the scheme provides for additional storage below the power station, or the flow is sufficient to permit continuous generation of power and the water not used for irrigation can therefore be allowed to run to waste. Furthermore, where a scheme is designed primarily for irrigation, power production is normally limited to the period (of, say, six months in a year) when water is released for this purpose, which is often the time when the demand for electric power is at a minimum.

The only region on the mainland of Australia where land is high enough to receive reliable winter snowfall, and from which reasonably constant water supplies throughout the year can therefore be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales through to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop approximately 3,289,000 kW. within the next 25 years, of which 789,000 kW. should be available by 1960. The two major construction schemes in this area are the Snowy Mountains and Kiewa projects. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount there available is only a small proportion of the potential of the Alpine region.

In Tasmania hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. Whereas on the mainland the chief source of energy is coal, water occupies this position in Tasmania. However, because of its insular position, that State's electric power potentialities must at present be considered apart from those of the mainland, although their indirect contribution to the Australian economy as a source of power for basic industries is quite substantial. Improvements in transmission techniques may some day make possible a direct contribution.

A study of the map on page 1171 reveals a significant distribution of the resources required for the generation of electric power. When the resources of Tasmania are excluded, the pattern is broadly symmetrical. In close proximity to Sydney lie great black coal deposits, while the most extensive brown coal deposits are located near Melbourne ; roughly equidistant from these two large centres of population and industry is found the mountainous region which contains most of the available hydro-electric potential.

From a geographical point of view, this concentration of energy resources is disproportionate ; from an economic point of view, however, when considered in relation to the distribution of other resources and to other factors, it has a direct bearing on the general pattern of Australia's development.

4. **Electric Power Generation and Distribution.**—(i) *Ownership of Undertakings.* At the beginning of this century, Australia's electrical undertakings were carried on mainly by private enterprise, but some measure of governmental control was exercised through various electric light and power Acts. This legislation was designed to provide standards of safety, and to define the scope and obligations of the private organizations engaged in production of electric power for sale. As the demand for power increased, particularly from manufacturing industries, supply facilities were expanded and the industry grew rapidly. A trend towards public ownership commenced during the 1914–18 War and became more pronounced after the 1939–45 War. By 1952, all major generating stations supplying the public were, in varying degrees, under the control of State statutory organizations, constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies in the various States. There are, however, still a large number of small private and municipal enterprises generating power for supply to country towns, but, where practicable, central authorities are extending supply to these places. In many areas, however, it has been and remains the practice for central authorities to sell power in bulk to local distributing organizations who undertake local reticulation.

In addition to the private, local government and statutory organizations who generate and/or distribute electricity for sale, there are numerous firms generating power for use in their own establishments, particularly those firms engaged in mining pursuits remote from the main centres of population. As this article is intended primarily to cover the activities of central electric stations, and as power regularly produced for such internal consumption is a relatively small proportion of total power produced, only incidental reference is made to firms generating electricity for consumption within their establishments.

(ii) *Power Production.* In the twenty year period 1928–29 to 1948–49, production of electric power in Australia increased by nearly 300 per cent., from 2,286 to 9,053 million kilowatt hours. A comparison of the relative amounts produced in each State is shown in the following table :—

PROPORTION OF ELECTRIC POWER PRODUCED IN EACH STATE.

(Per Cent.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
1928–29	42	29	4	7	5	13	100
1948–49	41	28	10	6	4	11	100

During the 1920's, demand increased very rapidly as supply was extended to new areas and electricity usage considerably diversified. In that period, consumption increased at a rate of 15 per cent. per annum compound, which amounted to a doubling of the load each five years. As the net population increase averaged a little less than 2 per cent. per annum, this was not a significant contribution to the comparatively rapid increase in consumption.

During the depression of the early '30's, demand remained fairly constant, but from 1934 to 1939, as industrial activity regained momentum, consumption increased rapidly each year at a rate of from 8 to 10 per cent. per annum compound. During the 1939–45 War, power restrictions were imposed on commerce and industry, very few houses were built and, in general, new domestic electric appliances were either in short supply or not available. Despite these conditions, consumption continued to increase, but this was due mainly to rising demand caused by war production.

Since the 1939–45 War industry and commerce have expanded rapidly, many new houses have been built and the population has increased by approximately 8 per cent. These factors, together with extension of electricity supplies to rural areas and the increased use of domestic electric appliances, have all contributed to bring about a position where the inflated demand for power cannot be satisfied by the existing installed capacity of central generating stations. For example, average consumption per head per annum in 1950 exceeded 1,000 kWh., compared with approximately 500 kWh. before the war. During the period 1939–40 to 1949–50, the capacity of electrical machinery installed by secondary industries and utilizing purchased electricity, increased by 118 per cent., namely, from 1.1 million horse-power to 2.4 million horse-power.

Notwithstanding the fact that production of electric power nearly doubled in the decade between 1938–39 and 1948–49, all States have found it necessary to introduce some form of power rationing, particularly during the winter peak period. The main cause of the inadequate supply was, and continues to be, the lack of sufficient generating capacity, a situation which originated in the restriction of development programmes during the 1939–45 War. Rationing has in some States also been partly due to inadequate coal supplies, particularly in those dependent on New South Wales coal.

(iii) *Generating Capacity.* In 1949, installed generating capacity in Australia totalled approximately 2.1 million kW. compared with 1.7 million kW. in 1939, an increase of about 24 per cent. This represents 0.28 kW. and 0.24 kW. per head of population in 1949 and 1939 respectively, while the total population increased by 14 per cent. in this period. Had demand per head remained constant, the increase in installed capacity would have been adequate to cater for the additional consumption by the larger population. However, the factors already mentioned have caused demand to be considerably in excess of supply or potential supply, especially during the winter.

This situation has been met in part by the increased use of available plant. In 1939 each kW. of installed capacity produced an average of 3,000 kWh. per annum, compared with an average of 4,400 kWh. in 1949. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed. In Tasmania, for example, average outputs per kW. installed were 5,000 and 5,400 kWh. in 1939 and 1949 respectively, compared with 2,300 and 3,600 kWh. in South Australia.

With a view to further decreasing the gap between demand and supply and reducing peak loads, electricity authorities have introduced differential tariffs, zoning in some areas, and restrictions on the use of certain electrical appliances. However, particularly in New South Wales and Victoria, the absence of reserve plant has led to frequent "black-outs" in recent years because of the inability to handle winter or abnormal peak loads.

5. **Future Developments.**—(i) *Power Supply and Demand.* Each central authority has embarked upon constructional programmes to overcome the lag between supply and demand. However, industrial and commercial expansion has continued on a high level, and several projects have been commenced or planned in various parts of the Commonwealth for suburban and main railway line electrification. Other fields directly connected with the demand for power, such as house building, must be taken into account.

Increases in population, even if unaccompanied by increases in consumption of power per head, would result in overall increases in consumption. The rise in industrial demand, which was very great during the period 1930–1950, may be expected to continue, even though the rate of increase slows down; this will further add to the demand for power.

(ii) *Thermal-Hydro Comparison.* The increasing relative importance of the generation of electric power from water resources is illustrated by the following expected changes in proportion between steam, hydro and internal combustion installed generating capacity over the period 1949 to 1960, viz. :—Steam, from 82 per cent. to 71 per cent.; hydro, from 13 per cent. to 26 per cent.; internal combustion, from 5 per cent. to 3 per cent. Although it is evident that, unless there is revolutionary change in the ways of using resources for producing electric power, hydro generated electricity will remain of lesser importance than that generated by steam, its contribution will become more significant as existing potential is developed and problems connected with the transmission of power over relatively great distances are overcome. Furthermore, in comparison with thermal generated power, the cost of generation per unit is substantially lower, although increases in capital costs of large hydro-electric projects may raise the overall costs of production to a level not much lower than that prevailing for thermal generated power.

6. **Summary.**—The major portion of Australia's power resources, namely, her coal deposits and hydro-electric potential, are concentrated in the south-eastern section of the continent, an area comprising approximately one-sixth of the total. Closely related to this distribution of basic resources is the location of population and industry. In this area are contained 89 per cent. of the population and more than 90 per cent. of Australia's secondary industries.

In the years between 1929 and 1949, production of electric power increased by nearly 300 per cent. This increase followed the rapid growth of industrial activity, usage of electric power in new fields, and a greatly increased consumption per consumer. To-day, owing mainly to the retarding of constructional programmes during the 1939–45 War, production of electric power is insufficient to cater for demand, compelling most States to impose power rationing on industrial and domestic consumers with varying degrees of severity. In an endeavour to overcome the present unsatisfactory supply position, State electricity supply authorities have projects under construction which, if carried out according to programme, will double generating capacity in the Commonwealth by 1956.

Since 1914 there has been a consistent movement towards nationalization of the electricity supply industry, which in the post 1939–45 War period has accelerated. At present, all major power stations producing electricity for sale are, in varying degrees, under the control of statutory State commissions. Where practicable, supply is being extended in rural areas, and small private and municipal organizations generating power in country towns are being absorbed into the system of the States' central electricity supply authorities. Many municipalities, however, buy in bulk and undertake local reticulation.

Each State has problems peculiar to its own territory relative to the generation and distribution of electric power, and these will be discussed in the respective sections.

B. SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME.

1. **Geography of Area.**—The main features of the Snowy country in south-eastern New South Wales have been described earlier in this survey. It is the only part of the continent in which any altitudes exceed 7,000 feet, and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 120 inches in the vicinity of Mt. Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy, which flows southwards to Bass Strait.

2. **Historical.**—(i) *Early Suggestions for Utilization of Snowy River.* The Murray and Murrumbidgee have been subject to control and intensive development for irrigation for many years; the Snowy, however, flows through mountainous and practically uninhabitated country until debouching onto the river flats of East Gippsland, not many miles above its mouth. It has never been controlled in any way, either for the production of power or for irrigation, and a very great proportion of its waters flow to waste into the sea.

As a result, attention has long been directed towards this river, which has the highest source of any in Australia and which conducts away a very large proportion of the waters from the south-eastern New South Wales snowfields.

As early as 1884, the possibility of diverting its waters to the parched inland plains had been suggested by the Surveyor-General, Mr. P. F. Adams, in evidence before a Royal Commission on water conservation. Subsequently, the increasing use of electricity led to investigations of its possibilities as a source of hydro-electric power. Interest shifted sporadically between these two objectives, and the Snowy was consecutively considered as a means of supplementing the flow of the great inland rivers, a source of water supply to the rapidly growing metropolitan area of Sydney, a means for developing hydro-electric power and, again, as a source of increasing agricultural production in the rich Murray and Murrumbidgee valleys.

In 1918, a Parliamentary survey was carried out by the New South Wales Public Works Department of a project to utilize the waters of the river for generation of electric power, and a report in this regard was presented to the Under Secretary of the Department on 16th January, 1920. Nothing, however, resulted from this proposition. In 1937 the British firm of Consulting Engineers, Messrs. Rendel, Palmer and Tritton, in the course of a report to the New South Wales Government, suggested a new scheme for the utilization of Snowy waters, based on building a storage dam at Jindabyne and expected to produce 220,000 kVA. of power.

The 1939–45 War, however, and the plans for post-war reconstruction, which then originated, led to a proposal by the State of New South Wales for diversion for irrigation and agricultural purposes of the waters of the Snowy to the Murrumbidgee River—a scheme in which little emphasis was placed on the generation of power. The Victorian Government proposed a counter-scheme, involving very much greater generation of power, and involving diversion, not to the Murrumbidgee, but to the Murray.

(ii) *Committee of Commonwealth and State Representatives*, 1946–1949. The Commonwealth Government, however, being seized with the national implications of these proposals, brought about a meeting in 1946 of Commonwealth and State representatives to discuss the general utilization of Snowy waters, and subsequently a Committee was set up to examine the whole question on the broadest possible basis. This Committee, in a report submitted in November, 1948, suggested consideration of a far greater scheme than any previously put forward. It involved not only the simple question of utilization of the waters of the Snowy, but a general consideration of the possible diversion of a number of rivers in the area, tributaries, not only of the Snowy, but of the Murray and Murrumbidgee. The recommendations of the Committee were generally agreed to by a conference of Ministers representing the Commonwealth and States of New South Wales and Victoria, and it was also agreed that the Committee should continue its investigations.

(iii) *Constitution of Snowy Mountains Hydro-electric Authority*, 1950. A further report was submitted by the Committee in June, 1949, as a result of which the Commonwealth Parliament passed the Snowy Mountains Hydro-electric Power Act. In the next month the Snowy Mountains Hydro-electric Authority was constituted, and thus was inaugurated the greatest engineering scheme in Australian history.

3. **Description of Scheme.**—The proposals at present being implemented fall into two groups—(i) Tumut Development and (ii) Snowy-Murray Development—each having its associated plans for hydro-electric power production. The features described hereunder may be identified by reference to the map on page 1178. It should be remembered that, as the final designs for practically every element of the scheme have not yet been completed, and in many cases will not be completed for many years, any figures which are now quoted in respect of those elements will undoubtedly be subject to modification in the future.

(i) *Tumut Development.* The central feature of this part of the plan is diversion to, and regulation of, the waters of the Tumut River, a stream at present completely unregulated, but which contributes approximately half of the flow of the Murrumbidgee River at Gundagai below the existing main storage on the Murrumbidgee at Burrinjuck. To the Tumut will be diverted the waters of the Eucumbene, a major tributary of the Snowy, and the head waters of the Tooma, a tributary of the Upper Murray. The headwaters of the Murrumbidgee itself will also be diverted to the Tumut, principally to secure desirable electric power.

A major dam is to be constructed on the Eucumbene River at Adaminaby, creating a storage of at least 3.5 million acre feet, and from this, water will be conveyed by a 15-mile tunnel to Tumut Pond on the upper reaches of the Tumut River, where it will be joined by the waters from the Tooma, diverted by racelines and tunnels. From Tumut Pond, another tunnel will convey the water to power station T.1 with an installed capacity of about 320,000 kW., and a further tunnel to power station T.2 with a capacity of 280,000 kW., thence discharging into a smaller storage at Lob's Hole.

To the Lob's Hole Reservoir will also be brought the waters of the Upper Murrumbidgee from another major storage at Tantangara, holding over 350,000 acre feet. From it, waters will be led by tunnel to power station T.3 with an installed capacity of 140,000 kW., which will discharge into a pond on the Yarrangobilly River, a tributary of the Tumut, and from Yarrangobilly Pond by further tunnel to power station T.4 with an installed capacity of 160,000 kW. which, in turn, will discharge into the Lob's Hole Reservoir.

Between the foot of the Lob's Hole storage and the top of the Blowering storage will be power stations T.5 and T.6. The total capacity of these stations will be 410,000 kW.

The Blowering storage will have a capacity of about 800,000 acre feet and at the foot of the dam will be the last of the Tumut power stations, T.7, with a capacity of some 500,000 kW., but this station will operate only when water is released for irrigation.

The total extra new water which will reach the Murrumbidgee is expected to average 565,000 acre feet per annum and the total installed capacity of the various power stations is estimated at 1,310,000 kW. (excluding T.7).

(ii) *Snowy-Murray Scheme.* The central feature of this part of the scheme is the diversion of the waters of the Upper Snowy itself from a major dam to be constructed at Jindabyne on that river, a little below its junction with the Eucumbene and the Crackenback Rivers. This reservoir will have a storage capacity of approximately 1,200,000 acre feet, and from it will run right through the Great Dividing Range a tunnel approximately 32 miles in length, finally discharging into Swampy Plains River, not far above its junction with the Murray proper.

Into this tunnel will be collected a considerable quantity of water from the very high altitude country of the Kosciusko area, and from a number of smaller tributaries of the Murray. The collection from the Kosciusko area commences at the Kosciusko Reservoir at an altitude of 5,725 feet, not many miles below the source of the Snowy. A tunnel will convey water from this reservoir to power station M.1.A. with an installed capacity of 60,000 kW., and thence to a pond on the Snowy River, at its junction with the Guthega River.

From the Guthega Pond, a further tunnel and penstock will lead to station M.1.B. with a capacity of 90,000 kW., which discharges into a pond at the junction of the Munyang and Snowy Rivers. Construction of this part of the scheme has already commenced. Munyang Pond will discharge into a tunnel leading to station M.2 H and L with installed capacity of 85,000 kW., thence into a reservoir at Island Bend on the main stream of the Snowy.

From the Island Bend reservoir, a vertical shaft, 1,000 feet deep, will lead to the main tunnel from Jindabyne reservoir previously referred to, passing on its way through power station M.3 with installed capacity of 250,000 kW. Into this main tunnel will also be collected waters from the Upper Murray tributary streams previously mentioned.

Of these, the most important is the Windy Creek–Geehi River series. A pond on Windy Creek, a small tributary of the Geehi, situated at an altitude of over 5,000 feet, will provide water through a tunnel to station M.4 with an installed capacity of 75,000 kW., thence by racelines and tunnel to station M.5.H. with an installed capacity of 40,000 kW., discharging into Geehi River pond.

A vertical shaft will lead this water into the main tunnel, passing through station M.5.L with an installed capacity of 20,000 kW. The combined waters thus collected into the main tunnel will pass through station M.6 with an installed capacity of 540,000 kW., and then discharge into a pond on Bogong Creek, another of the Upper Murray tributaries. At this point, the water is still at an altitude of nearly 2,000 feet, and the main tunnel will thence continue to station M.7 with a capacity of 540,000 kW.

From M.7 the total collected waters will flow into the Swampy Plains River at a point some seven miles, in a direct line, above its confluence with the Murray. It will be necessary, however, to provide on the Murray a further storage for the proper regulation of these waters for irrigation purposes.

The total water flowing to the Murray from these works will amount on the average to 730,000 acre feet per annum, but as 330,000 acre feet which now reaches the Murray from the Tooma will be, as indicated previously, diverted to the Tumut, the total extra water actually reaching the Murray will be, on the average, 400,000 acre feet per annum; the total installed capacity of the power stations, 1,700,000 kW.

(iii) *Race Lines.* An integral part of each development is the construction of hundreds of miles of racelines, to collect and divert water from the many streams in the area into storages and tunnels.

4. **Utilization of Power.**—The total capacity of all stations in the scheme will be of the order of 3,000,000 kW., which is greater than the present total installed capacity of all the generating stations in the Commonwealth.

If, however, the demand for power continues to increase as is expected, the major source of power must still be thermal stations. The operation of the whole scheme is dependent on the appropriate development and integration of these stations, as otherwise there would be a serious loss in ultimate economy: all economic estimates therefore postulate that thermal capacity will be expanded so as to preserve an appropriate ratio.

For the purposes of general comparison, the ratio of 38 per cent. for effective capacity of hydro power to 62 per cent. thermal has been adopted. This, however, is only tentative and may be departed from as the scheme proceeds. It has, however, been estimated with a reasonable degree of probability that the power available from the scheme will save coal to the order of five million tons annually.

The first call on the power generated under the Snowy Scheme will be by the Commonwealth Government for supply to the Australian Capital Territory of power which it needs in that area, particularly for certain projects with defence significance, and no indication can at present be given as to how great that call will be. It is not likely, however, to amount to more than a relatively small fraction of the total power available, and it has been agreed that the balance will be divided between the States of New South Wales and Victoria in a proportion of two-thirds to New South Wales and one-third to Victoria.

The project has not yet proceeded so far that plans can be formulated for the actual scheme of power distribution, but transmission lines from the Australian Capital Territory via Cooma are under construction and, whereas this is primarily to supply power from the existing New South Wales network to the operational sites for construction purposes, it is anticipated that, when station M.1.B. comes into operation, power will then be fed from that station back to the interconnected network. The original estimates for transmission costs in the proposal were based on transmission to load centres at 220,000 volts, but it is probable that much higher voltages will be used.

C. STATES AND TERRITORIES.

§ 1. New South Wales.

1. **General Historical.**—Experiments first took place with electricity in Sydney during 1860, and it was first commercially used in 1878; since then the generation and distribution of power and the responsibility for these functions have undergone considerable changes.

Initially, the supply of electricity was a purely local problem, and it was not until satisfactory techniques had been developed for transmitting electricity over longer distances that the need arose for co-ordination on a State-wide basis. Consequently, in the early stages numerous organizations, both large and small, private and public, entered the field.

A pioneer in electricity generation and supply was the Tamworth Municipal Council, which reticulated power for street lighting in 1888; during the same year the town of Young was supplied with electricity, followed by Penrith and Moss Vale (1889), Broken Hill (1890) and Redfern (by the Redfern Municipal Council), during 1891. In the city of Sydney, King-street was lighted between Elizabeth and Pitt streets during 1892. Prior to 1904, electricity was supplied in the City of Sydney by five small companies :—the Empire Electric Light Co , the Strand Electric Light Co., the Imperial Arcade Electric Light Co., the Oxford Street Electric Light Co., and the Palace Electric Light Co. These concerns and the undertakings of the Redfern Municipal Council were subsequently purchased by the Municipal Council of Sydney.

In the early days of power production, both generation and distribution were the responsibility of each authority. However, with the growth and diversification of electric power usage, two factors, interconnexion of power stations and bulk supplying, have tended to separate the function of generation of electricity from its reticulation. The first interconnexions took place in the Sydney area, when Ultimo power station, operated by the Department of Railways, was linked with Pyrmont, a station owned by the Sydney Municipal Council. In Newcastle, the Department of Railways power station at Zarra-street was connected to the Newcastle Municipal Council's electrical undertaking in Sydney-street. As a result of these power links a large proportion of the electricity supplied to domestic and industrial consumers in Sydney and Newcastle was generated by the Department of Railways.

At the same time, the practice of bulk supplying was increasing. A number of Sydney municipalities were distributing power purchased in bulk from the Department of Railways and the Electricity Supply Undertaking of the Sydney Municipal Council. The further development of this trend toward separation of generation from distribution is illustrated by the fact that in 1949 there were 67 organizations generating power, compared with 161 supplying it. It may be noted that, of these 67 generating organizations, four produced approximately 95 per cent. of the total electricity production in New South Wales.

Before establishment of the State Electricity Commission of New South Wales which was constituted under the Electricity Commission Act 1950, the major organizations responsible for the generation of electric power were the Sydney County Council, the Department of Railways, the Electric Light and Power Supply Corporation, the Southern Electricity Supply, and the Clarence River County Council. A discussion of the early history and the growth of these organizations up to 1950, and of the general pattern of electric power development in New South Wales follows. (Details of the projects under control of the Snowy Mountains Hydro-electric Authority are dealt with separately in Part B, commencing on page 1154.)

The areas of supply of the major generating authorities and the location of small generating undertakings are shown on the map on page. 1172.

2. **The Sydney County Council.**—Under the Municipal Council of Sydney Electric Lighting Act 1896, the Electricity Supply Undertaking was established in 1902 and by 1904 was reticulating electricity for domestic and industrial purposes and for street illumination. As the Act provided for construction of generating and transmission equipment to cater for an increasing load and extension of the area of supply, steps were taken to erect a power station at Pyrmont on Sydney Harbour. The initial installation consisted of three vertical engines direct coupled to alternators generating at 5,000 volts, 3-phase, 50 cycles, having a total capacity of 1,500 kW. The demand for power in the area supplied was continually increasing, necessitating frequent extensions of capacity, and by 1924 installed capacity totalled 73,500 kW. This was considered the maximum economic size for the station.

In 1925 construction was commenced on a steam station at Bunnerong on Botany Bay designed for a capacity of 150,000 kW. consisting of six 25,000 kW. units; it was completed during 1930. Boiler plant comprised eighteen boilers, each complete with stokers and mechanical draught plant. In August, 1937, a further 25,000 kW. unit was installed making the station's total capacity 175,000 kW. During 1939, Bunnerong "B" was placed in service with one 50,000 kW. unit—another 50,000 kW. unit being installed in 1941. By 1947, one more similar unit had been added, giving Bunnerong "A" and "B" an aggregate of 325,000 kW. Between 1929 and 1940, some of the older units at Pyrmont were withdrawn from service, reducing generating capacity to 49,500 kW.

On 1st January, 1936, the ownership and control of the Electricity Supply Undertaking were vested in the Sydney County Council, an organization created by the Gas and Electricity Act 1935–1941. From its two major power stations, namely Bunnerong and Pyrmont, the Council supplies electricity direct to industrial and domestic consumers and provides power for street lighting in the city and 33 suburbs. Bulk supplies are sold to a number of municipalities and to the Hawkesbury Development Company, an organization having a franchise to reticulate electricity in parts of Penrith Municipality and Colo Shire.

Originally, an area of about one square mile in the centre of the city was supplied by power converted to direct current operation. During 1930, work was commenced to change the supply to alternating current. Numerous interruptions caused the conversion programme to be retarded, but much of the rewiring has now been done, an alternating supply system has been established throughout the area, and the changeover of installations in premises is proceeding.

Power generated at Bunnerong is stepped up from 11 kV. to 33 kV. for transmission to a number of substations, where the voltage is reduced to 5 or 11 kV. for reticulation to distribution centres. Electricity from the Pyrmont station, used normally for peak load requirements during the winter months, is transmitted at 5 kV. direct to distributing centres. Bunnerong and Pyrmont are connected by cables, having a capacity of 75,000 kVA.—the system further provides for interchange of power between Pyrmont and the Railway Department's White Bay power station, and Bunnerong and the Department of Public Works' station at Port Kembla. Capacities of the interconnecting equipment of these two systems are 36,000 kVA. and 15,000 kVA. respectively. Further interconnexions exist between the systems of the Sydney County Council and the Electric Light and Power Supply Corporation.

The growth of the undertaking of the Sydney County Council between 1904 and 1949 is indicated by the following comparisons :—Installed capacity, from 500 kW. (estimated) to 375,000 kW. ; units sold, from 0.258 million kWh. to 1,112 million kWh. ; consumers, from 86 to about 300,000. The Council also supplies electricity in bulk to the municipalities of Holroyd, Ryde, Windsor, Penrith and Fairfield, the Blacktown, Baulkham Hills and Hornsby Shires, and the McKellar County District. Consumers in these areas number approximately 68,000.

The proportions of electricity usage by the various classes of consumers supplied by the Sydney County Council during the years 1944 and 1949 respectively are as follows :—Domestic, 30 per cent., 33 per cent. ; industrial, 48 per cent., 43 per cent. ; commercial, 11 per cent., 9 per cent. ; bulk, 9 per cent., 13 per cent. ; street lighting, 2 per cent. each year. Rationing of power was more severe in 1949 than in 1944, particularly for industry and commerce.

3. **The Department of Railways.**—The Department of Railways commenced the generation of electricity in 1899 with a steam power station located at Ultimo, a suburb of Sydney. It now operates four major stations, namely, Ultimo and White Bay in the metropolitan area, and at Newcastle and Lithgow. Installed capacity and units generated in 1935–36 and 1948–49 were as follows :—

NEW SOUTH WALES : DEPARTMENT OF RAILWAYS SYSTEM.

Power Station.	1935–36.		1948–49.	
	Installed Capacity.	Units Generated.	Installed Capacity.	Units Generated.
	kW.	m.kWh.	kW.	m.kWh.
Twenty-five cycle—				
Ultimo	50,000	165	60,000	300
White Bay	63,750	38	27,500	43
Fifty cycle—				
White Bay	86,000	220	86,000	398
Zarra-street(*a*)	35,000	105	77,500	358
Lithgow	7,500	14	12,500	54
Total	242,250	542	263,500	1,153

(*a*) Includes some 25-cycle generating equipment.

Initially, the Ultimo undertaking was designed to supply a 600 volt direct current service for the city trams; this was increased to 6,600 volts operating at a frequency of 25 cycles, with radial feeders to sub-stations. At a later stage, the direct current generating plant was replaced by rotary convertors for the inner city 600 volt services. The convertors were supplied from either the Ultimo alternating current plant, or, if desired, from the original section of the Department's power station at White Bay, both of which operated at a frequency of 25 cycles; the more recently constructed section of White Bay operates at 50 cycles.

The Department of Railways steam station located at Zarra-street, Newcastle was placed in service during 1917. In addition to providing power for the Newcastle electric tramways, a service inaugurated in 1923, the Department sells bulk supplies to the Greater Newcastle and Maitland City Councils, municipalities of Dungog and Singleton, shire councils of Stroud and Gloucester and the Clarence River, Macleay River, Manning River, Brisbane Water, and Oxley County Councils. The Newcastle trams were replaced by buses during 1950. At Lithgow, situated 96 miles west of Sydney, the Department operates another steam station which was placed in service during January, 1928. Power is supplied in bulk to the State Coal Mine at Lithgow and to a number of local authorities between Lawson and Dubbo. These include the Lithgow, Orange and Bathurst City Councils, Lyndhurst and Wellington Shire Councils and Dubbo Municipal Council, the Blue Mountains City Council at Katoomba, and the Blaxland Shire Council at Wallerawang near Lithgow.

4. **The Electric Light and Power Supply Corporation Ltd.**—In 1909 the Electric Light and Power Supply Corporation Ltd. commenced production of electricity from its power station at Balmain—a suburb of Sydney. The Corporation was permitted to reticulate electricity to five suburban municipalities, Ashfield, Balmain, Leichhardt, Newtown and Petersham. Present installed generator capacity of the Balmain station is 48,000 kW. During 1949 the Corporation expanded its activities by the acquisition of two other private electricity supply organizations—Parramatta and Granville Electric Supply Co. Ltd. and the Dundas Electricity Undertaking. The first mentioned organization was formed in 1913, and with purchased power served certain areas of the municipalities of Parramatta and Granville These undertakings are to be acquired by the Electricity Commission at a price to be determined by the Land and Valuation Court.

5. **The Southern Electricity Supply.**—In the eastern central area of New South Wales (*see* map on page 1172) the Southern Electricity Supply, which was formed in 1942 under the Southern Electricity (Administration) Act, No. 3 and which was administered by the Department of Public Works, operated five power stations located at Yanco, Port Kembla, Cowra, Burrinjuck and Wyangala near Cowra. These five stations, the first three steam and the latter two hydro, are interconnected to form the Southern Electricity Supply system. In addition, the Canberra power station, which is owned by the Commonwealth Department of Works, is part of the system. The Electricity Commission pays an annual rental for the station, and also owns some of the plant there. Power is transmitted by a 132 kV. line 145 miles long connecting Burrinjuck and Port Kembla, while Yanco, Burrinjuck, Wyangala and Canberra are connected by transmission lines of 66 kV. To permit an interchange of power, the system has been interconnected by 66 kV. lines with the metropolitan systems and the Department of Railway's western system at Orange. The assets, liabilities and staff of the Southern Electricity Supply were transferred to the Electricity Commission on 1st November, 1950, and the Southern system became the first part of the State's interconnected system to be owned and operated by the Electricity Commission.

The Southern system provides power in bulk to the Commonwealth Department of the Interior at Canberra and a number of local government authorities, who in turn supply electricity for domestic, industrial and street lighting purposes in their shires or municipalities. Bulk supplies are also made to the Water Conservation Irrigation Commission at Yanco, which reticulates power to towns in the Murrumbidgee Irrigation Area, including Griffith, Leeton and Yenda. In 1948–49 it purchased 16 million kWh. of energy.

Growth of the Southern Electricity Supply's system in the decade 1939 to 1949 is shown in the following table :—

NEW SOUTH WALES : SOUTHERN ELECTRICITY SUPPLY SYSTEM.

Power Station.	1939.		1949.	
	Installed Capacity.	Units Generated.	Installed Capacity.	Units Generated.
	kW.	m.kWh.	kW.	m.kWh.
Yanco	4,750	9	4,750	7
Port Kembla	14,500	37	28,000	114
Burrinjuck	20,000	(a) 30	25,800	111
Wyangala	..	..	7,500	31
Canberra	(b) 5,100	(b) 13	5,100	6
Cowra	..	..	5,000	7

(a) Restrictions were imposed during 1939 owing to drought conditions in the catchment area.
(b) Year 1938–39. Part of the plant was installed prior to linkage with the interconnected system; immediately thereafter Canberra became a stand-by station.

Proportions of units sold within the Southern Electricity Supply system to the various consumers of power are : bulk, 64 per cent. ; industrial, 32 per cent. ; retail, 3 per cent. ; and miscellaneous, 1 per cent. Organizations receiving bulk supplies reticulate electricity to domestic and industrial consumers and use some power for street lighting.

6. **The Clarence River County Council.**—On the north coast of New South Wales, the Clarence River County Council is responsible for the generation of electricity in an area stretching from Kempsey in the south to near the Queensland border (*see* map on page 1172). Richmond River (Electricity) County Council and Mullumbimby Municipal Council obtain marginal supplies from the Clarence River County Council to supplement the electricity generated in their own power stations.

The Clarence River County Council was set up in 1923, pursuant to the Local Government Act 1919, with the object of developing some of the hydro-electric potential of the Nymboida catchment. On 25th November, 1924, the station was placed in service with an installed generator capacity of 800 kW. The area of supply included the city of Grafton, the municipalities of South Grafton and Ulmarra, and the surrounding district. As the system was extended to new localities and consumption per head rose, the station's installed capacity was increased and by 1939 amounted to 4,800 kW.—the project's designed maximum output. The Council also operates a diesel stand-by station of 6,800 kW. at Lismore and a small hydro station of 300 kW. at Dorrigo, west of Coff's Harbour. Capacity at Lismore is being increased by the installation of an additional 1,000 kW. diesel unit.

Nymboida and Lismore stations are connected by a 66 kV. transmission line approximately 90 miles long, with two step-down substations *en route* at Grafton and Casino. From Nymboida the line runs south to Kempsey, where it interconnects with the Department of Railways 66 kV. system. A secondary transmission system supplies power in the County Council's area and to a number of shires and municipalities at 33 kV. (*see* map on page 1172). The municipalities of Lismore and Casino obtain power in bulk, while the Mullumbimby Municipal Council and the Richmond River (Electricity) County Council receive some of their requirements from this source. The three stations generated 49 million kWh. of energy in 1949, of which Nymboida contributed 36 million, Lismore 12 million and Dorrigo one million. A total of 13,932 consumers were connected in that year to the system, compared with 9,698 in 1940, when 25 million kWh. were generated. The total area supplied by the Council is about 10,000 square miles.

7. **Other Organizations.**—At Tamworth, approximately 190 miles north of Sydney, the Tamworth Municipal Council supplies electricity in bulk or retail to the municipalities of Manilla and Quirindi, the Shires of Cockburn, Peel, Liverpool Plains and Mai dowa, and to the Namoi Valley, New England and North-west County Councils. The Council has the distinction of being the first organization in Australia to supply electric power for street lighting, a service which was inaugurated in November, 1888. During 1907 it commenced to reticulate supplies to domestic and industrial consumers. A steam station located at Tamworth has an installed generator capacity of 16,300 kW. Energy is generated at 3.3 kV. and stepped up to 66 kV. for transmission. Power lines run north to Inverell, north-west to Narrabri, and south to Murrurundi (*see* map on page 1172). During 1950 a total of 28 million kWh. of power were generated compared with 14 million in 1945 and 12 million in 1943.

Retail supply of electricity in the Newcastle area is in the hands of the City of Newcastle Electric Supply Department. The service was inaugurated in 1894 by the Newcastle City Council and became the responsibility of the Electric Supply Department in 1897. At that time, 290 consumers used 750,000 kWh. of energy, compared with 48,000 consumers in 1947 who purchased about 192 million kWh. The Department maintains a steam stand-by station of 2,500 kW., but purchases in bulk the major portion of its power requirements from the Railways Department station at Zarra-street.

The Electric Supply Department's area of supply covers 1,270 square miles, having a population in 1947 of 209,800 persons. In addition to Greater Newcastle, territory served comprises the Shire of Lake Macquarie, and parts of the Shires of Lower Hunter, Port Stephens, Wallarobba and Kearsley. Proportions of electricity usage amongst the various classes of consumers in 1943, 1947 and 1950, respectively, were as follows :—Domestic, 18 per cent., 22.5 per cent., 30 per cent. ; commercial, 7 per cent., 8 per cent., 8 per cent. ; industrial, 73 per cent., 68 per cent., 61 per cent. ; street lighting, 2 per cent., 1.5 per cent., 1 per cent.

Numerous other authorities and private firms are active in New South Wales generating or distributing power, or both, but in general to rural districts and country towns. Some of the larger undertakings include the Oxley, Bega Valley, St. George, Northern Riverina, Southern Riverina, North-west and Brisbane Water (Gosford) County Councils, and the Broken Hill and Blue Mountains City Councils. A number of these organizations purchase their supplies in bulk from the principal supply authorities, e.g., Department of Railways and Electricity Commission. In addition, a number of large industrial organizations generate power for their own use and in some cases supply electricity to surrounding districts or contribute to the interconnected system during peak load periods.

8. **State Organization.**—(i) *Gas and Electricity Act* 1935. Prior to 1935, apart from certain provisions under the Local Government Act, there was virtually no legislation enabling supervision to be exercised over the development and co-ordination of electricity supplies in New South Wales. In 1935, however, the Gas and Electricity Act, which made some important amendments in respect of electricity supply to the Local Government Act, became law. Under its provisions, an Advisory Committee was convened for the purposes of investigating proposals involving the construction of power stations, major increases in generator capacity, erection or extension of main transmission lines and associated works. The Committee was required to report on any such proposals to the Minister for Local Government.

(ii) *The Electricity Authority of New South Wales.* Under the Electricity Development Act of 1945 the Electricity Authority of New South Wales was constituted for the stated purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State.

The Authority assumed the duties formerly carried out by the Electricity Advisory Committee together with certain further powers, and became responsible for the overall planning and co-ordination of electrical development throughout the State. Of major concern was the rationalization of supply areas, and, in particular, the consolidation of town and rural areas under one electricity organization. The main approach to this problem has been through the avenue of County Councils established for the purpose of distributing electricity throughout the County Districts. There are now 21 electricity County Councils in the State, ten of which have been constituted since 1947.

The Authority also administers the Rural Electricity Subsidy Scheme, introduced by the Government in 1946, under which are provided subsidies amounting in some cases to nearly 50 per cent. of the cost of rural extensions. The initial programme under the Scheme aimed at the extension of electricity supply to 24,000 farms and 9,500 other rural consumers within a period of ten years. By 1951 a total of 12,800 farms and 11,000 other rural consumers had actually been connected. The total number of farms in New South Wales is more than 70,000 and of these, some 16,000 were connected when the Scheme began. Thus about 40 per cent. of the farms in the State are now served by electricity.

The Authority also exercises control over safety standards—its functions in this sphere including the approval of prescribed electrical appliances and the licensing of electricians and electrical contractors.

The functions of the Authority are not affected by the Electricity Commission Act 1950, except in so far as the work of the Commission is not subject to the approval of the Authority.

(iii) *Electricity Commission of New South Wales.* The legislation constituting the Electricity Commission was contained in the Electricity Commission Act 1950, which also amended certain provisions of the Gas and Electricity Act 1935–1940, and repealed the Southern Electricity (Administration) Act 1942. The Electricity Commission Act empowers the Commission to acquire electricity undertakings and mentions specifically the undertakings of the Electric Light and Power Supply Corporation Ltd., and the Parramatta and Granville Electric Supply Co. Ltd., Sydney County Council, Commissioner for Railways and the Southern Electricity Supply of New South Wales. When these acquisitions are effected, it becomes the responsibility of the Commission to generate and transmit to bulk consumers. The Commission will then produce approximately 96 per cent. of the electricity for public supply and traction. However, local reticulation will remain the responsibility of separate distributing authorities, mostly controlled by local government bodies. The Southern Electricity Supply was taken over in November, 1950, and the Sydney County Council's electricity generating assets on 1st January, 1952. Arrangements have been made to acquire the other two major undertakings, which are already subject to the Commission's control in respect of the amount of electricity they are required to feed into the interconnected system. When acquisition is completed, the 79 bulk consumers of the four major organizations specified will purchase electricity in bulk from the Commission. In general, therefore, local government bodies, including the Sydney County Council, will continue to distribute electricity to consumers throughout the State, but the Commission will be responsible for the generation and transmission to these distributors and for providing the major portion of the State's requirements of electricity.

9. **Electricity Generation.**—(i) *General Position.* The following statistics show the growth of electricity generation in New South Wales between 1939–40 and 1949–50 :—Installed capacity, 790,103 kW. to 980,871 kW. ; units generated, 2,145 million kWh. to 3,758 million kWh. ; consumers, 520,000 to 784,000.

Despite the significant increase in the amount of power generated, supply has been unable to keep pace with the growth of demand—particularly since 1945. Severe restrictions have been imposed in the metropolitan area on the use of power by all classes of consumers during the winter months and to a lesser extent during other periods of the year. It has been estimated that, provided the installation of new generating capacity is maintained at present schedules, supply will be adequate to meet unrestricted demand by 1954.

(ii) *New Generating Capacity.* There are a number of works under construction in the metropolitan area and elsewhere in New South Wales which are designed to increase installed capacity. The more important projects, involving construction of new stations or extension of existing stations, and their location, are as follows :—

(*a*) *Thermal Capacity* (kW.).

Sydney Metropolitan Area.—Pyrmont " B ", 200,000 ; Bunnerong " B ", 50,000 ; Balmain, 50,000 ; White Bay, 100,000 ; Liverpool, 20,000 ; Penrith, 20,000.

Port Kembla Area.—Tallawarra (Lake Illawarra), 240,000 ; Port Kembla, 20,000.

Newcastle Area.—Lake Macquarie, 300,000 ; Maitland, 20,000.

Lithgow Area.—Wallerawang, 120,000 ; Lithgow, 22,500.

Other.—Koolkhan (near Grafton), 17,500 ; Gunnedah, 50,000.

(*b*) *Hydro-electric Capacity.*

Hume Weir—hydro-electric, 50,000 kW.—initially the New South Wales system will benefit by 25,000 kW. from this project.

By far the greater proportion of generating capacity in New South Wales, 92 per cent. of the total, is steam-operated, the balance of 8 per cent. being equally divided between hydro-electric and internal combustion plant. Considerable hydro potential does exist, however, in the Snowy Mountains area and in the rivers flowing into the Pacific Ocean along the northern coast. Surveys undertaken in the Clarence River (a northern coastal river) area have indicated that a potential of between 300,000 and 400,000 kW. exists. Plans are being formulated by which 35,000 kW. will initially be developed. Details of projected works in the Snowy region, where it is estimated that more than 3 million kW. of generating equipment can be installed, are dealt with on pages 1155-6. After Commonwealth requirements from the Snowy scheme have been met, the remaining output will be shared between New South Wales and Victoria in the proportions of two-thirds and one-third, respectively.

§ 2. Victoria.

1. **General Historical.**—Since 1919, control of the generation and distribution of electric power in Victoria has been vested in the State Electricity Commission of Victoria (known until 1921 as the Electricity Commissioners). Prior to 1919, there was no legislation to co-ordinate and unify electricity supplies throughout the State—development of electric power production being in the hands of local government authorities and private organizations. After 1896, however, authority to operate electrical undertakings and private organizations was granted pursuant to the Electric Light and Power Act or by Orders-in-Council.

Records of early achievements in the production of electricity indicate that it was first employed in 1863 at a display to celebrate the marriage of the Prince of Wales. Current was generated by Cullen chemical batteries and burnt in three arc lamps erected in the City of Melbourne. In 1878 and 1879 two firms, Sands and McDougall and the Apollo Candle Co., each imported an arc lamp and generating equipment—the power produced was used for commercial lighting.

During 1880 the Victorian Electric Light Co. was formed with a nominal capital of £2,500. A small power station, established by the Company in Russell-place, off Bourke-street, later supplied power for lighting the Eastern Market and Athenaeum Hall. In 1881, the company's assets were acquired by the Australian Electric Light Co. Two new firms commenced operations in 1883, the Australian Electric Light, Power and Storage Co. and the Indian and Colonial Edison Co. The first-mentioned firm later merged with the Australian Electric Light Co., while the latter went out of existence.

In 1886 the Australian Electric Light Co. (later reconstituted under the name of the New Australian Electric Lighting Co., with a capital of £250,000) acquired a piece of land at Richmond—present site of the State Electricity Commission's power station in that suburb—and commenced work on a station designed for an ultimate capacity of 9,000 kW. During 1891 the company secured contracts for street lighting in the suburbs of Richmond and Prahran.

In 1899, the assets of the New Australian Electric Lighting Co. were purchased by the Electric Lighting and Traction Co. of Australia Ltd. (later the Melbourne Electric Supply Co.), an organization formed specifically for the purpose of acquiring the undertakings of the foregoing company and another smaller firm, the A. C. Alcock Electric Light and Motive Power Company. The company obtained a franchise under the Electric Light and Power Act 1896 to supply electricity in certain areas of Melbourne and Geelong and for tramway traction purposes.

In 1908, the Electric Lighting and Traction Co. of Australia Ltd. changed its name to the Melbourne Electric Supply Company. From its power station at Richmond it supplied power to a large portion of the metropolitan area and to two tramway trusts, while in Geelong the company reticulated power in the city and also operated the tramway service. These undertakings continued to function after the Commission was established, but in 1924 an agreement was made which, in effect, transferred control of the stations to the Commission. In that year the company's franchises were extended by Parliament for five years. Under the terms of the agreement the company was to manage the undertakings pending acquisition by the Commission of its assets at the end of five or seven and one-half years. As part of the agreement, the Richmond station's generator capacity was increased by the installation of a 15,000 kW. unit during May, 1926. In 1930 the Commission exercised its right of purchase, and the company's Melbourne and Geelong undertakings passed to the direct control of the Commission.

During 1894, the Melbourne City Council, which had set up a department to administer its electrical undertakings, started to generate electricity at a power station at Spencer-street, City for domestic and industrial consumption and street lighting. The Council arranged to purchase the undertakings operated by various small companies located near the city's boundaries, but in the final event the purchase was effected from the Electric Lighting and Traction Co. of Australia Ltd., which, before completion of the negotiations for the sale, had taken over the smaller organizations. To cater for an increasing consumption of electric power in its area of supply, the Council at various times took steps to develop the Spencer-street power station, which, by 1951, had an installed capacity of about 44,000 kW. In January, 1941, by agreement between the Council and the Commission, this station became part of the Commission's system, operating under its control although remaining in the Council's ownership.

A third major generating and supply authority in the metropolitan area, the North Melbourne Electric Tramways and Lighting Co. Ltd., was formed during 1905 to supply electric power to Essendon, Kensington and Flemington. This organization, which also supplied energy for tramway traction purposes, was acquired by the Electricity Commission on 1st August, 1922—the tramways portion of the undertaking being passed to the Tramways Board.

Moves had been made before the turn of the century to develop electricity supply in Geelong. In 1899 an Order-in-Council covering the municipal areas of Geelong, Newtown, Geelong West and Chilwell was granted to Messrs. F. J. Leary and J. A. Dawson. This authority was later in the year transferred to the Electric Lighting and Traction Co. of Australia, the term of the order being for 30 years and due to expire during 1929. As mentioned previously, the company's Geelong undertakings were acquired by the Commission in 1930. A tramway service was inaugurated in 1912 and by 1919 the power station had an installed capacity of 1,000 kW. In that year the company changed its supply from direct current to three-phase alternating current.

At Bendigo and Ballarat, the Electric Supply Co. of Victoria was granted a franchise to generate and distribute electric power for domestic, industrial and tramway traction purposes. The company purchased the assets of existing undertakings and commenced operations at Bendigo in 1903 and at Ballarat in 1905. Tramway services were established in both cities. On 30th June, 1931, the company's undertakings were acquired by the State Electricity Commission, but the company's franchises were extended for three years under Commission financial control, full operational control being assumed by the Commission on 1st July, 1934.

2. **The State Electricity Commission of Victoria.**—(i) *Extent of System.* The foregoing outlines the picture of the development of the generation and distribution of electric power in Victoria from early times, and the gradual process of acquisition of electrical undertakings by the State Electricity Commission after its establishment in 1919. Since that date the Commission has developed a State-wide system supplying two-thirds of the State in which four-fifths of the population reside.

Included in the State generating system there were at 30th June, 1951, thirteen steam-electric, hydro-electric and diesel-electric power stations located at different centres in the State, and all interconnected in one State-wide system. The distribution system comprised 15,200 miles of high and low voltage power lines, eight terminal receiving stations and over 6,700 distribution sub-stations.

(ii) *Origin and Development.* First moves towards establishment of a State statutory authority to develop Victoria's electric power resources were taken in 1917 with the appointment by the Victorian Government of an Advisory Committee, whose objects were to " make certain investigations and report in regard to the commercial utilization of brown coal, and particularly for the purpose of generating electrical energy ". In its Report dated 25th September, 1917, the Committee, amongst other things, recommended the erection of a power station at Morwell with transmission facilities, and the creation of an appropriate authority to initiate and control the project.

As a result of the Committee's Report, a Bill was drafted and presented to Parliament on 10th December, 1918, and received royal assent on 7th January, 1919. Under the terms of this Act, three Commissioners were appointed, who took up duty on 4th March, 1919. Their powers authorized them to erect and operate electrical undertakings; to supply electricity in bulk to any corporation; to supply electricity to any person outside any area in which there was an existing undertaking; to carry on any business associated with an electrical undertaking; to make regulations as to precautions to be adopted in the use of electricity and arrange for the licensing of wiremen; and to establish and operate State coal winning projects.

In addition to these powers, the Commissioners were to enquire into and report to the Government as to the steps which should be taken to co-ordinate and concentrate all electrical undertakings in Victoria; to secure the efficient inter-connexion of such undertakings by adopting the necessary standards of plant, voltages, etc.; to encourage and promote the use of electricity for industrial purposes; to report to the Government on the prospects of establishing new industries in Victoria requiring large quantities of electrical energy; and to carry out investigations of coal deposits or hydro-potential that could be used for the generation of electrical energy.

Action was taken to investigate the practicability of utilizing the State's brown coal and water power resources for the production of electricity. In a Report dated 26th November, 1919, the Commissioners concluded, *inter alia*, that the Morwell brown coal field should be developed and a power house established thereon by 1923, with an initial capacity of 50,000 kW. As to water power, they were of the opinion that consideration of hydro-electric power schemes should be deferred until further investigations then being undertaken were completed. It was further concluded that in order to obtain maximum economy, the proposed Morwell station (its name was changed to Yallourn in 1920) and any other power house to be erected in connexion with the proposed State electric supply scheme should be interconnected with the Railways Department power station at Newport and operated under the control of a single authority.

However, no action was taken until 1948 to transfer the Railways Department's section of Newport to the State Electricity Commission—the actual transfer being effected on 21st January, 1951. Newport " A ", which operates at 25 cycles frequency, was established by the Department of Railways during 1918, providing power for the suburban electric trains—a service inaugurated in July, 1919 with the electrification of the Sandringham–Essendon line. Several additions to generating equipment were made in subsequent years and by 1948 Newport " A " had an installed capacity of 95,500 kW. At the date of its transfer to the Commission, the station's capacity was 113,000 kW.

As an alternative to early control of Newport " A " by the Commission, arrangements were made whereby the Commission would establish its own station on a site immediately adjacent to Newport " A ", thus securing economy in handling the two authorities' fuel requirements. Work on the new station, known as Newport " B ", commenced during April, 1921. Supplementing the power output of this new project, which was designed for an initial capacity of 30,000 kW. operating at a frequency of 50 cycles, Newport " A " supplied the Commission with 12,500 kW. of 25-cycle energy to assist it in catering for the increasing consumption in the metropolitan area. To convert the power from 25 to 50 cycles, a frequency changer of 12,500 kW. capacity was installed.

The Railways were already under contract to supply electricity to the Melbourne City Council and the Melbourne Electric Supply Co., both of which had installed 5,000 kW. frequency changers which came into operation during 1921. The capacity of the frequency changers in operation at 30th June, 1951, was 22,000 kW. An additional frequency changer of 30,000 kW. capacity is scheduled to be in service during 1952.

By agreement with the Railways Department, the new station, after being placed in service on 12th October, 1923, was operated in conjunction with Newport " A " station by that Department.

This arrangement remained in force until 1939, when the Commission assumed control of the operation of Newport " B ". Also in that year, the station's capacity was increased by the installation of a new 30,000 kW. unit. During the 1939-45 War, a further 48,000 kW. were installed—18,000 kW. at Newport " B " and 30,000 kW. in a new extension known as Newport " C ". Three additional 30,000 kW. units were added to Newport " C ", one each in 1946, 1948 and 1950. By 1951, the total installed generating capacity at Newport " A ", " B ", and " C " was 311,000 kW., which, added to Spencer-street (44,000 kW.) and Richmond (15,000 kW.), made a total of 370,000 kW. installed in the Melbourne metropolitan area, of which all but the 113,000 kW. in Newport " A " power station were included in the 50-cycle interconnected State generating system.

(iii) *Yallourn Power Station.* To implement one of the main purposes for establishment of the State Electricity Commission, namely, development of Victoria's brown coal resources, particularly for production of electrical energy, construction commenced in 1920 of the Yallourn power station, designed for an initial capacity of 50,000 kW., but increased within a few years by the addition of two further machines. By 1923, power was being supplied to nearby Gippsland areas from a temporary station erected for constructional activities at Yallourn itself—installation of five machines with a total capacity of 62,500 kW. was completed in 1925. Work also commenced on a double circuit transmission line of 132,000 volts (later duplicated) designed to carry the power to Melbourne, a distance of approximately 90 miles. On 24th June, 1924, power was first transmitted on a commercial basis from Yallourn to Melbourne. Main terminal stations were constructed at Yarraville and later at Richmond.

The site chosen for the power station on the bank of the Latrobe River, about 6 miles from Morwell, had numerous advantages. Adequate water was available for the station's requirements, land nearby provided a good town site, whilst, most important of all considerations, an area of one square mile, adjacent to the proposed station, contained proved reserves of brown coal totalling about 150 million tons with averages of 174 feet thickness and 33 feet overburden. By the use of mechanical methods for open-cut coal winning, the coal could be extracted and delivered to the power station at a cost of only a few shillings a ton. Development of these resources was designed to ensure to a large degree the State's independence in fuel requirements for the production of electrical energy.

Estimated to contain about 6,000 million tons of brown coal, all capable of being won by mechanized open-cut methods, the Yallourn-Morwell brown coal field forms part of the very large brown coal deposits in the Latrobe Valley, where boring has revealed approximately 18,000 million tons of brown coal capable of being won by open-cut methods of extraction.

As the Yallourn station was intended to carry the base load of the system, steps were taken to augment its capacity to keep pace with the anticipated and continually increasing demand for electric power. By 1928, a sixth 12,500 kW. unit had been installed, giving the station a total capacity of 75,000 kW. In the early 1930's construction was commenced on Yallourn "B" with a planned ultimate capacity of 100,000 kW., in four units—this project was completed during 1938, Yallourn "A" and "B" then having a total capacity of 175,000 kW. (In addition, an average of 8,000 kW. of by-product electricity is fed into the system from the Yallourn briquette factory.)

(iv) *Hydro-electric Development.* (*a*) *General.* Development of the State's hydro-electric potential, the necessity of which was foreseen in the Commissioners' initial Report of November, 1919, but deferred pending further investigations, commenced in 1922. The project selected was dependent on the waters of the Goulburn River and adjacent mountain streams in the Cerberean Range, about 65 miles north of Melbourne. These two sources of water power provided a distinct advantage in that one was mainly summer flow and the other winter flow, thus permitting the continuous generation of power. Five small stations, namely, Sugarloaf (Eildon Weir, 13,500 kW.), Rubicon (9,100 kW.), Lower Rubicon (2,700 kW.), Royston (840 kW.), and Rubicon Falls (275 kW.), were installed, totalling approximately 26,400 kW. The complete project was in service by 1929. When the new Eildon Dam has been constructed, the Sugarloaf station will be replaced by one having a total installed capacity of 135,000 kW. It will comprise two new generators, totalling 120,000 kW. capacity, while the two 6,750 kW. machines in the existing Sugarloaf power station will be re-built and re-installed at the revised rating of 7,500 kW. each.

(*b*) *Kiewa Project.* In a Report to Parliament during 1920, the Commissioners included details of a large-scale project for harnessing the Kiewa River in the valleys and tablelands of the Mt. Bogong area of the Main Dividing Range, located approximately 150 miles north-east of Melbourne. At that time the Commission was not prepared to recommend adoption of the plan, but, on the other hand, suggested further consideration of the smaller Sugarloaf and Rubicon scheme. However, during the following 17 years, hydrological investigations were carried out in the Kiewa area which greatly facilitated the subsequent planning of a major hydro-electric project.

On 12th June, 1937, a further Report was submitted to Parliament recommending adoption of a plan to provide an ultimate capacity of 117,000 kW. from the Kiewa project. The plan, which included construction of four power stations with an initial installation comprising 20,000 kW. to be in service by 1942, was approved and its provisions embodied in State Electricity Commission (Extension of Undertaking) Act 1937. Construction commenced during 1938, but the war delayed progress and it was not until September, 1944 that the first station came into partial operation with 13,000 kW.—a second unit of 13,000 kW. was placed in service in April, 1945.

The 1937 Kiewa project, prior to its submission to the Government, was critically reviewed by a group of oversea consulting engineers, and their report indicated that an enlarged scheme might be possible after further detailed investigation of the water power resources of the terrain adjacent to the Bogong High Plains. On 21st November, 1947, the Commission submitted proposals for expanding the original Kiewa scheme of 117,000 kW. to one of 289,000 kW. with an annual output, averaged over a typical period of wet and dry years, of about 986 million kWh. The greater capacity, which required provision of increased water storage and construction of two additional power stations, was planned for completion by 1956. Approval for the amended scheme was contained in the State Electricity Commission Act 1948. Work is proceeding on the project.

(v) *State Supply System.* (*a*) *Growth and Extent.* Since its inception, the Commission has gradually extended the State's system of supply so that it now serves the greater part of the Victorian population and certain towns in New South Wales, including

Albury (*see* map on page 1173). By 1929, installed capacity totalled 148,000 kW. and approximately 423 million units of power were generated in that year. Supplies of electricity were being reticulated to practically the whole of the metropolitan area, 140 country towns, and 700 farms. The Commission had erected about 1,500 miles of high voltage transmission lines, extending to Echuca, Corowa and Albury in the north to Port Fairy in the west, and to Lakes Entrance in the east. The following comparative table indicates the growth of the Commission's State system between 1929 and 1951.

VICTORIA: STATE ELECTRICITY COMMISSION SYSTEM.(*a*)

Particulars.	Year ended 30th June—			
	1929.	1939.	1949.	1951.
Installed Capacity .. .. kW.	148,000	(*b*) 281,400	478,500	510,000 (50 cycle) 113,000 (25 cycle)
Units Generated .. .. m.kWh.	423	898	2,148	2,518 (50 cycle) 193 (25 cycle)
No. of consumers (approx.) (including bulk supply areas)	230,000	368,000	500,000	553,000
Country Centres Served	140	440	720	780
Farms Served	700	4,985	14,419	17,572

(*a*) About 98 per cent. of electricity produced in Victoria is generated by the State Electricity Commission, which also supplies 95 per cent. of consumers. (*b*) Includes Geelong power station (acquired 1st September, 1930) and Ballarat power station (acquired 1st July, 1934, but not in 1939 connected with the rest of the State system); excludes Spencer-street power station, which was not connected with the State system until 1st January, 1941.

During 1950–51, electricity was reticulated to the various classes of consumers in the following proportions—domestic, 35 per cent.; commercial, 15 per cent.; industrial, 44 per cent.; public lighting, 2 per cent.; and traction (excluding railways), 4 per cent.

As stated previously, the State Electricity Commission (as it was styled from 1921 onwards) was established by legislation passed in 1918. This Act and subsequent amending legislation were consolidated in the State Electricity Commission Act of 1928, which (with later amendments) is the Act now governing the operations of the Commission. Operations of independent undertakings are governed by the Electric Light and Power Act 1928, which the Commissioner administers. Statutory powers conferred upon the Commission authorize it, *inter alia*, to own and operate equipment for the generation and transmission of electricity; to co-ordinate and unify the distribution and supply of electricity to all consumers in the State; and control the regulatory functions of the electric supply industry.

Since its inception, the Commission has acquired 78 country undertakings in addition to those acquired in the metropolitan area and in provincial cities, and carries out retail distribution throughout its area of supply, except for part of the metropolitan area where 11 municipal undertakings, operating under orders-in-council granted before the foundation of the Commission, purchase their electricity in bulk from the Commission. Bulk supply is also given to five New South Wales border municipalities and shires, Albury, Berrigan, Coreen, Corowa and Moama. There remained in 1951, 55 independent undertakings in various country towns in Victoria generating and distributing their own supplies.

(*b*) *Composition and Control of Inter-connected Generating System.* The Commission's interconnected generating system comprises three principal groups of power stations, namely :—

Steam stations.

Yallourn—burning raw brown coal ; Metropolitan and provincial stations—burning briquettes and brown coal. (Newport power station also burns black coal and oil fuel.)

Hydro stations.

Sugarloaf-Rubicon ; Kiewa.

Diesel stations.

Shepparton (partly in service in 1951) ; Warrnambool (partly in service in 1952). In meeting the total demand on the system which, of course, fluctuates throughout the day and from month to month throughout the year, each group of stations is assigned a predetermined function dependent upon the availability of power from each group and the overall economics of generation. The various stations are utilized in a combination that will most economically meet the system load at a given time.

This procedure results in an arrangement of the system on the following general lines :—

1. Yallourn power station, owing to the very low cost of extraction and ample supply of raw brown coal, is a base load station, and is operated continuously at its maximum economic capacity.
2. Metropolitan and provincial steam and internal combustion (diesel) stations—Newport (excluding Newport "A", which supplies power for the Victorian Railways), Richmond, Spencer-street, Geelong, Ballarat, Shepparton and Warrnambool—situated close to load centres, are designed to operate as peak load stations to assist in meeting the heavy, short period load. Pending the completion of extensions to Yallourn power station, a substantial proportion of the total load on the system is carried by Newport " B " and " C ".
3. Sugarloaf-Rubicon and Kiewa hydro stations are operated at all times in accordance with the availability of water. They are designed to effect, where possible, a saving of the more expensive fuels used in the metropolitan and provincial thermal stations.

(*c*) *Organization.* In the Commission's organization, the functions of generating and distributing electrical energy are under the control of two separate departments—the Production Department in charge of power stations, brown coal winning, briquette manufacture, terminal stations and main substations, and the Electricity Supply Department, responsible for reticulation to consumers. The territory covered by the latter Department is divided into nine areas, each constituting a supply branch. The Metropolitan Branch supplies Melbourne and suburbs, with the exception of certain areas supplied by City Councils reticulating Commission electricity. Energy is supplied by the Production Department to the Metropolitan Branch and the metropolitan municipal supply authorities purchasing electricity in bulk at metropolitan terminal stations and a number of main transmission substations. Supply to the Eastern Metropolitan Branch (which has its headquarters at Dandenong) is on similar lines.

Headquarters of the Electricity Supply Department's branches outside the metropolis are located at Ballarat, Bendigo, Geelong, Dandenong (Eastern Metropolitan), Traralgon (Gippsland), Castlemaine (Midland), Benalla (North Eastern) and Colac (South Western).

Supply to the Gippsland Branch is obtained from Yallourn power station. From Yallourn 66,000 volt transmission lines extend within the branch to Maffra in the east and Leongatha in southern Gippsland, while another—from Yallourn to Warragul—is due for completion in 1952.

Supply to the Geelong Branch is obtained through Geelong power station and Geelong terminal station, the latter being connected with the rest of the system by a 66,000 volt transmission line to Newport power station.

TUMUT AND SNOWY-MURRAY PROPOSALS

Supply to the South Western Branch is obtained through Geelong terminal station by a 66,000 volt transmission line extending through Colac to Warrnambool, where the new peak load power station to reinforce supply is due to begin operating during 1952.

Ballarat Branch obtains its supply from Ballarat power station and Ballarat terminal station, the latter being connected with the rest of the system by a 66,000-volt transmission line to Newport power station.

Both the Midland and Bendigo Branches obtain their supply through the 66,000-volt power line from Thomastown terminal station, one of the major metropolitan terminal stations in the system.

For the North Eastern Branch, supply is obtained through Rubicon "A" terminal station, Sugarloaf power station and the Kiewa hydro-electric undertaking, while local reinforcement of supply is provided by Shepparton power station. Inter-connexion with the rest of the system is provided by the 66,000-volt transmission line extending from Thomastown terminal station to Kiewa via Rubicon "A", Sugarloaf and Benalla, with branches to Shepparton and Kyabram, Yarrawonga and Mulwala (New South Wales), and via Wangaratta to Wodonga for supply to Albury.

The Commission also operates a diesel station at Hamilton of 2,757 kW., which is not at present part of the interconnected system.

(vi) *New Capacity.* Despite a very great increase in the production of electrical energy in Victoria between 1919 and 1951 (and 180 per cent. increase between 1939 and 1951), supply since the 1939–45 War has been inadequate to cater for the increase in demand. In recent years, particularly during the winter months, the Commission has found it necessary to impose restrictions on the use of certain electrical appliances and on commercial and industrial consumers. At times, "load shedding" has caused temporary cessation of supply. The main reasons for the deficiency of electric power are the effect of retarded constructional programmes during the war, fuel shortage at Newport power station, and an accelerated increase in demand since the war.

With a view to stabilizing the supply demand relationship, the Commission has electric-power projects under construction which, provided constructional programmes can be maintained, are expected to increase the installed capacity of the State generating system to approximately 1,300,000 kW. by 1957, inclusive of by-product electricity obtained from the power station to be constructed as part of the Commission's Morwell briquette project.

Major approved works include :—

(*a*) *Thermal stations.*

Yallourn extensions—200,000 kW.

Morwell—90,000 kW. for the new power station in conjunction with the Morwell briquette project. Of this, approximately 35,000 kW. of by-product electricity will be available to the State system in the first stage (on completion of the first and second factories). A further 35,000 kW. will be available in the second stage (on completion of the third and fourth factories), when an additional 60,000 kW. will be installed.

Metropolitan—153,000 kW. This includes a 30,000 kW. 25-cycle generator, due to be in full service with its two associated boilers during 1952, at Newport "A" power station. In addition to 153,000 kW. of generating plant, the system is being reinforced by the installation at Newport power station of a new 30,000 kW. frequency changer, also due for completion in 1952.

Geelong—30,000 kW. "packaged" units.

Ballarat—20,000 kW. ,, ,,

Shepparton—10,000 kW. Portion of this station is in service.
Warrnambool—10,000 kW. " " " "

(*b*) *Hydro stations.*
Kiewa—124,000 kW. (with further power stations projected at a later date).
Hume—25,000 kW. representing Victoria's share of a 50,000 kW. power station shared equally by Victoria and New South Wales.
Eildon Dam—135,000 kW.

(*c*) *Thermal regional stations.*
Mildura—10,000 kW. This will be a "packaged" power station.

A 220 kV. transmission line is under construction from the Kiewa project to Thomastown terminal station.

As portion of a plan to provide electricity to the major part of the Murray Valley area, the Commission will construct a 220 kV. transmission line from Kiewa to Mildura by way of Shepparton—a distance of approximately 350 miles. Regional stations at Shepparton and Mildura will function primarily as peak-load stations when the plan is implemented.

The Commission has submitted to the State Parliament its plan for the final phase of rural electrification of Victoria, extending supply to all populated regions of the State. The plan provides for the extension of State Electricity Commission supply to 178,000 additional country consumers, bringing electricity to every home in Victoria except for a residue of about 15,000 homes located in the most isolated parts of the State.

§ 3. Queensland.

1. **General Historical.**—(i) *Prior to establishment of State Electricity Commission.* The generation and distribution of electric power in Queensland had, until the last decade, tended to lag behind developments in this field in other States of Australia. The comparatively slow growth in the production and consumption of electricity can be attributed to some extent to the absence, prior to 1938, of a central statutory authority constituted to undertake the functions of co-ordinating, unifying and controlling the production and transmission of electric power. In addition, Queensland's vast area, coupled with a low population density, made large-scale rural electrification, elsewhere than in the south-eastern portion of the State which surrounds the major centres of industry and population, an uneconomic proposition. In 1936, there were 62 electrical undertakings in Queensland, of which 51 operated their own generating equipment and eleven purchased energy in bulk. Of the 62 undertakings, 41 were owned by local authorities and 21 by private organizations. No attempt had been made to interconnect any of the power stations then operating.

The early history of the industry in Queensland records that electricity was first used in the Government Printing Office, Brisbane, on 9th April, 1883, when some 50 incandescent lamps were put into service. These lamps were supplied with power from an 8.5 h.p. generator, coupled to the engine used for driving the printing machinery. The following year a local newspaper, the *Brisbane Courier*, had electric lighting installed in its composing room, and during the same year the Brisbane railway station was permanently lit with arc lamps. In 1886, transmission lines were constructed from the Government Printing Office along William-street to Parliament House.

In the following year a private firm, Barton and White, set up as electrical engineers, and not long after established a supply of electricity in Brisbane. A few years later the firm's assets were purchased by the City Electric Light Co. Ltd., which now supplies a large part of Brisbane's electric power requirements and a considerable rural area south-east of the city. By 1933 this organization was operating a modern power station at Bulimba, a suburb of Brisbane, with an installed generator capacity of 37,500 kW., from which it supplied more than 16,000 consumers and generated about 60 million kWh. of energy per annum. Capacity at Bulimba "A" is now 95,000 kW.; with this, 401 million units were generated in 1950, while the number of its consumers at 31st January, 1951 totalled 65,704.

The first country town in Queensland to receive supplies of electric power was Thargomindah, 730 miles west of Brisbane, in 1893—electricity being generated by utilizing the water flow from an artesian bore. This station operated until 1951, when reduced flow from the bore necessitated replacement of the hydro unit by diesel equipment. During 1905, the Toowoomba Electric Light and Power Co. Ltd. established supply in Toowoomba, and now supplies a considerable area including portion of the Darling Downs. Power is generated at the Company's diesel stations of 3,520 kW. supplemented with bulk supplies purchased from the City Electric Light Co. Ltd. In 1940 the company purchased the power undertakings at Warwick—a service inaugurated in that town during 1912 by the Electric Energy Supply Co. Ltd., and in 1946 the Killarney undertaking from the Killarney Electric Light Co., which established supply in 1931.

After the 1914–18 War, a number of suburban municipalities made plans to reticulate in their areas electricity purchased in bulk from the City Electric Light Co. Ltd. With a view to co-ordinating these developments, the Brisbane City Council established an electricity supply service. The first bulk supplies were provided in 1920 and supply was commenced to a number of other municipalities during the next three years. In 1923, all municipalities receiving bulk supplies were amalgamated under the Metropolitan Electricity Board to facilitate administration of the service. When the Greater Brisbane Council was constituted, the functions of the Board were vested in the Brisbane City Council Electricity Supply Department (now known as the Department of Electricity) which commenced operations on 1st October, 1925. By 1938, the Council was supplying an area of about 365 square miles, including the suburbs of Balmoral, Coorparoo, Enoggera, Hamilton, Ithaca, Kedron, Sandgate, Stephens, Sherwood, Taringa, Toombul, Toowong, Windsor and Wynnum—its consumers in the area numbered 56,928. Energy was purchased in bulk from a power station located at New Farm (administered by the Tramways and Power House Department) and from the City Electric Light Co. Ltd.

An electric tramway system, operated by the City Council, serves the City of Brisbane and a large part of the suburbs. The service was inaugurated during August, 1885, and, until 1897, the trams were drawn by horses. During 1896, however, interests in the service were acquired by the Brisbane Electric Tramway Co.—a private organization, with its head office in London. Conversion was commenced immediately and the first electric tram was placed in service during 1897. In that year track mileage totalled fifteen, compared with 106 in 1938, and 120 in 1950. Power is obtained from a station at New Farm and converted to direct current for traction purposes. The initial installation at New Farm comprised two generating units of 9,375 kW. each—the station's capacity now totals 75,000 kW.

On 31st December 1922, the tramway service was purchased by the Government, and the Brisbane Tramway Trust was set up to control and operate it. In November, 1925, after adoption of the Greater Brisbane Scheme which amalgamated all suburban and city municipalities of Brisbane, control of the tramways passed to the City Council. Growth of the Council's electrical undertaking and power production is indicated by the following comparisons between 1937–38 and 1950–51 figures, respectively :—Installed capacity, 56,250 kW. and 75,000 kW.; units purchased and generated, 71 million kWh. and 331 million kWh.; consumers, 57,000 and 93,000. In 1950–51 New Farm power house generated 328 million units and three million were purchased from City Electric Light Co. Ltd. The Department of Transport (Tramways) consumed 37 million units.

Prior to the establishment of the State Electricity Commission of Queensland in 1938, the generation and distribution of electric power was administered under the Electric Light and Power Acts 1896–1934, Local Authorities Acts 1902–1935, City of Brisbane Acts 1924–1936, and Electrical Workers Act 1927–1931. This legislation gave authority for the issue of Orders-in-Council to local governing bodies and private organizations for supplying electricity within specified areas and other associated matters. An amendment to the 1896 Act, promulgated in 1933, approved the reticulation of power to a small number of consumers by firms generating electricity for use primarily in their own factories. In 1936, there were eight such establishments in Queensland, as well as a large number generating power for their own use exclusively. Before establishment of the Regional Electricity Boards, no attempts had been made to unify or co-ordinate electricity supplies, and rural electrification, apart from reticulation within certain townships, was practically unknown. Further amendments effected during 1933 set up an Electricity Board to review tariffs and provided for the appointment of government electrical inspectors.

(ii) *Royal Commission on Generation and Distribution of Electric Power in Queensland, 1936.* On 5th December, 1935, the Queensland Government, being concerned with the need to develop the State's power resources in the public interest, appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland. The Royal Commission's terms of reference were wide and included inquiry into the general operation and effect of the legislation then in force relating to the electricity industry and whether amendments to this legislation or new provisions were necessary, desirability of centralized control, and the need for co-ordination of the generation and supply of electric power.

The Commission commenced its task on 10th March 1936, and throughout the inquiry tended to concentrate mainly on proposals for electrification of south-eastern Queensland and establishment of a suitable statutory authority to control and unify the development of electrical undertakings in the State. South-eastern Queensland, as designated in the Commission's Report, represented only 2.86 per cent. of the total area of Queensland, but contained more than 57 per cent. of the State's population. At 31st December, 1935 its area was 19,192 square miles with a population of 554,871 persons. In 1935, 152 million units were generated in Queensland, of which the south-eastern portion of the State contributed 122 million.

Investigations revealed that the lack of rural electrification was attributable mainly to two main associated factors, namely the absence of load centres of sufficient size to make the establishment of electrical undertakings economical and the inability of local authorities to finance the expenditure necessary for their establishment. It was found that rural extensions had been made chiefly in the south-eastern area and then only in isolated localities. Furthermore, some of these organizations were unable to show a profit unless they charged high tariffs, which made the extensive use of electricity economically unsound.

Two proposals were submitted to the Commission for electrification of the south-eastern area—one from the Brisbane City Council and another from the City Electric Light Co. Ltd. The former included compulsory acquisition by the Council of the City Electric Light Company's undertakings—a power which it was held existed under the City of Brisbane Act 1924. The Council, which desired sole rights to supply electricity within a radius of 100 miles of Brisbane, had evolved a plan whereby power would be supplied in bulk to four proposed Joint Boards appropriately situated in the area. The four Joint Boards were to be formed by contiguous cities, towns and shires for the purpose of initiating and controlling electricity supply in the Boards' areas. Energy would be supplied in bulk at 33,000 volts at appropriate points from main transmission lines owned and controlled by the Council.

The alternative proposal submitted by the City Electric Light Co. Ltd. provided for complete electrification of an area that it considered could be supplied economically and efficiently from Brisbane. The company's plan included the construction of main transmission lines southward to the Queensland—New South Wales border so that the two States' systems could be interconnected. The main transmission system within the area was designed to provide a number of interconnecting lines, giving duplicate supply to all main sub-stations at 66,000 volts. Under its scheme, the company would carry out complete reticulation, meter readings, collections of monies, etc., and supply power to the area at a price ten per cent. higher than its Brisbane tariff.

In the course of the investigations, the Commission indicated that, in its opinion, ultimate public ownership of electricity supply was desirable, and recommended that in order to achieve a properly planned scheme for the electrification of the south-eastern area, control of the generation and distribution of electric power be vested in the State—a commission, similar to the State Electricity Commission of Victoria, could give effect to the Government's policy on electric power.

Alternatively, the Royal Commission recommended that, if establishment of an operating Commission was not found practicable, electrification under public control with ultimate public ownership be implemented. This could best be effected by a controlling Commission capable of being converted at any time into an operating Commission. The alternative plan envisaged the negotiation of an agreement with the City Electric Light Co. Ltd., under which the Company would proceed with its project to electrify the south-eastern area of the State.

With regard to electricity supplies in areas of Queensland outside the south-eastern portion of the State, the Commission concluded that, with the exception of a section of the country from Townsville north to Mossman and west to Herberton, such electricity problems as existed were purely local ones of generation and distribution, not justifying further consideration at that time. It was suggested that the Barron Falls hydro-electric scheme, the potentialities of Tully Falls and the development of the Cairns area in general be the subject of immediate and detailed investigations.

2. **The State Electricity Commission of Queensland.**—In 1937, the State Government legislated to constitute a State Electricity Commission, which commenced to function during January, 1938—to it was passed administration of the Electric Light and Power Acts 1896-1938. The Commission's main powers were :—to secure a proper and efficient supply of electric power ; review tariffs ; grant licences to supply electricity ; secure the safety of the public ; and control and advise electrical undertakings generally. It was thus a controlling authority as distinct from an operating authority. In addition, the Commission was empowered to co-ordinate the industry's development throughout Queensland. Between 1938 and 1951, the number of private companies was reduced by absorption and acquisition from twenty-one to seven, and publicly owned undertakings, by amalgamation into Regional Authorities, from forty-seven to thirty.

By agreement with the Commission in 1939, the City Electric Light Co. Ltd. became co-ordinating authority for provision of electricity in an area of some 10,062 square miles, extending from the New South Wales—Queensland border to Gympie, north of Brisbane. The Company acquired the undertakings at Boonah, Beaudesert, Gympie, Coolangatta, Ipswich, Nambour, Southport, Redcliffe and the Somerset Dam supply and transmission line to Brisbane. Certain restrictions were placed on the Company's dividend rate, namely, limitation to the rate on Commonwealth bonds plus 2 per cent. During 1940, a similar agreement was made with the Toowoomba Electric Light and Power Co. Ltd. for the supply of electricity in the Toowoomba, Warwick, Killarney and Allora districts, subsequently being extended to cover a comprehensive area of 9,324 square miles, including Stanthorpe and other districts. Transmission line extensions since that year have made supply available to a number of adjacent districts on the Darling Downs. The Government has the right to acquire both these companies in 1954, or later.

Amending legislation, passed by the Queensland Parliament in March, 1948, changed the constitution of the State Electricity Commission from a body corporate to a corporation sole. On 1st July, 1948, a Commissioner for Electricity Supply was appointed in lieu of the previous Commission of four Commissioners. Since its inception in 1938, the Commission has made considerable progress in its task of developing the State's power resources and promoting a more widespread use of electric power. The degree of utilization of electrical energy in Queensland now compares favorably with other States in the Commonwealth.

3. **Regional Electricity Boards.**—With a view to facilitating the control and development of electricity supply in areas of low population density or those having a predominantly primary producing economy, the Government in 1945 passed the Regional Electric Authorities Act. This legislation, as later amended, provides for the creation of regions of electricity supply and constitution of Regional Electricity Boards. The Act provided for transfer to the Boards of local authority electricity undertakings in their regions, and for acquisition by the Boards of privately owned undertakings when purchasing rights fell due. Each Board comprises representatives of local authorities in the region and a representative of the Commission. Financial operations of the Boards are under the control of the Commission.

Soon after passage of the Regional Electric Authorities Act, four regions were defined and four Regional Boards constituted, namely, Wide Bay, Capricornia, Townsville and Cairns. A fifth Board, entitled South Burnett, became an operating authority in October, 1947, but on 1st July, 1951 was absorbed in the Wide Bay Regional Board and the organization is now known as the Wide Bay-Burnett Regional Electricity Board. As power was to be obtained from the Wide Bay Regional Board's station at Howard, the Commission decided that development of the two regions could be planned more effectively by a single authority. (Regional Boundaries and the location of generating stations throughout Queensland are shown on the map facing page 1174.)

Activities of the five Regional Boards in 1950–51, compared with operations of the stations located in regions in 1945–46, and totals for Queensland as a whole, are shown in the following table :—

QUEENSLAND : REGIONAL OPERATIONS.

Region.	1945–46.		1950–51.	
	Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.
	m.kWh.		m.kWh.	
South Burnett(*a*)	2.3	2,165	4.1	2,892
Wide Bay	11.4	9,302	23.6	13,959
Capricornia	19.5	11,196	36.5	15,175
Townsville	25.8	11,612	53.7	16,050
Cairns	22.7	9,722	47.6	13,631
Total	81.7	43,997	165.5	61,707
Queensland	487.0	194,429	(*b*) 972.0	(*b*)243,161

(*a*) *See* previous paragraph. (*b*) Year 1949–50.

Generator capacity installed at 31st December, 1951 of the four existing Regional Boards was :—Wide Bay-Burnett, 22,700 kW. ; Capricornia, 7,109 kW. ; Townsville, 15,332 kW. ; Cairns, 12,020 kW. ; total, 57,161 kW.

4. **New Capacity.**—(i) *Regions.* To provide for development of the electric power resources in the regions, the Commission formulated a ten-year programme divided into two five-year periods. In the first, it was planned to erect main transmission systems to connect existing power stations located within the regions and supplement generating capacity by the construction of new stations. Work on this section of the plan is proceeding. In the second period, the transmission system will be extended to more sparsely settled areas, the ultimate purpose being the provision of " ring " transmission lines throughout each region and interconnexion between the regions.

Work has commenced on a number of new generating stations, including Howard (Wide Bay Region), of which 15,000 kW. was placed in service during September, 1951, Rockhampton (Capricornia Region), and Townsville (Townsville Region). Each of these stations will have an ultimate capacity of 52,500 kW. and be steam-operated. In the Cairns Region, construction has commenced on the Tully Falls hydro-electric scheme, which is designed for an ultimate installed capacity of 92,400 kW. To augment existing capacity, pending operation of Tully Falls, the Cairns Regional Board has installed eleven diesel units with a total capacity of 7,860 kW. In addition, five 750 kW. sets are on order. It will be necessary, however, to obtain further plant, as it is anticipated that the demand will equal present plant facilities by the end of 1953.

At Mackay, where supply was first given in 1924, and Bowen, both situated on the coast between the Capricornia and Townsville Regions, the local Councils operate power stations of 5,000 kW. and 1,000 kW., respectively. The Mackay City Council is embarking on a scheme for rural development under an arrangement with the State Electricity Commission. To cater for the anticipated growth in demand, the capacity of its station will be increased to 10,000 kW. by 1954. At Bowen, the Town Council, which established the service in 1925, is extending the station's capacity by installation of one 1,000 kW. unit. During 1935, a small (3,800 kW.) power house—Australia's first underground hydro station—was placed in service at Barron Falls near Cairns. When the Cairns Regional Board was established during 1946, operation of the station passed to the Board's control and now comprises part of its generating plant, supplying an area of approximately 42,000 square miles.

(ii) *Western Queensland.* In Western Queensland, where a number of small isolated generating stations supply power to some of the larger towns, the Commission has evolved a plan to increase and modernize existing capacity. It involves installation of small internal combustion units ranging in size from 100 kW. to 600 kW. according to the load likely to be experienced, and conversion from direct to alternating current supply. The Government is assisting the scheme by subsidy—a feature of electrical development in Queensland. In general, the assistance provided comprises subsidies of up to one-third of capital cost on annual loan charges, with special subsidies of up to 50 per cent. for authorities in isolated areas.

In addition to improving supplies to the larger western towns, a scheme has been devised for electricity supplies for smaller towns in the western districts, where consumers range from 50 to 200. Subsidies of 65 and 60 per cent. will apply in those cases where the number of consumers supplied is less than 100 and 200, respectively. This plan is now being implemented, and in the first instance will provide the amenities of electricity to ten townships in the west of Queensland. The power will be supplied by small oil driven generating sets with automatic controls, which can be run with a minimum of operating attendance.

(iii) *South-eastern Queensland.* To increase the availability of electric power in the south-eastern area of the State, the two major generating authorities, in conjunction with the Commission, have power station projects under construction which are designed to place in service by 1956 new generating units totalling 203,200 kW. The City Electric Light Co. Ltd. is building a station known as Bulimba " B " on a site adjacent to Bulimba " A "—the initial installation comprises 60,000 kW. but the ultimate capacity may reach 180,000 kW. A 3,200 kW. unit at Somerset Dam near Brisbane is expected to be in service during 1952. At Tennyson in the Brisbane area, the City Council is constructing a new power station—initial capacity 60,000 kW. which may ultimately be increased to 180,000 kW. To supplement capacity pending operation of these projects, " packaged " generating units totalling 20,000 kW. have been ordered from overseas; of these 10,000 kW. will be installed at Tennyson and 10,000 kW. at Ipswich. In addition to catering for the anticipated increase in demand from industrial and domestic sources, this new capacity will be called on to supply energy for the electrified suburban railways—a project upon which preliminary work has commenced.

(iv) *The Burdekin River Hydro-electric Project.* In the vicinity of Townsville, the Commission, acting on behalf of the Burdekin River Authority, is continuing investigations of the proposed hydro-electric development of the Burdekin River. This project is linked with the plan to conserve the waters of the River for irrigation, and surveys undertaken indicate that approximately 80,000 kW. could be generated. It has been estimated that a station approaching this size should meet the requirements of Townsville and the adjacent areas, including the coal mines in the region of Collinsville, for at least 20 years, and by obviating the continuous operation of thermal plant, achieve significant savings in fuel. In addition, construction of this hydro station will obviate the need to install new thermal capacity at Townsville within a relatively short time.

§ 4. South Australia.

1. **General Historical.**—In 1895, the South Australian Electric Light and Motive Power Co. Ltd., with nominal capital of £20,000, was formed under the South Australian Companies Act with the object of supplying electricity for public and private purposes. A private Act, passed in 1897, conferred certain powers which enabled the company to generate and transmit electric power for sale.

Just prior to the close of the 19th century, the Electric Lighting and Traction Co. of Australia Ltd., a company registered in London, acquired the assets of the South Australian Electric Light and Motive Power Co. Ltd. These included a small power station at Port Adelaide of 150 kW. capacity, as well as the franchise of that company to supply power in Port Adelaide and the City of Adelaide. A station of 400 kW. capacity was built which supplied direct current to the City of Adelaide; by 1917, this had an installed capacity of 12,000 kW.

In 1905, the Adelaide Electric Supply Co. Ltd., incorporated in Great Britain with a paid-up capital of £180,000, took over the South Australian section of the Electric Lighting and Traction Co. of Australia Ltd., including the franchise under the 1897 Act. Certain limitations had been imposed under that legislation in respect of the area within which electricity might be supplied. However, in 1922, shortly after the management of the company had been transferred from England to South Australia, a further private Act was passed which amended the 1897 Act and, subject to certain provisions, gave the company authority to operate in any part of the State.

Although the Act of 1922 conferred additional powers on the Company, it nevertheless maintained a principle laid down in the 1897 legislation, namely, that the Company could not extend its area of supply to a district without the sanction of a resolution of the ratepayers. This provision did not, however, prevent the Company from taking its instrument of supply into and through intermediate districts.

The Adelaide Electric Supply Co. Ltd. gradually expanded its activities, and in August, 1923 a new station of 20,000 kW., in three units, was commissioned at Osborne on the Port River. By 1937 this station had a capacity of 55,000 kW. and the company was supplying an area of about 3,500 square miles. Its distribution system included three 33 kV. double circuit overhead transmission lines from the Osborne power house to the Croydon and Richmond substations, and a 33 kV. ring about 20 miles in length linking these two substations to the three main suburban substations. These in turn were linked to the four main city substations by an inner 33 kV. ring.

A measure of State control over matters relating to the service provided to consumers of electric power was envisaged by the 1897 legislation. Under Section 27, power existed to make regulations for securing a regular and sufficient supply of electricity and fixing a maximum price to be charged. Section 26 provided that any local authority within whose municipality the company was operating might lawfully purchase, after the expiration of specified periods from the passing of the Act, all or portion of the company's assets located in the area under the local authority's control.

However, no regulations were made under Section 27, and no Council attempted to exercise its right of purchase under Section 26. Provision is made in Part XXIV., Division II., of the Local Government Act 1934–1941, giving local authorities autonomy to generate and supply electricity within their areas, and a number of councils have availed themselves of this power.

Prior to 1932, no attempts had apparently been made to exercise any of the powers available to control the company, or to institute any inquiry regarding it. In that year, however, a Committee was appointed to inquire into and report upon certain activities of the company, namely:—

1. The charges made for the supply of electricity to consumers, including minimum charges;
2. The payments for the rent of meters registering the amount of electricity used by consumers;
3. The payments of any deposits before installation of electrical apparatus.

The Committee's report of 16th July, 1932 indicated that in their opinion the organization was efficiently managed and conducted with due regard to its obligations to deal fairly and equitably with the public, and that it provided the standard of service to which the latter was entitled. No further action was taken until 1935, when the Government instituted inquiries into the capitalization of a sum, representing nearly the whole of an amount paid in premiums on the issue of ordinary shares in 1912, 1913, 1915 and 1921, and also the rate of dividends being paid to holders of ordinary shares in the Company.

It was evident that the Government was becoming concerned with the need to provide an adequate supply of electricity at reasonable rates to the public, particularly with a view to encouraging the development of industry. In March, 1943, a Committee was appointed to investigate the following questions :—

1. The desirability of establishing a power station at Port Augusta or elsewhere outside the metropolitan area for the generation and transmission of electricity to the metropolitan area and country districts.
2. What additional sets, if any, should be installed at Osborne " B " power station, in addition to the 30,000 kW. set then under construction. (At this time the Company's programme for increasing capacity included two 30,000 kW. turbo-alternators and three 15,000 kW. boilers.)
3. What measures might be taken to meet the necessity for an immediate increased electricity supply in the metropolitan area.

Following upon this inquiry, the Electricity Act 1943 was passed which, *inter alia*, established the South Australian Electricity Commission. However, until the State assumed full responsibility for the supply of electric power, this body was not able to do much more than exercise the formal functions conferred on it by the Act.

Under the provisions of Section 3 of the Adelaide Electric Supply Company Act 1944, a Royal Commission was appointed to inquire into and report upon the supply of electricity by the Company and upon all matters concerning it. The Commission presented its report on 28th August, 1945, which included alternative recommendations, the main substance of which was subject to certain considerations and assumptions, that

(*a*) the Government acquire the assets and liabilities of the Adelaide Electric Supply Co. Ltd., and the responsibility for the generation and transmission of electric power in South Australia be vested in a public authority to be called the South Australian Electricity Trust,

or, if acquisition was not considered desirable,

(*b*) prices charged for the supply of electricity by the Company be fixed by regulation and determined from time to time by a Committee appointed by the Governor in Council, giving due regard to the interests of the public and a fair return to the shareholders of the Company.

The Commission also recommended that an inquiry be held forthwith by the South Australian Electricity Commission regarding the co-ordination of electricity supplies in the State, and that the Commission have power to veto any proposals for the construction of works to generate and transmit electric power.

2. **The Electricity Trust of South Australia.**—Early in 1946, a Bill was passed transferring the assets of the Adelaide Electric Supply Co. Ltd. to the newly formed Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supplies. This legislation provided that the Trust should take over the powers vested in the South Australian Electricity Commission under the 1943 Act, which, after establishment of the Trust, would cease to exist. In addition to the powers specified in the Adelaide Electric Supply Company's Acts 1897–1931, the Trust may, *inter alia*, supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other persons who generate or supply electricity, arrange to interconnect the mains of the Trust with those of other persons, and give or receive supplies of electricity in bulk.

3. **The Municipal Tramways Trust.**—In addition to the instrumentalities mentioned above which are engaged in the generation and distribution of electric power in South Australia, the Municipal Tramways Trust operates a power station of 27,500 kW. at Port Adelaide, which supplies energy for traction purposes. This organization was formed in February, 1907 and acquired the assets of the horse tramway companies then operating. An electric service was commenced in March, 1909. The system was gradually extended, and in 1929 the Trust purchased the South and North Terrace railway lines, which connected Adelaide and Glenelg, from the South Australian Railways Commissioner. By December, 1929, the Trust had completed the electrification of the South Terrace section and opened it for traffic. Trolley buses were introduced during 1938, providing a service between Tusmore and Largs—a distance of approximately 15 miles. In 1946 the Trust's route mileages were :—tramway, 80 ; trolley bus, 16. It also operates a number of motor buses. In 1946 the service consumed approximately 28 million kWh. of electricity.

4. **Capacity and Production.**—(i) *Categories.* There are three main categories of organizations generating electric power in South Australia, namely :—

(*a*) Governmental, which include the Electricity Trust ; (*b*) Local Authorities, e.g. municipal and district councils, Renmark Irrigation Trust, Municipal Tramways Trust ; (*c*) Other, including :—(i) Individuals and firms primarily engaged in generating power for sale ; (ii) Firms generating power primarily for their own use but supplying outside consumers ; (iii) Firms generating power for their own use.

(ii) *Installed Capacity.* In 1949–50 total installed capacity in South Australia was 206,743 kW. compared with 120,081 kW. in 1939–40. Units generated totalled 594 and 270 million kWh. in 1949–50 and 1939–40, respectively.

Of the total installed capacity, the Electricity Trust of South Australia operates plant with a capacity of 145,000 kW. It is thus the most important single authority supplying electricity in the State. There are approximately 169,000 consumers of electricity, of whom about 145,000 are supplied by the Trust. Its major steam stations are Osborne "A" (79,000 kW.) and Osborne "B" (60,000 kW.), while the balance of the capacity controlled consists of a number of small internal combustion plants located in rural districts.

No hydro-electric potential exists in South Australia. Steam generating units comprise 92 per cent. of installed capacity and the balance, 8 per cent., is internal combustion equipment. Until recently, all fuel consumed in the thermal stations was obtained from sources outside the State, and at times power restrictions were necessary owing to the inadequacy of supplies.

5. **Leigh Creek and other new Capacity.**—With a view to achieving independence from external sources, steps are being taken to install boilers designed to burn locally mined fuel. Fairly extensive deposits of low-grade sub-bituminous coal are obtainable at Leigh Creek, about 370 miles north of Adelaide. Under the Electricity Trust of South Australia Act Amendment Act 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and to sell or otherwise dispose of any surplus production.

In order to cope with the rapidly increasing demand for power, the Electricity Trust is installing four additional 30,000 kW. units at Osborne "B", one of which is planned to be in service by June, 1952. Ultimate capacity of this station will be 180,000 kW. Another major work under construction is the regional power station at Port Augusta, where three 30,000 kW. units will be installed, one each by 1954, 1955 and 1956. One of the principal reasons for locating the station at Port Augusta is its proximity to the Leigh Creek coal, thus eliminating a considerable part of the long and costly haul to Adelaide. A new standard gauge line is to connect Leigh Creek with Port Augusta. A system of power transmission lines is to interconnect the metropolitan stations with Port Augusta by way of Port Pirie; supply to country areas will also be facilitated or increased. The Trust recently purchased a small power station at Port Lincoln from the Government Produce Department for reconstruction at a new site, and with an ultimate capacity of 3,000 kW. Extensions are planned to the existing steam station at Leigh Creek, which include the installation of two steam units each of 1,500 kW. The locations of generating stations and main transmission lines in South Australia are shown on the map on page 1175.

Present works are expected to increase installed capacity by 154,000 kW. by 1956, providing a total installed capacity of approximately 361,000 kW. From 1952 to 1956, it is expected that at least one 30,000 kW. unit will be installed each year. These increases should more than cater for the increase in demand up to 1956, but further additions to plant will be necessary before 1960 to maintain reserves and provide replacements for retired equipment.

§ 5. Western Australia.

1. **General Historical.**—The pattern of the generation and distribution of electric power in Western Australia consisted until recently of a number of isolated systems each supplying a particular area. Excepting in the metropolitan area and in the area embraced by the South West Power Scheme, where in both cases electricity supply is in the hands of the State Electricity Commission of Western Australia, local authorities are generally responsible for the supply of electricity for domestic, industrial and traction purposes. In order to cater for the expected growth in demand, capacity of the State's major generating stations is being increased and plans have been formulated for the interconnexion of the Perth-Fremantle system with the south-western area. In 1945, the State Electricity Commission was set up with the object of co-ordinating the supply of electricity throughout the State.

The first supplies of electric power in Perth were reticulated to consumers by a private organization—the Perth Gas Company Ltd.—in 1894. This firm continued to supply until 1912, when its undertakings were purchased by the Perth City Council. At that time, responsibility for the generation of electric power was assumed by a Governmental authority administered by the Commissioner for Railways, namely the Western Australian Government Electricity Supply, distribution remaining mainly in the hands of the Perth City Council. Pursuant to the Electric Light and Power Agreement Act 1913, the Government Electricity Supply contracted with the Perth City Council to supply the Council's power requirements in bulk at a price not exceeding 0.75d. per unit for a period of 50 years. However, in 1948, fifteen years before expiration of the agreement, the State Electricity Commission purchased the Council's electricity and gas undertakings, thus releasing it from the contract. Under a similar agreement the Government organization also sells bulk supplies of power for traction and other purposes to the Fremantle Municipal Tramways and Electric Lighting Board, which reticulates power to industrial and domestic consumers in Fremantle and East Fremantle municipalities, and Melville and Rockingham Road Board districts.

2. **Perth.**—Under the Government Electric Works Act 1914, the Western Australian Government Electricity Supply was given power to construct works for the supply of electricity in the metropolitan area. By 1916, the authority had established a generating station at East Perth with an installed capacity of 12,500 kW. As the demand for electric power became more widespread, both the generation and distribution facilities were increased. In 1930, installed capacity stood at 32,000 kW. and the distribution system extended for a radius of 24 miles from the stations; altogether, 105 miles of high tension lines were in use, including 92 miles of 20,000 volt and the balance 6,000 volt. Capacity was further increased in December, 1938, when a 25,000 kW. unit was placed in service. At the same time, three new boilers were installed which were designed to use pulverized Collie coal. In 1946, control of this station was passed to the State Electricity Commission.

Statistics relating to activities at the East Perth undertaking are shown in the following comparative table :—

WESTERN AUSTRALIA : EAST PERTH UNDERTAKING.

Particulars.		1928–29.	1938–39.	1949–50.
Plant capacity	kW.	32,000	57,000	53,000
Maximum load	kW.	21,500	33,000	52,500
Units generated	m.kWh.	80	137	237
Units used on works	,,	5	13	20
Units sold	,,	69	117	192
Coal used per unit generated	lb.	3.1	2.77	2.55
Coal used—				
Collie small	tons	110,460	165,355	267,448
Imported	,,	427	3,367	..

3. **Kalgoorlie.**—In Kalgoorlie, on the goldfields, electricity supply was first established by the Municipal Council in 1895. By 1945, this authority was supplying 3,350 consumers with direct current from a diesel station of 1,350 kW. generating capacity. In 1902, the Kalgoorlie Electric Power and Lighting Corporation commenced operations with the primary objectives of supplying power for the gold mines and for traction. This organization operates a steam station of 18,750 kW. and maintains a 22 kV. line of 21 miles to the Celebration mine. Alternating current is also supplied to about 1,000 consumers, and bulk supplies are provided to the Kalgoorlie Electric Tramways Limited. The Corporation's undertaking generates approximately 45 million kWh. per annum and consumes about 100,000 tons of wood fuel.

4. **General Pattern of Electricity Supply.**—The pattern of electricity supply in rural areas of Western Australia has hitherto consisted of a large number of small organizations, both private and local government, generating power for sale to consumers in a particular town or municipality, but in the area between the Great Southern Railway from Northam to Albany and the west coast, the State Electricity Commission is now constructing transmission lines to give central station supply to the towns and their surrounding rural areas. In addition, there are several mining companies which generate electricity for use in their mines.

The main load centre is, of course, the Perth-Fremantle area into which is concentrated the major portion of the State's population and industry. In 1949, the East Perth power station generated 39 per cent. of the electricity produced in the State from all sources, excluding those firms which generate power for their own use. No interconnections between the various power stations established in rural localities and those in the metropolitan area have yet been effected.

Some statistics relative to the generation and supply of electric power in Western Australia are provided by the following comparisons between 1939–40 and 1949–50, respectively :—total installed capacity, 111,641 kW. and 119,396 kW. ; units generated, 337 million kWh. and 417 million kWh. ; consumers, 95,000 and 109,000.

The location of power stations and distribution systems, including projects under construction or proposed, are shown on the map on page 1176.

5. **The State Electricity Commission of Western Australia.**—(i) *Origin and Aims.* In order to ensure an organized and co-ordinated future growth of electricity generation and distribution throughout the State, the Government introduced a Bill in 1945 to establish the State Electricity Commission, which, together with an Electricity Bill, became law early in 1946. Under these Acts, the Commission was given power, *inter alia*, to secure the ultimate co-ordination of all State or other electrical undertakings in the State, to construct and operate power stations and transmission lines and purchase as a going concern and carry on the undertaking of any supply authority.

Under the Electricity Act, which should be read in conjunction with, and is subject to, the State Electricity Commission Act, no person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and any proposals are not inconsistent with the Commission's plans.

(ii) *New Projects.* Since its inception in 1946, the Commission has proceeded with the task of increasing generating capacity in an endeavour to cater for a greatly increased demand for power. Long-range plans have been formulated to interconnect the south-western portion of the State with the Perth-Fremantle system. One of its most important and immediate problems was to increase the capacity of the generating equipment serving Perth and Fremantle. During the 1939-45 War years, it became evident that growth of demand for electric power would necessitate provision of additional generating equipment in the metropolitan area as soon as possible. Accordingly, the Government Electricity Supply authority commenced design work for a new station of 50,000 kW. capacity. Contracts were let in 1945 and construction commenced on a site selected at South Fremantle, on the coast south of Fremantle proper. Responsibility for completion of this project was given to the Commission under the Act of 1946. As it was considered that an even larger station would be required, provision was made for the installation of two additional units giving an ultimate capacity of 100,000 kW. Steam is furnished by eight boilers designed to use pulverized coal from Collie, which is located about 120 miles from the station. By 1951, two units had been placed in service and the output was being fed into the metropolitan system. The Commission plans to have all units in operation during 1952 and 1953.

Most of the plant at the East Perth power station, which passed to the Commission's control in 1946, is due for retirement or requires extensive overhaul. During and since the War, the demand for power has necessitated its almost continuous operation, all maintenance work being undertaken during week-ends or holidays. At times, when the load has become too great or break-downs have occurred, it has been necessary to "black out" certain districts or reduce the load by other means. In addition, certain restrictions were imposed on consumers between 1946 and 1950, but were lifted when the new station came into service just prior to the winter of 1951. In an endeavour to improve the position pending operation of the South Fremantle station, three diesel units, each of 1,000 kW., were installed in 1950. The Commission now plans to install a 30,000 kW. unit at East Perth, and tenders have been called for supply of the turbo-alternator, boiler plant and ancillary equipment.

6. **Frequency Conversion.**—The earliest sets installed at East Perth were designed for operation at 40 cycles and this frequency was adhered to throughout the growth of the plant on this site, until the 1938 additions brought total capacity at this frequency to 57,000 kW. During 1947 the station's size was reduced by 4,000 kW.

As a result of a separate inquiry conducted at the same time as the early investigations into the proposed new station at South Fremantle, a recommendation was made favouring conversion of the system to the British and Australian Standard frequency of 50 cycles per second. The recommendation was adopted and implemented by making the frequency of generation at South Fremantle 50 cycles and installing at East Perth a frequency changer able to convert 25,000 kW. of energy from one frequency to the other. Change-over of consumers' plant is proceeding and a large number of important loads are now supplied at 50 cycles.

7. **South-west Development.** Under the Electricity Act of 1937, which was superseded by the 1946 Acts, a Committee was appointed to inquire into and report upon a proposed scheme for the electrification of the south-western portion of the State. The Committee commenced its activities in 1939, but owing to the conditions prevailing at that time no action was taken to implement any of its recommendations. On 30th

August, 1943, the Electricity Advisory Committee was requested by the Government to report on the question of establishing a central power station in the south-west, taking into consideration current policy regarding decentralization of industry, and also the increased development which might reasonably be anticipated in the south-west after the War.

The Committee submitted its report in 1945, recommending, amongst other things, that a National Power Scheme for the south-west be proceeded with. The plan provided for acquisition of the existing Collie power station and installation of additional generating capacity, construction of a power station at Bunbury and interconnexion of the south-west scheme with the metropolitan system. On 12th October, 1946, the State Electricity Commission acquired the Collie power station, which prior to 1946 was owned and operated by the Collie Power Company Limited. At the date of acquisition, the station's installed capacity was 5,000 kW., comprising two steam units. The capacity of the station will be increased to 12,500 kW. by the end of 1952.

Since 1950, the Commission has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-West Power Scheme was officially opened at Collie. When completed, a system of power lines will reticulate electricity over an area of approximately 1,800 square miles. Tenders have been called for the first two 30,000 kW. units for a new power station at Bunbury, which will be interconnected by transmission lines to the Collie and South Fremantle stations, permitting an interchange of power between the metropolitan and south-west systems.

§ 6. Tasmania.

1. **Hydro-electric Potential.**—With its mountainous terrain and relatively high rainfall, Tasmania is well endowed with hydro-electrical resources. It has been estimated that its lakes and rivers possess a potential which, with appropriate conservation measures, would permit the installation of generating equipment totalling at least 1,750,000 kW. Present installed capacity is only a fraction of this amount, namely, about 218,000 kW.

The major portion of Tasmania's hydro potential is situated on the Central Plateau, covering an area of about 1,500 square miles at an altitude varying from 2,000 to 4,000 feet. Annual rainfall ranges from 80 inches in the western section to 30 inches in the east. Natural storages are provided by a number of lakes and marshes, the largest of which is the Great Lake, covering an area of 58 square miles with a present capacity of 1,150,000 acre feet. Numerous rivers, having their source on the Central Plateau, flow into the sea at intervals around the coast, but by far the greatest proportion of the run-off is carried southwards by the Derwent River and its tributaries. This river system is thus the most important source of hydro-electric power on the island.

In addition to the rivers having their source on the Central Plateau catchment, there are two other major potential areas of hydro-electric power, namely, those of the Esk River in the north near Launceston and the Huon in the south near Hobart. Both these areas are important in that relatively large stations could be operated at low cost in close proximity to large load centres. A station of approximately 80,000 kW. which will utilize the waters of the South Esk is at present under construction near Launceston.

2. **Historical.**—Development of the island's hydro-electric potential was first commenced in 1892, when the Launceston City Council constructed a small station of 450 kW. at Duck Reach on the South Esk River. Power was made available in 1895. This station, which is still operating and was acquired by the Hydro-Electric Commission in 1944, now has an installed capacity of 2,000 kW. Although this was the first hydro-electric station, a steam station operated by a private concern supplied some power to Hobart in 1893.

With a view to obtaining cheap supplies of electric power, the Mount Lyell Mining and Railway Co. in 1911 decided to develop the potential of Lake Margaret near the western coast; the Lake's catchment has an area of 8 square miles with an annual rainfall of 147 inches. By 1914, the Company was generating about 8,400 kW., later increased by the installation of another unit. In 1951 the station had an installed capacity of 9,900 kW. Originally it was arranged that any power not required for the Company's activities should be fed into the Tasmanian system. However, in recent years the amount generated has been insufficient, necessitating purchase of additional supplies from the Hydro-Electric Commission. In 1911 also, another private firm obtained authority to generate electricity. This organization, the Hydro-Electric Power and Metallurgical Company, was formed to exploit the potential of the Great Lake, where it was intended to develop 7,000 kW. for the electrolytic treatment of complex ores. However, the Company experienced considerable difficulty in raising capital, and in 1914 the Government, being concerned about the progress of the scheme, took over that part of the Company responsible for the development of the power project.

As a result of this move, the Hydro-Electric Department of Tasmania was set up and immediate action taken to develop the Great Lake scheme. By May, 1916, two 3,500 kW. units had been installed at a station named Waddamana. The power produced was utilized for domestic lighting and tramway traction in Hobart and also for the treatment of ores. In 1919 the Department accepted a contract to supply 23,000 kW. of power to the Electrolytic Zinc Co. of Australasia Ltd., which necessitated the enlargement of the Great Lake scheme. It was decided at this time that the constructional programme should be designed to cater for the anticipated future load-growth, and by 1922 the Great Lake–Waddamana project had an installed capacity of 49,000 kW. Works associated with the project required construction of a multiple arch dam at Miena, where the natural flow from the southern end of the Lake forms the River Shannon. Additional catchment area has been obtained by diverting water from the Ouse River to the Lake. Transmission lines of 88 kV. capacity run northward to Burnie and the north-east coast, and southwards to Hobart.

Before the waters which drive the generators at Waddamana pass through that station, they are first used to generate power in the Shannon project. This scheme utilizes the controlled flow of water between Miena Dam and the Waddamana Canal. Construction of an earthen dam to divert water from the Shannon River into a canal, before falling through steel pipe-lines to the power station 258 feet below, was commenced in the late 1920's and by 1934 the Shannon station had an installed capacity of 10,500 kW.

In 1929, the Government passed the Hydro-Electric Commission Act, under which was established the Hydro-Electric Commission. In 1930 this corporate body took over the State hydro-electric undertakings and the business of the Hydro-Electric Department.

3. **The Hydro-Electric Commission.**—(i) *Extent of Operations.* After the economic depression of the early 1930's, industrial activity, particularly in those industries requiring large blocks of electric power, increased rapidly. It became evident to the Commission that this demand for power, together with the increasing domestic demand, would soon reach a stage when it could only be satisfied by the installation of additional generating capacity. Accordingly, towards the end of 1934, the Tarraleah project was commenced and by 1938 three 15,000 kW. units had been installed. Since then three more units have been placed in service, giving the station a total installed capacity of 94,500 kW. The Tarraleah scheme involved construction of a power station on the Nive River near its junction with the Derwent, conservation of waters in the River Derwent at Lake St. Clair and Butler's Gorge and their diversion by flume and pipeline to the power station. Power is generated at 11,000 volts and stepped up to 110,000 volts for transmission to Rosebery on the west coast and to Hobart.

With a view to ensuring that peak loads could be met, the Commission, during the 1939–1945 War, commenced construction of a new station known as Waddamana "B". An ideal source of peak load power exists in the Great Lake storage, which has a capacity of 1,150,000 acre feet at an altitude of 3,380 feet. The project, with a total installed capacity of 50,000 kW. comprising four units, was completed in 1949. Sufficient water to operate the station is provided by a canal similar to the one supplying Waddamana "A". Power is generated at 11,000 volts and transmitted by 110,000-volt lines to Boyer substation near Hobart.

Since the first year of operation, namely 1916, when Waddamana "A" was placed in service, output of the Hydro-Electric Commission's system grew from about four million kWh. to a total of 920 million kWh. in 1949. Between 1939 and 1949 the number of consumers of electric power in Tasmania increased by 20,924 to 70,924. During the same period the peak load on the system rose from about 70,000 kW. in 1939 to 171,940 kW. in 1949. The Commission's total installed generating capacity was 172,500 kW. at 30th June, 1949, which, when compared with the 1949 peak load of 171,940 kW., indicates that very little reserve capacity was available. A number of factors contributing to an increase in demand, combined with a series of rainfalls below average, have in recent years necessitated the imposition of power rationing. These restrictions on the use of electricity are expected to continue until 1953.

The following comparative statistical material indicates the growth of the Hydro-Electric Commission's system between 1938 and 1949:—

TASMANIA: HYDRO-ELECTRIC COMMISSION SYSTEM.

Power Station.	1938.			1949.		
	Installed Capacity.	Units. Generated.	Peak Loads.	Installed Capacity.	Units Generated.	Peak Loads.
	kW.	m.kWh.	kW.	kW.	m.kWh.	kW.
Waddamana "A" ..	47,200	376	51,000	49,000	242	52,000
Waddamana "B" ..	..	..	..	36,000	140	40,000
Shannon	10,200	84	10,000	10,500	72	9,600
Tarraleah	(a) 47,250	(a) 15	(a) 10,700	75,000	463	73,700

Devonport (Steam) ..	750	.013	(c)	(d)	(d)	(d)
Total ..	105,400	475.013	..	172,500	920	..
System ..	67,100 kW.			171,940 kW.		
Number of substations	9			15		

(a) Not in full operation. (b) Not taken over by Hydro-Electric Commission until 1944. (c) Not available. (d) Withdrawn from service.

Since 1949 installed generator capacity at Waddamana "B" has been increased to 50,000 kW. and Tarraleah to 94,500 kW., while the new Butler's Gorge station is now in service, making total installed capacity of the system approximately 218,000 kW.

(ii) *New Capacity.* In order to cater for increasing demands for power from domestic and industrial sources, the Commission has projects under construction which, by 1954, are expected to more than double present installed capacity. Major works include the Tungatinah scheme on the Nive River, where a new station with an initial capacity of 100,000 kW. is scheduled for completion in 1953. This project will be extended at a later date by the installation of an additional 25,000 kW. unit. At a site near Launceston work is in progress on the Trevallyn scheme, involving construction of a tunnel from the South Esk to the River Tamar. The power station is to be located on the left-hand bank of the Tamar facing downstream. The ultimate capacity of the station is planned as 80,000 kW. in four units, all of which should be in service by 1954. This project is designed primarily to supply power to the Aluminium Production Commission's works at Bell Bay, but any surplus energy will be fed into the Tasmanian system.

Further development of Tasmania's hydro potential is proposed, involving the construction of two major stations and associated works. The larger, known as the Wayatinah scheme, will have an installed capacity of approximately 100,000 kW. The plan includes construction of diversion dams on the Nive River below the present Tarraleah station, with a tunnel and a canal from the Nive to the Derwent. The power station will be located near the junction of the Florentine and Derwent Rivers. A station of about 28,000 kW. is planned on the Dee River below Lake Echo. The water to be utilized in this project later passes through both the Tarraleah and Tungatinah stations.

Details of the Hydro-Electric Commission's power stations, distribution system and proposed works are shown on the map on page 1177.

(iii) *Special Features.* After 1930, every effort was made to keep pace with anticipated increases in demand by means of a progressive construction policy. The abundant and comparatively cheap supplies of electricity and other natural resources attracted to Tasmania a number of important secondary industries for which energy costs constitute a significant proportion of the total cost of production. Some of the more important organizations and their continuous power demands when plant is operating are as follows:—Electrolytic Zinc Company of Australia Ltd., 51,000 kW.; Australian Commonwealth Carbide, 6,500 kW.; Goliath Portland Cement, 1,800 kW.; Associated Pulp and Paper Mills Ltd., 8,600 kW.; Australian Newsprint Mills Pty. Ltd., 24,000 kW.; and Australian Aluminium Production Commission, 30,000 kW. (when in production). These quantities shown relate to demand on an unrestricted basis—namely during 1950—and they are not necessarily the actual amounts consumed by these organizations.

Given normal weather conditions, it was not found necessary, until recently, to impose restrictions on consumers in regard to either load or usage. With the extension of the use of electricity into new fields, however, demand for power steadily increased, and this, combined with a series of below average rainfalls, necessitated the introduction, of a power rationing scheme in March, 1951.

With the object of offsetting to some degree the trend towards centralization of the population in the larger cities, it is the policy of the Commission to extend its service to all districts. Where the costs of the extension cannot be covered by the anticipated revenue, the State Government subsidizes the extension. This has caused a substantial increase in consumption in rural districts where the electrification of farm machinery and other labour saving devices has in recent years become widespread. Also of considerable importance is the fact that the standard of living on farms has been raised, thereby tending to attract families to the country and retain those already established in rural areas.

In general, exploitation of Tasmania's hydro potential has led to a comparatively high standard of domestic life and no less than 90 per cent. of the island's population is served with electricity.

§ 7. Commonwealth Territories.

1. **Internal Territories.**—(i) *General.* The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government. Administration and control of these undertakings is vested in the Commonwealth Department of Works.

(ii) *Australian Capital Territory.* Supply was first established at Canberra during 1915. The Department owns steam and diesel stand-by plant of 2,100 kW. capacity which is operated in conjunction with the New South Wales Electricity Commission's generating equipment (for further details *refer* to page 1160 of this article). The major portion of the Capital City's power requirements are supplied in bulk from the New South Wales interconnected system. Within the next few years. defence projects at present under construction in Canberra will greatly increase the demand for electrical energy. These requirements will be met from the Snowy Scheme, the first section of which is scheduled for operation in June, 1954, and the power produced is to be fed into the New South Wales interconnected system at Cooma.

(iii) *Northern Territory.* At Darwin, supply was established by the Town Council in October, 1934, but later, during April, 1937, responsibility for generation and supply was placed in the hands of the Northern Territory Administration. The power station is equipped with diesel generating plant of 2,010 kW. capacity. During 1951, the first of two new 850 kW. diesel sets was placed in service—it is expected that the second set will be operating in 1952. Small diesel generating units supply the requirements of Katherine, Tennant Creek and Alice Springs.

In 1948 it was announced that the Department of Works and Housing (now the Department of Works) had selected a site for a hydro-electric station on the Adelaide River, 72 miles from Darwin. The scheme is designed to augment supply to Darwin and suburbs when the diesel equipment at present installed is unable to cope with the demand for power. No constructional work has yet been undertaken on the project.

2. **External Territories—Papua and New Guinea.**—Responsibility for the operation and establishment of electrical undertakings in Papua and New Guinea is vested in the Administration of the Territory of Papua–New Guinea, whose headquarters are located at Port Moresby. Diesel equipment totalling 1,372 kW. is in operation at Port Moresby (750 kW.), Samarai (52 kW.), Lae (360 kW.), Madang (50 kW.) and Rabaul (160 kW.). At Wau, New Guinea, supply is provided to a small number of residents in the town by the New Guinea Goldfields Ltd., operating under franchise from the New Guinea Administration. At Bulolo, near Wau, the Bulolo Gold Dredging Ltd. operates a hydro station of 5,500 kW. Power produced is used to operate the Company's dredges and bulk supplies are provided to the New Guinea Goldfields Ltd.

Vast hydro-electric potential exists in New Guinea—it has been estimated at 15,000,000 kW., but because of the island's location, absence of large load centres and lack of industrialization, only a very small proportion could, at present, be economically developed. However, there are indications that some industrial expansion will be effected in the main centres of population within the next few years.

In 1950 it was announced that the Commonwealth Government had joined with the British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A new company has been formed, known as the New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth holds 51 per cent. of the shares and has a controlling interest on a board of five members. The agreement for formation and operation of the Company is administered by the Commonwealth Department of Supply, except in matters requiring compliance with the law of New Guinea, when responsibility for administration rests with the Department of Territories. Surveys and comprehensive investigations are in progress.

With a view to providing cheap power in the near future for domestic purposes and also to industry in the Port Moresby, Lae and Rapopo areas, the Department of Territories has drawn up a plan to construct a number of small hydro-electric schemes in Papua and New Guinea. These projects involve expenditure of more than £1,000,000 over the next three years.

The more important projects and estimated costs are as follows :—Port Moresby (Papua), £192,000 ; Lae (New Guinea), £200,000 ; Rapopo (New Guinea), £440,000 ; Madang (New Guinea), £200,000.

Work has commenced on the Port Moresby project which will have a capacity of approximately 10,000 kW. The estimated cost of smaller schemes is £186,000.

D. CONCLUSION.

During the next four to five years, electricity supply authorities plan to increase installed generating capacity in Australia by 2,350,000 kW. The overall cost of these works is estimated at approximately £300,000,000, based on an average of £80 per kW. for generation and £50 per kW. for transmission. This means, in effect, that each year for the next five years Australia will need to invest £60,000,000 on electric power projects alone. Imports of equipment for use in the generation of electricity were valued at about two and a half million pounds (£A.f.o.b.) in 1949-50 and at about four and a half million pounds (£A.f.o.b.) in 1950-51. The corresponding value of imports during 1939-40 was less than half a million pounds (£A.f.o.b.). By 1956, installed capacity is expected to be sufficient to satisfy unrestricted demand for electrical energy and have adequate reserve generating capacity available to provide for emergencies.

In determining the cost of electrical energy reticulated to the consumer, the main factors entering into such calculations include the geographical location of power stations in relation to the cost of fuel delivered (in the case of thermal stations) and the cost of transmission. Other elements in costs include labour, interest on capital invested and, to a certain extent, profits.

In general, the electricity supply authorities of Australia have adopted a tariff policy based on the cost of production at the power station or for the system as a whole, the class of consumer and amount consumed, the time of the day or night that consumption takes place, and the distance of the consumer from the source of supply. The only significant departure from the differential tariff policy is in Tasmania, where the Hydro-electric Commission charges a uniform tariff to all consumers of a certain class throughout the State—rates vary, of course, between the different classes of consumer, e.g. domestic or industrial. If the reticulation of electric power to new rural consumers is uneconomic, the State Government subsidizes the extension. Similar policies are in force in New South Wales and Queensland, but tariffs are not uniform in these States, i.e. they differ between metropolitan and rural localities.

Actual tariffs vary from State to State, being determined by the incidence of generation and distribution costs. Since the 1939-45 War, the price of electric power to the consumer has risen and it appears likely that this trend will continue for a number of years. With a view to encouraging the decentralization of industry to rural areas, most electricity supply authorities offer tariffs on a par with, or only slightly in excess of, those current in metropolitan areas. In both metropolitan and rural areas the average cost per unit to the consumer moves in an inverse ratio to the amount of power consumed.

The provision of adequate supplies of electric power is of such vital importance to Australia that, while its overall cost to the community and its cost to the consumer must be studied, the task of bringing supply and demand into equilibrium requires the constant attention of the authorities responsible, Commonwealth and State.

E. STATISTICAL SUMMARY, 1939-40 AND 1949-50.

The tables in this part present summaries, for the years 1939-40 and 1949-50, for each State separately and combined, relating to :—(i) the numbers and capacity of central electric generating stations, (ii) the amount of electricity generated and the number of consumers, and (iii) the values of production and output and the numbers of persons employed in the electricity supply industry.

CHAPTER XXVI.

WATER CONSERVATION AND IRRIGATION.

A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS.

§ 1. Introduction.

1. **Special Article.**—Official Year Book, No. 37, pp. 1096–1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. This article, which incorporated basic information supplied by the various Commonwealth and State Departments and other bodies connected with water conservation, presented a comprehensive picture of recent development in this field. The previous issue of the Year Book which contained such a survey was No. 23, 1930, pp. 636–661.

In subsequent issues much of Mr. Ellis's article of a statistical nature, including that contained in this chapter in recent years, has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article.

2. **Geographical and Climatic Factors.**—The opening section of the special article contained a simplified picture of the main geographical and climatic features of Australia, presented in order to enable the reader to appreciate the significance of the Australian water pattern. This is not reproduced, but Chapter II.—Physiography, of this issue, contains considerable detail of the climatic features of Australia with some reference to geographical features, while earlier issues of the Year Book deal exhaustively with these subjects.

3. **Statistical Aspects.**—It should be noted that the basis of recording statistics of water use differs in several States. Therefore, while every attempt has been made to present a uniform statistical picture, it has been difficult to ensure that statistics quoted as between States are strictly comparable in detail. Some steps have been taken by State authorities with a view to securing uniformity of statistical data, but until this objective has been achieved allowance should be made for this factor in this Chapter.

The Chapter deals with the conservation and utilization of water on a nation-wide or State-wide basis, and also devotes particular attention to these activities in relation to rural areas and purposes. For information on water conservation and utilization for the purpose of water supply and sewerage in the metropolitan areas, cities and towns of Australia *see* Chapter XV.—Local Government, § 5. Water Supply, Sewerage and Drainage. For additional information on hydro-electric power generation and on the various existing and projected schemes *see* Chapter XXV.—Electric Power Generation and Distribution.

4. **Select Bibliography.**—Appended to the special article in Official Year Book No. 37 is a select bibliography containing a list of selected books, reports, papers, etc. dealing with the development of the water resources of Australia and their conservation (*see* pp. 1140–1). The works included, numbering more than thirty, are classified under the headings "General", "Murray River", "Sub-surface Water", "Snowy River", "Hydro-electricity", "States" and "Catchments".

§ 2. Water Resources and their Utilization.

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. Therefore, it is impossible at present to estimate, with any degree of reliability, the total average annual flow of Australian streams and it has been doubted whether the total annual average flow of all Australian Rivers would exceed 60,000,000 acre feet, a figure small in comparison with the flow of rivers in other continents, some examples of which are given below expressed as mean annual discharges in millions of acre feet: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America, 900 (in the aggregate).

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction or projected, as at the middle of 1951.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
		Existing Dams and Reservoirs.		
Hume	Murray River near Albury	1,250,000	106	Part of Murray River Scheme—storage for domestic, stock and irrigation purposes. To be increased to 2,000,000 acre feet.
Miena	Great Lake, Tasmania	1,125,000	40	Regulates water to Waddamana hydro-electric power station.
Burrinjuck	Murrumbidgee River, New South Wales	771,640	247	Storage for irrigation and production of hydro-electric power.
Lake Victoria	Murray River near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia.
Waranga	Goulburn River, Victoria	333,400	..	Earthen embankment, 23,800 feet long. Irrigation storage.
Eildon	Upper Goulburn River, Victoria	306,000	..	Rock filled embankment, 2,300 feet long and concrete spillway, 700 feet. Irrigation storage.
Wyangala	Lachlan River, New South Wales	303,900	190	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power.
Clark	Derwent River, Tasmania	243,000	200	Serves Tarraleah hydro-electric power station.
Avon	Nepean River, New South Wales	173,800	230	Part of Sydney water supply.
Glenmaggie	Gippsland, Victoria	106,000	100	Storage for irrigation.
		Dams and Reservoirs under Construction or Projected.		
Adaminaby	Eucumbene River, New South Wales	3,500,000	330	Projected as part of Snowy Mountains Hydro-electric Scheme.
Eildon	Upper Goulburn River, Victoria	2,750,000	..	Existing dam being enlarged for irrigation storage and production of hydro-electric power.
Menindee Lakes Project	Darling River near Menindee, New South Wales	2,000,000	..	Part of Darling River water conservation scheme—under construction.
Warragamba	Warragamba River, New South Wales	1,678,500	415	Under construction for Sydney water supply.
Jindabyne	Snowy River, New South Wales	1,200,000	260	Projected as part of Snowy Mountains Hydro-electric Scheme.
Upper Murray	Upper Murray River, New South Wales	Not less than 1,000,000	..	,, ,, ,, ,,
Blowering	Tumut River, New South Wales	846,000	300	Projected as part of Snowy diversion scheme.
Somerset	Stanley River, Queensland	724,000	130	Under construction for Brisbane-Ipswich water supply.
Burrendong	Macquarie River, near Wellington, New South Wales	650,000	193	Under construction for rural water supplies.
Warkworth	Wollombi Brook (Hunter Valley), New South Wales	400,000	100	Projected as a flood mitigation dam for the Hunter Valley.
Keepit	Namoi River, near Gunnedah, New South Wales	345,000	135	Under construction for rural water supplies.
Tantangara	Murrumbidgee River, New South Wales	300,000	150	Projected as part of Snowy Mountains Hydro-electric Scheme.
Glenbawn	Hunter River, near Scone, New South Wales	296,000	240	Under construction as part of Hunter Valley conservation work.
Upper Yarra	Yarra River, Victoria	110,000	270	Under construction for Melbourne water supply.
Lake Brewster	Lachlan River, near Hillston, New South Wales	108,000	..	Storage of rural water supplies for the Lower Lachlan —works almost complete.

3. **Irrigation.**—(i) *History.* For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey Brothers and to the Victorian Irrigation Act in 1886 *see* previous issues.

(ii) *Extent and Nature of Irrigated Culture.* About half of Australia's irrigated acreage is now in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In these areas served by the Murray and its tributaries irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes. Approximately half of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where fodders and pastures are served. Irrigation schemes have not been developed in Tasmania or the Northern Territory.

The following table shows the area of land irrigated in each State during the years 1938–39 to 1941–42 and 1945–46 to 1950–51 :—

AREA OF LAND UNDER IRRIGATED CULTURE.

(Acres.)

(*a*) Source: Water Conservation and Irrigation Commission. (*b*) Included in Other Crops.
(*c*) Includes tobacco, 2,969 acres. (*d*) Includes lucerne for pasture, 26,692 acres.

(iii) *Irrigation Trends.* In Official Year Book, No. 37, p. 1099, the following trends in irrigation practice were described, viz. :—the improvement of irrigation techniques in established areas, a growing appreciation of the benefits and necessity of irrigation in humid and sub-humid areas with a flush annual rainfall, the use of irrigation to stabilize the stock industries, especially on an " extensive " basis, consideration regarding the provision of weirs to prevent the entry of salt water, the increasing quest for cheap electric power to aid pumping operations for stock, domestic and irrigation purposes, and an increase in the extent of spray irrigation.

(iv) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following :—high water tables due to the application of water to land where no natural drainage lines exist, or where drainage lines are too small to cope with extra water ; presence of salt in semi-arid soils, resulting in surface accumulation ; salinity of water, which makes it unsuitable for human beings, stock and plant life ; adverse reactions of semi-arid soil types to increasing quantities of water which affect the sub-soil ; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle ; and growth problems affecting plants and trees.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations :—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry ; Griffith (New South Wales)—influence of irrigation on plant life (using horticultural trees and vegetables as test plants), land drainage and soil structure ; Deniliquin (New South Wales)—pastures ; Werribee (Victoria)—diseases of dairy cattle. These stations are in close contact with the settlers. In the maintenance of Merbein and Griffith Stations the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are :—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed ; to provide a system for advising on local agricultural policy and organization ; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy ; to achieve a unified approach to sub-regional extension in all branches of agriculture ; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein ; to achieve close liaison between research and extension ; and to conduct research in extension methods.

4. **Preservation of Catchments.**—As water conservation commences on the catchments it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize effects of floods, overstocking, bush fires, and destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. **Hydro-electric Power.**—Hydro-electricity is generated in all States except South Australia and Western Australia and the Northern Territory. Water is the sole source of electric power in Tasmania, all other States depending largely on steam and oil. On the mainland it is usual to allot water for irrigation purposes, combining this with hydro-electricity to whatever extent is possible. During summer, when irrigation is proceeding, there is ample discharge for power, but in the non-watering period the main objective is to store water. Information on existing and projected hydro-electric schemes is given in later sections of this Chapter, and the subject of the generation of electric power from water resources is discussed in this issue in Chapter XXV.—Electric Power Generation and Distribution, which contains, in addition, further particulars of the various schemes.

6. **Sub-surface Supplies.**—(i) *General.* While a more or less complete general picture of the available and potential surface water resources exists, much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent and potentials of the artesian basins—particularly the Great Artesian Basin—have been fairly accurately determined, and the use of sub-artesian supplies is extensive and more development is possible. The shallower groundwater supplies, however, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed in any degree, except in a few localities.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 550,000 square miles, comprising about 350,000 in Queensland, 76,000 in New South Wales, 100,000 in South Australia and 24,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal :—

PRINCIPAL WATER-BEARING BASINS : AUSTRALIA.

Name.	State.	Geological Age.	Area.	Depth of Water.
			Square Miles.	Feet.
Great Artesian	Queensland, New South Wales, South Australia and Northern Territory	Cretaceous-Jurassic	550,000	Up to 7,000
Murray	Victoria, New South Wales, and South Australia	Miocene	107,000	100 to 900
Torrens	South Australia	Recent Pleistocene	4,000	Up to 600
Coastal Plain	Western Australia	Recent Jurassic	10,000	200 to 2,500
Adelaide	South Australia	Recent Oligocene	1,100	100 to 500
Gippsland	Victoria	Pleistocene-Oligocene	1,800	200 to 1,800
Port Phillip	Victoria	Pleistocene-Oligocene	300	Up to 600

More than 3,000 artesian bores have been constructed within the Great Artesian Basin and the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life; while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts a considerable amount of irrigation is carried out from shallow ground water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject *see* Official Year Book No. 37, pp. 1103–4.)

(iii) *Ground Water.* Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes the most notable scheme being that conducted by the Hunter District Water Board where ground water from the Tomago sandbeds near the mouth of the Hunter River, New South Wales is used to supplement water storages fed from surface sources. For further information on ground water *see* Official Year Book No. 37, p. 1104.

7. **Industrial, Metropolitan and Country Town Supplies.**—Details relating to urban water supply systems will be found in Chapter XV.—Local Government of this Year Book.

§ 3. National and Interstate Aspects.

1. **General.**—As the government of Australia is conducted under a Federal system, and as the Commonwealth Constitution makes special reference to water problems, both the Federal and the State Governments have an interest in the control and conservation of water. As main responsibility for control of water resources resides in the State governments, and as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth–State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945 national aspects of water conservation and use were emphasized. The report recommended the adoption of an all-Australian plan, having the assent of the various governments, to obviate lack of co-ordination, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

Following a resolution of the Australian Agricultural Council, the Irrigation Production Committee was established in 1938 for the purpose of carrying out comprehensive investigations into the various agricultural activities of lands irrigible by the River Murray and its tributaries in order to co-ordinate developmental activity there, but its work was interrupted by the war. Resuscitated in 1946 as the Irrigation Production Advisory Committee, and representative at first of the Commonwealth and the States of New South Wales, Victoria and South Australia, and later also of such other States as desired representation, with the Commonwealth Director-General of Agriculture as chairman, its functions are :—(*a*) to prepare for the consideration of the Australian

Agricultural Council, or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (*b*) to undertake long-term co-ordination of land utilization in irrigible areas served by the River Murray and its tributaries, this involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. **Murray River Scheme.**—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland, and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (1,050 miles), the Darling (1,760 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,400,000 acre feet; Murrumbidgee River, 2,600,000 acre feet; Goulburn River, 2,250,000 acre feet; Darling River, 2,150,000 acre feet; and Ovens River, 1,200,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, dairy produce, wool, fat lambs, rice, vegetables, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia *see* previous issues of the Year Book. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) *River Murray Waters Agreement.* Under the Agreement construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation.

Under the original agreement the major works comprised two large storages—one on the Upper Murray above Albury (the Hume Dam) and the other at Lake Victoria in New South Wales near the South Australian border. In addition, provision was made for a number of weirs and locks along the Murray and Murrumbidgee Rivers. In 1934 the Agreement was varied to provide for the construction of a diversion weir at Yarrawonga (145 miles downstream from the Hume Dam), and the provision of barrages at the mouth of the River to prevent the entry of salt water. The amendment also limited the original proposal for 26 weirs and locks on the Murray and 9 on the Murrumbidgee to 13 on the Murray and 2 on the Murrumbidgee. At the same time it was agreed that the Hume Dam should be completed to a capacity of 1,250,000 acre feet with provision for later increase to 2,000,000. As a result of the amendment, continuous navigation is limited to a route of 600 miles, extending from the mouth to a point some 50 miles above Mildura. All works authorized under the amended Agreement (except the enlargement of the Hume Dam to 2,000,000 acre feet) have been carried out at a total cost of £12,000,000, of which approximately half represents the cost of the Hume Dam. Expenditure has been shared equally by the Commonwealth and the three States.

At a Ministerial Conference held in October, 1948, the four parties to the Agreement resolved that the enlargement of the Hume Reservoir to 2,000,000 acre feet and the doubling of the capacity of the inlet channel to Lake Victoria storage should be proceeded with immediately at a further estimated cost of £2,000,000. The resolutions of the Conference were subsequently incorporated in an amending agreement which was ratified by legislation by all parties. Under the terms of the amending agreement, the States of New South Wales and Victoria are required to report annually on the condition of the Hume Reservoir catchment and to take any special action recommended by the River Murray Commission in regard thereto. The River Murray Commission has also power to initiate proposals for the better conservation and regulation of the waters of the Murray, and may cause surveys and investigations concerning such proposals to be undertaken.

At the Conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, Conference decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 400,000 acre feet per annum would be added to the Murray River. Although a minimum storage of 250,000 acre feet would be necessary to regulate this additional water, Conference considered it would be unwise to limit to this capacity any storage which might be constructed, and felt that a storage of not less than 1,500,000 acre feet should be provided, in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

It was agreed, therefore, to ask the River Murray Commission to investigate the position and to determine the optimum size of the proposed storage it considered should be constructed and also its location. Investigations into the hydrographic aspects of the maximum practicable regulation of the waters of the Upper Murray, including diversions from the Snowy River, have been undertaken and the results are now under consideration by the Commission. Investigations into the hydro-electric potentialities are also in hand.

The total estimated quantity of water diverted in 1949–50 for irrigation and other purposes from the Murray and its tributaries (under the River Murray Agreement) was as follows (in acre feet):—New South Wales, 1,029,257; Victoria, 1,429,524; South Australia, 182,560; a total of 2,641,341 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Dam, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 106 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately 1 mile. Ultimate plans include provision for hydro-electric generation, and preliminary works associated with the construction of the power station are now in hand. Attention is also being given to the completion of the dam to its designed capacity of 2,000,000 acre feet and also to the enlargement of the inlet channel to Lake Victoria, necessary to permit greater storage of periodic flood flows of short duration.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction; and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage was completed in 1928 with a capacity of 551,700 acre feet and a surface area of 27,670 acres. The water released from Lake Victoria is used by the South Australian settlements.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 771,640 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 306,000 acre feet (now being increased to 2,750,000 acre feet); Waranga (Goulburn), 333,400 acre feet. No storages exist on the Murray in South Australia. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems.

3. **New South Wales–Queensland Border Rivers Agreement.**—The New South Wales–Queensland Border Rivers Agreement provides for the construction of certain works on parts of those portions of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation, water supply and irrigation in those States. The Agreement, which was ratified by the Parliaments of both States, was executed on 27th November, 1946 and came into effect on 1st July, 1947. However, the Dumaresq-Barwon Border Rivers Commission, which is charged with the duty of giving effect to the Agreement and the ratifying Acts, was not constituted until 1st May, 1948.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, has for some time past been carrying out investigations of alternate dam sites on the Dumaresq River near Mingoola Station Homestead which is approximately 39 miles from Tenterfield. Although well advanced, these investigations have not proceeded sufficiently far to enable the Border Rivers Commission to determine the most suitable site, the height of the dam wall or the capacity of the storage.

The Irrigation and Water Supply Commission of Queensland, which is the constructing authority for the new weirs and regulators, has carried out detailed investigations as to sites for such works. The Border Rivers Commission authorized construction of a weir on the Dumaresq River near Bonshaw, known as the Bonshaw Weir, and work has been in progress since June, 1949. Owing to abnormal flood conditions in the river and difficulty experienced in obtaining plant and materials, construction has not yet been completed.

The Border Rivers Commission has also authorized the construction of a further weir, to be known as the Cunningham Weir, at a site at mileage 42.25 in the Dumaresq River, but work has not been commenced owing to the difficulty in obtaining technical staff, plant and materials. Investigations are proceeding in regard to the remaining weirs and regulators. The existing Goondwindi and Mungindi Weirs have been taken over and are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the

areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry, is being examined.

4. Snowy Mountains Hydro-electric Scheme.*—(i) *General.* Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949 passed the Snowy Mountains Hydro-electric Power Act (No. 25 of 1949) setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme will be constructed in two parts, the first being known as the Snowy-Murray system, where the water is to be diverted by tunnel from a large dam across the Snowy River at Jindabyne, to the Swampy Plains River in the Murray Valley; and the second as the Snowy-Tumut system, the water in which will be diverted by tunnel from a dam on the Eucumbene River—a tributary of the Snowy—at Adaminaby, to the Tumut River, a tributary of the Murrumbidgee. The whole scheme will involve the construction of:—seven major dams (with a total storage capacity of approximately 7,000,000 acre feet); sixteen power stations; 86 miles of tunnels varying in diameter from 18 feet to 42 feet—one projected tunnel 30 miles long under the Alps will be one of the largest in the world; nearly 500 miles of racelines at high elevations.

The total expenditure is estimated at £225,000,000 including £100,000,000 for transmission lines. The scheme will form the greatest engineering and developmental work ever undertaken in Australia and one of the major engineering projects of the world.

(ii) *Snowy Mountains Hydro-electric Power Act* 1949. The Snowy Mountains Hydro-electric Authority is constituted by a Commissioner: he is assisted by two Associate Commissioners. The functions of the Authority are defined in the Act as follows:—(*a*) to generate electricity by means of hydro-electric works in the Snowy Mountains area and (*b*) to supply electricity so generated to the Commonwealth (i) for defence purposes and (ii) for consumption in the Australian Capital Territory. The general powers of the Authority as defined in the Act are as follows:—For the purpose of performing its functions the Authority shall have power to construct, maintain, operate, protect, manage and control works—(*a*) for the collection, diversion and storage of water in the Snowy Mountains Area; (*b*) for the generation of electricity in that area; (*c*) for the transmission of electricity generated by the Authority; and (*d*) works incidental or related to the construction, maintenance, operation, protection, management or control of any of the works specified above. The Act provides that the Authority may sell to a State, or to an authority of a State, electricity generated by the Authority which is not immediately required by the Commonwealth for defence purpose or for consumption in the Australian Capital Territory.

(iii) *The Authority's Objectives and Programme.* The two basic objectives are—(*a*) early production of electricity; and (*b*) early diversion of water inland.

(NOTE.—The following information was furnished in September, 1951.)

The Authority is expanding its day-labour forces to undertake types of work which are unsuitable for execution by contract, and, so as to reduce to a minimum the demand on local resources, is procuring from overseas most of its professional staff and skilled and unskilled labour and materials in local short supply. The Authority's personnel on 1st August, 1951, was as follows:—Professional staff, 260; other technical staff, 140; administrative and accountancy officers, 350; skilled and unskilled labour, 2,000.

---

* *See also* Chapter XXV.—Electric Power Generation and Distribution, pp. 1154–7.

The Department of Public Works, New South Wales, has undertaken the design and construction of Adaminaby Dam, and the Department of Main Roads, New South Wales and the Snowy Shire have undertaken the reconstruction of over 70 miles of existing roads. A large proportion of the building construction now in hand is being carried out by oversea contractors who import prefabricated sections of the buildings and the labour to erect them. A contract has been placed with an oversea firm for the design and construction of the complete Guthega Project on the Upper Snowy River. The contractor will bring his staff, labour, construction equipment and material from overseas. For some detail of the preliminary work of the Authority *see* previous issue of the Year Book.

(iv) *Development of Power.* It is anticipated that the first instalment of power, estimated at approximately 60,000 kW., will be available by 1954, and additional generating capacity is scheduled to become available gradually up to over 500,000 kW. by 1959.

B. STATES AND TERRITORIES.

§ 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections dealt generally with water conservation and irrigation in Australia and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water for the stock industries (mainly underground sources), and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

§ 2. New South Wales.

1. **General.**—(i) *Rainfall and History.* In issue No. 37 of this publication (p. 1110) information on the pattern of rainfall and the history of irrigation in New South Wales preceded the description of water conservation and use in that State, but it has now been omitted. Chapter II.—Physiography, of this issue, however, contains particulars of climatic conditions in each State.

(ii) *Administration.* Under the amendment of the Irrigation Act, made by the Conservation Authority of New South Wales Act, 1949, which came into force on 1st July, 1949, the Water Conservation and Irrigation Commission of New South Wales now consists of three members appointed by the Governor, one of whom is appointed as Chairman. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, and a farm water supply scheme.

Under the Water Act the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Crown. A system of licences also operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947 *see* page 1210 *ante*.

2. **Schemes Summarized.**—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam on the Lachlan, another tributary. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, and Flood Control and Irrigation Districts. There are five Irrigation Areas :—The Murrumbidgee Irrigation Areas consisting of 403,256 acres served with water through a channel system off-taking from the river at Berembed Weir ; the Coomealla Irrigation Area of 35,450 acres, served by pumping from the Murray ; the Curlwaa Irrigation Area of 10,243 acres, supplied from the Murray by pumping ; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee ; and the Tullakool Irrigation Area of 16,305 acres supplied from the Edward River at Stevens Weir. All these areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) hereinafter.

(ii) *Works.* The capacities of the main storages (in acre feet) are :—

Murray :—Half share of Hume Dam, weirs and locks to Wentworth (736,420); Stevens Weir, Edward River (7,165).

Murrumbidgee :—Burrinjuck Dam (771,640) ; Berembed Weir (10,000) ; Maude Weir (6,740) ; Redbank Weir (7,360).

Lachlan :—Wyangala Dam (303,900) ; Lake Cargelligo (29,435) ; Jemalong Weir (1,790) ; Lake Brewster (108,000)—works almost complete.

Water from the Hume Dam is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. A balance storage at Lake Cargelligo conserves water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wyldes Plains, serving an area of 225,196 acres. Wyangala is now producing hydro-electric power. Proposals for future development include provision of a head storage at Belubula River, the construction of a balance storage of 108,000 acre feet at Lake Brewster (now almost complete) and development by licensed diversions.

The approximate total length of channels (including main canals) in New South Wales is 2,630 miles. The approximate length of drains and escape channels is 930 miles, and approximate total length of pipe lines is 10 miles, making a grand total of 3,570 miles of channels and pipe lines, etc.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems and the areas under irrigated culture in New South Wales during 1950–51, the latter according to the nature of irrigated culture.

AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE : NEW SOUTH WALES, 1950-51.

(*a*) Includes grazing and cutting. (*b*) Perennial and annual self-seeding. Perennial amounted to 10,999 acres of which 6,000 acres were in the Berriquin Irrigation District. (*c*) Citrus and deciduous. Deciduous amounted to 8,131 acres, of which 7,703 acres were in the Murrumbidgee Irrigation Area. (*d*) Not available. (*e*) Includes 408 acres of dry area leases and land outside the Area supplied under special agreement. (*f*) Works incomplete. (*g*) Area irrigable; actual details of area irrigated are not available. (*h*) Excludes domestic and stock supplies for which particulars are not available. (*i*) Tobacco. (*j*) Incomplete. (*k*) Includes Flood Control Districts—*see* (*g*).

3. **Murrumbidgee Irrigation Areas.**—(i) *Description.* These areas comprise about a third of the State's irrigated acreage and in 1950–51 received 277,938 acre feet of the total water allocated for stock, domestic supply and irrigation (821,980 acre feet). They are served by the Burrinjuck Dam (capacity 771,640 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation is supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the flood irrigation districts of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-April irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate 840 miles and drainage channels 810 miles.

In addition, 380 miles of supply channel run through adjacent irrigation districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control. The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations with a sparse population.

Population was 12,000 in 1923, 15,000 in 1929 and 20,000 at the 1947 Census. The population of the Yanco district (with Leeton as the centre) was then 9,000; and the population of the Mirrool Area (with Griffith at the centre) was 11,000.

(ii) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas, also the distribution of electricity throughout those areas. Other local government services, including town water supply, are provided by Shire Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1951 was 342,379 acres, including 42,150 held for short lease grazing, agriculture, etc.

(iii) *Production.* Since the scheme was inaugurated in 1911 the value of total production has aggregated approximately £60,000,000. During the year ended 30th June, 1951, production was valued at £7,820,800.

Live-stock contributed £1,073,300 (comprising sheep, £871,300; cattle, £145,000; pigs, £57,000); wool, £2,028,000; and other products, £106,800.

Rice (£1,560,000), wheat and oats (£666,000) contributed a total of £2,226,000. Horticulture accounted for £1,649,000, comprising almonds, apricots, citrus, drying grapes, table grapes, wine grapes, figs and olives, peaches and nectarines, pears, plums and prunes, quinces and apples. The greatest individual contributions were made by grapes, £433,900, peaches and nectarines, £317,600 and citrus, £375,200.

The total value of all vegetables was £644,200, including root crops, £288,700, tomatoes, £145,700, peas and beans, £129,000, cabbages, cauliflowers, onions and other products. A total of £93,500 represented the value of miscellaneous products.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924. Since then, aggregate production from those areas and from the other localities mentioned hereunder has been approximately 1,022,000 tons, valued at about £13,700,000 to the grower. In 1950–51 total area sown was about 37,000 acres, including 26,000 acres on the Murrumbidgee Irrigation Areas and adjoining districts, 8,890 acres at Wakool and 2,256 acres at Tullakool. The total quantity of water delivered for the rice crops during the 1950–51 season was 215,616 acre feet. Water supplied for rice represents about two-thirds of the total delivered in the areas and a quarter of the water artificially supplied for irrigation in New South Wales. Before the war the rice crop was more than sufficient for Australian requirements. During and after the war the area planted was increased to the limit of water available. Rice has also been grown in the adjoining districts of Benerembah and Tabbita and in each of the years 1944, 1945 and 1946 some 4,000-odd acres were sown by the Water Conservation and Irrigation Commission at Wakool as a war-time project. Approval has been given for some rice to be grown by individual landholders within the Wakool Irrigation District during and since the 1948–49 season: this arrangement, however, is of a temporary nature only. On Tullakool Irrigation Area rice growing is expected to become a regular feature of primary development; 2,256 acres were sown during the 1950–51 season.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle 300,000 bushels of fruit per year (compared with 54,600 in 1927–28. Sales turnover of the Leeton cannery in each of the past five years was over £1,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. **Other Irrigation Areas.**—The Curlwaa, Coomealla, Hay and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,243 acres of which 2,327 acres at 30th June, 1951, comprised irrigated holdings. Production consists of dried vine fruits, deciduous fruits and fodder crops of a total estimated value, in 1950–51, of £198,546.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 35,450 acres of which 3,001 acres at 30th June, 1951 comprised irrigated holdings. Other land in the undeveloped part is leased for grazing. Production consists of vines and citrus of an estimated value, in 1950–51, of £335,583. Works are now under construction to provide 100 horticulture farms for ex-servicemen, 33 of whom were in occupation of their new holdings towards the end of 1951.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 1,114 acres are occupied as irrigated holdings. Annual production, valued in 1950–51 at £26,710, comprises dairy products, fat lambs, sheep, wool and fodders.

5. **Irrigation Districts.**—These Districts are set up under the Water Act for (*a*) domestic and stock water supply and (*b*) irrigation. They differ from water trusts as the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—*Murray River*—Wakool District (completed) 486,192 acres, Berriquin Provisional District (almost complete) 654,050 acres, Deniboota Provisional District (in progress) 303,064 acres, Denimein Provisional District (in progress) 156,830 acres, Jernargo Provisional District (now to be included within the Berriquin District) 130,850 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 88,651 acres; *Murrumbidgee River* (completed)—Benerembah District 111,586 acres, Tabbita District 5,980 acres, Wah Wah Provisional District 583,111 acres, Gumly Provisional District 329 acres; *Lachlan River* (completed)—Jemalong and Wyldes Plains District 225,196 acres.

Since the completion of the Hume Dam several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in ten or twelve, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1951, the total length of completed canal and channels was 774.4 miles, including Mulwala Canal 75.4 miles, Berrigan channel 22.2 miles, subsidiary channels 635.4 miles, escape channels 32.5 miles and cross drainage channels 8.9 miles. Off-take capacity of the Mulwala Canal is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be completed.

Wakool, with 361 miles of channel, contains 226 holdings and it is expected that the area developed by irrigation will comprise about one acre in 13 of the total area. The total area irrigated in 1950–51 was 43,666 acres and water supplied was 91,509 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and it is expected that the proportion of total area to be developed for irrigation will be considerably higher than in the case of Wakool. Total irrigated acreage was 126.797 at the 30th June, 1951. Sheep and wheat growing are main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1950–51 season for irrigation, etc. was 63,438 acre feet, and the area irrigated was 38,223 acres, including rice and other cereals, pastures and fodder crops. The estimated value of production, included in the amount (viz., £7,820,800) for the Murrumbidgee Irrigation Area, was £1,104,300 including wool, live-stock, wheat and oats and rice.

For the same season 7,665 acre feet of water was supplied from the Lachlan River to irrigate a total area of 8,594 acres within the Jemalong and Wyldes Plains Districts. The total estimated value of production was £2,000,000 including wool and lambs £1,800,000, calves £68,000, wheat, £70,000 and lucerne, £29,000.

6. **Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.**—The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted; the area in acres of each district is shown in parenthesis :—*Murray River*—Tuppal Creek (78,080), Bullatele Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,985), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanko, Colombo and Billabong Creeks (1,001,210); *Lachlan River*—Torriganny, Muggabah and Merrimajeel Creeks (170,240), Condobolin West Weir (4,480), Marrowie Creek (295,040), Ulonga (71,655), Micabil Weir (11,500); *Miscellaneous*—Algudgerie Creek (9,760), Nidgery Weir (46,880). Great Anabranch of Darling River (995,200), Collarenebri town water supply (88)—making in all a total area of 2,945,068 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parenthesis) :—*Hunter River*—Blairmore (315); *Murray River*—Bama (3,446), Goodnight (1,167), Bungunyah–Koraleigh (1,804), Glenview (661), Bringan (4,933); *Darling River*—Pomona (1,241)—making in all a total area of 13,567 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres) was constituted in 1945, being the first of its kind. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 44 holdings. Another district (Medgun near Moree in the North-West) is in operation. Its total area is 272,800 acres, and a levee is being constructed to extend flood irrigation to an area larger than that commanded by the original works.

7. **River and Lake, and Farm Water Supplies.**—During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation has increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and financial assistance are made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. **Underground Water.**—Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the north and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and

twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5,000,000 acres and water is distributed through 3,378 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1951 was 946 and the estimated total daily flow from 538 flowing bores was 62,156,177 gallons. The estimated flow in 1914-15 was 99,350,000 gallons per day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely, 1,115,360 gallons per day. Of the total number of bores sunk, 222 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Since 1912 the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1951, the total constructed by the Commission's plants was 4,203 and their average depth was 297 feet.

9. **Future Programme.**—The programme of post-war development already in hand includes the provision of eighteen dams and storages, eight diversion weirs and flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter and Burrendong on the Macquarie, while legislation has been passed authorizing the construction of a flood control dam at Warkworth in the Hunter Valley and a conserving dam at Blowering on the Tumut River. The Menindee Lakes storage project—part of the scheme for conserving the waters of the Darling River—is well advanced. A balance storage at Lake Brewster on the Lachlan River is almost complete and is in operation. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. Total estimated capacity of all proposed new storages is 5,500,000 acre feet.

10. **Hydro-electricity.***—The largest hydro-electric installation in New South Wales is that located at Burrinjuck Dam on the Murrumbidgee River. It consists of two power stations aggregating 25,800 kW., the first of which commenced operation in 1929. High tension transmission lines connect these plants with the major inter-connected system of New South Wales at Goulburn and Canberra. The output of the plant is dependent on the release of waters for irrigation purposes.

The Nymboida hydro-electric scheme was opened in 1924 with an initial capacity of 800 kW. to supply Grafton, South Grafton and Ulmarra over a transmission line of 31 miles. The Nymboida power station is situated on a tributary of the Clarence River in northern New South Wales and now has a capacity of 5,600 kW. The station now operates in conjunction with a diesel station at Lismore and an associated transmission network to provide supply throughout the north-eastern area from Kyogle in the north to Kempsey in the south, a distance of some 200 miles north and south. In 1946 the system was interconnected with the Department of Railways system based on Newcastle. The Nymboida system is controlled by the Clarence River County Council.

The Bega Valley scheme was opened in 1944 to supply an area of 2,700 square miles extending from Bermagui to Eden. The power is derived from the waters of Rutherford Creek, a tributary of the Bemboka River, and the capacity of the present installation is 500 kW. Two 750 kW. generating units are to be installed in conjunction with a further development on George's Creek, another tributary of the same river, and a comprehensive programme of rural electrification has been initiated. This system is controlled by the Bega Valley County Council.

Wyangala Dam power station was brought into operation in 1947. This station, with an installed capacity of 7,200 kW., utilizes the irrigation waters released from the dam to generate electricity, and in addition is designed to provide an essential stabilizing feature in the transmission system between Burrinjuck and Lithgow, to which the station is inter-connected. The output of the station at any time is dependent on the release of water for irrigation purposes.

---

* *See also* Chapter XXV.—Electric Power Generation and Distribution, pp. 1160–1 and 1164.

Major projects which are being investigated by the New South Wales Government include the hydro-electric development of the Clarence River at the Gorge and other locations, the hydro-electric development of the Shoalhaven River and the hydro-electric development of the Styx River, a tributary of the Macleay River.

The Clarence Gorge scheme, situated 140 miles from Brisbane and 240 miles from Newcastle, embraces not only hydro-electric development, but also may offer considerable benefits by reason of the flood mitigation effects of a large dam built at this location. Investigations have shown that a dam 245 feet high would impound 4,500,000 acre feet of water and would enable the production of more than 100,000 kW. of power. It is expected that eventually some 400,000 kW. of power might be obtained from the Clarence River and its tributaries.

The Commonwealth and States agreed in 1945 on hydro-electric development at the Hume Dam on the Murray River near Albury. Plans are already well advanced for the installation at this site of two 25,000 kW. water turbines and generators.

Investigations are also taking place into the possibilities of developing hydro-electric power in association with the Warragamba Dam which is being built for water supply purposes for the Sydney metropolitan area, at Keepit Dam which is being constructed for irrigation purposes on the Namoi River near Gunnedah, and at the Burrendong Dam which is to be constructed for irrigation purposes on the Macquarie River near Dubbo.

§ 3. Victoria.

1. **General.**—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37, and Chapter II.—Physiography, of this issue, contains information on climatic conditions in each State.

(ii) *Administration.* Although practical steps were taken to organize Victoria's water resources before the turn of the century, the passage of the Water Act in 1905 marked the commencement of sustained progress. The State Rivers and Water Supply Commission established by this Act is vested with the control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted Waterworks Trusts or Local Governing Bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and Local Governing Bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. **Systems Summarized.**—(i) *Works.* Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 1,975,780 acre feet (including Victoria's share of the Hume Dam). By means of channels, bores, etc. one-fourth of the State is artificially supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 110,000 acres in 1906 to 716,051 in 1950–51, and irrigation channels command 2,086,565 acres.

The Commission controls 35 large reservoirs and 238 subsidiary storages. The capacities of the storages in acre feet within the various systems at 30th June, 1951 were as follows :—

> *Goulburn System* :—Eildon Reservoir 306,000 ; Goulburn Weir, 20,700 ; Waranga Basin, 333,400 ; *Murray–Loddon System* :—Half share of River Murray Commission storages including Hume, Yarrawonga, Torrumbarry, Euston, Mildura and Wentworth, 736,420 ; Kow Swamp, Laanecoorie, Kerang-North-West Lakes, Lake Boga and Lake Cullulleraine, 148,210 ; total 884,630 ; *Wimmera–Mallee* :—206,860 ; *Maffra–Sale* :—106,040 ; *Coliban*:—62,730 ; *Werribee*:—34,900 ; *Bellarine Peninsula* :—10,850 ; *Mornington Peninsula* :—5,800 ; *Otway* :—1,080 ; *Miscellaneous* :—2,790 ; *Total* :—1,975,780.

Irrigation channels extend 4,708 miles, domestic and stock channels, 8,514 miles and drainage and flood protection channels, 2,083 miles, a total of 15,305 miles. In addition, the Commission controls 1,180 miles of piping, comprising 260 miles of mains and 920 miles of reticulation. Farm holdings served with water total 40,948. Urban districts supplied by the Commission's channels and pipelines have a population of 152,320 persons in 130 towns, and a further 136 towns with a total population of 333,980 persons are supplied by Trusts under the supervision of the Commission.

To 30th June, 1951, the total capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £47,815,000, one-half of which was in respect of irrigation.

The total capital liability in respect of works under the control of the Commission at 30th June, 1951 was £40,534,000, of which £37,817,000 was borne by the State and £2,717,000 by water-users. Waterworks Trusts and local governing bodies had a total capital liability of £5,592,000 at 30th June, 1951, of which £2,676,000 was borne by the State and £2,916,000 by the Authorities.

(ii) *Extent of Systems and Nature of Irrigated Culture.* Although the area irrigated is less than 2 per cent. of the State, it yields approximately 11 per cent. of Victoria's rural production. The following table shows the areas of the various irrigation districts and the areas under irrigated culture during 1950–51 :—

AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE : VICTORIA, 1950–51.

(Acres.)

System.	Total Area.	Area under Irrigated Culture.									
		Cereals.	Lucerne.	Other Fodder Crops.	Pastures.		Vineyards.	Orchards.	Market Gardens.	Fallow and Miscellaneous.	Total.

(a) Area of Campaspe District only. (b) Area of First Mildura Trust District only.

(iii) *Production.* The influence of irrigation on Victorian production is illustrated by the following estimates, prepared by the Commission, of the value of production from irrigated areas :—1905–6, £500,000 ; 1925–26, £5,000,000 ; 1948–49, £17,900,000 ; 1949–50, £22,500,000. Detailed classification of the 1949–50 irrigation production estimates is as follows :—Live-stock—Dairying, £4,700,000 ; Beef and veal meats, etc., £1,140,000 ; Wool, lamb and mutton, £4,300,000 ; Pigmeats, £1,150,000 ; Poultry and eggs, £1,200,000 ; total Live-stock, £12,490,000. Horticulture—Vine fruits, £3,840,000 ; Citrus fruits, £640,000 ; Other fruits, £1,580,000 ; total Horticulture, £6,060,000. Vegetables and other primary products, £3,950,000.

3. **Goulburn System.**—The Eildon and Waranga Reservoirs, on the Goulburn River, supply half the irrigated acreage, and form the largest system in Victoria. Annual rainfall in the valley is only 18 inches and the annual discharge has varied from 567,000 acre feet in a drought year to 6,202,171 acre feet in a particularly wet season. Total regulated supply is 960,100 acre feet which will be practically doubled on completion of the Eildon Reservoir Enlargement programme.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District.

Two main outlet channels issue from the Waranga Reservoir, one serving the Western part of the Rodney district; while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 202,400 acres east of the Goulburn; 608,350 acres between the Goulburn and Campaspe; 445,100 acres between the Campaspe and Loddon Rivers; and 79,900 acres west of the Loddon—a total of 1,335,750 acres. Main channels of the system have a total length of 213 miles and in addition there are 2,344 miles of distributaries, a total of 2,557 miles for the whole system.

The development of the fruit-canning industries in the Goulburn Valley is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooroopna canneries, together with that of city canneries—from Goulburn Valley fruit—amounts to an aggregate which represents 70 per cent. of Australia's total production of canned peaches, pears and apricots. Other main products of the Goulburn districts are fat lambs, fodders, wine and table grapes and dairy products.

4. **Murray River System.**—The waters of the River Murray are used to supply an area of more than 500,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, excepting Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, supplied from Yarrawonga, will serve 280,000 acres when completed. At 30th June, 1950, 450 miles of main and distributary channels were completed and supplied 190,000 acres west of Yarrawonga.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 415,500 acres with 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year.

Red Cliffs Irrigation District comprises 31,000 acres. At present 12,000 acres are irrigated. This ranks first in importance among Victoria's pumping schemes. A system of main and distributary channels commands every holding in the district. The district, originally for soldier settlement, has been subdivided into 700 blocks. The area planted is composed mainly of vines and citrus. The first harvest (1924) returned 570 tons of dried fruit in addition to table grapes. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 10,520 acres and contains 436 holdings averaging 24 acres each. A reticulated pipe system supplies the town of Merbein, and the pumps also supply the Yelta Waterworks District of 51,200 acres.

Nyah Irrigation District is supplied with water diverted from the Murray by a high-lift pumping plant, serving 3,840 acres in 220 holdings devoted mainly to orchards and vineyards.

5. **First Mildura Trust District.**—The First Mildura Irrigation Trust—which is the only Irrigation Trust operating in Victoria—controls an area of 44,000 acres, of which 13,000 acres are irrigated. This area irrigated includes 12,000 acres of vines, 900 acres of citrus trees and small areas of apricots, peaches, prunes, figs, almonds, olives, lucerne and other fodders. It produces approximately 15,000 tons of raisins, currants and sultanas each year. The irrigation water is pumped from the River Murray and distributed through 168 miles of channels.

6. **Wimmera-Mallee System.**—The Wimmera-Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from the Grampians storages with a capacity of 206,860 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 11,000 square miles or nearly one-eighth of the State, which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 75,000 acre feet of water is distributed through 6,600 miles of open channel and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. At least 16,000 tanks are served. In addition, forty-five towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Horsham and Murtoa, near the main storages, 3,000 acres are irrigated for soft fruits and pastures, but the limited water resources at present available will not permit any extension of irrigation.

The northern part of the system is affected by sand drifting into the channels, particularly in years of dry weather conditions, and the Commission is involved in substantial annual expenditures to remove this sand drift before the annual water distribution can be made. It is considered that this expenditure could be reduced by better farming methods, and efforts in this direction such as the sowing of rye-corn. and including the use of compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country, have resulted in marked savings in maintenance costs.

7. **Farm Water Supplies.**—The Rural Finance Corporation Act 1949 is designed, *inter alia*, to give farmers an opportunity of establishing or improving domestic and stock water supplies on their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams.

A Farm Water Supplies Branch has been set up by the State Rivers and Water Supply Commission to advise farmers on farm water supply matters even if finance is not required. Comprehensive booklets entitled "Farm Water Supplies for Domestic and Stock Purposes" and "Farm Irrigation and Drainage" prepared by this Branch have been widely circulated to landholders.

8. **Underground Resources.**—A comprehensive survey of the underground water resources of Victoria has been commenced. It will compile records of bores in the Mallee, Wimmera and Glenelg regions, and provide a detailed description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and at Bacchus Marsh where a number of observation bores have been installed.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies in different parts of the basin. Over 300 bores exist in Victoria, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

9. **Future Programme.**—Victoria has now reached the stage when the demand for water is far greater than the supply, and a programme which envisages an expenditure of £25,000,000 has been launched. This includes the Rocklands storage on the Glenelg River (272,000 acre feet) and the Cairn-Curran Reservoir on the Loddon (120,000 acre feet). Work has been commenced on the enlargement of the Eildon Reservoir on the Goulburn from 306,000 to 2,750,000 acre feet by the building of a large earthen embankment 260 feet high and 3,300 feet long at an estimated cost of £12,000,000. This would be Australia's greatest storage.

10. **Hydro-electricity.***—The Kiewa project in the Australian Alps is one of the largest hydro-electric developments in Australia. The authority responsible for its construction and operation is the State Electricity Commission of Victoria. The Kiewa River is a tributary of the Murray. The Victorian State Parliament in July, 1948, authorized the enlarged Kiewa project comprising a series of power stations with a total installed capacity of 289,000 kW. and an average output over wet and dry years of 1,000 million kWh. of electricity per annum.

---

* *See also* Chapter XXV.—Electric Power Generation and Distribution, pp. 1168 and 1180.

Work is now in progress on this major undertaking of the State Electricity Commission. Electricity will be transmitted over a 220,000 volt power line 152 miles long to terminal stations in Melbourne for distribution throughout the Commission's supply network.

The first of the Kiewa power stations has been operating since 1944. Its installed capacity is 26,000 kW. and it is contributing annually between 40 and 50 million kWh. of electricity to the State system. The remaining power stations to be built will come into operation as and when they are completed.

The Kiewa hydro-electric undertaking is one of the principal developments in the State Electricity Commission's present construction programme. It will be complementary to the Commission's brown coal burning power station at Yallourn, which at present generates approximately 43 per cent. of all the electricity produced in Victoria and is now being extended to double, and later treble, its present capacity and output.

Further utilization is to be made by the State Electricity Commission of irrigation waters from the Goulburn River by the erection of a very much larger power station of 120,000 kW. capacity, which will operate on the increased flow of water from the new Eildon Reservoir now being constructed by the State Rivers and Water Supply Commission of Victoria (*see* above). Orders have been placed for the two 60,000 kW. generators which are to be installed.

Irrigation waters from the existing Eildon Reservoir are already utilized to operate the 13,500 kW. Sugarloaf power station, which is the largest power station in the State Electricity Commission's Sugarloaf-Rubicon group of five hydro-electric power stations. With a total installed capacity of 26,400 kW., this group has been in operation since 1928, and at present contributes on the average between 130 and 150 million kWh. of electricity per annum to the State system. Power is generated at Sugarloaf during the summer months when water is being released for irrigation, and at other times of the year when storage is full. The four associated mountain stream stations on the Rubicon and Royston Rivers generate maximum power in the winter and spring, when water flow is at its greatest.

Irrigation water will also be utilized at the Hume Weir where a new power station will serve both Victoria and New South Wales. It is being erected by the New South Wales Public Works Department to designs and specifications prepared by the State Electricity Commission of Victoria. Initially, the installed capacity of the power station will be 50,000 kW. Output of electricity, averaging about 200 million kWh a year, will be shared equally by the two States, each contributing its quota of the annual cost. Victoria's share of the electricity generated will be fed into the State system.

§ 4. Queensland.

1. **General.**—(i) *Rainfall.* Particulars of the rainfall pattern of Queensland were given in Official Year Book No. 37, page 1122, and Chapter II.—Physiography, of this issue, contains information on climatic conditions in each State.

(ii) *Administration.* The first comprehensive Water Act in Queensland was the Water Act of 1926 which vested in the Crown the right to the use and flow of all streams, lakes, watercourses, etc., which flowed through or were within the boundaries of two or more occupiers, and also vested in the Commissioner of Irrigation and Water Supply the bed and banks of all boundary streams. The Irrigation Act of 1922 provided for the establishment of Irrigation Areas in approved localities. From 1922 to 1931 the Commissioner of Irrigation and Water Supply administered the Acts, but in 1931 the Land Administration Board was appointed to act as the Commissioner and continued to act until the Irrigation and Water Supply Commission Act of 1946 was proclaimed in 1947. Under this Act the Corporation of the Commissioner of Irrigation and Water Supply was reconstituted. The Commissioner is responsible for carrying out the provisions of the Irrigation Acts 1922 to 1949 and the Water Acts 1926 to 1942. He is also responsible for investigations into, and the planned development of, water resources of Queensland under the Land and Water Resources Development Acts 1943 to 1946. For particulars of the New South Wales–Queensland Border Rivers Agreement ratified by Acts of both States in 1947 *see* page 1210.

(iii) *Water Utilization in Queensland.* Queensland's predominant interest in the past in the field of water conservation has been the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half the Commonwealth's cattle, a seventh of the sheep and a third of the horses. More than half the State's rural production is derived from cattle and sheep. The cattle are distributed throughout the State, but most thickly between the east coast and the 20-inch average annual isohyet. Sheep are mainly pastured on the inland areas west of this isohyet, whilst dairying is concentrated in the south-eastern quarter of the State. In addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meatworks and markets has lately received much attention.

The State's agricultural crops differ from those of other States in that a large proportion is tropical. Sugarcane is the greatest individual crop, representing in value some 40 per cent. of total agricultural production. Approximately 12 per cent. of the sugarcane acreage is irrigated and represents some 54 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase annual production of this crop greatly by means of development under irrigation.

2. **Great Artesian Basin.**—(i) *General.* Western Queensland beyond the 22 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores, and where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, but excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 350,000 square miles of the total State area of 670,500 square miles. Statistics of bores and flow as at 31st December, 1950, are :—Artesian bores drilled, 2,205 ; artesian bores still flowing, 1,400 ; total depth drilled, 3,249,597 feet ; deepest bore, 7,009 feet ; total estimated flow, 217,575,000 gallons per day. Artesian pressure and flow are both steadily diminishing despite new bores drilled. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are :—pressure, 1–2 feet/head, total flow 1½–2 per cent. per annum.

There are some 19,000 miles of bore drains and the greatest length served by one bore is 121 miles. This method of watering is somewhat wasteful, owing to evaporation and soakage, but it is the most economical in first cost. Not more than 5 per cent. of the water is actually used by stock, and present policy is to restrict working flows to serve limited drain systems of smaller dimensions and reduce evaporation and soakage losses. The average loss per mile of drain is 10,000 gallons per day ; with smaller drains this is reduced to 7,000 gallons per day. Pipe lines are very rarely used for distribution owing to high initial cost.

Although artesian beds underlie such a large area of the State, only 87,500 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain, for distribution of water by drains. High costs have restricted deep drilling. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

In 1939, a special Committee was appointed to inquire into the geology and hydrology of the Basin and economic use of artesian supplies. A first progress report has been issued by this Committee and its final report is now being prepared. It has been established that the rate of diminution of flow is declining.

In the past, many excavated tanks failed in dry seasons, because of insufficient original depth and capacity, and subsequent silting. Mechanical plant is now almost exclusively in use and much larger tanks are being excavated, even in areas where artesian water may be obtained at a reasonable depth. New tanks with capacities of 20,000 cubic yards and depths of 25 feet are not uncommon. Two tanks with capacities of 65,000 cubic yards each, and depths of 42 feet and 40 feet have recently been completed for watering stock in an area where a good artesian flow may be obtained at a depth less than 2,000 feet.

(ii) *Bore Water Areas.* The Constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from existing bores resumed with the land for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1950–51 are :—Areas constituted, 65 ; administered by Commissioner, 53 ; administered by Local Boards, 12 ; area benefited, 4,995,931 acres ; average rate per acre, 1.12d ; number of flowing bores, 59 ; total flow, 28,441,000 gallons per day ; drains served, 2,881 miles.

3. **Stock Route Watering.**—During 1935, a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944 a co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands, and with an officer of that Department as superintendent, whose duty was, *inter alia*, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes throughout the State. Natural waters are being supplemented by artificial facilities at intervals of about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1951, 228 facilities had been completed and at 30th June, 1951, 240 facilities were under construction or investigation.

4. **Irrigation.**—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production is receiving growing attention in Queensland. However, with the exception of the Theodore Irrigation Area, orthodox projects served by a channel system have not so far been developed, though construction of the Clare Irrigation Area on the Burdekin River is well advanced and investigations of several schemes are being carried out. Because of the large variations in both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is performed by private farmers operating under licence, and obtaining water by pumping from streams or from natural underground storages. Where available, electricity is the most popular source of power for pumping ; the principal areas supplied with electricity comprise the Burdekin Delta and the Lockyer Valley.

Furrow irrigation is used for cotton, sugar cane, and most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Experimental use of the border check method in the irrigation of pasture and fodder crops during the last three years has proved successful and may supersede other methods.

The following table shows for each division of the State the number of irrigators and the areas under irrigated culture for the year ended 31st March, 1951.

AREA OF LAND UNDER IRRIGATED CULTURE : QUEENSLAND, 1950–51.(a)

Division.	No. of Irrigators.	Area under Irrigated Culture (Acres).							
		Vegetables.	Fruit.	Sugar Cane.	Tobacco.	Cotton.	Other Crops.	Pastures.	Total.
Southern Queensland ..	2,564	14,179	1,686	7,150	998	9	10,451	2,713	37,186
Central Queensland ..	208	575	120	..	..	199	1,320	334	2,548
Northern Queensland ..	1,120	2,719	472	37,958	1,971	11	209	76	43,416
Total	3,892	17,473	2,278	45,108	2,969	219	11,980	3,123	83,150

(a) Year ended 31st March, 1951.

The growth of irrigation is illustrated by the following figures for the total area of irrigated land :—1906, 9,922 acres ; 1916, 10,886 acres ; 1926, 24,250 acres ; 1936–37, 44,509 acres ; 1940–41, 60,961 acres ; 1950–51, 83,150 acres.

The pattern of irrigation in Queensland is unlike that in southern States ; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn " irrigation season " of the temperate southern irrigated lands is not applicable, and that round the year irrigation is required throughout most of the State, the timing and duration of the summer " wet " season being too variable to enable a definite non-irrigation season to be fixed.

(ii) *Lockyer Valley.* West of Brisbane and within 50 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The Valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean rainfall of 30 inches the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 500 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the City Electric Light Company which serves the Valley. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. To study local problems, an Irrigation Research Station was established at Gatton in 1946 by the Bureau of Investigation.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) *Burdekin River.* The Burdekin River, which joins the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disabilities. On the other hand, the fertile Delta Area with its underground water supplies at shallow depth has contributed greatly to the agricultural prosperity of North Queensland. The projected irrigation, hydro-electric and flood mitigation scheme, together with the high level railway bridge at present under construction, will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production. Present development is confined to the Delta Area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently, sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies in the dry periods.

Sugar is the main irrigated crop, though citrus, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill–Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station now controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being adopted in place of the individual internal combustion engines previously used. At both Home Hill and Ayr water for domestic supply is raised by a windmill on each property.

In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An Irrigation Research Station has recently been established to study the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested Government Departments under the general supervision of the Burdekin River Authority. The development envisaged would include a dam storing some 4,000,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobacco-growing, dairying and cattle fattening, with sorghum, sunflowers, peanuts, cotton and sugar cane as other possible forms of production.

The recently constituted Clare Irrigation Area is at present being developed for tobacco production. Located from 25 to 37 miles upstream from the mouth of the Burdekin, this area comprises some 6,000 acres which will obtain irrigation water from central pumping stations drawing initially on the unregulated river flow of the Burdekin. This development is a first step in the major Burdekin scheme.

(iv) *Dawson Valley.* The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy some 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed the Dawson Valley. A scheme for the development of the Dawson Valley under irrigation was inaugurated in 1923, providing for the irrigation of some 70,000 acres. Storage for the scheme was to be provided by a dam at Nathan Gorge of some 2,000,000 acre feet capacity. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of some 3,500 acres supplied from a central pumping station. An additional weir has since been built, giving a total storage of 11,000 acre feet. Pasture, vegetables, cotton, fruit and dairying products are the principal produce. The cheese factory established at Theodore has been closed, but there is a ready market for all cream produced, and with the increase in dairying based on irrigated lucerne and pasture, the future of the area appears assured. Attention has recently been given to the former plans for the Valley and earlier work is now under close scrutiny as a prelude to future development.

(v) *Walsh-Barron Tobacco Lands.* The Walsh and Barron Rivers rise in the Great Dividing Range some 50 to 60 miles south-east of Cairns. Sandy soils suitable for tobacco are to be found in the valleys of these rivers in the neighbourhood of Mareeba and Dimbulah. Surveys indicate that 40,000 acres of land suitable for irrigated agriculture are available, including 32,000 suitable for tobacco. At present some 800 acres of high grade tobacco are grown annually, together with small areas of vegetables and fruit. Six weirs of combined capacity of 1,800 acre feet are being provided on a number of streams to store water for irrigation. Full development of the area is dependent on the provision of a major dam at Nullinga on the Walsh River, and possibly at Tinaroo Falls on the Barron River, and the construction of these dams is being investigated. Tobacco would be the basic crop, whilst peanuts, vegetables, broom-millet, maize, citrus, cotton, and giant cowpeas may prove suitable subsidiary crops. Should pastures be established as a rotational sowing for tobacco, cattle fattening might also be introduced.

(vi) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project *see* page 1210.

5. **Bureau of Investigation.**—Under the Land and Water Resources Development Act of 1943 a Bureau of Investigation has been set up for the co-ordinated investigation of land and water resources development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture, under the chairmanship of the Co-ordinator-General of Public Works. Among notable work carried out by the Bureau of Investigation since its inception has been the trial planting of irrigated pastures with a view to developing mixtures suited to the special conditions of each part of the State. Other valuable work has included the mapping of the ultimate land uses of the State, and the detailed investigation of the agricultural and pastoral potentialities of many regions.

6. **Channel Country.**—Extensive investigations of the Channel Country fed by inland rivers in the south-western corner of the State have been made by the Bureau of Investigation. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage, but that improved transport facilities are essential.

At 30th June, 1951, 30 watering facilities, at an estimated cost of approximately £150,000, had been proposed under a Federal-State agreement for stock routes through, and in the approaches to, the Channel Country. Two had been completed, progress in general having been delayed by wet weather and lack of contractors for bore drilling.

7. **Bradfield Scheme.**—Detailed discussion of the scheme proposed by the late Dr. J. J. C. Bradfield for overcoming natural climatic disabilities of the Lake Eyre Basin (South Australia) and Western Queensland will be found on page 1128 of Official Year Book No. 37.

8. **Hydro-electricity.***—Behind the coastal plain of the Cairns–Ingham area is an extensive plateau, the elevation ranging from 2,000 to 3,000 feet, although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the old divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can in most cases be provided, is essential to control the very variable flow.

The Barron Falls Scheme, 14 miles north-west of Cairns, came into operation in 1935. The installed plant operates under a head of 410 feet and comprises three 2,000 h.p. turbines each connected to a 1,320 kW. generator. Average rainfall varies from 80 to 150 inches along the ranges to less than 35 inches in the western portion of the catchment. There is extreme variation from year to year, resulting in great fluctuation of stream flow which, at Kuranda, has varied from a maximum of 117,000 cusecs in 1911 to a minimum of 30 in 1915. Storage to regulate the flow is possible but has not yet been provided. During periods of low flow the supply of electricity is supplemented by fuel plants at Cairns, Atherton, and Innisfail. Power is distributed over 22,000 volt transmission lines serving the tableland and extending southward along the coast to Tully.

A small hydro-electric scheme on the Mossman River, 5 miles from Mossman, North Queensland, comprises two 120 h.p. turbines operating under a head of 200 feet.

---

* *See also* Chapter XXV.—Electric Power Generation and Distribution, pp. 1184–5.

A hydro-electric power scheme at Tully Falls is to be constructed. Water controlled by Koombooloomba Dam to be built on the upper Tully River will be diverted, a short distance above Tully Falls, through a tunnel and steel penstocks to pelton-driven generators under a head of 1,485 feet. Ultimate installation will be four 18,000 kW. sets, two of which will be installed initially. Future automatic power plants upstream and downstream from Tully Falls will consist of two 7,500 kW. sets under 405 feet head and one 5,400 kW. set under 230 feet head. The combined peak load for the three plants will be 69,000 kW.

Other northern schemes which have been investigated include Freshwater Creek (3,900 kW.); North Johnstone–Russell Rivers (32,000 kW.); Beatrice–North Johnstone Rivers (9,000 kW.); South Johnstone River (25,000 kW.): extension of Barron Falls scheme (22,000 kW.); Herbert River (90,000 kW.). The total potential of the plateau region is therefore about 250,000 kW. at 50 per cent. load factor.

A power plant immediately below the Burdekin Falls Dam of the proposed Burdekin River Irrigation Scheme will operate under an average head of 225 feet. The output of firm power will depend upon the varying demand for water for irrigation, but it is expected to average about 50,000 kW.

South of the Burdekin River no appreciable hydro-electric development is practicable. A plant of 3,200 kW. capacity is being installed to utilize the outflow from Somerset Dam on the Stanley River a few miles above its confluence with the Brisbane River.

§ 5. South Australia.

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia were given on page 1129 of Official Year Book No. 37, and Chapter II.—Physiography, of this issue, contains information on the climatic conditions in each State.

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to "divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under or on any land entered upon for the purpose of supplying water to the inhabitants of any water district".

(iii) *Methods of Catchment and Conservation.* Early steps were taken to vest all running streams, springs and "soaks" in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and "rainsheds" have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,263,752. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.

2. **Irrigation.**—In South Australia irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey Brothers in 1887 whereby 250,000 acres at Renmark were made available for irrigation settlement. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers an area of 31,007 acres of irrigable high land, together with 9,381 acres of reclaimed swamp and 167,042 acres of non-irrigable land in the irrigation areas and 34,147 acres of land temporarily leased and reserved for commonage or other purposes, amounting in all to 241,577 acres. In addition, the Renmark Irrigation Trust controls 20,557 acres, of which more than 8,500 are irrigated. Water used for irrigation purposes in 1950–51 in the high land

irrigation areas controlled by the Department of Lands was approximately 90,000 acre feet, in addition to which approximately 60,000 acre feet were used on reclaimed areas by gravitational watering. In the Renmark area water used for irrigation in 1950–51 was 26,300 acre feet. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexias, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes and citrus fruits. Before irrigation, these semi-arid lands were of little productive value. The following tables show the acreage devoted to various crops in the government controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government controlled reclaimed swamp districts near the mouth of the Murray which are devoted to dairying.

IRRIGATION AREAS ADMINISTERED BY DEPARTMENT OF LANDS AND RENMARK IRRIGATION TRUST, SOUTH AUSTRALIA: AREA OF LAND UNDER IRRIGATED CULTURE, 1950–51.

(Acres.)

Area.	Vine Fruits.	Tree Fruits.	Citrus Fruits.	Lucerne.	Other Fodders.	Total.

Jervois	..	..	..	38	3,613	3,651
Total ..	..	..	..	160	8,685	8,845

The expenditure incurred by the Government to the 30th June, 1951 in purchase of land, reclamation of swamps, preparation of irrigable lands for fruit growing, and purchase of pumping plants for drainage and water supply is approximately £4,928,000. Further irrigation development is being undertaken as a part of the Commonwealth-wide War Service Land Settlement Scheme. South Australia's share of a total of 32,000 acres of horticultural plantings under the Scheme is 10,000 acres, comprising citrus 3,500 acres, vines 5,300 acres, and deciduous tree fruits 1,200 acres. Schemes already approved and under construction will absorb between 7,000 and 8,000 acres, and further areas are being selected to take up the balance. Holdings will be provided for about 380 settlers, and annual production from the 10,000 acres of plantings mentioned is estimated at :—Citrus, 1,000,000 cases ; deciduous tree fruits—dried, 800 tons, fresh, 2,300 tons ; dried vine fruits, 5,600 tons ; wine grapes, 12,800 tons. On present-day prices, the value of this production would approximate £1,500,000.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 80 miles of channel for the reticulation of 8,715 acres.

3. **Country Water Supply Schemes.**—(i) *Summary.* Water conservation and distribution works in South Australia have cost £24,458,000 (exclusive of river control and irrigation works on the River Murray which are dealt with above). A summary of statistical information concerning country supplies in 1949–50 follows :—Length of water mains, 5,489 miles ; capacity of storages, 9,500 million gallons ; approximate population served, 237,000 ; area served, approximately 4,000,000 acres ; and total capital cost, £17,410,000.

Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges, and agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system. Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District, but demands have increased to such an extent in recent years that further sources of supply are necessary, and with this end in view a water-bearing area known as the Uley-Wanilla Basin has been developed, and water from it is now being used in the Tod River system.

(ii) *Morgan-Whyalla Water Supply Scheme.* For particulars of the construction and works of the 223-mile pipe line bringing water from the Murray at Morgan to Whyalla on Spencer Gulf *see* Official Year Book No. 37, page 1132. The Morgan–Whyalla Water Supply Scheme forms part of the South Australian Country Water Supply system referred to above.

4. **Underground Water.**—The occupied portion of South Australia is, on the whole, well endowed with underground water. The extent of the several artesian basins is tolerably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put. Apart from numerous boreholes and wells tapping underground water for farms, stations and towns, two notable basins are being developed on Eyre Peninsula—one at Flinders (Streaky Bay) and the other at Uley-Wanilla, near Port Lincoln. Leigh Creek coalfield, some 350 miles north of Adelaide, derives its supply from a borehole at Sliding Rock mine, the water being pumped through a pipeline 25 miles long.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government, however, to provide watering places along stock routes, and pastoralists rely largely on supplies in suspended basins at shallower depths.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east, especially for farms, but also for township supplies for Mount Gambier, Naracoorte, Bordertown and Pinnaroo. The maximum depth of boreholes is 235 feet and the minimum 71 feet. Average tested yield is 14,808 gallons per day.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 40 drills. A large area within the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and an examination of a large part of Kangaroo Island and Southern Eyre Peninsula has been completed in connexion with Soldier Settlement schemes. Examination of large areas in the Upper South-East has been undertaken in connexion with land development schemes.

The results of comprehensive surveys of underground supplies undertaken by geologists of the South Australian Government have been published in the State's geological survey bulletins in recent years.

5. **Farm Water Schemes.**—While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. **South-Eastern Drainage.**—For some information on the drainage schemes necessary for the disposal of surplus water in areas in the south-east of South Australia *see* Official Year Book No. 37, page 1133.

§ 6. Western Australia.

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia were given on page 1133 of Official Year Book No. 37, and Chapter II.—Physiography, of this issue, contains information on the climatic conditions in each State.

(ii) *Administration.* Irrigation districts are administered under the Rights in Water and Irrigation Act of 1914–1945 and the Government is advised by an Irrigation Commission representing the local irrigationists and government technical and financial branches. The Goldfields Water Supply is administered by a branch of the Public Works Water Supply Department and its responsibilities include control of water from this scheme for agricultural purposes. The metropolitan water supply is controlled by a separate department under the control of the Minister for Water Supply, Sewerage and Drainage. Under the Water Boards Act (1904) fourteen towns are administered by local water boards and 30 are under direct Ministerial control. The Minister also controls three District Farming Schemes. Water rights over water flowing in streams and water courses is vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

2. **Irrigation.**—The main irrigation districts—Harvey, Waroona and Collie—are along the south-west railway line between Waroona (70 miles from Perth) and Dardanup (116 miles from Perth). The total area irrigated in these districts during 1950–51 was 18,923 acres and the total water used was 56,870 acre-feet. The total acre waterings (i.e. the number of acres watered multiplied by the average number of waterings) was 85,440.

Harvey Districts (Nos. 1 and 2—32,663 acres) are supplied from the Harvey Weir (8,300 acre-feet) and Stirling Dam (44,344 acre-feet), Waroona District (10,325 acres) from Drakesbrook Dam (1,855 acre-feet) and Samson's Brook Dam (6,540 acre-feet), and Collie District (28,762 acres) from Wellington Dam (27,800 acre-feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie during the seasons 1938–39 and 1946–47 to 1950–51, illustrates the growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA: ACRE WATERINGS.

Year.	Pasture.	Fodder.	Potatoes.	Vegetables.	Orchard.	Flax and Broom Millet, etc.	All Crops.
1938–39	31,049	934	3,142	692	922	..	36,739
1946–47	61,948	547	4,304	3,209	1,096	..	71,104
1947–48	57,450	508	3,714	3,433	1,190	..	66,295
1948–49	71,687	640	2,692	3,562	1,448	..	80,029
1949–50	79,373	685	4,591	4,297	1,369	4	90,319
1950–51	76,431	793	2,946	4,090	1,180	..	85,440

3. **Water Supply Schemes.**—(i) *Goldfields Scheme.* Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37, and an account in greater detail on page 576 of No. 6. Mundaring reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the goldfields, and has a capacity of 15,100 million gallons and a catchment of 569 square miles. The water now passes through 346 miles of steel main, mostly of 30 inch diameter, aided by eight pumping stations, involving a total net lift of 1,280 feet.

Hundreds of miles of branch mains and pipes have been laid to mining districts, towns and farming districts, the most important being the Norseman extension of 101 miles. The system serves 34 towns and water is reticulated to 970,000 acres of farming lands. Total length of mains is 1,793 miles and the population served is 55,000. Total quantity of water pumped from Mundaring in 1950–51 was 2,470 million gallons. Total cost of system to the end of 1950–51 was £7,331,691.

Work has now been completed on raising the impounding wall at Mundaring Weir and preparations are well in hand for the raising of the wall at Wellington Dam (50 feet). Steady progress has been made on the 30 inch diameter pipeline from Wellington Dam to Narrogin, approximately 30 miles having already been completed. Large storage reservoirs have been constructed at Kalgoorlie (25 million gallons) and at No. 8 Pumping Station (12 million gallons) for the purpose of safeguarding supply during the hot summer months. To increase the quantity of water delivered from No. 3 Pumping Station to No. 4 Pumping Station and the Goldfields Area, a booster pump hasnow been installed near Kellerberrin. This pump, which came into operation during 1950–51, is capable of giving an additional flow through the main conduit of approximately one and a half million gallons per day.

(ii) *Rock Catchments.* An interesting feature of the State's conservation system is found in the Barbalin, Narembeen and Kondinin District Farming Land Schemes in the wheat belt, where extensive granite outcrops have been used as catchments. The rain is caught at the foot of the rocks, and pumped to tanks from which the water is reticulated to farms and to a number of small towns. For further particulars *see* Official Year Book No. 37, page 1135.

(iii) *South-west Scheme.* The Commonwealth Government has agreed to assist a scheme to extend water for agricultural areas and towns in the south-west of Western Australia, which will be administered by the State Government. It is estimated that the scheme will cost £4,300,000 of which the Commonwealth will contribute £2,150,000. The scheme provides for raising the height of the Mundaring Weir and the Wellington Dam to increase the storage capacity of these reservoirs to 15,000 million gallons and 38,000 million gallons respectively (*see* above), and for increasing the capacity of pumping stations on the Goldfields pipeline to permit water diversions from that source. Twenty-three towns and over 4,000,000 acres of agricultural country will benefit.

4. **Underground Water.**—Individual farmers, orchardists, market gardeners and others derive water from wells or windmills wherever available, and, where power is available, pumps and motors are used to tap such supplies. The Department of Public

Works has twelve boring plants which are lent out to farmers to facilitate boring operations to an average depth of 150 feet. The Department also contracts with private firms to bore for communal farm supplies. During the past 58 years 300 artesian and sub-artesian bores have been sunk, mostly for private purposes. The total depth of all recorded bores in Western Australia is 245,604 feet; daily flow is 87,692,500 gallons; and the average depth at which water is struck is 819 feet. Maximum depth of any bore is 4,006 feet and minimum 21 feet.

5. **Ord River Scheme.**—The Ord River in the north-west of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 in the north. The hottest months (December to March) are also months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 2,000,000 acre feet of water, equipped with hydro-electric plant, which might supply irrigation water for an area of 100,000 acres, if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. However, the economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

§ 7. Tasmania.

1. **General.**—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania were given on page 1136 of Official Year Book No. 37, and Chapter II.—Physiography, of this issue, contains information on the climatic condition in each State.

(ii) *Main Purposes of Conservation and Utilization.* Owing to its fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages in their properties. Underground water is of poor quality and a small quantity exists over an area in the Midlands which has been exploited to a limited extent only by bores and windmills. Geological conditions do not appear to favour the utilization of ground water except on a minor scale. There is only one known flowing bore—at Spreyton, which yields 1,690 gallons per hour.

(iii) *Administration.* The State does not own all natural waters as in Victoria, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. There is no machinery other than the Courts for deciding the issue in cases where municipal councils or private individuals propose to divert water for town supplies or irrigation from streams in which neither of these two authorities is interested. The only exceptions are a few municipal and industrial undertakings which have statutory rights.

2. **Hydro-electricity.**[*]—Tasmania depends entirely on water for power development, and its power potential has been estimated at 3,500,000 h.p. on the basis of 50 per cent. load factor and 80 per cent. turbine and generator efficiency. The Hydro-Electric Commission, the authority controlling the generation of electricity in Tasmania, provides most of Tasmania's power requirements from four power stations—Waddamana, Tarraleah, Shannon and Duck Reach. The Mount Lyell Mining and Railway Co. Ltd.

---

[*] *See also* Chapter XXV.—Electric Power Generation and Distribution, pp. 1193–5.

also operates a 10,000 kW. plant at Lake Margaret on the west coast to serve copper mines, and this station is interconnected with the Commission's network. Small stations operated by tin mining companies have a total capacity of 2,000 kW.

Only a brief description of the major schemes is given below.

The first stage of the Waddamana power station with an installed capacity of 10,000 h.p., was completed in 1916. This station which is now called Waddemana A power station has subsequently been extended to 66,000 h.p., while a new station Waddemana B, of capacity 66,800 h.p., was completed in 1947–48.

In the Shannon scheme water from the Great Lake passes down the Shannon River by pipeline and canal to the Shannon Power Station, where 14,500 h.p. is generated before the water passes into the Waddamana canal and power station.

The Waddamana and Shannon power stations are fed with water from the Great Lake, which is situated near the geographical centre of the State at an elevation of 3,380 feet above sea level.

Tarraleah power station is situated on the Nive River, but is served by water from the River Derwent and Lake St. Clair. The water from Lake St. Clair flows down the Derwent to Butler's Gorge, where a 200 feet high concrete dam (Clark Dam) impounds up to 243,000 acre feet of water.

The Butler's Gorge power station is situated at the foot of the Dam and at maximum water level it can develop 17,100 h.p. Water discharged from Clark Dam is diverted into the Tarraleah Canal and thence into Tarraleah Lagoon for use in the Tarraleah power station which has a capacity of 126,000 h.p.

Work has commenced on the Tungatinah Power Development which will regulate the run-off from that part of the Central Plateau which lies between the Great Lake and Lake St. Clair catchments. A dam will divert the headwaters of the Nive River into a chain of lakes formed by constructing levees across the outlets of Woodward's, Brady's, Big and Nive Marshes. Water will then be conveyed by a tunnel and penstocks to the Tungatinah power station which will have an ultimate capacity of 175,000 h.p. As a further stage of this project a dam across the River Dee at the outlet from Lake Echo will provide about 300 cusec-years of storage which will be used to augment the storage in Brady's, Big and Nive Marshes.

The Trevallyn Power Development is being undertaken primarily to meet the power requirements of the aluminium industry. It involves the construction of a power station at sea level and works to bring water from the Second Basin in the South Esk River to the Tamar, about two miles from Launceston. To increase the storage capacity and regulate the flow of the Lake River, weirs will be constructed at its outlet from Arthur and Woods Lakes.

The following table shows the development of Tasmania's hydro-electric power resources at the end of 1950 :—

HYDRO-ELECTRIC POWER RESOURCES : TASMANIA.

Power Station.	Installed Capacity.	Ultimate Capacity.
	H.P.	H.P.
Waddamana A and B	132,800	132,800
Shannon	14,500	14,500
Tarraleah	105,000	126,000
Butler's Gorge	Nil	17,100
Duck Reach	2,600	2,600
Trevallyn	Nil	112,000
Tungatinah	Nil	175,000
Lake Margaret	13,800	13,800

3. **Industrial.**—Three principal industrial schemes have been installed privately. The Australian Newsprint Mills pump approximately 6,000,000 gallons a day from the Derwent River at Lawitta for the Boyer mills. Associated Pulp and Paper Mills pump several million gallons a day from Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Weybridge. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, at present largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. **Irrigation.**—There are no State irrigation projects, but preliminary inquiries as to the possibility of establishing one in the Coal River Valley are to be made. All systems operating are privately owned and, with one exception (at Bushy Park), are single-farm units. At Bush Park a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation, as practised in Tasmania, was applied in 1950–51 to 7,242 acres devoted to: hops (1,075 acres); fruit (981 acres); pastures (4,700 acres); green fodder, etc. (167 acres) and other crops (319 acres).

§ 8. Northern Territory.

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory were given on page 1138 of Official Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter X.—The Territories of Australia.

2. **Administration.**—Under the Control of Waters Ordinance (1938) of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed.

3. **Underground Water.**—Artesian water is found mainly in the south-east where the Great Artesian Basin enters the Territory. Pastoral (beef) production accounts for the bulk of the Territory's income, and the marked seasonal conditions affect the industry's economy. During the wet summer season there is adequate water, but during the winter most natural watering points disappear, and pastures dry. Bores supplement the permanent watering points, which are mainly along river frontages. The cattle industry is concentrated in the area in which the feed retains an appreciable nutritive value during the winter despite the dry conditions. This area is not in the wetter coastal regions, but in the inland belt of 15 to 25 inch rainfall and to the north of Alice Springs. Lack of bores is a limiting factor in the industry's economy, as cattle are able to thrive only within certain distances of reliable water.

Some 600 bores have been recorded, but complete records are not available. Maximum depth is more than 600 feet. For further information *see* Official Year Book No. 37, p. 1139.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (80,350 acre feet) which serves Darwin with a reticulated supply. Irrigation has therefore assumed no current importance. For particulars of present activity and potentialities *see* p. 1138 of the previous issue.

§ 9. Papua and New Guinea.

1. **Rainfall.**—When all localities (32 stations) where gauges are kept are taken into consideration, the average annual rainfall over periods varying from two to ten years is about 159.21 inches. This figure includes both inland and coastal stations.

2. **General.**—For a general description of these territories *see* Chapter X.—The Territories of Australia, pp. 346, 349–350 and 360–362 of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development. The main water conservation interest in New Guinea at present is the hydro-electric potential.

Those portions of New Guinea administered by Australia are well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to 13,000 feet. Complete data concerning water resources are not available, but it is known that the opportunities for production of hydro-electric power are extensive. Some authorities estimate that 20,000,000 h.p. could be generated. Present investigations have been limited to those areas where a demand for power is likely to arise. New Guinea has a substantial native population and few major industries.

Explorations over the southern portion, known as Papua, have resulted in the collection of much information concerning water resources. The largest stream is the Fly River, at least 500 miles long, which is situated in the western division. Its large tributaries extend to the northern boundary of the Territory rising among lofty mountain ranges. Records show that at a point above the tidal influence, where the river is 600 yards wide and 40 feet deep, the stream travels at a rate of 3½ miles per hour and discharges 105,200,000 gallons per minute. All the principal rivers flow from the main range in a southerly direction. Most of them carry a large volume from a great height over relatively short distances. They have a total catchment of about 50,000 square miles having an elevation between 2,000 and 13,000 feet. The Government Geologist has estimated that if only 50 per cent. of the annual rainfall were utilized through a height of only 500 feet a total of 8,500,000 h.p. would be produced.

CHAPTER XXVII.

DEFENCE.

§ 1. Department of Defence.

1. **Introduction.**—At the outbreak of the 1939–45 War, the Department of Defence comprised the three Fighting Services and a Central Secretariat. In November, 1939, separate Departments, each with its own Minister, were created for the control and administration of the Navy, Army and Air Force. The Defence Department as then reconstituted retained responsibility for over-all defence policy and for the conduct during the war of the business of the War Cabinet, set up in September, 1939, and the Advisory War Council, set up in October, 1940. These bodies ceased to function after the war.

2. **Functions and Organization.**—(i) *The Cabinet.* The determination of defence policy is the responsibility of Cabinet.

(ii) *Functions of Department of Defence.* Subject to the authority of Cabinet, the Minister and Department of Defence are responsible for :—

(1) The formulation and general application of a unified defence policy relating to the Defence Forces and their requirements, including :—(*a*) co-operation in British Commonwealth defence and the defence aspect of the Charter of the United Nations ; (*b*) the supply aspect of defence policy, including the review of production programmes and capacity ; (*c*) the scientific aspect of defence policy ; and (*d*) the financial requirements of defence policy, and the allocation of funds made available.

(2) The defence aspect of Armistice and Peace Terms, Control Commissions, and Forces of Occupation.

(3) Matters of policy or principle and important questions having a joint service or inter-departmental defence aspect.

(4) The higher defence machinery, and the control of the joint service machinery.

(5) The defence aspect of questions relating to the organization and machinery for :—(*a*) co-operation in British Commonwealth defence ; (*b*) co-operation in regional security, including obligations under the United Nations Charter ; (*c*) higher direction in war ; and (*d*) higher direction of the Services.

(6) The Commonwealth War Book, which is a summary of national plans for an emergency as developed in Departmental War Books.

(7) The administration of inter-service organizations, such as the joint intelligence machinery.

(8) The defence aspect of :—the strength and organization of the Forces, higher appointments in the Services, Honours and Awards.

(9) Advice on the military aspect of civil defence.

(iii) *Joint Service and Inter-departmental Machinery.* The joint service and inter-departmental advisory machinery of the Department consists of various committees headed by the Defence Committee, the Chiefs of Staff Committee and the Joint War Production Committee. The Defence Committee is a statutory body consisting of the Secretary, Department of Defence, who is Chairman, and the Chiefs of Staff of the three Services. In general, its function is to advise on defence policy as a whole, and on matters of policy or principle and important questions having a joint service or inter-departmental defence aspect. The main responsibility of the Chiefs of Staff Committee in peace is the preparation of strategic appreciations and military plans. The function of the Joint War Production Committee is, briefly, to examine the relation between strategical plans and their requirements to ensure that the war potential for them exists. The major committees subordinate to the Defence Committee and/or the Chiefs of Staff Committee comprise the Principal Administrative Officers Committee (Maintenance and

Materials), the Principal Administrative Officers Committee (Personnel), the Defence Research and Development Policy Committee, the Joint Planning Committee, the Joint Intelligence Committee and the Joint Administrative Planning Committee.

3. **Basis of Current Defence Policy.**—The principal strategic considerations influencing the Government's defence policy were described by the Minister for Defence on 21st February, 1952, and included the following features :—

(i) *Cold War.* That it was essential to check the form of aggression occurring in Korea and Malaya, and that an adequate Australian contribution to the "cold war" was essential both to our relations with our powerful friends and to the Allied strategic starting point should war occur.

(ii) *Global War.* That if there were war on a global scale, it would be won or lost outside Australia, and that, since no one country could win without the co-operation of all the others, Australia must therefore, in its own and the general interest, play a full part in its allotted place in the general Allied strategy, and that the employment of its forces must be planned in advance, in co-operation with these Allies.

(iii) *Local Defence.* That the local security of Australia, at least during the next two decades, was likely to depend on the control of sea and air communications in the Pacific and Indian Oceans and in the seas joining them.

(iv) *Time Factor.* That there were two aspects of the time factor :—firstly, that the time available for preparation might be very short ; and, secondly, that the degree to which the armed forces were prepared in advance of events must be much greater than had been found necessary in the past.

4. **The Defence Programme.**—(i) *Adoption of a Three Years' Defence Programme.* In June, 1947, approval was granted for a Defence Programme over five years from 1947–48 to 1951–52. As from the 1st July, 1950, it was decided to adopt a Three Years' Programme extending to 30th June, 1953, which is one year beyond the period of the Five Years' Programme. The Three Years' Programme provides for the completion of the Five Years' Programme, plus expansion approved in the Three Years' Programme.

(ii) *Objective.* The objective of the Defence Programme is to provide the strengths of the forces required on mobilization, together with their equipment. This objective involves the planned development of the strengths of the forces including National Service Trainees, the provision of accommodation, buildings and other facilities, the procurement of the full range of modern equipment and supplies, and the establishment of a Defence Research organization.

(iii) *Financial.* Funds allocated at 30th June, 1952, were as follows :—

FUNDS ALLOCATED FOR DEFENCE AT 30TH JUNE, 1952.
(£'000.)

Department.	Maintenance.	Capital.			Total.
		Material Requirements.	Buildings, Works and Sites.	Contingency Fund.	
Defence	2,615	371	793	166	3,945
Navy	65,962	69,931	7,909	3,686	147,488
Army	120,615	49,314	50,279	..	220,208
Air	58,734	67,196	12,193	..	138,123
Defence Production ..	7,157	8,230	7,324	..	22,711
Supply	10,813	1,506	1,568	..	13,887
Research and Development	11,977	4,667	14,157	94	30,895
Total	277,873	201,215	94,223	3,946	577,257

Total expenditure incurred against the above allocation to 30th June, 1952 was £239,069,000.

(iv) *Personnel Strengths.* The establishments approved as at 30th June, 1952, for the three Services, including Permanent and Citizen Forces and National Service Trainees, and the corresponding strengths as at that date were :—

Service.	Approved Establishments.	Strengths.
Navy	27,000	21,542
Army	130,500	72,717
Air Force	33,637	21,228
Total	191,137	115,487

(v) *Material Requirements.* Material requirements, which include munitions, ships, aircraft, clothing, motor vehicles and a very wide range of other essential requirements, are being procured from government factories and private industry in Australia and from overseas.

(vi) *Defence Buildings and Works.* The programme includes a substantial amount for aerodromes, accommodation for members of the Forces, buildings and other facilities. Defence works accounted for 35.6 per cent. of total expenditure by the Commonwealth Department of Works in 1950–51, and 42.5 per cent. in 1951–52.

(vii) *Defence Research and Development.* The major Australian contribution to Defence Research and Development has been the building up of the Long Range Weapons Establishment, which includes ranges at Woomera and the base establishment at Salisbury, South Australia. A great deal of preparatory work has been done and important trials of new military devices are now proceeding.

Although the Long Range Weapons Establishment is the major commitment, other important research and development activities, for example, in aeronautics and electronics, are being undertaken, and will make available contributions to defence.

The Defence Research and Development work being done in Australia is complementary to that being done by other Commonwealth countries.

5. **Australian Participation in Korea, Malaya and the Middle East.**—(i) *Korea.* In accordance with the resolutions of the Security Council calling on members of the United Nations to assist the Republic of Korea in resisting aggression, Australia has furnished forces as follows :—

Navy—Since 29th June, 1950, a Royal Australian Naval Force of two ships has been engaged in operations. This force has consisted from time to time either of two destroyers or a frigate and a destroyer. In addition, H.M.A.S. *Sydney* relieved H.M.S. *Glory* in October, 1951, for a period of three months, and the latter ship has been refitted at Garden Island Dockyard.

Army—At 30th June, 1952, the Forces in Korea consisted of :—

(i) 1 and 3 Infantry Battalions, The Royal Australian Regiment.

(ii) A proportion of a Brigade Head-quarters and of the Head-quarters 1st Commonwealth Division.

(iii) An element of the British Commonwealth Communications Zone.

3 Infantry Battalion, with necessary reinforcements, had been on active service in Korea since September, 1950, and 1 Battalion since March, 1952.

Air Force—No. 77 (Fighter) Squadron and No. 30 Transport unit, together with the necessary administrative and maintenance units for their support, are engaged in Korea and Japan as part of the United Nations Forces in the Korean Campaign.

Over-all operational control of the United Nations Forces in Korea is the responsibility of the American Unified Command which was established by the Security Council. The Commander-in-Chief, British Commonwealth Forces, Korea, is responsible for the non-operational control and administration of the British Commonwealth Forces in Korea, the land forces of which comprise 1st Commonwealth Division, United Nations Forces.

The number serving in H.M.A. ships in the Korean area, including a port party in Japan as at 30th June, 1952, was 610. Australian Army strength at that date in Korea and Japan was 3,909. Royal Australian Air Force strength at that date in Korea and Japan was 473.

(ii) *Malaya.* Since June, 1950, one Bomber Squadron and one Transport Squadron of the R.A.A.F. have been engaged in anti-bandit operations in Malaya.

(iii) *Middle East.* In June, 1952, No. 78 (Fighter) Wing, totalling 265 personnel, left Australia for service as part of the peace-time Air Force garrison in the Middle East.

For further details *see* sections relating to the respective Services.

6. **National Service Training.**—(i) *Liability.* Compulsory military training under the Defence Act was in operation from January, 1911 to November, 1929, when the Citizen Forces were re-constituted on the basis of voluntary enlistment. In March, 1951, the National Service Act was passed to enable effect to be given to the Government's policy of National Service training.

Under the National Service scheme, all male British subjects ordinarily resident in Australia, of the age of 18 years, are required to register when called upon to do so by notice published in the *Gazette.* The only exceptions are certain officials in the service of international bodies, diplomatic personnel, men already serving in the Permanent Forces and aboriginal natives of Australia. It is the Government's intention that the scheme should apply to migrants coming to Australia with the intention of making it their home, but there are certain difficulties of international law and practice which are being investigated.

Every registrant who complies with the standards of fitness laid down is liable to be called up for service unless he is exempt from service. The exempt classes, apart from persons subject to prescribed physical or mental disabilities, are theological students, ministers of religion, members of religious orders and conscientious objectors. There is provision for deferment of call up, while the ground of deferment continues, for such cases as apprentices, students, persons living in remote areas, and individual cases of exceptional hardship.

(ii) *Conditions of Service.* Service under the National Service Scheme is with the Citizen Naval Forces, the Citizen Military Forces or the Citizen Air Force. In determining in which part of the Citizen Forces a person is to serve, effect is given as far as possible to the preferences indicated. No person is called up for service with the Citizen Naval Forces or the Citizen Air Force unless he has volunteered for service beyond the limits of Australia. The total period of service to be rendered is 176 days. In the case of the Navy there is an initial period of 124 days continuous training, and 13 days continuous training a year for the next four years. In the case of the Army the initial period of continuous training is 98 days, with 14 days full-time camp training and 12 days part-time training in each of the following three years. In the Air Force, the total of 176 days training is completed in one continuous period, except in the case of students who may complete their service in two equal periods of eighty-eight days in the months of December, January and February of following years. (*See also* sections dealing with the respective Services.)

(iii) *Strength.* To 30th June, 1952, 34,500 trainees had been called up for training. A further 12,000 were to be called up by the end of 1952, and more than 36,000 in 1953.

§ 2. Military Defence.

1. **State Systems.**—A detailed historical account of the Australian defence forces prior to Federation will be found in Official Year Book No. 2, pp. 1075–1080. *See also* Official Year Book No. 12, p. 999.

The strength of the military forces of the States on 31st December, 1900 (the eve of Federation) was :—New South Wales, 9,338 ; Victoria, 6,335 ; Queensland, 4,028 ; South Australia, 2,932 ; Western Australia, 2,696 ; Tasmania, 2,024 ; total for Australia, 27,353. This total is exclusive of cadets, reservists and rifle club members.

2. **Commonwealth Systems.**—(i) *General.* Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. The growth of the Commonwealth Military Forces may be considered to have taken place in

sixteen phases. For particulars of the phases which cover the period from the welding together of the military forces of the States into one homogeneous army in 1902 up to the decision to increase the training strength of the militia to 70,000 in the year before the 1939–45 War (phases 1–7), *see* Official Year Book No. 36 and earlier issues.

Phases 8–10, covering the period immediately prior to, and just following, the outbreak of the 1939–45 War, relate to the initial steps necessary to put the Australian Military Forces on a war-time basis, and to its organization into commands.

The eleventh phase, in January, 1942, was the division of Northern, Eastern and Southern Commands into separate commands and base head-quarters to handle operational and administrative matters respectively, and the twelfth phase was the revision of the machinery for command administration of lines of communication areas. The thirteenth phase was the appointment of Lieutenant-General Sir Iven Mackay as G.O.C.-in-C. Home Forces commanding the forces in Northern, Eastern and Southern Commands. The fourteenth phase covers the period following the outbreak of war with Japan and the entry of United States of America forces into the South-West Pacific Area, and relates to the appointment of General Sir Thomas Blamey as Commander-in-Chief, Australian Military Forces, the cessation of the Military Board, and the replacement of the system of commands and bases by the field army and lines of communication areas. In March, 1943, First and Second Armies took over from Queensland, New South Wales and Victoria Lines of Communication Areas the command of all coast and static anti-aircraft artillery defences and training establishments. On 16th June, 1944, Western Command was re-established and took over the combined responsibilities of Third Australian Corps and Western Australia Line of Communication Area.

The fifteenth phase was the re-introduction in March, 1946 of the Military Board and the organization of commands and military districts, and the sixteenth phase was the commencement of the National Service Training Scheme in August, 1951 (*see* § 1, para. 6 *ante* and sub-para. (iv.) (*c*) following).

For greater detail on phases 8–14 *see* Official Year Book No. 38 and earlier issues.

(ii) *Estimated Population of Military Age, 30th June,* 1951. The following particulars show the estimated numbers of males of military age in the population of Australia as at 30th June, 1951. The total number of cadet age, 14 and over, and under 18, was 227,627; at citizen soldier age, 18 and over, and under 26, 520,102; and 26 and over, and under 35, 614,841; making a total of 1,134,943, 18 and over, and under 35, which is considered the best period for military service. In addition to the above-mentioned, it was estimated that there were 1,304,207 males 35 and over, and under 60, in Australia at 30th June, 1951.

(iii) *Allotment of Units.* Under the Command Organization (*see* above) units are raised on a territorial basis, each State supplying its proportion of the personnel required for the fighting services, the organization at 30th June, 1952 being as follows:—

COMMAND ORGANIZATION.

Army Head-quarters.

Northern Command	Eastern Command	Southern Command	Central Command	Western Command	Tasmania Command	Northern Territory Command
All formations and units in 1st Military District and New Guinea.	All formations and units in 2nd Military District.	All formations and units in 3rd Military District.	All formations and units in 4th Military District.	All formations and units in 5th Military District.	All formations and units in 6th Military District.	All formations and units in 7th Military District.

Military Districts conform generally to State or Territory areas, as follows :—1st Military District, Queensland ; 2nd, New South Wales ; 3rd, Victoria ; 4th South Australia ; 5th, Western Australia ; 6th, Tasmania ; 7th, Northern Territory. Third Military District includes a considerable portion of Southern New South Wales, and 4th includes Broken Hill.

(iv) *Military Training Systems.* (*a*) *General.* Particulars of the military training systems in operation prior to the 1939–45 War, first on a compulsory basis and later voluntary, will be found in Official Year Book No. 38 and earlier issues.

The present plan for the raising of the Australian Regular Army envisages a total of 33,000 soldiers and 5,000 civilians. The Citizen Military Force will comprise 30,000 voluntarily enlisted personnel and 67,500 National Servicemen.

(*b*) *The Australian Cadet Corps.* The Australian Cadet Corps is a voluntary organization comprised of School Cadet units and Regimental Cadet units. It serves as a training ground to provide, to some extent, the future officers and non-commissioned officers of the Australian Military Forces, and, as such, occupies a foremost position in the scheme of national defence. School Cadet units are raised at educational establishments in all States of the Commonwealth. The minimum age for enrolment is the year in which the applicant reaches the age of 14 years, and cadets, who in the large majority of schools receive a free issue of A.M.F. pattern uniform, may remain in the Cadet Corps until they cease to be pupils of the educational establishments concerned. A few units retain their own pattern school uniform and are not issued with A.M.F. pattern uniforms. Provision is made for the appointment of officers, warrant and non-commissioned officers on an authorized establishment scale from within school units. School cadet units are not affiliated with Citizen Military Force units.

Regimental Cadet units, however, are raised in close affiliation with Citizen Military Force units. These units are manned by the enrolment of boys who have either left school or are students at schools where no School Cadet unit is raised. Regimental Cadets wear the same uniform as their parent Citizen Military Force unit with the addition of the word " Cadets " directly under the unit title.

The establishment for the whole Corps is 35,000 all ranks, and by June, 1952, comprised 276 School Cadet units with a posted strength of 31,123 all ranks and 3,701 Regimental Cadets posted to Citizen Military Force units.

(*c*) *National Service Training Scheme.* Under the National Service Scheme (*see* §1, para. 6 above) the Army is required to train 29,250 trainees per year, effected by three intakes each of 9,750 trainees. The first intake commenced training in August, 1951.

(v) *Women's Services.* In November, 1950, approval was given for the enlistment of women into the Australian Regular Army, on a limited scale. Enlistment commenced immediately into the Australian Women's Army Corps. During June, 1950, the Australian Women's Army Corps was re-designated the Women's Royal Australian Army Corps (W.R.A.A.C.). Members are employed in establishments in direct substitution for male soldiers. The Women's Services in the Australian Regular Army now comprise two Corps only :—(*a*) Royal Australian Army Nursing Corps ; (*b*) Women's Royal Australian Army Corps.

(vi) *Korea.* On 2nd August, 1950, the Commonwealth Government announced its decision to raise and despatch to Korea one infantry battalion as part of Australia's contribution of military assistance to the United Nations. 3 Battalion, the Royal Australian Regiment stationed in Japan, brought up to strength by special enlistments flown to Japan from Australia, became the Special Korean Force, and on 27th September, 1950, sailed from Japan for Korea where it joined 27 British Brigade, later designated as 27 British Commonwealth Brigade. For its gallantry on 24th and 25th April, 1951, 3 Battalion was awarded the United States Presidential Citation by the United States of America. On 4th October, 1951, the Commonwealth Government announced that a second infantry battalion would be sent to Korea to join 3 Battalion. On 3rd March, 1952, 1 Battalion, The Royal Australian Regiment, which had been brought up to strength at Ingleburn, New South Wales, embarked for Japan where it was equipped before moving to Korea. 1 Battalion joined 3 Battalion, now under operational control of 28 British Brigade, 1st Commonwealth Division, on 1st June, 1952. Both battalions are still serving in Korea.

(vii) *The Staff College.* Until 1938 the training of staff officers was carried out in the various Military Districts throughout Australia, except in cases where officers were selected from time to time to attend courses abroad. In 1938 an Australian Command and Staff School, located in the original Officers' Mess at Victoria Barracks, Sydney, was established. Between 1939 and 1945 the training of staff officers was carried out under varying conditions by different schools in accordance with the changing needs of the war.

Early in 1946 the Staff School (Australia) was established at Seymour in Victoria and re-designated the Staff College in conformity with other Empire training establishments for training officers for command and staff appointments. The College was later moved to Queenscliff, Victoria, where it is at present situated. The courses are of one year's duration and are held from February to December each year. The normal intake is 30 students and, on successfully completing the course, an officer is awarded the symbol "psc". The course is designed to train selected officers for war, and in so doing to fit them for Command or Grade II. staff appointments. Each course includes among the students Army representatives of the United Kingdom, other Dominions and countries. Included in the 1951 course were students from the United Kingdom, Canada, New Zealand, India, Pakistan and the United States of America. Vacancies on each course are reserved also for officers who may be nominated by the Royal Australian Navy, the Royal Australian Air Force and the Commonwealth Public Service.

In order to ensure common standards in tactical doctrine and staff and command training throughout the Empire, liaison is maintained with other Staff Colleges; and to this end there is also a reciprocal exchange of instructors. To this extent it may be said that the Staff College is imperial in character.

(viii) *Royal Military College.* The Royal Military College was established in 1911 at Duntroon in the Australian Capital Territory for the purpose of providing trained officers for the Army. The conditions of entry are laid down in the Royal Military College Regulations and provide for admission by "normal", "service" and "special" entries. The length of the normal course is four years; "service" entry cadets attend for three years.

While at the College, cadets receive pay and allowance of 13s. 7d. per day in their first year, rising to 18s. 4d. per day in their fourth. Uniform maintenance allowance of 1s. 9d. per day is additional, and a further 6d. per day is paid to cadets on attaining the age of 18 years. The course of instruction is organized into military and civil departments and the instructional staff comprises officers of the army and civilian professors. On graduation, cadets are appointed lieutenants in the Australian Regular Army. The College also trains New Zealand cadets for commissions in the New Zealand Permanent Forces under an agreement made with the Government of that Dominion.

(ix) *The Officer Cadet School.* The Officer Cadet School was established in 1951 at Portsea, Victoria, for the purpose of speeding up the production of junior regimental officers for the Australian Regular Army. Serving members of the Australian Regular Army, the Citizen Military Forces, National Servicemen, and civilians between the ages of 18 and 23 years, are eligible to apply for entrance. The course is of six months' duration, and on graduation, cadets are appointed second-lieutenants in the Australian Regular Army. They then normally proceed to further training at the Army School of the Arm or Service to which they have been allotted before being posted to regimental duties.

(x) *The Army Apprentices' School.* The Army Apprentices' School was opened in 1948 at Balcombe, Victoria, with the aim of training youths as skilled tradesmen for the Australian Regular Army, and to form a background for an Army career with prospects of promotion. The course is open to boys between the ages of 15 and 17 years and provides training in a number of highly skilled trades. A three year course of intensive theoretical and practical work at the Apprentices' School is followed by one year in an appropriate Army workshop or technical unit. At the end of their third year, boys are given their Army trade test and also take the Victorian Apprenticeship

Commission final grade public examinations, which ensures that they will be accepted as qualified tradesmen in civil life when they eventually leave the Army. In addition to trade training, the Apprentices' School provides general educational facilities up to the School Leaving Standard.

(xi) *Army Schools.* Army Schools have been established for the major Arms and Services for the purpose of training officers and other ranks in the up-to-date techniques of their own Arm or Service, to qualify them for promotion requirements, and to produce trained instructors. In addition, a School of Tactics and Administration which has been established at Seymour, Victoria, provides qualifying and instructional courses in current tactical and administrative doctrine for members of all Arms and Services. Courses at Army Schools are conducted for members of both the Australian Regular Army and the Citizen Military Forces.

The following Army Schools have been established :—School of Tactics and Administration ; Armoured School ; School of Artillery ; School of Military Engineering ; School of Survey ; School of Signals ; School of Infantry ; Royal Australian Army Medical Corps School of Army Health ; Royal Australian Army Service Corps School ; Royal Australian Army Ordnance Corps School ; Royal Australian Electrical and Mechanical Engineers Training Centre ; Transportation Training Centre.

(xii) *Rifle Clubs.* The Australian Rifle Club movement, which had its origin in 1888 is provided for in the Defence Act and comprises an Australian Council of State Rifle Associations (which functions in an advisory capacity to the Minister and in the promotion of inter-empire and interstate rifle competitions), State Rifle Associations, District Rifle Club Unions and Rifle Clubs. When placed in recess, the efficient strength of the rifle club movement was 1,018 clubs and 36,478 members. Approximately 20 per cent. of this number served overseas and a further 60 per cent. performed home service duties during the recent war. Rifle shooting activities were resumed in 1946 and the strength position of the movement as at 30th June, 1952 was 1,098 clubs and 51,622 members.

(xiii) *The Australian Battles Nomenclature Committee.* The Minister for the Army gave approval on the 25th July, 1947 for the formation of the Australian Battles Nomenclature Committee to tabulate and classify the operations fought in the Pacific Zones in the 1939–45 War which involved the Australian Military Forces, to define their geographical and chronological limits and to advise the United Kingdom Battles Nomenclature Committee regarding operations in zones other than the Pacific Zone in which the Australian Military Forces participated. Sub-committees were later appointed to study the various campaigns in order to classify the operations into battles, actions and engagements.

3. **Strength of Australian Military Forces.**—The strength of the Australian Military Forces at 31st August, 1952 was as follows :—Australian Regular Army, 20,322 ; Regular Army Special Reserve, 8,747 ; Citizen Military Forces (including National Service Trainees)—effective strength, 50,731 ; Australian Cadet Corps*, 34,873 ; Civilians employed by the Department of the Army,* 5,477.

§ 3. Naval Defence.

1. **State Systems.**—Information regarding naval defence systems prior to 1901 will be found in Official Year Book No. 2, p. 1084.

2. **The Present System.**—(i) *General.* (*a*) *Royal Australian Navy up to end of 1939–45 War.* An outline of the development of Australian Naval policy was given in Official Year Book No. 3, p. 1060 and No. 12, p. 1012. Some account of the building of the Australian Navy, the proposed and modified cost thereof, the compact with the Imperial Government, etc., appears in Official Year Book No. 15, pp. 921 *et seq.* An account of the growth and activities of the Royal Australian Navy during the 1939–45 War is given in Official Year Book No. 36, pp. 1023 *et seq.*

(*b*) *Post-war Programme.* Under the post-war defence policy as extended in July, 1950, the Commonwealth Government had allocated, at 30th June, 1952, more than £147,000,000 for Naval Defence for the period June, 1950 to June, 1953. (*See also* § 1, paras. 4 (i) and (iii) *ante*).

---

* At 30th June, 1952.

The following is a summary of the Naval Programme :—

(1) Ships in Commission—

Fleet : It is intended that by the end of the 1950–53 programme, the Fleet should consist of :—

Carrier Force : 2 Light Fleet Carriers, 1 Cruiser, 4 Destroyers.
Escort Forces : 4 Frigates, 1 " Q " Class Destroyer.
Surveying Duties : 2 Survey ships and their tenders.
Training Ships : 2 Frigates, 8 Fleet Minesweepers.
Auxiliary Vessels : 3 Air/Sea Rescue Vessels, 1 Ocean-going Tug, 1 Ammunition Carrier, 3 Boom Defence Vessels, 2 Patrol Vessels, 2 General Purpose Vessels.

(2) In addition to the ships in Commission, a substantial reserve fleet will be maintained in good condition against any future emergency.

(3) Change in Status—On 1st January, 1949 the Royal Australian Navy ceased to be a squadron and assumed the status of a fleet, a fleet being an organization consisting of various types of ships and naval aircraft, capable of undertaking major operations.

(4) Personnel—The strength of the Royal Australian Navy has been pegged at 14,550, comprising 1,400 Officers and 13,150 ratings.

(5) Reserve and National Service Training—Reserve training was resumed as from 1st January, 1950, for members of the Royal Australian Naval Reserve. Training consists of 45 two-hourly drill attendances at night or on Saturdays in naval training establishments in each of the capital cities, plus 13 days' continuous training each year in H.M.A. ships or training establishments, including special schools. In addition, payment is made for further voluntary home training up to a maximum of 12 days. Selected members may undergo special courses up to a limit of six months during the whole of their service in the Reserve, whilst up to 12 months' training or service may be performed in H.M.A. ships or establishments with similar qualifications. Engagements are for three years. Rates of pay have been aligned (with minor modifications) with those applicable to the Permanent Naval Forces. The training for members of the Royal Australian Naval Reserve (Sea-going) is normally 28 days every two years whilst the Royal Australian Naval Volunteer Reserve are under no training obligations.

Naval National Service personnel commenced training on 30th July, 1951. On completion of their 124 days' initial training in naval establishments and H.M.A. ships, personnel will be attached to the Naval Reserve Training Establishment in their State and will carry out 13 days' annual continuous training for the next four years in a manner similar to the members of the Royal Australian Naval Reserve, in order to comply with their National Service liability of five years. The present annual intake of National Servicemen is 1,000.

Revised post-war conditions of service in the Royal Australian Fleet Reserve were introduced as from 13th December, 1950. This Reserve is comprised of two classes, viz. :—

(*a*) former ratings who receive full benefits under the Defence Forces Benefits Act and are required to serve five years in the Royal Australian Fleet Reserve as a consideration for receival of these benefits, and (*b*) former ratings who have previously served in the Permanent Naval Forces of the Royal Australian Navy, Royal Navy or a Dominion Navy subject to a minimum period of three years' service and an absence of not more than five years. No retainer is payable to members under (*a*) and no training is carried out. Members under (*b*) receive an annual retainer of £24 subject to completing 14 days' annual training. Ratings receive pay applicable to Royal Australian Navy personnel whilst under training. No Royal Australian Fleet Reserve training has been carried out since pre-war but will be resumed shortly.

(6) Naval Aviation—The development of the Royal Australian Naval Air Station at Nowra (H.M.A.S. *Albatross*) continues along with plans to develop a naval aerodrome at Schofields, Sydney. The latter will be taken over from the Royal Australian Air Force and commissioned as H.M.A.S. *Nirimbi* on 1st April, 1953. In September, 1951, H.M.A.S. *Sydney* arrived in Japanese waters, relieving H.M.S. *Glory* in the Korean theatre. H.M.A.S. *Sydney* returned to Australia in February, 1952.

(7) Ship Construction and Repair—Provision is made for the maintenance in Australia of a nucleus ship construction and repair industry capable of rapid expansion in time of war. An average sum of £2,500,000 is provided for the completion of the present destroyer programme of six vessels. Two (H.M.A.S. *Anzac* and H.M.A.S. *Tobruk*) are in commission and four are under construction. A programme of six anti-submarine frigates, the conversion of five "Q" Class destroyers to fast anti-submarine frigates and the modernization of H.M.A.S. *Hobart* and three Tribal Class destroyers, have been authorized. Work is in progress on H.M.A.S. *Hobart*, one Tribal and four "Q" Class destroyers.

(8) Shore Establishments—A new base was established at Manus Island (Admiralties) on 1st April, 1950, replacing the New Guinea Base at Dreger Harbour. This new base is now the head-quarters of the Naval Officer-in-Charge, North-East Australian Area.

(c) *The Relation of New Weapons.* Careful consideration has been given to the implications of new weapons, and the decisions in regard to the Navy are based on the broad conclusions of great naval powers that these weapons should be introduced by the normal process of evolution, first into existing ships, and later perhaps into an entirely new form of fighting ship. The same authoritative opinion is of the view that there will be no rapid development which will render vessels such as carriers, cruisers and destroyers obsolete within the near future.

(ii) *Naval Board.* The Australian Navy is administered by a Board consisting of the Minister for the Navy with four Naval Members, including a member for Naval Aviation, one Finance Member and the Secretary, Department of the Navy (ex-officio); the seat of administration is at Melbourne.

(iii) *Naval College.* Fifty Cadet Midshipmen (including one from the Royal New Zealand Navy) entered the Naval College for training in the year commenced January, 1952.

(iv) *Training Establishments.* Flinders Naval Depot, Victoria remains the principal training establishment for ratings in the permanent forces, while several advanced training schools are established in Port Jackson, New South Wales. Air training has begun at Nowra, New South Wales.

(v) *The Australia Naval Station.* Defined limits of the Australian Station will be found in Official Year Book No. 37, page 1152.

(vi) *Foreign Service.* The R.A.N. is represented in Japan by H.M.A.S. *Commonwealth* base establishment in Kure. During the three years commenced 1st July, 1949, H.M.A. Ships *Sydney, Anzac, Bataan, Tobruk, Warramunga, Shoalhaven, Murchison* and *Condamine* have served in the Korean theatre of war.

(vii) *Papua and New Guinea Division of the Royal Australian Navy.* A Papua and New Guinea Division of the Royal Australian Navy, consisting of native ratings, was inaugurated in July, 1951, as a separate part of the Permanent Naval Forces, for employment in Papua and New Guinea and waters adjacent thereto.

(viii) *Transfer of H.M.A.Ships to Royal New Zealand Navy.* During 1951–52, the Australian minesweepers (650 tons displacement),' *Echuca, Inverell, Kiama* and *Stawell* were presented, as free gifts to the New Zealand Government, as a token of the close liaison existing between the Royal Australian Navy and the Royal New Zealand Navy.

3. **Ships of the Royal Australian Navy.**—The following ships were in commission or in reserve in June, 1952:—

SHIPS OF THE ROYAL AUSTRALIAN NAVY, JUNE, 1952.

Vessel.	Description.	Displacement.
In Commission—		Tons.
Sydney	Aircraft Carrier	14,000
Australia	Cruiser	10,000
Anzac	Destroyer	2,325

Miscellaneous vessels in commission and reserve—fifty seven	..	..

4. **Strength of Royal Australian Navy.**—The serving strength of the Royal Australian Naval Forces, both permanent and reserves, at 30th June, 1952, was 1,086 officers and 12,677 ratings including 44 native ratings of the Papua and New Guinea Division of the Royal Australian Navy. In addition, eight officers and 205 ratings of the Women's Royal Australian Naval Service were serving and 168 Cadet Midshipmen were undergoing training at the Naval College. Reserve strength (August, 1952) comprised 1,279 officers and 6,253 ratings.

§ 4. Air Defence.

1. **General.**—A statement respecting the preliminary steps taken in connexion with the development of air defence will be found in Official Year Book No. 18, p. 610, and one on the expansion and development, and zones and operations of the Royal Australian Air Force during the 1939–45 War appears in Official Year Book No. 36, p. 1027.

2. **Operations in Korea and Malaya.**—At the conclusion of the 1939–45 War, the R.A.A.F. provided part of the Air Component of the British Commonwealth Occupation Forces in Japan. Soon after the 38th parallel was violated by the North Koreans on 25th June, 1950, No. 77 Squadron in Japan was made available as part of the United Nations Forces opposing this aggression. Within one week from the commencement of hostilities, No. 77 Squadron R.A.A.F., already operationally trained and equipped, had completed its first mission. From that date until June, 1952, the Squadron, operating continuously from different bases in Korea, carried out 3,542 missions, comprising 11,388 individual sorties.

The Squadron is equipped with Meteor aircraft and is employed, as required, on Armed Reconnaissance and Ground Support missions

Australian assistance has been provided, in the form of two R.A.A.F. Squadrons (one transport and one bomber), to the Malayan authorities against Communist bandit action. The first Australian aircraft, a Dakota of No. 38 Squadron, left Darwin on 18th June, 1950. The Lincolns of No. 1 Squadron arrived in July, 1950, and both Squadrons were soon in action. Up till June, 1952, the transport squadron had flown 13,344 hours and the bomber squadron had dropped more than 12,500,000 lb. of bombs during these operations. Working in close co-operation with the ground forces, this bombing is mainly on jungle hideouts frequented by the insurgents. Such bombing and strafing of bandit hideouts calls for extreme accuracy.

3. **Administration and Organization.**—The Department of Air is responsible for policy for organization and control of the Royal Australian Air Force. The Air Board is responsible, subject to approved policy, for the control and administration of the Royal Australian Air Force, and is constituted as follows :—Chief of the Air Staff, Air Member for Personnel, Air Member for Technical Services, Air Member for Supply and Equipment, Citizen Air Force Member and the Secretary, Department of Air.

Head-quarters of the Royal Australian Air Force is located at Melbourne. An Overseas Head-quarters is located at London and an Air Attaché at Washington, U.S.A.

With the exception of certain technical units which form a Maintenance Group, the units of the Royal Australian Air Force are organized in five geographical areas throughout Australia.

The geographical areas of command are :—

Southern Area—Head-quarters Southern Area controls Air Force units in Victoria, Tasmania and South Australia, with certain units in New South Wales.

Eastern Area—Head-quarters Eastern Area controls Air Force units in New South Wales and Southern Queensland.

North-Eastern Area—Head-quarters North-Eastern Area controls Air Force units in northern Queensland, New Guinea and adjacent islands.

North-Western Area—Head-quarters North-Western Area controls Air Force units in Northern Territory.

Western Area—Head-quarters Western Area controls Air Force units in Western Australia.

The organization of the Royal Australian Air Force includes the following types of units :—

(*a*) Formations, comprising a head-quarters unit to control the activities of a number of units at one location. Each formation has a base squadron which provides common services to all units at the location.

(*b*) Flying Squadrons. These bomber, fighter, photographic reconnaissance, transport, target towing and general reconnaissance squadrons undertake the operational and operational training flying commitments of the R.A.A.F.

(*c*) Aircraft Depots. These units specialize in major overhauls, etc., of aircraft, and relieve flying unit ground staff of these commitments.

(*d*) Stores Depots. Stores and equipment ordered by the R.A.A.F. are delivered to these centrally located depots for delivery to units.

(*e*) Flying Training, Ground Training, Navigation, Radio and Air Armament Training Units specialize in the aircrew and ground staff training required by the R.A.A.F.

(*f*) Royal Australian Air Force College. This unit is the training college for officer cadet entrants to the R.A.A.F.

(*g*) Telecommunications Units. These units are responsible for the communications services of the R.A.A.F.

(*h*) R.A.A.F. Staff College. This College trains specially selected R.A.A.F. officers for higher staff and command posts.

4. **Aircraft.**—Some of the aircraft which are at present being used in the Royal Australian Air Force are : Bomber Squadrons—Lincoln and Canberra ; Fighter Squadrons—Mustang, Vampire and Meteor ; Transport Squadrons—Dakota ; General Reconnaissance Squadrons—Lincoln and Neptune ; Tactical Reconnaissance—Mustang and Auster ; Training—Tiger Moth, Wirraway, Mustang, Dakota, Lincoln and Beaufighter.

5. **Establishment.**—The Royal Australian Air Force establishment, as proposed, comprises—(*a*) a Home Defence Organization, (*b*) Task Force elements and (*c*) a Training Organization consisting in all of approximately 16,450 personnel.

6. **Strength of Royal Australian Air Force.**—At 31st August, 1952, the strength of the Royal Australian Air Force was as follows:—Permanent Air Force, 16,202; Citizen Air Force, 2,264; National Service Trainees (in training), 2,946.

§ 5. War Gratuities.

1. **1914–18 War.**—Reference is made in earlier issues of the Official Year Book (*see* No. 15, p. 930) to the bonus payable in accordance with the War Gratuity Acts of 1920 as a war service gratuity to soldiers and sailors who served in the 1914–18 War. Owing to limitations of space this information cannot be repeated, but it may be noted that the gratuity was paid in Treasury Bonds, maturing not later than 31st May, 1924, and bearing interest at 5½ per cent. In necessitous cases payment was made in cash when desired by the person entitled. The first gratuities were made available about the beginning of June, 1920. The total amount paid to 30th June, 1951 was £27,515,036 and bonds amounting to £11,780 had not been redeemed at that date.

2. **1939–45 War.**—Briefly, the War Gratuity Act 1945–1947 provided for payment to members of the Forces of war gratuity (*a*) at the rate of £3 15s. per month of oversea service, subject to a qualifying period of 90 days continuous or 180 days in the aggregate in twelve months, and of certain subsequent periods in Australia, and (*b*) at the rate of 15s. per month of Australian service after 6th December, 1941, subject to a qualifying period of six months' service, other than that for which payment at the oversea rate is made. All members who performed oversea qualifying service were paid a minimum of twelve months' gratuity at the oversea rate, irrespective of whether the full twelve months period had been completed or not.

In cases of death due to war service either overseas or in Australia, where members of the family were totally dependent on the deceased member, a minimum payment equivalent to three years' gratuity calculated at the oversea gratuity rate could be made. In respect of all other cases of death, overseas and in Australia, due to war service, gratuity at the rate accruing to the member at the date of notification of his death was continued for a further seven months.

The period of entitlement to gratuity terminated at the date of discharge or on 30th June, 1947, whichever was the earlier. The bulk of the payments were made on 3rd March, 1951, but in certain circumstances payments were made at earlier dates. Compound interest was allowed at the rate of 3.25 per cent. per annum on the yearly credit balances. For greater detail on the provisions of the Act *see* Official Year Book No. 36, pp. 1073–4.

A Registrar of War Gratuities controls the register in which are kept the accounts of all persons entitled to war gratuity. Provision was made for financing the Act by appropriation from Consolidated Revenue Fund and by borrowing. The War Gratuity

Appropriation Act 1948 created a trust account for the payment of gratuities. Particulars of the operations of this fund during the years 1948–49 to 1950–51 were as follows :—

WAR (1939–45) GRATUITY TRUST FUND.

(£'000.)

Particulars.	1948–49.	1949–50.	1950–51.
Balance brought forward	..	30,051	36,751
Receipts	33,249	9,943	30,630
Expenditure	3,198	3,243	61,447
Balance carried forward	30,051	36,751	5,934

§ 6. The Department of Defence Production.

1. **General.**—The Department of Defence Production was created on 11th May, 1951, when many of the establishments previously administered by the Department of Supply were transferred to the control of the new Department. The basic principle in the re-adjustment was that the Commonwealth Government Factories (including munitions and aircraft establishments, but excluding the Commonwealth Clothing Factory) with the Defence Production Planning Branch, were taken over by the new Department. References to previous operations of the various sections and establishments are given in Official Year Book No. 38, pp. 1,200–9.

2. **Functions of the Department and Acts Administered.**—The functions of the Department of Defence Production, as defined in the administrative arrangements approved by the Governor-General, are :—

(i) The manufacture, acquisition, provision and supply of munitions for the defence forces, that is to say, armaments, aircraft, arms, ammunition, weapons, machine tools, war chemicals, radar (and such other items as may be mutually agreed with the Department of Supply as falling within the definition of munitions), including the materials and plant necessary for the production of those things and all matters incidental thereto, including :—

The receipt from the Service Departments, and other authorities or Departments, of orders and forecasts of requirements of munitions ; appropriate liaison with the Higher Defence Machinery Service Departments and the Department of Supply to deal with Service munitions programmes ; operation and management of factories, workshops, and undertakings concerned in the production of munitions ; arrangements and all action necessary to secure the manufacture, processing and delivery of munitions ; investigations and development of Australian sources of munitions production, including the establishment of annexes or special capacity in industry for that purpose ; acquisition by the Commonwealth and the establishment of factories and workshops for the purpose of producing munitions ; provision and maintenance of stocks of materials and goods for the purpose of producing munitions.

(ii) The employment and training of technicians, workmen and others for the purpose of producing munitions.

(iii) The formation of Industry Advisory Committees to advise the Minister of Defence Production regarding :—

The allocation to industry of production programmes of munitions; the establishing of additional munitions production facilities, including annexes and undertakings; the obtaining of appropriate details of Australian industrial capacity required by the Department of Defence Production in allocating munitions production to industry; any other matters associated with munitions production as specified by the Minister; the provision and control of stores, magazine and similar undertakings required in connexion with production of munitions and for other purposes as required; arrangements for ascertaining costs and the control and limitation of profits in connexion with the production of munitions; the development of inventions originating in Government factories in the interests of defence production.

The Act administered by the Department is the Supply and Development Act 1939–1948.

3. **Defence Production Planning.**—A Defence Supply Planning Branch was established in July, 1950, within the (then) Department of Supply to co-ordinate the planning of expansion of production capacity in the Government-owned factories and in industry. When the Department of Defence Production was created, the Branch was transferred to that Department as the Defence Production Planning Branch.

Broadly, the functions of the Branch are :—(i) to arrange production of requirements for the Defence Services on mobilization; (ii) to plan the expansion of production capacity to meet such requirements in war.

The following production and related sections exist within the Branch :—(*a*) Ammunition; (*b*) Radar and Telecommunications; (*c*) Materials; (*d*) Chemicals and Chemical Engineering; (*e*) Weapons and their Equipment including equipment involving optics; (*f*) Engineer Stores including Mobile Equipment and Small Craft; (*g*) Production Plant and Equipment; (*h*) Instruments; (*i*) Electrical. The production sections have a particular reference to the manufacture of defence stores and components by industry.

The Defence Production Planning Branch is the executive instrument of a Committee of the same name. The three Defence Services, the Departments of Defence, Defence Production, Supply and National Development are represented on the Committee. This enables a close liaison to be maintained with the Departments concerned directly and indirectly with defence in the formation of defence production planning policy.

4. **Munitions Factories.**—Munitions factories now in operation are :—Ammunition—Footscray, Victoria; Explosives—Maribyrnong, Victoria, Mulwala and St. Mary's, New South Wales; Ordnance—Maribyrnong, Bendigo, Echuca, Port Melbourne Marine Engine Works, all located in Victoria; Small Arms—Lithgow, New South Wales.

5. **Aircraft Production.** (i) *General.* All matters relating to the production in Australia of military types of aircraft and aero engines and of other aircraft components required by the Royal Australian Air Force and the Royal Australian Navy are administered by the Division of Aircraft Production of the Department of Defence Production. Aircraft repair and overhaul activities carried out for those Services in civilian establishments, as distinct from Service workshops, are also the function of the Division, together with the responsibility of supplying aircraft spare parts and airborne equipment generally.

(ii) *Aircraft, Engine and Other Production.* As at 1st July, 1952, the approved production programme for the major aircraft manufacturing organizations in Australia comprised Canberra jet-engined light bombers, Lincoln heavy bombers and small radio-controlled jet-propelled target aircraft at the Government Aircraft Factories, Vampire jet fighters and Drover feeder-line transport aircraft at De Havilland Aircraft Pty. Ltd. and Sabre jet-engined fighters and Rolls Royce Nene and Avon turbo-jet engines at Commonwealth Aircraft Corporation Pty. Ltd.

Associated concurrent activities include the production of retractable undercarriages at the Aircraft Engine Factory, propellers for Lincoln aircraft at the Propeller annexe and of heavy forgings in light alloy metals at the Heavy Forge annexe.

(iii) *Design and Development Projects.* Concurrently with the aircraft and aero engine manufacturing programmes, projects involving original design studies in the aircraft and aero engine fields were advanced at the Government Aircraft Factories and at the works of Commonwealth Aircraft Corporation Pty. Ltd. during the year.

At the former, the radio-controlled target aircraft project, covering both piloted and unmanned versions of the aircraft, had been developed to the stage where arrangements were being made for production of the aircraft in quantity while developmental activity was continuing regarding certain features of the design. Further work was done during the year, also on the development of a rotary valve engine.

Work continued during portion of the year on the design and development by Commonwealth Aircraft Corporation Pty. Ltd. of a twin-engined all-weather jet fighter aircraft but this had to be suspended because of the demands made on the Company's staff for the engineering of the modifications to be incorporated in the Australian version of the North American Sabre aircraft, including the installation of the Rolls Royce Avon engine as a replacement for the lower-powered engine in the American Sabre.

Developmental work continued on the light radial type aero engine designed by Commonwealth Aircraft Corporation Pty. Ltd. for use as the power unit for a trainer aircraft and, at 1st July, 1952, the two prototype engines were under test.

(iv) *New Aircraft Projects.*—Approval was given by the Government during 1951–52 for the production by De Havilland Aircraft Pty. Ltd. of a trainer version of the Vampire jet-propelled fighter and by Commonwealth Aircraft Corporation Pty. Ltd. of an elementary trainer aircraft of the Company's own design. Both projects were being pushed ahead rapidly.

(v) *Repair and Overhaul.* The broad policy was continued by the R.A.A.F. of returning to the factories in which they were produced all Australian-made aircraft and aero engines requiring major overhaul and the incorporation of modifications. Repair and overhaul of R.A.A.F. aircraft of other types and of carrier-based aircraft operated by the R.A.N. were undertaken by civilian personnel in the aircraft factories or in the works of contractors specially equipped to handle this type of work.

This policy, together with the production of maintenance spare parts, assisted the factory managements to retain a reasonably balanced nucleus of experienced aircraft tradesmen by supplementing the limited programmes of new aircraft and engine manufacture with repair and overhaul projects.

Lincoln aircraft were being repaired and modified at the Government Aircraft Factories throughout the year. Mustang and Wirraway aircraft and single and twin-row Wasp radial engines and Rolls Royce Nene turbo-jet engines were overhauled by Commonwealth Aircraft Corporation Pty. Ltd. in Melbourne, while Rolls Royce Merlin and Griffon engines and Bristol Centaurus engines from R.A.A.F. and naval aircraft were overhauled by the Company at the Aircraft Engine Factory in Sydney.

De Havilland Aircraft Pty. Ltd. repaired and overhauled Vampire, Mustang and Tiger Moth aircraft and Gipsy Major engines. At the Aircraft Maintenance workshops at Parafield, South Australia, Dakota transports and Wirraway trainer aircraft were being repaired and overhauled during the year.

(vi) *Naval Aircraft.* The repair and overhaul of carrier-based Fairey "Firefly" and Hawker "Sea Fury" aircraft operated by the R.A.N. continued to be handled by the Fairey Aviation Company of Australia Ltd., in Sydney.

6. **Liquidations.**—Over-all realizations on surplus property for the five years ended 30th June, 1951, totalled £20,785,022. For 1949–50 the total was £615,340 and for 1950–51, £299,786.

7. **Finance and Accounts.**—(i) *General.* The expenditure on munitions, munitions factories, aircraft production, etc., during the years 1946–47 to 1950–51 is shown in the tables which follow. The first table shows the total expenditure while the second shows details of expenditure under the various trust funds.

(ii) *Total Expenditure.* The table following shows the total expenditure incurred on account of the departments concerned during the years 1946–47 to 1950–51 inclusive.

MUNITIONS, ETC. : TOTAL EXPENDITURE.
(£'000.)

(*a*) Includes Departments of Defence Production and Supply. (*b*) Department of Aircraft Production. (*c*) Department of Supply and Shipping.

§ 7. The Department of Supply.

1. **General.**—The Department of Supply was formed on 17th March, 1950, when the operations of the Bureau of Mineral Resources, Geology and Geophysics were transferred from the Department of Supply and Development to the Department of National Development, which was created on the same day. On the 11th May, 1951, a large part of the functions of the Department of Supply was transferred to the Department of Defence Production. References to the operations of the Department of Supply and Development are contained in Official Year Book No. 38, pp. 1200–10.

2. **Functions of the Department and Acts administered.**—The functions of the Department and Acts administered by it before the 11th May, 1951, were given in Official Year Book No. 38, pp. 1200–10. Since that date its functions include (*a*) the manufacture, acquisition, provision and supply of services and goods other than "munitions" (that is to say foodstuffs, textiles, clothing, hardware, boots and other like supplies) required by Service and other authorities; (*b*) research and scientific development in relation to war *matériel*, including the operation of the Long Range

Weapons and other defence science establishments ; (*c*) design and associated technical development and inspection of war *matériel* ; (*d*) planning for and procurement of strategic materials ; (*e*) planning and establishment of manufacturing facilities for production of goods other than munitions ; (*f*) formation of industry advisory committees in respect of production and procurement matters ; (*g*) arranging contracts for supply of goods and performance of services ; (*h*) acquisition, maintenance and disposal of stocks ; (*i*) sale or disposal of surplus or unserviceable property (except buildings or land) ; (*j*) production of ingot aluminium by the Australian Aluminium Production Commission ; (*k*) provision of Commonwealth transport facilities ; (*l*) control of atomic energy materials ; (*m*) security service for Supply and Defence Production Departments ; (*n*) arrangements for ascertaining costs and control and limitation of profits on production contracts ; (*o*) co-ordinating estimates, allocation and committment of resources for Defence Supply needs (including munitions) and liaison with the National Security Resources Board ; (*p*) provision and control of stores required for or in connexion with matters administered by the Department of Supply ; general storage for other Departments as required and to the extent facilities are available.

Acts administered by the Department are the Aluminium Industry Act 1944 ; Atomic Energy (Control of Materials) Act 1946–1952 ; Supply and Development Act 1939–1948.

3. **Research and Development Branch.**—(i) *General.* Functions and details of the organization of the Research and Development Branch are contained in Official Year Book No. 38, pp. 1203–6.

(ii) *Long Range Weapons Establishment, South Australia.* At Salisbury, steady progress is being maintained in recruitment of scientific and technical staff. Modifications to existing buildings have progressed and construction is proceeding on the Salisbury airfield. At Woomera, the provision of houses is nearing completion, and technical facilities are well advanced. Trials are proceeding in accordance with the programme agreed with the United Kingdom.

(iii) *Defence Research Laboratories and Aeronautical Research Laboratories.* There has been very little departure from the programme as set out, but there has been a greater concentration on work of a defence nature. A number of new research projects are being undertaken.

(iv) *New Establishments.* Recruitment for new laboratories, namely (*a*) the Electronics Research Laboratory, (*b*) the Propulsion Research Laboratory, and (*c*) the High Speed Aerodynamics Research Laboratory, is proceeding within the limits laid down by Cabinet, and in accordance with funds provided for the year 1952–53. Progress has also been made in connexion with Australian initiated and designed prototypes.

4. **Army Branch.**—The functions of the Army Branch are design and development, and inspection and proof. These functions were transferred to the Department of Supply from the Department of the Army in February, 1950. Since the transfer, Army Branch has been re-organizing to cater for the expansion of the Defence Programme and to supply the technical services required to allow the Army to be equipped with the latest designs of stores and equipment. Consequently the recruiting of personnel and the provision of plant, equipment, and buildings for the Technical Services Establishment of Army Branch has been the main initial objective.

Although deficient in resources, the output of design and development work has been noticeably increased by the introduction of improved methods of management. The following are examples of work undertaken during this period :—Preparations for tropic testing the Centurion Tank on behalf of the Ministry of Supply in the United Kingdom ; design modifications to a large quantity of telecommunications equipment in aid of the Army's repair programme ; investigatory work in conjunction with industry to enable the maximum use to be made in war of commercial type vehicles ; and the use of industry to design important telecommunications equipment.

During the year the Army Branch has provided technical data and information regarding the Army's requirements for equipment.

Inspection and proof activities have increased owing to large Army orders for equipment. Orders for stores to the approximate value of £2,250,000 were received for the attention of the Inspection Service during September, 1951. This increase in activities has made it necessary to increase the examination staff from 400 to 462 during the year. An expansion of the Inspection Service will be necessary to cope with the increasing flow of production orders resulting from the expanded Defence Programme.

5. **Directorate of Contracts.**—(i) *General.* The Directorate of Contracts and its State Organization under the Supply and Development Act 1939–1948 and Regulations is the authority responsible for purchasing supplies or arranging services for the Military, Naval and Air Forces of the Commonwealth. Under this Act and Regulations it is also charged with the responsibility of arranging for the sale or disposal on behalf of the Department of Supply, Defence Production, Navy, Army and Air of all surplus or unserviceable war material, goods and services approved for disposal.

(ii) *Disposals.* The Directorate continues, broadly, the policy developed by the Commonwealth Disposals Commission, which was designed mainly to ensure an orderly disposal of surplus goods at fair market prices.

(iii) *Purchases.* The Directorate purchases supplies and foodstuffs for the Naval, Military and Air Forces as far as possible by public tender, as provided by Treasury Regulations.

(iv) *Administrative Organization.* The Directorate is situated in Melbourne, and the approving authority for the arranging of contracts is the Contract Board, comprising representatives of the Department of Supply, the Department of Defence Production, the Department of the Navy, the Department of the Army and the Department of Air. The Directorate is represented in States other than Victoria by a district organization which also operates in conjunction with a District Contract Board as the approving authority. The table following shows, in respect of the Contract Organization, the purchases and the realizations from disposals for the years 1949–50 and 1950–51.

CONTRACTS ORGANIZATION : PURCHASES AND REALIZATIONS FROM DISPOSALS.

District Contract Board—				
New South Wales	4,000,544	5,546,928	572,794	467,496
Queensland	339,148	751,613	228,688	169,118
South Australia	704,107	1,303,990	205,989	99,082
Western Australia	637,735	671,855	125,815	81,695
Tasmania	60,911	86,473	20,359	23,262
Total	17,950,065	48,875,848	2,958,817	1,946,952

6. **Tinplate.**—Throughout the 1939–45 War assured supplies of tinplate were essential to the packaging of foods for Australian and Allied troops. With this objective the Commonwealth Government established a Commonwealth Tinplate Board, comprising representatives of the industrial and departmental interests concerned in the availability of adequate supplies, not only for the canning of foodstuffs, but also for more direct war purposes. This Board was replaced on 31st December, 1946 by the Commonwealth Tinplate Advisory Committee and at the same time a Controller of Tinplate was appointed.

Over the ten years ended 30th June, 1951 Australian consumption of tinplate averaged 110,000 tons per annum. Upwards of 85 per cent. is used for the canning of foodstuffs. Most canning factories run at peak capacity in the fruit-picking season, and keep their key personnel in employment during other months of the year in handling such packs as jam from fruit pulp, soup, vegetables, meat and spaghetti.

Australia's tinplate supplies are drawn from the United Kingdom and the United States of America. Recently small tonnages have been ordered from Japan, but during 1949 plans for the establishment of a tinplate mill at Port Kembla were further advanced. Tinplate is rolled to rigid specifications many months in advance of its permanent use in the form of cans.

Control over the use of tinplate in Australia was abolished on 12th October, 1949, but the services of the Committee are being retained by the Commonwealth for advice in the matter of oversea supplies and distribution in Australia.

7. **Stores and Transport Branch.**—This Branch now functions as the central authority which is responsible for providing all storage and transport facilities necessary to meet the official requirements of Commonwealth Departments and authorities. It has branches in all States and agents in Canberra and Townsville, Queensland.

At the 30th June, 1951, it had under its control land, buildings, plant and machinery valued at over £5,000,000, and 4,000,000 square feet of storage space, of which 3,600,000 was Government-owned and the balance held under tenancy.

8. **Australian Aluminium Production Commission.**—Basic plans for the manufacture of aluminium ingot in Australia were approved by the Commonwealth Government in April, 1941 as a defence measure designed to make this country independent of oversea supplies. In April, 1944 an agreement was made between the Commonwealth and Tasmanian Governments for the establishment of the industry in Tasmania. The Australian Aluminium Production Commission, consisting of two representatives and two deputies acting for the Commonwealth and an equal number of representatives and deputies for Tasmania, was constituted on 1st May, 1945. By legislation passed in 1952, the original fund of £3,000,000 to finance the undertaking was increased to £7,250,000, of which the Commonwealth Government will contribute £5,750,000 and the Tasmanian Government £1,500,000.

Workable deposits of bauxite (aluminium ore) have been proved in New South Wales, Victoria and Tasmania, the largest deposits being located in the Inverell district of northern New South Wales, where reserves exceeding 8 million tons have been brought under Commission control. Reported extensive deposits in the Wessel Islands, off the coast of Arnhem Land, are being investigated. A combined alumina and reduction plant is being erected at Bell Bay, northern Tasmania, to which power will be transmitted from a generating station at Trevallyn, near Launceston. Large quantities of plant and equipment have been purchased, and considerable progress in construction work has been made with the object of completing the project in 1953. The works will have an output of 13,000 tons of ingot annually.

CHAPTER XXVIII.

REPATRIATION.

§ 1. General.

An outline of the activities leading up to the formation of the Commonwealth Repatriation Commission was given in Official Year Book No. 15, p. 931. Some account was given also in the Official Year Book referred to, and in subsequent issues, of the policy and general activities of the Department, while detailed information was incorporated in regard to such matters as sustenance rates and pensions to soldiers and dependants. (*See* Official Year Book No. 17, pp. 598-601.) In 1943 the Australian Soldiers' Repatriation Act was amended by the incorporation of the recommendations of the Parliamentary Committee appointed to inquire into pensions and repatriation benefits. A general increase was made of approximately 20 per cent. in the rates of war pensions and increases were also made in other repatriation benefits.

Under Act No. 34 of 1950, the rates of pension and medical sustenance were increased, and the pensions and benefits under the Act were extended to those members of the Forces (and their dependants) engaged in operations in Korea and Malaya. Provision was also made for payment to a war widow, on re-marriage, of a gratuity equal to one year's war pension.

In addition, an important amendment was a change in the basis of war pensioning. Previously, the basis was the daily rate of service pay, but under the amending legislation the rank, not the pay, of the service man or woman became the basis.

This change was brought about as the result of the increased rates of pay of members of the Forces under the new pay code from 1st July, 1947, and the further increases since then. The constantly rising figure made it evident that the basis of pensioning on the daily rate of pay would be unworkable; for example, the rates of pay of more or less senior officers of the 1914–18 War and of the 1939–45 War, discharged before 1st July, 1947, were less than the new rates of pay for present day lower ranks, with a consequent disparity in the rates of pension.

To avoid this disparity, the daily rate of pay basis—which had been in operation since the original war pension legislation of 1914—was abandoned in favour of the basis of pensioning according to the rank of the member, the basis adopted by other countries.

Under the Statute Law Revision Act of 1950 the title " Australian Soldiers' Repatriation Act 1920–1950 " was amended to " Repatriation Act 1920–1950 ".

The main activities of the Repatriation Commission at 30th June, 1951 were confined to the grant, review and assessment of war and service pensions, the provision of medical treatment, payment of re-employment allowances, vocational training of the more seriously disabled members, the renewal and repair of artificial replacements and surgical appliances, the grant and review of sustenance and living allowances and the administration of the Soldiers' Children Education Scheme.

§ 2. War Pensions.*

1. **General.**—Provision for the payment of war pensions to soldiers and their dependants was made by the Commonwealth Parliament in the War Pensions Act 1914, which came into operation on 21st December, 1914. This Act was repealed in 1920 by the Australian Soldiers' Repatriation Act. Owing to limitations of space, only some of the main features relating to war pensions under the Repatriation Act 1920–1951 are shown in the following paragraphs :—

(i) *Eligibility for Pension.* There has been a considerable widening of the provision in this respect, to the benefit, mainly, of members of the Citizen Military Forces who have not served outside Australia. These provisions are summarized as follows :—

(*a*) A member of the Forces who served (1) outside Australia, (2) in the Territories of Australia, such as Papua and New Guinea, or (3) within Australia in circumstances which can be regarded as actual combat against the enemy, is covered for war pension purposes in respect of incapacity or death which may result from any occurrence happening during the whole period of service.

(*b*) In other cases where a member served only in Australia, incapacity or death to be pensionable must have been attributable to service.

(*c*) There is a third ground applicable to all in (*a*) and (*b*) who have had at least six months' camp service. This provides that, where a condition pre-existed enlistment, a pension may accrue if it is considered that such condition was aggravated by service.

(ii) *Pensions for Incapacity.* Under the amending legislation of 1950 the general rate of pension for a totally incapacitated member of the Forces, ranges, according to members' rank, from £7 to £8 16s. per fortnight. From 2nd November, 1950, the wife of such a member receives a pension of £3 1s., and each child under 16 years of age £1 3s. per fortnight.

If the degree of incapacity is less than 100 per cent. the rates of pension are proportionately lower.

(iii) *Supplementation of Pension.* Where a member in receipt of a pension at the maximum rate is, because of his war disability, temporarily (for at least three months) precluded from earning, an additional pension may be granted that would bring the total pension to a member up to £17 10s. per fortnight.

(iv) *Women's Nursing and Auxiliary Services.* Members of Women's Services are entitled to pensions and other benefits as prescribed in the Act on the same basis as male members of the Forces.

(v) *Tuberculosis.* In the case of a member of the Forces who served in a theatre of war, and, at any time after discharge became or becomes incapacitated, or died or dies, from pulmonary tuberculosis, war pension is payable, and medical treatment is provided on application as if the incapacity or death resulted from an occurrence on service. (*See also* § 3. Service Pensions.)

(vi) *Special Rates.* Those who have been totally blinded as the result of war service and those who are permanently totally incapacitated receive, as from 25th October, 1951, special pensions of £17 10s. per fortnight. In addition to the special pension, an attendant's allowance of £3 per fortnight may be granted to the war-blinded and to certain others who are deemed to be in need of an attendant. A war-blinded member who is also affected with total loss of speech or total deafness is entitled from 2nd November, 1950 to an attendant's allowance of £6 per fortnight in lieu of that referred to above. The wife and any children under 16 years of age receive the same rates as shown in sub-par. (ii).

---

* For rates operating since October, 1952, *see* Appendix to this volume.

(vii) *Specified Disabilities.* Where the disability is amputation of a limb or limbs or total loss of vision in one eye, amounts ranging from 15s. to £7 per fortnight are payable as from 2nd November, 1950, in addition to the statutory rate of pension. In addition, allowances of either £3 or £6 per fortnight are payable in certain double amputation cases.

(viii) *Time Limit for Wives and Children Removed.* Prior to the 1950 amending Act, wives who were married and children who were born after 1st July, 1938 were ineligible to receive a war pension. This time limit was removed as from 2nd November, 1950.

(ix) *Rates of Pensions for Death.* (*a*) *Widows.* As already stated, rates of pension were previously based on the daily rate of pay of the member. From 2nd November, 1950, the rate ranges from £7 to £8 16s. according to the rank of the member. In addition to the pension, the widow received an allowance of £1 per fortnight if she had dependent children or if she was over 50 years of age; as from 25th October, 1951, this allowance was increased to £3 4s. per fortnight, and eligibility extended to include a widow who, although under 50 years of age, is permanently unemployable.

(*b*) *Children.* From 2nd November, 1950, the rate of pension for the eldest child (under 16 years of age) was increased to £2 4s. per fortnight, and that of each younger child to £1 11s. In addition to the pension, an amount of 12s. per fortnight may be paid in certain circumstances. Where both parents are dead each child is pensioned at the rate of £4 per fortnight.

(x) *Widowed Mother on Death of Member.* From 2nd November, 1950, a pension ranging from £4 10s. to £8 6s. per fortnight, according to the rank of the member, may be granted to a widowed mother of a deceased unmarried son, provided widowhood occurred either prior to or within three years after the death of the member. The pension may be supplemented by payment of an additional amount constituting the difference between the statutory pension and £8 per fortnight or part thereof, according to the extent of other income of the pensioner. The value of property possessed by the widowed mother does not affect the issue.

2. **Appeal Tribunals.**—The principal Act was amended as from 1st June, 1929 to create tribunals to hear appeals in regard to war pensions. The War Pensions Entitlement Appeal Tribunal is empowered to hear and decide any appeal by or on behalf of ex-members of the Forces or their dependants against a decision of the Repatriation Commission that an incapacity or the death of an ex-member did not arise out of war service. Assessment Appeal Tribunals were created to hear and decide any appeal against a current assessment or a "Nil" assessment of war pension made by the Repatriation Commission in respect of an incapacity of an ex-member of the Forces which had been accepted as arising out of war service. Provision was made by subsequent legislation to enable the Tribunals to hear appeals by certain members for service pensions.

3. **Summary of War Pensions, 1950–51.**—At 30th June, 1951 the number of war pensions for the 1914–18 War was 148,516 and for the 1939–45 War 354,111, and the amounts paid £12,997,634 and £13,192,829, respectively. The outstanding features for 1950–51 for each war were as follows.

WAR PENSIONS: SUMMARY, AUSTRALIA, 1950–51.

Particulars.	1914–18 War.	1939–45 War.	Both Wars.
New claims granted	8,567	39,866	48,433
Restorations	627	1,215	1,842
Claims rejected (gross)	1,480	8,387	9,867
Pensions reviewed	18,519	75,550	94,069
Pensions cancelled or discontinued	3,168	10,515	13,683
Deaths of pensioners	3,782	1,439	5,221
Number of pensions in force at 30th June, 1951	148,516	354,111	502,627
Annual pension liability at 30th June, 1951 £	13,271,144	14,483,436	27,754,580
Amount paid in pensions during the year 1950–51 £	12,997,634	13,192,829	*a*26,191,718

(*a*) Includes £1,255 in respect of the Korean and Malayan operations.

4. **Classes of War Pensions, 1950–51.**—At 30th June, 1951 special rate pensions of £14 per fortnight were being paid to the following classes of members of the Forces :—

WAR PENSIONS: MEMBERS ON SPECIAL RATES, 30th JUNE, 1951.

Class.	1914–18 War.	1939–45 War.	Both Wars.
Blinded members	192	172	364
Tubercular members	889	1,290	2,179
Totally and permanently incapacitated members	6,857	1,857	8,714

The following is an analysis of the total number of new claims granted during 1950–51 :—

WAR PENSIONS: NEW CLAIMS GRANTED, 1950–51.

Class.	1914–18 War.	1939–45 War.	Both Wars.
Members	1,001	8,883	9,884
Wives of members (or husbands of members)	3,258	9,652	12,910
Children	3,962	20,760	24,722
Other dependants	346	571	917
Total	8,567	39,866	48,433

In the following table the number receiving pensions at 30th June, 1951 is shown for each war for each class of pensioner :—

WAR PENSIONS IN FORCE, 30th JUNE, 1951.

Class.	Number of Pensioners.		
	1914–18 War.	1939–45 War.	Both Wars.
Orphan children	1,207	11,328	12,535
War widows	15,670	8,839	24,509
Members	64,889	115,942	180,831
Children	9,002	123,501	132,503
Wives (or husbands)	53,115	87,619	140,734
Parents	4,332	6,681	11,013
Brothers and sisters	115	132	247
Others	186	69	255
Total	148,516	354,111	502,627

5. **Number of War Pensioners and Expenditure, 1950–51.**—The following table shows the number of pensions in force for each war at 30th June, 1951, and the places where payments were made during 1950–51 :—

WAR PENSIONS : NUMBER OF PENSIONERS AND EXPENDITURE, 1950–51.

Where Paid.	War Pensions in Force.				Expenditure. (£.)
	Incapacitated Members of the Forces.	Dependants of Incapacitated Members.	Dependants of Deceased Members.	Total.

(*a*) Includes Australian Capital Territory. (*b*) Includes Northern Territory. (*c*) Includes £1,255 in respect of the Korean and Malayan operations.

§ 3. Service Pensions.*

1. **General.**—The payment of service pensions is provided for in the Repatriation Act 1920–1951 and has operated since 1st January, 1936.

Originally fixed on a lower scale, the rate of service pension for a member of the Forces now conforms to the rate of the age or invalid pension, which from 1st November, 1951 was £6 per fortnight. The maximum rate for the wife of a member is £3 per fortnight ; the rate for the first child under 16 years of age was increased to 23s. per fortnight and 5s. per fortnight is payable for each of the younger children up to three in number. The actual rate payable in any case is determined after taking into consideration all other income received and property (apart from the home and certain other exempted items) owned by the pensioner, and no service pension can be paid where such other income and/or property exceeds certain specified limits. From 1st November, 1951 the "allowed income" was £234 per annum for a single man and £468 per annum in the case of a member and eligible wife. If a member has property exceeding in value £1,000 (£2,000 for a member and eligible wife), that alone precludes payment of a pension. Pension is assessed according to the amount of income ; if the income from all sources is less than the amount shown above, service pension is assessed at such rate as will, with that other income, bring the total income of the pensioner (including service pension) up to the "allowed income", provided that the pension cannot exceed the maximum rate specified for the particular class of case. If assessable property is held, then a deduction is made from the pension assessed according to income only, the deductions being made at so much for each complete £10 of property in excess of £100 (or £200 in the case of member and eligible wife). The deductions are as follows :—for each £10 from £100 to £450, 9d. per fortnight ; for each £10 of the portion from £450 to £1,000, 1s. 6d. per fortnight.

---

* For rates operating since October, 1952, *see* Appendix to this volume.

Female members of the forces were made eligible in 1936 for consideration of service pensions if they embarked for service abroad; previously they must have served in a theatre of war. In the same year an institutional rate of service pension not exceeding 12s. per fortnight was made available. This pension rate from 1st November, 1951 was £2 2s. per fortnight, and benefits particularly inmates of mental asylums, who were previously excluded from the scheme.

Eligibility for service pensions may be established on the following grounds :—

(*a*) Sixty years of age or more, provided the member served in a theatre of war, but eligibility on this ground applies only to the member and not to his wife or children. In the case of a female member of the forces, the qualifying age is 55 years, and service abroad, not necessarily in a theatre of war, is sufficient.

(*b*) Permanently unemployable, provided the member served in a theatre of war (or, in the case of a female member, served abroad). Under this class pensions may be paid to the member, his wife and children—up to four in number.

(*c*) Pulmonary tuberculosis, whether the member served in a theatre of war or not. Under this class, also, pensions are payable to the wife and children—up to four in number.

Only those members who qualify under Class (*c*) are entitled to receive both service and invalid pensions at the same time.

The eligibility of wives and children for service pension is as follows :—

1914–18 War : wife married, or child born, before 2nd October, 1931.

1939–45 War : wife married within 15 years after discharge of member ; any child born of such a marriage.

During the year 1941–42 the scheme was extended to veterans of the South African War 1899–1902, and by amending legislation in 1943 was further extended to members of the Forces of the 1939–45 War.

2. **Operations, 1950–51.**—The following are the important details of the service pension scheme during 1950–51 :—

Claims granted during year—	
Members of the Forces	2,185
Wives	210
Children	33
Total	2,428
Claims rejected during year—	
Members of the Forces	582
Wives	212
Children	4
Total	798
Service pensions cancelled or discontinued during year	1,780
Deaths of pensioners during year	870
Pensions in force at 30th June, 1951	16,512
Annual pension liability on 30th June, 1951	£1,586,039
Amount paid in pensions during the year 1950–51	£1,507,258

3. **Number of Service Pensioners and Expenditure, 1941–42 to 1950–51.**—(i) *Australia.* The following table shows the number of service pensions in force and the expenditure for the ten years 1941–42 to 1950–51 :—

SERVICE PENSIONS : SUMMARY, AUSTRALIA.

(*a*) Includes Australian Capital Territory. (*b*) Includes Northern Territory.

§ 4. Medical Treatment of Returned Soldiers Suffering from War Service Disabilities.

At 30th June, 1951 there were 5,531 in-patients, including a number whose care was undertaken by the Repatriation Commission on behalf of other countries or Commonwealth Departments. There were 412,235 out-patient attendances for treatment during the year, excluding 397,248 treatments by the 2,770 local medical officers resident in metropolitan and country areas and New Guinea. The expenditure to 30th June, 1951 was £37,921,150.

§ 5. General Benefits and Miscellaneous.

1. Other Departmental Activities.—(i) *General.* Since the outbreak of the 1939–45 War, the ordinary activities of the Department in the way of general benefits for the welfare of members and dependants have continued without interruption. They were mainly education and training of children under the Soldiers' Children Education Scheme, medical benefits for widows and children of deceased members and for widowed mothers of deceased unmarried members, funeral expenses for certain classes of members and dependants, and allowances to certain classes of dependants in lieu of pension.

By amending legislation passed during the 1939–45 War, these benefits were extended for members engaged in that war, and new benefits designed for the re-establishment of members after discharge from the Forces were made available. The re-establishment benefits administered by the Repatriation Commission are :—payments of re-employment allowance while awaiting employment ; provision of tools of trade and equipment where such are necessary to the member's employment ; transportation expenses to meet the cost of fares and removal of household belongings, where a member, or member and family, take up training, employment, a business, or settle on the land ; supplementation of wages of apprentices whose apprenticeships were interrupted by war service ; re-establishment loans to enable members and widows to establish themselves in businesses, practices or other occupations, including (until the Commonwealth Director of War Service Land Settlement began operations early in 1946) agricultural occupations ; payment of re-establishment allowance during the early stages of establishment in business ; gifts up to £75 for furniture to members who are blinded or totally and permanently incapacitated, also to widows with children under 16 years of age ; and free passages to Australia for wives, widows and children of members who married abroad (and passages outward from Australia in certain cases of members and dependants).

The Commission has now taken over the functions of the Re-establishment Division of the former Department of Post-war Reconstruction, and is responsible for the co-ordination of all matters relating to training under the Commonwealth Reconstruction Training Scheme. Re-establishment of the more seriously disabled where ordinary training is not sufficient continues to be an activity of the Commission, and special means have to be found to overcome each problem.

(ii) *Review of General Benefits.* The following paragraph gives particulars (number of cases and expenditure) of the more important general benefits over the period from 8th April, 1918 to 30th June, 1951.

(*a*) *Employment*—

1914–18 *War :* Number of applications, 251,200 ; Expenditure—sustenance while awaiting employment, £1,768,000 ; tools of trade and fares, etc. (gift), £554,000 ; tools of trade (loan), £21,800.

1939–45 *War :* The placing of members in employment was carried out by the Commission for only a short period prior to the inauguration of the Department of Labour and National Service, but the Commission has the responsibility of payment of re-employment allowance, provision of tools of trade and payment of fares and removal expenses. Number of cases and expenditure to 30th June, 1951 are as follows :—Re-employment allowances—66,620, £1,026,750 ; tools of trade (gift)—259,594, £1,876,050 ; (loan)—19,196, £282,997 ; fares and removal expenses, —15,638, £225,196.

(*b*) *Vocational Training*—

1914–18 *War :* Number of members completed training in full-time courses, 27,696 ; expenditure, £4,849,600.

1939–45 *War :* Members completing apprenticeships—12,611, £3,856,008.

(*c*) *Business Loans*—

1914–18 *War :* 6,130, £421,800.

1939–45 *War :* 26,626, £6,682,467. Allowances pending productivity of business—1,266, £76,727. Fares and removal expenses to member proceeding to a business, £495.

(*d*) *Furniture Grants*—

1914–18 *War:* Expenditure—gift (to members blinded or totally and permanently incapacitated and to widows), £75,190; loan (to other classes of members), £1,031,570; total number of cases, 35,400.

1939–45 *War:* Gift (no loan cases)—widows, 5,577, £382,322; members, 350, £22,706.

(*e*) *Free Passages*—

1914–18 *War:* £509,120.

1939–45 *War:* To Australia—4,762, £309,965; from Australia—67, £9,995.

(*f*) *Soldiers' Children Education Scheme*—

Main Scheme: Full-time training as from 13 years of age.

Particulars.		1914–18 War.	1939–45 War.
Applications		31,497	8,682
Approved		29,833	8,513
Completed training		23,582	3,170
Withdrawn during training		4,021	323
Awaiting next stage of training		42	123
In training		2,188	4,897
Expenditure	£	3,032,471	519,533

Minor benefits prior to entrance to main scheme: 1914–18 War, £39,317; 1939–45 War, £26,098.

(iii) *Total Expenditure on General Benefits.* The total expenditure on general benefits, apart from war and service pensions, from 8th April, 1918 to 30th June, 1951, was as follows:—1914–18 War, £33,850,529 (including loan, £1,676,014); 1939–45 War, £34,242,187 (including loan, £6,974,570). Of the grand total of £68,092,716, the largest amounts were absorbed by medical treatment with £37,921,149, vocational training with £8,779,256, and expenses of providing employment, £5,827,775.

2. **Expenditure of Repatriation Commission, 1950–51.**—The expenditure of the Commission for the year ended 30th June, 1951 was £38,096,193, distributed as follows:—

		£
Repatriation benefits—		
Loans to members		591,498
Grants to members and general expenditure (including maintenance of training schools, medical institutions, etc.)		7,239,427
Assistance to members in necessitous circumstances		2,580
Allowances to dependants of members not provided for under the Act		301
Total		7,833,806
Soldiers' Children Education Scheme		184,226
War and Service Pensions		27,532,254
Administrative costs—	£	
Salaries	2,202,923	
Contingencies	342,984	
		2,545,907
Grand total		38,096,193

3. **Settlement on the Land of Returned Service Personnel.**—Reference to the settlement on the land of returned service personnel of both the 1914–18 and 1939–45 Wars will be found in Chapter IV.—Land Tenure and Settlement.

CHAPTER XXIX.

MISCELLANEOUS.

§ 1. Patents, Trade Marks and Designs.

1. **Patents.**—(i) *General.* The granting of patents is regulated by the Commonwealth Patents Act 1903–1950, which, in regard to principle and practice, has the same general foundation as the Imperial Statutes, modified to suit Australian conditions. The Act is administered by a Commissioner of Patents. Fees totalling £10 are sufficient to obtain letters patent for the Commonwealth of Australia and the Territories of Papua, New Guinea and Norfolk Island. Renewal fees are payable as follows :—£1 before the expiration of the fifth year and an amount progressively increasing by ten shillings before the expiration of each subsequent year up to the fifteenth, when the fee becomes £6. If a renewal fee is not paid when it becomes due, an extension of time up to twelve months may be granted on grounds specified in the Act, and subject to the payment of prescribed fees. An amendment to the Act in September, 1946 permits the public to inspect an application, complete specification and provisional specification (if any) after the complete specification has been lodged. Previously, specifications were made public only after an application had been accepted, in many cases as much as a year after the date of lodgment.

(ii) *Summary.* The number of separate inventions in respect of which applications were filed during the years 1939 and 1946 to 1950 is given in the following table, which also shows the number of letters patent sealed in each year :—

PATENTS : AUSTRALIA.

Particulars.	1939.	1946.	1947.	1948.	1949.	1950.
No. of applications ..	5,740	9,072	8,358	7,709	6,724	7,051
No. of applications accompanied by provisional specifications	3,161	4,321	3,727	3,302	3,174	3,359
Letters patent sealed during each year	3,141	1,901	2,773	3,381	3,550	3,115

(iii) *Revenue.* The revenue of the Commonwealth Patent Office during the years 1939 and 1946 to 1950 is shown hereunder :—

PATENTS : REVENUE, AUSTRALIA.

(£.)

Particulars.	1939.	1946.	1947.	1948.	1949.	1950.
Fees collected under Patents Act	45,581	83,871	90,278	92,500	85,972	95,089
Receipts from publications ..	1,828	2,293	2,100	2,000	1,826	1,260
Total	47,409	86,164	92,378	94,500	87,798	96,349

2. **Trade Marks and Designs.**—(i) *Trade Marks.* Under the Trade Marks Act 1905-1948 the Commissioner of Patents is also Registrar of Trade Marks. This Act has been amended from time to time, the last amendment having been made in 1948. Special provisions for the registration of a "Commonwealth Trade Mark" are contained in the Act of 1905, and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connexion with the manufacture of such goods are fair and reasonable. The Act of 1948 provides for the registration of registered users of trade marks, and also for assignment of trade marks with or without the goodwill of the business concerned.

(ii) *Designs.* Under the Designs Act 1906–1934 the Commissioner of Patents is also Registrar of Designs.

(iii) *Summary.* The following table shows the applications for trade marks and designs received and registered during the years 1939 and 1946 to 1950 :—

TRADE MARKS AND DESIGNS : AUSTRALIA.

Applications.	1939.	1946.	1947.	1948.	1949.	1950.
RECEIVED.						
Trade Marks	1,992	4,142	4,041	3,724	3,732	3,796
Designs	865	1,544	1,256	990	948	1,187
REGISTERED.						
Trade Marks	1,580	1,649	2,447	2,386	1,165	1,003
Designs	736	771	879	1,005	962	304

(iv) *Revenue.* The revenue of the Trade Marks and Designs Office during the years 1939 and 1947 to 1950 is shown hereunder :—

TRADE MARKS AND DESIGNS : REVENUE, AUSTRALIA.

No fees in respect of trade marks have been collected under State Acts since 1922.

§ 2. Copyright.

1. **Legislation.**—Copyright is regulated by the Commonwealth Copyright Act 1912–1935 wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America, under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order in Council which came into operation on 1st February, 1923, and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

2. **Applications and Registrations.**—The following table shows under the various headings the number of applications for copyright received and registered, and the revenue obtained for the years 1939 and 1946 to 1950 :—

COPYRIGHT : AUSTRALIA.

§ 3. Lord Howe Island.

Lord Howe Island is situated in latitude 31° 30′ south, longitude 159° 5′ east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formations of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia Palm Seed. The land belongs to the Crown and is occupied rent-free on sufferance.

Discovered in 1788, the Island was first settled by a small party of Maoris in 1853 ; afterwards a colony was settled from Sydney. Constitutionally the Island is a dependency of New South Wales and is included in King, one of the electorates of Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 179 at the Census of 30th June, 1947.

§ 4. Commonwealth Scientific and Industrial Research Organization.

1. **General.**—By the Science and Industry Research Act 1949, the previously existing Commonwealth Council for Scientific and Industrial Research was reorganized under the title of the Commonwealth Scientific and Industrial Research Organization. An account of the organization and work of the former Council, and of the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the Official Year Book. (*See* No. 14, p. 1061 and No. 37, p. 1183.)

2. **Science and Industry Research Act 1949.**—This Act provides for—

(*a*) an Executive of the Organization consisting of five members to be appointed by the Governor-General, at least three of whom shall be persons possessing scientific qualifications ;

(*b*) an Advisory Council of the Organization consisting of the members of the Executive, the Chairman of each State Committee constituted under the Act, and such other members as the Advisory Council, with the consent of the Minister, co-opts by reason of their scientific knowledge.

The powers and functions of the Organization are as follows :—(*a*) To initiate and carry out scientific researches in connexion with primary or secondary industries in Australia ; (*b*) to train research workers and to establish industrial research studentships and fellowships ; (*c*) to make grants in aid of pure scientific research ; (*d*) to establish and make grants to industrial research associations in any industry ; (*e*) to test and standardize scientific apparatus and instruments ; (*f*) to collect and disseminate scientific and technical information ; (*g*) to publish scientific and technical reports and periodicals ; and (*h*) to act as a means of liaison between Australia and other countries in matters of scientific research.

3. **Science and Industry Endowment Act 1926–1949.**—Under this Act, the Government established a fund of £100,000, the income from which is used to provide assistance (*a*) to persons engaged in scientific research ; and (*b*) in the training of students in scientific research. Provision is made for gifts or bequests to be made to the fund, which is controlled by a trust consisting of the Executive of the Organization. In accordance with the Act, arrangements have been made to send a number of qualified graduates abroad for training in special fields of work.

4. **Work of the Organization.**—The activities of the Commonwealth Scientific and Industrial Research Organization have necessitated a widespread and adaptable arrangement of its research laboratories. Undesirable centralization has been avoided mainly in two ways. In the first place, the policy has been followed of establishing laboratories in different places in the Commonwealth wherever the necessary facilities, contacts and other suitable conditions could best be found. Secondly, the Act provides for the establishment of a State Committee in each of the six States. These Committees are widely representative of scientific and industrial interests, and advise the Executive or the Advisory Council on general matters and on particular questions of investigation and research.

For about twelve years after its establishment, the work of the previous Council was devoted mainly to the solution of problems affecting the agricultural and pastoral industries. Unlike manufacturing concerns, which can often employ their own scientific staffs, the farmers and the pastoralists are dependent on outside help for the solution of their problems which require research. It was a recognition of the greater need of the primary producer which directed the Council's early policy. However, in 1937, the Commonwealth Government decided to extend the activities of the C.S.I.R. so as to provide assistance to secondary industries, and several laboratories have been established for work in that field ; it was thus in the fortunate position of being able to render to these industries assistance of vital importance almost immediately after the outbreak of war. In fact, the remarkable technological advances and developments in secondary industrial production during the war would to a large extent have been impossible had it not been for the assistance rendered by scientific research, and this may well serve as a forceful illustration of what may be accomplished in times of peace.

For the purpose of carrying out its research work there are established within the Organization a number of Divisions and Sections. The Divisions, of which there are now fifteen, comprise the major establishments for which special laboratory buildings have been erected and equipped ; the Sections generally include establishments which have not reached a stage of development, so far as the scope and magnitude of their operations are concerned, to justify their designation as Divisions. As the Organization's investigations extend on a Commonwealth-wide basis and as many of the investigations which are being conducted—particularly those concerned with problems affecting the agricultural and pastoral industries—necessitate experimental work in the field, a number of field stations have been established in various parts of Australia.

The Divisions which have been established are as follows :—

(1) Plant Industry, with main laboratories at Canberra and field stations.
(2) Entomology, with main laboratories at Canberra and field stations.
(3) Animal Health and Production, with main laboratories in Melbourne and Sydney and field stations.

(4) Biochemistry and General Nutrition, with main laboratories at Adelaide and field stations.

(5) Soils, with main laboratories at Adelaide and extensive operations in the field.

(6) Forest Products, with main laboratories in Melbourne and field experiments.

(7) Food Preservation and Transport, with main laboratories at Homebush. New South Wales, and a subsidiary laboratory in Brisbane.

(8) Fisheries, with main laboratories at Cronulla, New South Wales, subsidiary laboratories in Perth, Western Australia, Dunwich, Queensland and Thursday Island, and experimental work in coastal waters of Australia.

(9), (10), (11) Metrology, Physics and Electrotechnology, comprising the National Standards Laboratory at Sydney.

(12) Radiophysics, with main laboratory at Sydney.

(13) Industrial Chemistry, with laboratories in Melbourne.

(14) Tribophysics, with laboratories in Melbourne.

(15) Building Research, with laboratories in Melbourne.

The following are the Sections :—

(1) Commonwealth Research Station, Murray Irrigation Area, Merbein, Victoria.

(2) Irrigation Research Station, Griffith, New South Wales.

(3) Radio Research Board, Sydney.

(4) Dairy Research, Melbourne.

(5) Mathematical Statistics, Adelaide.

(6) Mineragraphic Investigations, Melbourne.

(7) Ore-dressing Investigations, Melbourne and Kalgoorlie.

(8) Flax Research, Melbourne.

(9) Atomic Physics, Melbourne.

(10) Physical Metallurgy, Melbourne.

(11) Meteorological Physics, Melbourne.

(12) Wool Textile Research Laboratories, Geelong, Melbourne and Sydney.

(13) Oenological Research, Adelaide.

(14) Coal Research, Sydney.

(15) Mathematical Instruments, Sydney.

(16) Wildlife Survey, with main laboratory in Canberra, subsidiary laboratory at Albury, and field experiments.

(17) Land Research and Regional Survey, with headquarters in Canberra, and field stations at Ayr (Queensland), Katherine (Northern Territory) and Ivanhoe (Kimberley, Western Australia).

In addition to its investigational work, the Organization maintains an Information Service which deals with inquiries covering a wide range of scientific and technical subjects. Since the outbreak of war in 1939 Scientific Research Liaison Offices have been established in London and Washington.

Recently an Agricultural Research Liaison Section was established at Head Office to assist in making the Organization's results in agricultural research speedily available in State Departments of Agriculture for use in their extension work.

The Organization's Head Office, with administrative and executive staff, is in Melbourne, and associated with it are the Organization's Information Service, Central Library, Agricultural Research, Liaison Section and Central Experimental Workshops. The funds for the Organization are provided from two main sources, viz., from Commonwealth revenue by Parliamentary appropriation, and from industry directly or indirectly by way of contributions and special grants. The fact that contributions and grants account for over one-eighth of the total annual expenditure indicates that C.S.I.R.O. has succeeded in a very large measure in gaining the confidence of the public.

The activities of C.S.I.R.O. are now so comprehensive in their scope and so widely distributed that it is not an easy matter to present in a concise form an adequate picture of them. For details of the investigations in progress reference should be made to the Annual Report of the Organization.

§ 5. Australian Institute of Anatomy.

1. **Foundation of Institute.**—The Australian Institute of Anatomy, situated in Canberra, occupies a monumental building erected by the Commonwealth Government under the Zoological Museum Agreement Act of 1924. Prior to the passing of this Act, the Commonwealth Government had expressed regret that the Australian nation possessed neither a collection of specimens of the unique and fast disappearing fauna of Australia, nor a museum in which such specimens could be preserved for future generations. Comparative anatomy is the basis of medical science, and while the importance of a study of Australian animals in the solution of various medical problems had for years been recognized by other countries and steps taken by them to procure specimens for their museums, national effort in this direction was neglected in Australia. The late Sir Colin MacKenzie, the first Director of the Institute of Anatomy, however, very kindly presented to the Commonwealth Government his entire private collection, and this magnificent gift was acquired and provision was made for its proper housing under special legislation by the Commonwealth Government. In 1931 the Institute became an integral part of the Commonwealth Department of Health.

2. **Additions to Original Collection.**—In addition to the original collection, which has been greatly augmented, the following gifts have been made to the Australian nation, and are on view in the Institute :—

(1) *Horne-Bowie Collection.*—Dealing with the life of Central Australian aborigines and throwing valuable light on the psychology of this Stone Age people.

(2) *Burrell Collection.*—This deals with the life history of the platypus, and is unique in the world. The platypus is the most primitive mammal known to science, and is the link between the bird, the reptile and the mammal.

(3) *Milne Collection.*—This is an anthropological and ethnological collection dealing with the aborigines of New South Wales, and contains many valuable and now unobtainable native weapons and implements.

(4) *Murray Black Collection* of anatomical material representative of the aborigines of Southern Victoria and the River Murray.

(5) *Nankivell Collection*, illustrating the anatomy of the aborigines of the Murray Valley.

(6) *Harvard University Collection.*—This includes a collection of specimens from the Harvard University, U.S.A., representing a carefully worked out epitome of archaeology of the United States of America, and, together with two rare skeletons of primitive North American Indians, was a goodwill gift from the University to the Institute of Anatomy.

(7) *The Sir Hubert Murray Collection.*—The ethnological and osteological collection of the late Sir Hubert Murray, formerly Lieutenant-Governor of Papua. This deals especially with the anthropology of Papua.

(8) *The Rabaul Ethnological Collection.*—This concerns chiefly the ethnology of The Trust Territory of New Guinea.

(9) *The Basedow Collection.*—This collection was purchased by the Commonwealth Government. It deals especially with the anthropology of Central and Northern Australia and was assembled, after many years of research, by the late Dr. Herbert Basedow of Adelaide, who was formerly Protector of Aborigines.

(10) *The Crowther Collection* of stone artifacts of the extinct Tasmanian race. This collection was a gift of Dr. W. E. L. H. Crowther of Tasmania.

(11) *Keith Goddard Australian Ethnological Collection.*—This collection has been donated by Mr. R. H. Goddard of Sydney and represents an important ethnological collection dealing with the aborigines of the Northern Territory. It includes also some specimens from the Pacific Islands.

(12) Many hundreds of specimens and books received from numerous interested scientists, the most outstanding being those from Mr. E. Hill, of Nagambie, Victoria; Mrs. Harry Burrell, New South Wales; and medical books for the Library from the estates of the late Drs. Molloy, David Grant and Robert Stirling.

3. **Endowments for Orations and Lectures.**—In addition to the aforementioned donations of material, there have been several endowments for orations and lectures as follows:—

(1) *The Anne MacKenzie Fund.*—Founded with a gift of £1,000 by the late Sir Colin MacKenzie in memory of his mother. The interest from the fund to be used to arrange for an oration or symposium to be delivered or held from time to time as circumstances warrant. The purpose of the lecture or symposium is to emphasize the importance of the prevention of disease.

(2) *The Kendall Lecture in Veterinary Science.*—Endowed by the sons of the late Dr. W. T. Kendall who was the founder of the first Veterinary School in the Southern Hemisphere.

(3) *The Charles Mackay Fund.*—Endowed by Miss C. Mackenzie with a gift of £607 as a memorial to her grandfather, an educationalist, who arrived in Melbourne in 1852 and died at Kilmore, Victoria. The purpose of the fund is to arrange a lecture or symposium known as the Charles Mackay Lecture or Symposium to be held from time to time as circumstances warrant. The lecture or symposium is to deal with the history of medical science.

4. **The Scope of the Institute.**—The building occupies a site which adjoins that reserved for the Australian National University.

The Institute consists of two separate and distinct entities. Portion of the original collection of anatomical specimens assembled by the late Sir Colin MacKenzie is arranged in two large museums which are open to the general public. The material in these museums has been arranged so as to present simple lessons in human hygiene as well as to display the anatomical features and especially the peculiarities of Australian fauna.

The remainder of the building houses research units which are studying problems in the biological and medical sciences. The large collections of bony anatomical material donated by Murray Black have provided most interesting and valuable data on aboriginal diseases.

In 1938, following upon the retirement due to ill-health of Sir Colin MacKenzie, the activities of the Institute were extended to interpret more fully the ideas of the founder. In the later years of his life Sir Colin had been keenly interested in the relationship of nutrition to the development of the child. In recent years the work of the staff has developed in laboratory and field research in problems of nutrition, and this work is being continued and developed, particularly in association with the Institute of Child Health of the Commonwealth Department of Health, situated at the Sydney University.

§ 6. Commonwealth Observatory.

1. **Foundation of Observatory.**—The Observatory was founded primarily to prosecute astrophysical research, including the study of the relations between solar and terrestrial phenomena. A short history of the foundation of the Observatory appears in Official Year Book No. 19, p. 979.

2. **Site of Observatory.**—The Observatory is situated on Mount Stromlo which forms part of a ridge of hills about seven miles west of Canberra. The highest point in the ridge is 2,560 feet above sea level, that is, about 700 feet above the general level of the surrounding country.

3. **Equipment.**—Some of the major items of astrophysical equipment have been obtained through the generosity of private donors. Thus a 30-inch reflector was donated by the late J. H. Reynolds, Esq.; a 9-inch refractor was presented by the late Mr. James Oddie; and the trustees of the late Lord Farnham made available a 6-inch refractor. Other major equipment comprises a solar tower telescope with an 18-inch coelostat and a 3-inch reversible transit instrument. The Observatory was the successful tenderer at a public sale for the purchase from the Victorian Government of the long disused 48-inch reflector of the now closed Melbourne Observatory. This instrument is being modernized by conversion into a Schmidt Gregorian telescope with a 50-inch primary mirror. A 74-inch reflector has been nearly completed in the works of Sir Howard Grubb Parsons and its installation at Mount Stromlo will be completed shortly.

4. **Functions of Observatory.**—Investigations in the fields of stellar spectroscopy, stellar photometry, and variable stars are being carried out. In addition to covering the type of astrophysical research for which the Observatory was founded, the field of work has been extended to include experimental and theoretical investigations of the ionosphere, and the determination of time. The observatory is now responsible for the accuracy of the Australian Time Service. Considerable attention is being given to the development of this work, and a highly accurate quartz clock system has been installed.

§ 7. Standards Association of Australia.

The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice.

The Association was established in July, 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth Association of Simplified Practice. It is an independent body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and industry.

The sole executive authority of the Association is vested in the Council on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organizations. Voluntary assistance is rendered in the drafting of specifications and codes by more than 4,500 individuals who are experts in their particular fields, and are organized into more than 500 committees. These committees are grouped under an internationally established classification, covering civil engineering and building construction, mechanical engineering, electrical engineering, automotive industry (including aircraft), transportation, naval architecture and marine engineering, shipbuilding, ferrous metallurgy, non-ferrous metallurgy, chemical industry, textile industry, mining, agriculture, wood industry, pulp and paper industry, glass and pottery, dairying industry, medical and dental, household and domestic economy, miscellaneous and general.

These committees are comprised of nominated representatives of manufacturing, distributing and purchasing organizations, and of scientific and other expert authorities in the particular field of the project being dealt with. The operations of these committees are co-ordinated and supervised by committees broadly representative of the whole industry, according to the foregoing classification, within which the respective projects are included.

The specifications of the Association provide a suitable standard of performance, quality and dimension and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery and without the necessity of drafting individual specifications.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardization be arrived at by general consent without coercion.

Organizations, companies, firms and individuals interested in the work of the Association are eligible for subscription membership. Members are entitled to free copies of the publications of the Association and to the use of the library and its Special Information Service. Bibliographical research is undertaken for committees, members of the Association, and industry in general. Many hundreds of inquiries are answered each year.

The Association has international affiliations and the standards of all British and foreign countries are filed in the library and are accessible to members. It also administers the Australian National Committees of the International Electrotechnical Commission, the World Power Conference and the International Commission on Large Dams. The Association is also a member, representing Australia, of the International Organization for Standardization (I.S.O.).

The Association is also the representative of the British Standards Institution, and all British standards may be purchased from head-quarters and branch offices in the various States.

The head-quarters of the Association are at Science House, Gloucester-street, Sydney, and branches of the Association are situated at Temple Court, 422 Collins-street, Melbourne; Sparkes Building, 183 Wickham-street, Valley, Brisbane; Alliance Building, Grenfell-street, Adelaide; Gledden Building, Hay-street, Perth; c/o Engineering Department, Hobart Technical College, Hobart; Department of the Interior, Canberra; and Howard Smith Chambers, Watt-street, Newcastle.

§ 8. Film Censorship.

1. **Legislation.**—The censorship of imported films derives its authority from Section 52 (*g*) of the Customs Act, which gives power to prohibit the importation of goods. Under this section, regulations have been issued prohibiting the importation of films except under certain conditions and with the consent of the Minister. The regulations provide, *inter alia*, that no film shall be registered which in the opinion of the Censor is (*a*) blasphemous, indecent or obscene; (*b*) likely to be injurious to morality, or to encourage or incite to crime; (*c*) likely to be offensive to the people of any friendly nation; (*d*) likely to be offensive to the people of the British Empire; or (*e*) depicts any matter the exhibition of which is undesirable in the public interest.

The regulations governing the exportation of Australian-made films are similar, with the addition that no film may be exported which in the opinion of the Censorship is likely to prove detrimental or prejudicial to the Commonwealth of Australia.

The Censorship consists of a Censorship Board of three persons and an Appeal Censor, the head-quarters being in Sydney. There is also a right of appeal to the Minister.

In addition to the censorship of moving pictures, the Censorship may refuse to admit into Australia any advertising matter proposed to be used in connexion with the exhibition of any film. In regard to films and advertising matter produced in Australia, legislation of a uniform nature is now operative in all States except South Australia. Under the State legislation the Commonwealth Film Censorship Organization acts as censor for the States concerned by virtue of agreements entered into between the Commonwealth and the respective State Governments.

2. **Import of Films.**—Imported standard size (35-millimetre) films dealt with by the Censorship for the year 1950 were as follows:—1,293 films of 3,086,252 feet passed without eliminations and 112 films of 708,766 feet passed after eliminations, making a total of 1,405 films of 3,885,018 feet. There were no rejections. The countries of origin were as follows:—United States of America, 723 films of 2,738,955 feet; United Kingdom, 402 films of 713,813 feet; and 280 films of 432,250 feet from other countries.

The films which chiefly concern the censorship are the feature or dramatic films. Of these, 407—3,145,451 feet were imported during 1950 (316—2,374,161 feet from the United States of America and 63—527,136 feet from the United Kingdom). Three hundred and three—2,344,265 feet were passed without eliminations and 104—801,186 feet were passed with eliminations. Feature films in the four years 1947 to 1950 have been dealt with as follows :—

How Dealt With.	1947.	1948.	1949.	1950.
Passed without eliminations	303	295	309	303
Passed with eliminations	35	40	90	104
Rejected in first instance	4	6	1	..
Total	342	341	400	407
Absolute rejections	1	3	1	..

There were also imported, during 1950, 4,047 miniature films (16 millimetres) of 2,586,869 feet and 1,696 miniature films (9.5 and 8 millimetres) of 566,501 feet. Four 8-millimetre films and one 16-millimetre film were rejected.

3. **Export of Films.**—The number of films exported for the year 1950 was 986 of 1,248,112 feet, of which 678 films of 1,016,648 feet were sent to places in the British Empire, including Trust Territories.

§ 9. Australian National Film Board and the Film Division.

1. **The Australian National Film Board.**—The Australian National Film Board was inaugurated in April, 1945, on the recommendations of a Commonwealth Government inter-departmental committee which considered the suggestions of a conference of interested individuals and Commonwealth and State officials, including Directors of Education, called in November, 1944 by the Ministers for Information and Post-war Reconstruction. It was attached, for administrative purposes, to the Department of Information.

With the abolition of the Department of Information, in March, 1950, administration of the Board was transferred to the News and Information Bureau, Department of the Interior.

In November, 1950, the Board was reconstituted as an advisory body to the Minister for the Interior on matters concerned with the production, distribution and acquisition of film required by Commonwealth departments for the following purposes :—

(*a*) for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration ;

(*b*) for dissemination abroad to expand trade and commerce with other countries, encourage tourist traffic with Australia, improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The constitution provides for a membership of ten, with the Secretary of the Department of the Interior, Chairman, the Director of the News and Information Bureau, Deputy Chairman, and the remainder representative of Commonwealth Departments, State Government instrumentalities and organizations interested in the production, distribution or utilization of films for national publicity.

2. **The Film Division of the News and Information Bureau.**—Production and distribution of all films required by Commonwealth Departments is undertaken by the staff of the Film Division, News and Information Bureau, Department of the Interior, or by commercial enterprises under the supervision of officers of the Film Division. Theatrical distribution in Australia, and both theatrical and non-theatrical distribution overseas, of all Film Division productions is organized by the News and Information Bureau's home office or its oversea representatives. Non-theatrical distribution in Australia is organized by the National Library, Canberra, in co-operation with State film distribution agencies.

The first Australian Government organization for the production of motion pictures for national publicity purposes was the Cinema and Photographic Branch of the Department of Commerce, set up in Melbourne in 1920. Early in World War II, the newly established Department of Information was made responsible for the operation of the Cinema Branch and for an Official War Photography Unit. Film exposed by war photographers was processed by commercial laboratories in Sydney, and copies were processed by the Cinema Branch, which also undertook the production of copies of training and entertainment films required by the instructional and amenities sections of the armed services in the South-West Pacific.

In March, 1946, most of the processing equipment of the Cinema Branch was destroyed by fire. A small laboratory was improvised in Melbourne to process 16-mm. prints, but the major work of the Film Division was carried out in commercial establishments in Sydney. After two years of dispersal the Film Division obtained tenancy of a building at Burwood from the Education Department of New South Wales. By remodelling, it was converted into sound studios, editing rooms, recording control rooms and offices. Only one of the Division's sections is not housed in these Burwood Studios—the Australian Diary Unit, which is based on the News and Information Bureau's offices at 18–20 York-street, Sydney. Replacement of the 35-mm. equipment lost in the 1946 fire has not been made, and processing of this gauge of film is done by commercial film laboratories.

Since 1946, the Film Division has produced 162 films for general exhibition, as well as training and special purpose films. Prints are dispatched to 32 oversea centres where distribution is arranged by News and Information Bureau officers or other Australian representatives. In Britain, there is regular distribution through more than a thousand theatres, and a large non-theatrical and educational series of circuits. In the United States of America there is wide non-theatrical distribution and considerable use of the films by television networks. An exchange arrangement with the National Film Board of Canada secures extensive distribution in Canada. French versions, prepared in Paris under the supervision of the Australian Embassy, circulate through France and French-speaking countries. Selected films have also been recorded in Dutch, German, Italian, Japanese, Hindustani, Tamil and other Indian dialects.

In addition to films made on the initiative of the News and Information Bureau, the Film Division has produced, or is producing, films under the sponsorship or with the co-operation of the Departments of Army, Civil Aviation, Commerce and Agriculture, Defence, External Affairs, Territories, Shipping and Transport, Health, Immigration, Labour and National Service, Navy, Postmaster-General, Supply, and Treasury ; and the Commonwealth Bank of Australia, Public Service Board, C.S.I.R.O., the Commonwealth Office of Education, the Road Safety Council, Overseas Telecommunications Commission, Repatriation Commission, Snowy Mountains Hydro-electric Authority, and Australian Wine Board.

The co-operation of the Australian motion picture industry with the Commonwealth, spontaneously offered at the outset of World War II, continues. Special films for urgent national appeals are planned, produced and distributed with the assistance of the National Films Council of the motion picture industry and its Film Production Advisory Committee.

§ 10. The Australian Broadcasting Control Board.

The Australian Broadcasting Act 1942–1946 was amended in 1948 to provide for the establishment of the Australian Broadcasting Control Board. The amending Act was assented to on 6th December, 1948, and subsequently proclaimed to commence on 15th March, 1949.

The principal functions of the Board, which operates under the Ministerial jurisdiction of the Postmaster-General, are set out in section 6K of the Act as follows :—

(*a*) to ensure the provision of services by broadcasting stations, television stations and facsimile stations, and services of a like kind, in accordance with plans from time to time prepared by the Board and approved by the Minister ;

(*b*) to ensure that the technical equipment and operation of such stations are in accordance with such standards and practices as the Board considers to be appropriate ;

(*c*) to ensure that adequate and comprehensive programmes are provided by such stations to serve the best interests of the general public.

In addition, the Board may exercise such other functions as are prescribed by regulation in relation to broadcasting stations, television stations and facsimile stations.

In the exercise of its functions in respect of programmes, the Board is required—

(*a*) to consult the Australian Broadcasting Commission and representatives of licensees of commercial broadcasting stations in relation respectively to the programmes of the national and commercial broadcasting services ; and

(*b*) in particular to—

  (i) ensure reasonable variety of programmes ;

  (ii) ensure that divine worship or other matter of a religious nature is broadcast for adequate periods and at appropriate times, and that no matter which is not of a religious nature is broadcast by a station during any period during which divine worship or other matter of a religious nature is broadcast by that station ;

  (iii) ensure that facilities are provided on an equitable basis for the broadcasting of political or controversial matter ;

  (iv) determine the extent to which advertisements may be broadcast in the programme of any commercial broadcasting station ;

  (v) fix the hours of service of broadcasting stations, television stations and facsimile stations.

The Board is empowered to make recommendations to the Minister as to the exercise by him of any power under Division 1 of Part III. of the Act, which prescribes the conditions under which licences are granted to commercial broadcasting stations.

The Board also has power, subject to the directions of the Minister—

(*a*) to determine the situation and operating power of any broadcasting station, television station or facsimile station ;

(*b*) to determine the frequency of each broadcasting station, television station or facsimile station, within bands of frequencies notified to the Board by the Postmaster-General as being available for such stations ;

(*c*) after consultation with the Commission to determine the conditions upon which a commercial broadcasting station may broadcast a programme of the National Broadcasting Service ;

(*d*) to regulate the establishment of networks of broadcasting stations and the making of agreements or arrangements by licensees of commercial broadcasting stations for the provision of programmes or the broadcasting of advertisements.

Subject to the approval of the Minister and of the Treasurer, the Board may provide financial and other assistance to commercial broadcasting stations for the purpose of ensuring that programmes of adequate extent, standard and variety are provided in the areas served by these stations.

In addition to prescribing the functions of the Board as set out in section 6K of the Act, the amending Act of 1948 also transferred to the Board certain powers which had previously been exercised by the Minister in connexion with the general control of the broadcasting service, particularly in relation to the operations and programmes of commercial stations.

Section 6B of the Act provides that the Board shall consist of three members appointed by the Governor-General, one of whom shall be chairman. The Board was constituted on the 15th March, 1949.

Section 6B of the Act provides that no person shall be appointed as a member of the Board who—

(*a*) has any financial interest, whether direct or indirect, in any company which is the licensee of a commercial broadcasting station or manufactures or deals in equipment for the transmission or reception of broadcasting, television or facsimile programmes ;

(*b*) is a member of the governing body of any company or other association of persons which is the licensee of a commercial broadcasting station ; or

(*c*) is the licensee of a commercial broadcasting station.

§ 11. Australian Broadcasting Commission.

1. **General.**—The Australian Broadcasting Commission was established under the Australian Broadcasting Commission Act 1932 to take over control of national broadcasting with the object of raising the standards of broadcasting in Australia. Control of the A.B.C. is vested in seven commissioners (originally five), one of whom is an officer of the Treasury and one an officer of the Postmaster-General's Department, and its income is derived from an annual government grant. (For information about the original method of finance *see* earlier issues of the Year Book.) Technical services are provided by the Postmaster-General's Department.

Broadcasting in Australia is a compromise between the system in operation in Great Britain and that in the United States, and the duty of the A.B.C. is to maintain the standards of radio without either dictating to its listeners or playing down to the lowest tastes. The activities of the Commission according to its several departments are described in the following paragraphs. The proportion of broadcasting time allocated on the twelve metropolitan stations during 1950–51 to each department was as follows :—Music—Classical and light classical, 23.3 per cent., light music, 16.0 per cent., total music, 39.3 per cent. ; Variety, 16.5 per cent. ; Drama, 5.4 per cent. ; Children's Session, 2.1 per cent. ; Youth Education, 3.0 per cent. ; Talks, 6.9 per cent. ; Parliament, 2.9 per cent. ; Religion, 3.6 per cent. ; News, 7.5 per cent. ; Sport, 5.3 per cent. ; Rural Services, 1.8 per cent ; Non-departmental, 5.7 per cent.

2. **Music.**—The A.B.C. is today the biggest concert-giving organization in the Commonwealth, and the immense growth of interest in music in this country is illustrated by the fact that Australian listeners in increasing numbers now welcome the opportunity of hearing fine music on the air and in the concert hall and have magnificently supported the presentation of orchestral concerts and of recitals by the best musicians from their own country and from overseas. In 1936 small regular orchestras were formed by the A.B.C. in Sydney, Melbourne, Adelaide, Brisbane, Perth and Hobart, and from these foundations have grown our present orchestras. Those in Sydney and Melbourne measure up to first class orchestras overseas, whilst those in the other capital cities are showing rapid improvements and are now the equal of those in many places of comparable size in Europe or America. Until 1946 the financing of these orchestras was the sole responsibility of the A.B.C., but since then arrangements have been made in all States for State government and municipal bodies to bear part of their cost ; in

South Australia the cost is partly met by donations from the public. This close co-operation between a broadcasting organization, city authorities and State Governments to establish and maintain symphony orchestras is unique in the world.

In 1951, the A.B.C. organized 508 public orchestral concerts (including 121 free concerts for school children) and 179 public recitals throughout the Commonwealth (including band recitals, chamber music groups, etc.).

The policy of the A.B.C. so far as individual artists are concerned has always been to develop local talent and at the same time give its audiences the opportunity of hearing famous international musicians.

3. **Drama and Features.**—Drama programmes are designed to give listeners opportunities, which they might not otherwise have, of hearing the great plays of all nations as well as adaptations of the best modern stage plays and also those written specially for broadcasting. The main regular drama programmes are broadcast on Saturday and Monday evenings and special series of longer plays are also given at various times during the year.

In recent years the technique of the feature programme has also been developed in this country. The feature is a form of entertainment which is unique to radio, consisting of specially written programmes designed to present information in an interesting way, and it may deal with a very wide variety of subjects ranging from history and current events to science and the arts. A number of Australian writers have become interested in this new form of entertainment and about 95 per cent. of the features broadcast are written by Australians. Local writers also contribute a large proportion of the plays broadcast and every effort is made to assist and encourage their work.

4. **Youth Education.**—The A.B.C. provides a regular series of broadcasts to schools as an addition to normal class-room education. The total number of listening schools at the end of 1951 was 7,100 or nearly 71 per cent. of all schools, State and private, throughout the Commonwealth. Many of the school broadcasts are presented in dramatized form, as this method makes the material more vivid and interesting to the young listener. For the very young children, the Commission broadcasts every weekday the " Kindergarten of the Air ", a type of broadcast which originated in Australia.

5. **Talks.**—The aim of the Talks Department is to provide programmes which will keep the listener well informed on current affairs and on general and historical topics. Many of the talks in the first category are now presented in a magazine type of session consisting of a number of short items linked by a narrator. This form of programme has proved popular with listeners but has by no means replaced the straight talk which usually runs from ten minutes to a quarter of an hour.

Two sessions which are designed to encourage discussion are the " Nation's Forum of the Air ", and the talks designed for listening groups. In the former, a topic of a controversial nature is discussed by four speakers before a studio audience. After their initial speeches, the speakers are questioned by members of the audience or by local listeners who send their questions by telephone. In the talks to listening groups, supplementary material relating to the broadcasts is provided for groups of listeners, organized by the A.B.C., who meet in their homes or elsewhere to discuss points arising from the broadcast.

6. **Rural Broadcasts.**—The Rural Broadcasts Department was commenced in 1945 to serve the needs of country listeners. It has proved to be of great value to men and women on the land throughout Australia, by giving them the latest market reports and information on general conditions, and by keeping them informed on rural development overseas. The interstate market report is the only Australia-wide market service available to the Australian rural population. Programmes are exchanged with radio organizations in England, Canada, the United States and elsewhere, and several visits to Australia by well-known farm radio personalities have also been arranged. The department has encouraged the work of Junior Farmers' Clubs in Australia, and has sponsored competitions for members in connexion with the Royal Agricultural Shows in Sydney and Melbourne. These competitions are to be extended to encourage international co-operation in this important work.

7. **News.**—On 1st June, 1947, the A.B.C.'s independent News Service came into full operation. Since that date the Commission has collected the news for its bulletins independently of the press and it now has, in addition to a large staff throughout Australia, a London news room for the selection and transmission of oversea news secured from the great news agencies. Nine national news bulletins are broadcast daily, and are followed by State bulletins of news of State interest. In addition, two regional bulletins are broadcast by local stations in country areas. The Commission also re-broadcasts, by arrangement with the British Broadcasting Corporation, two oversea news bulletins each day.

8. **Other Activities.**—The broadcasting of the proceedings of Federal Parliament commenced as a regular service in July, 1946, and Australian listeners are now able to hear full debates from the House of Representatives, and occasionally from the Senate. At present these broadcasts are confined to one of the two transmitters in each capital city, but it is hoped that eventually country listeners will also be able to hear them.

The Children's Session is presented on each weekday for children between the ages of 7 and 17. An important feature of this session is the Argonauts Club which children may join, and which encourages its members to contribute to the programmes and to do creative work such as painting, needlework, writing, etc. Part of the children's session is regularly devoted to an exchange of opinion on topical questions by members of the Argonauts Club.

In co-operation with the various religious denominations, the A.B.C. broadcasts several religious sessions each week day in addition to those given on Sundays. These religious broadcasts include relays of normal church services and a variety of special programmes of talks and sacred music. The modern trend towards the use of religious drama is also followed.

The A.B.C.'s variety and sporting programmes provide the lighter side of listening to the public. In its variety sessions the A.B.C. does everything possible to assist local artists in order to increase the amount of first class talent in this country. The Commission's dance bands in Sydney and Melbourne provide the accompaniment for the more important variety shows broadcast in these states, and are regarded as being two of the most outstanding bands in Australia.

The A.B.C.'s coverage of sport at home and abroad is comprehensive. On Saturday afternoons the sporting panel provides listeners with the progress results and scores, and also descriptions from half a dozen or more fields of sport. Events of international interest such as Test Matches, the Davis Cup, etc., are covered by simultaneous descriptions from A.B.C. commentators. In covering events overseas, the A.B.C. is indebted to the B.B.C. for its collaboration in Great Britain, and to the New Zealand Broacasting Service for events in New Zealand.

9. **Transmission Services.**—In December, 1951, the A.B.C.'s home programmes for Australian listeners were transmitted by 42 medium-wave and eight short-wave stations, and its oversea programmes were transmitted by four short-wave stations, two of which are of 100 kW. power and one of 50 kW. The 51 stations in operation at 30th June, 1950 are shown in Chapter V.—Transport and Communication, § 6. Radio Telegraphy and Telephony. Three medium-wave stations have come into operation since that date—4QA Mackay, 4GM Gympie and 5LN Port Lincoln. The domestic short-wave stations are used for giving service to listeners in the sparsely populated parts of Australia, and in New Guinea and adjacent islands, while the other short-wave stations are directed to listeners overseas. Thirty of the medium-wave stations are situated outside the capital cities, and further regional stations are to be constructed. When these additions have been made, the medium- and short-wave stations together will provide for clear reception of the Commission's programmes in practically every part of Australia.

§ 12. National Safety Council of Australia.

The National Safety Council of Australia was founded in Melbourne in 1927 for the purposes of developing, mainly by means of education, safety on the road, at work and in the home, and its activities have developed in other directions wherever the need for reducing the toll of accidents has been shown. To this end it conducts continuous propaganda through the press and in other ways. It also forms Junior Safety Councils in the schools for developing a safety conscience among children. The children themselves are officers of these Councils and patrol the roads in the neighbourhood of the schools and conduct the scholars across in safety. Posters are available to schools in connexion with Health and Safety lessons. Films specially taken are available for children's and home safety instruction.

A "Safe Driving" campaign for individual motor drivers is conducted as well as a "Freedom from Accidents" competition among employee drivers, those completing a year free from any accident for which they are responsible being given a certificate to that effect. An industrial service of four posters per month, together with slips for pay envelopes, constitutes a regular service for the dissemination of safety advice, and was supplied to over 100,000 workers in factories last year. Committees deal with specific problems regarding traffic, films, safety in industry, air safety and home dangers. The Air Safety Committee has issued a 32-page booklet "Air Sense" for distribution with pilots' private licences through the Civil Aviation Department, and has a plan for assistance to aircraft in distress which is being implemented throughout Australia.

The Council is supported by Government grants, public subscription and sales of service, and is a non-profit organization. Its work is carried on by a small paid staff controlled by committees and governed by an executive. The following committees, whose work is of an entirely honorary nature, are in operation, namely, Executive, Traffic, Industrial Safety, Home, Air Safety and Propaganda.

§ 13. Australian Road Safety Council.

1. **Origin and Organization.**—The Australian Road Safety Council was formed in June, 1947, through the instrumentality of the Australian Transport Advisory Council.

The prime movers for the establishment of the Council were the Australian Automobile Association, which submitted a comprehensive plan; the New South Wales Minister for Transport, who advocated expansion, on a nation-wide basis, of road safety activities on lines similar to those of the Road Safety Council of New South Wales; and the National Safety Council of South Australia, which conveyed recommendations from a Special Safety Convention held in Adelaide in 1946.

At that time, in addition to the above-mentioned organizations in New South Wales and South Australia, there was also a road safety organization in Victoria. Steps were immediately taken to form Councils in Queensland, Western Australia and Tasmania, and subsequently for the internal Territories.

The Australian Road Safety Council is the composite body of Road Safety Councils of the following States and Territories (internal) of Australia :—

Governmental.—New South Wales, Road Safety Council of New South Wales; Queensland, Road Safety Council of Queensland; Tasmania, Road Safety Council of Tasmania; Australian Capital Territory and Northern Territory, Road Safety Councils of Australian Capital Territory and Northern Territory.

Non-Governmental.—Victoria, Victorian Road Safety Division, National Safety Council of Australia; South Australia, Road Safety Division, National Safety Council of South Australia; Western Australia, Road Safety Division, National Safety Council of Western Australia.

The Council is representative, geographically and technically, of the whole Commonwealth, and comprises nominees of practically all classes of road users, together with representatives of road transport and police administrations from each State. National organizations represented on the Council are:—The Federal Chamber of Automotive Industries, Council of Fire and Accident Underwriters, Australian Road Transport Federation, Australian Automobile Association, Transport Workers' Union of Australia, Federation of Motor Cycle Importers and Distributors of Australia, and Auto Cycle Council of Australia.

The Council meets annually, and an Executive Committee operates between conferences. Special committees on education, public relations and films meet as required.

An annual grant of £100,000 is made available by the Commonwealth Government under the Commonwealth Aid Roads Act. Of this, £60,000 is allocated to the State road safety councils for local activities, and the remaining £40,000 is applied to the national campaign. This is supplemented by assistance, financial and otherwise, by State Governments, and indirectly by commercial organizations.

2. **Mode of Operation.**—The role of the Australian Road Safety Council is primarily in the field of education and public relations. Its task is to increase public awareness of the seriousness of the road accident problem, which, in the year ended June, 1952, resulted in 68,110 accidents involving casualties or damage in excess of £10 to property, the deaths of 2,054 persons and injuries to 38,376 persons. (For further information on the subject of Traffic Accidents *see* pp. 180–2 of this Year Book.)

The Council works in close collaboration with two other committees also established by the Australian Transport Advisory Council, namely, the Australian Motor Vehicle Standards and the Australian Uniform Road Traffic Code. All three committees are administered by the Commonwealth Department of Shipping and Transport, which is the executive department for the Australian Transport Advisory Council. The Australian Motor Vehicle Standards Committee develops essential basic motor vehicle standards, such as maximum lengths, weights, height, carrying capacity of vehicles, and minimum lighting, braking and other mechanical efficiencies. In addition to ensuring a greater safety factor, these standards will eliminate many conflicting State requirements which had an adverse effect on design and production costs. The Australian Uniform Road Traffic Code Committee is charged with the responsibility of progressively preparing a "blue print" uniform national traffic code for incorporation in State legislation. Speed limits, right hand turns, rules governing approaches to intersections, qualifications of drivers, pedestrian behaviour, are a few of the numerous aspects which come within its purview.

The campaign for road accident prevention resolves broadly into three main elements relating to (i) the Road User, (ii) the Road, and (iii) the Vehicle. Similarly, the attack falls into three main divisions—(i) Education, (ii) Enforcement, and (iii) Engineering. The link between the components is, broadly:—

The Road User	Education (public relations media, instruction in schools, homes, etc.). Enforcement (of correct road usage—through the police and the courts, uniform traffic laws, etc.).
The Road .. The Vehicle ..	Engineering (technical improvements of all kinds, safer roads and vehicles, improved illumination, uniform vehicle standards, etc.).

§ 14. Australian Shipbuilding Board.

1. **General.**—It is the policy of the Commonwealth Government to foster the shipbuilding industry in Australia, to preserve this vital industry and to assist in building up the Australian coastal fleet. In order to bring the cost of the vessels built in Australian yards for sale to private shipping companies into parity with United Kingdom costs, a subsidy of up to 25 per cent. has been granted. The Australian Shipbuilding Board is now under the control of the Department of Shipping and Transport. The head office of the Board is in Sydney.

2. **Construction Programme.**—The programme now consists of:—13 "A" Class, 9,000 D.W.T. freighters; 12 "B" Class, 6,000 D.W.T. freighters; 10 "D" Class, 3,000 D.W.T. freighters; 5 "E" Class, 700 D.W.T. freighters; 2 "U/S" Class, 3,000 D.W.T. freighters; 2 "D/A" Class, 3,000 D.W.T. freighters; 1 motor collier of 2,000 D.W.T.; 2 colliers of 4,800 D.W.T.; plus a number of small vessels and non-trading vessels of various types.

AUSTRALIAN SHIPBUILDING BOARD: SUMMARY OF CONSTRUCTION OF MERCHANT VESSELS OVER 200 TONS GROSS AS AT 30th SEPTEMBER, 1951.

§ 15. Commonwealth Disposals Commission.

Particulars of the constitution and functions of the Commonwealth Disposals Commission, its policy and procedure and an outline of its activities were given in Official Year Book No. 37 (*see* pp. 1194–6), and a summary of the realizations of the Commission during the five years of its existence was shown on pages 1206–7 of Official Year Book No. 38. Information regarding the liquidation of the Commission appears on p. 1259 of this issue.

§ 16. Rent Control.

Particulars of Commonwealth rent control operations during the 1939–45 War and subsequently, up to the return of controls to the States in August–September, 1948, will be found in earlier issues (*see* Official Year Book No. 37, pp. 1197–1200 and No. 38, pp. 1233–4).

§ 17. Housing Division.

Information on the Commonwealth Housing Division from its inception in July, 1945 until its transfer from the Department of Works and Housing to the Department of National Development in March, 1950 will be found in Official Year Book No. 38, pp. 1234–5.

§ 18. War Service Homes.

The provision of War Service Homes, formerly a function of the Department of Works and Housing, is now a function of the Department of Social Services, and the administration of the War Service Homes Act is under the immediate control of the Director of War Service Homes.

The War Service Homes Act 1918–1951 is a measure for the provision of homes for Australian soldiers who served during the 1914–18 War or during any war in which His Majesty became engaged on or after 3rd September, 1939, including, subject to the statutory provisions of the Act, service in Korea or Malaya; also to the female dependants of Australian soldiers and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person, as the case may be, as joint tenants.

The maximum amount of loan or advance which may be granted under the Act is £2,750 for building cases and £2,000 in respect of other classes of available assistance and periods of repayment may be approved up to 45 years; in the case of a widow or widowed mother of an Australian soldier this may be extended to a maximum of 50 years.

The War Service Homes Division does not provide homes for occupation on a purely tenancy basis.

Since the inception of operations under the War Service Homes Act (figures in parentheses indicate cases where eligibility has been established and assistance granted as a result of service during the 1939–45 War) 92,269 (45,227) applications have been approved; 33,027 (11,186) homes have either been built, or assistance to build them has been given; 33,063 (19,198) homes have been purchased; and 9,425 (6,140) mortgages have been discharged. The total number of homes provided under the War Service Homes Act to 30th June, 1951 was 75,515, including 36,524 to persons who served during the 1939–45 War.

In addition, the Division had approved of 8,950 transfers and resales, of which 1,081 were in respect of persons whose eligibility had been established as a result of service during 1939–45.

During 1950–51, 14,838 (14,183) applications were approved; 4,022 (3,888) homes were either built or assistance to build them was given; 8,660 (8,256) homes were purchased; and 2,483 (2,411) mortgages were discharged. The total number of homes provided during the financial year 1950–51 was 15,165 (14,555). Transfers and resales approved numbered 414 (346).

At 30th June, 1951, 5,034 homes, including 2,467 group projects, were in course of construction; 1,267 contracts, of which 264 were for group homes, had been let but work not started; and 1,532 tenders, including 459 for group homes, had been called but not finally dealt with. The majority of these homes are being provided for persons who served during the 1939–45 War.

The total capital expenditure from inception to 30th June, 1951 was £86,874,688, including £25,071,548 for 1950–51. The capital expenditure for 1950–51 includes unexpended advances as at 30th June, 1951. Receipts from inception to 30th June, 1951 amounted to £49,077,502, including £4,854,757 during 1950–51. Of the total receipts, £24,046,926 has been paid to the National Debt Sinking Fund, including £3,147,337 for 1950–51.

At 30th June, 1951 the total amount of insurances in force, including cover notes, amounted to £81,876,706. The premium income for period 1st May, 1951 to 31st October, 1952 amounted to £87,601, and expenditure from the War Service Homes Insurance Trust Account to £33,849.

At 30th June, 1951, arrears of instalments outstanding amounted to £232,724 or 0.53 per cent. of the total instalments due.

§ 19. New Building.

1. **General.**—The statistics in this section relate to the operations of private contractors, Government authorities and owner-builders, with the exception of those relating to employment, which exclude the numbers of persons working on owner-built houses. In general, they relate to *new* building only, and data on alterations, additions, renovations and repairs to buildings are excluded, because of the difficulty in obtaining complete lists of persons who engage in these operations. Figures for houses exclude converted military huts, flats and shop dwellings. Some houses built on farms are excluded but these do not affect the figures materially.

These statistics are available for the quarter ended 30th September, 1945 and onward.

The following definitions of terms used in this section are necessary to understand the data presented :—

Owner-Builder. A person who is actually building his own house or is having his house built under his own direction without the services of a contractor.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, it is probable that interpretations placed upon it by informants are not entirely uniform.

Completed. A building is regarded as having been completed when the builder has fulfilled the terms of the contract. As with commencements, the interpretations placed upon this definition may vary.

Under Construction. A building remaining uncompleted at the end of a period is regarded as being under construction, regardless of whether construction was actively proceeding on that particular date.

Employment. The figures of employment relate to persons actually working on new buildings on a specified day. They include working principals, employees, men working as, or for, sub-contractors and men temporarily laid off on account of weather. In addition, they include some employees engaged on alterations, additions, renovations or repairs to buildings *when these jobs are undertaken by a contractor who builds new buildings.* The figures exclude persons working on owner-built houses.

Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

2. **Value of New Buildings.**—(i) *Completed,* 1950–51. The following table shows the value of all new buildings completed in each State during 1950–51, according to the kind of building. It should be remembered that all values shown exclude the value of land and represent the estimated value of buildings on completion.

NEW BUILDINGS COMPLETED, 1950–51 : VALUE.

4. **Numbers of New Flats.**—The figures in the two foregoing tables do not include particulars of new flats. The summary below shows the numbers of new flats commenced, completed and under construction in Australia for the years 1945–46 to 1950–51, together with State details for 1950–51. It should be noted : (i) that the figures are additional to the numbers of houses shown in other tables, (ii) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, and (iii) that new flats only are included, i.e., the conversions of old buildings into flats are omitted.

NEW FLATS: NUMBER.

5. **Persons engaged in New Building.**—The following table shows, by States, the number of persons (including contractors and sub-contractors actually working on jobs) engaged on jobs *carried out by builders of new buildings* at 30th June of the years 1946 to 1951. Particulars for 30th June, 1951 show the numbers of tradesmen, contractors, sub-contractors and wage earners engaged. For an explanation of the field of employment covered *see* par. 1 of this section.

PERSONS ENGAGED IN NEW BUILDING.

(a) Actually working on jobs.

§ 20. Clothing and Food Rationing.

For information on the rationing of clothing and certain foodstuffs which was introduced early in the 1939–45 War and was discontinued, as circumstances permitted, from 1947 to 1950, *see* Official Year Books, No. 36, pp. 1084–1090, No. 37, pp. 1206–8 and No. 38, p. 1240.

§ 21. Consumption of Foodstuffs and Beverages.

1. **Quantities Consumed.**—Previous issues of the Year Book up to No. 36 included a statistical survey of the movement in the consumption in Australia, in total and per head of population, of a selected number of commodities over a period of years up to 1940–41 (*see* Official Year Book No. 36, pp. 1098–1100). In issue No. 37 these long-term comparisons were replaced by more detailed information covering consumption of the principal foodstuffs and beverages in annual periods since 1944 in comparison with average annual consumption during the three years ended 1938–39. In this issue the annual periods extend from 1946–47 to 1950–51.

The estimates of total consumption and consumption per head of population in Australia in the two tables following have been compiled by deducting net exports from production and allowing for recorded movements in stocks of the respective commodities. While the estimates may generally be accepted as reasonably accurate, there are some deficiences to which attention should be directed. These relate chiefly to the quantities of poultry, game and fish (fresh and shell) and the quantities of visible oils and other fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc., which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. Other difficulties occur in the compilation of statistics of consumption for which no allowance has been made. These include (i) the absence of particulars of stock movements in a limited number of cases, (ii) the disposal of surplus Army stores after the close of the war and (iii) the purchase of foodstuffs on the civilian market and the despatch of these quantities overseas as gifts in bulk and by parcel post. These deficiencies, however, do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head shown in the second table following have been checked, wherever possible, with data from other sources which confirm the reliability of the methods used. The data were obtained principally from the Food Consumption Survey conducted in 1944 by the Nutrition Committee of the National Health and Medical Research Council.

There has been a general upward movement in the consumption per head of population of most foodstuffs and beverages in Australia from the levels of consumption during the three years immediately preceding the 1939–45 War, but there are some notable exceptions, viz. beef, mutton, pig-meats, shell eggs, butter and cream.

More detailed information on the consumption of foodstuffs and beverages is contained in the publication, *Report on Food Production and the Consumption of Foodstuffs and Nutrients in Australia*, issued by this Bureau.

(a) Subject to revision.

§ 22. Valuation of Australian Production.

1. **General.**—The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published below have been compiled by the State Statisticians from the best data available, and relate to 1949–50. Comparable details for 1948–49 may be found in *Primary Industries Bulletin* No. 44. The adoption of substantially uniform methods of valuing production and of estimating elements of costs of production and marketing renders the results comparable as between States.

Attention is directed to the fact that the value shown in the table refers only to recorded production and excludes the building and construction industry, those industrial establishments not classified as factories, and agricultural and farmyard produce obtained from areas of less than one acre.

The following is a brief explanation of the terms used in the table :—

(a) " Gross value " is the value placed on recorded production at the wholesale price realized in the principal markets. (In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.)

(b) " Local value " is the gross production valued at the place of production and is ascertained by deducting marketing costs from the gross value. (Marketing costs include freight, cost of containers, commission and other charges incidental thereto.)

(c) " Net value " represents the net return to the producer after deducting from the gross value costs of marketing and of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays and other costs. No deduction has been made for depreciation and maintenance costs.

It should be noted that costs of maintenance of farm buildings and fences have not been deducted from the value of production of rural industries, as particulars are not available for all States. In addition, there is an overstatement in the net value of production for New South Wales by the inclusion of power costs in rural industries. These costs, which amounted to £1,892,000 in 1940–41, have not been ascertained in later years. The value shown for Mines and Quarries in Tasmania is understated owing to the omission of Quarries. This understatement, however, is more or less offset by the inclusion of production costs in Mining. Production costs are not available for all States in respect of Fisheries, and Local Values have been used for this industry with consequent overstatement.

In the chapter dealing with each industry (except trapping and mines and quarries) tables will be found showing the total and per capita values of production for that industry by States for a series of years ending 1949–50.

On page 976 of this issue is a graph showing the Net Value of Production, Australia for all recorded industries for the years 1928–29 to 1949–50.

2. **Value of Production, Australia, 1949–50.**—The following table shows particulars of the gross, local and net values of production in Australia by industries during the year 1949–50 :—

GROSS, LOCAL AND NET VALUE OF RECORDED PRODUCTION : AUSTRALIA, 1949–50.

(£'000.)

Industry.	Gross Production valued at Principal Markets.	Local Value—Gross Production valued at place of Production.	Net Value of Production (without deduction of depreciation or maintenance).
Agriculture	271,944	242,391	209,611
Pastoral	371,624	348,441	337,023
Dairying	101,111	95,760	81,102

§ 23. Indexes of Production.

In the tables below, indexes of price and quantity production are given for the following industrial groups, namely :—Agriculture, Pastoral, Farmyard and Dairying, All Farming combined (including separate indexes for Wool and Products other than Wool), Gold and Other Minerals, and All Mining combined.

1. **Primary Production Price Index-Numbers.**—The Primary Production Price Index-Numbers shown in the following table relate to average " prices " of primary products realized in the principal markets of Australia. The " price " data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year and the index-numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index-numbers for any year relate to the average values of primary products produced or marketed in that year, irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. " Prices " for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index-Numbers the average quantities of the relevant commodities *produced* in the period 1923–24 to 1927–28 were used as fixed weights. This series has been retained for years up to 1935–36, but re-computed to the base, average 1936–37 to 1938–39 = 100. For 1936–37 and later years, the original series was replaced in December, 1952 by a revised series of index-numbers, in which average quantities of each product *marketed* during the period 1946–47 to 1950–51 are used as fixed weights. In the revised series of Farming Price Indexes, the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All Farming Index of quantities of crops marketed for live-stock feeding in Australia.

PRIMARY PRODUCTION : INDEX-NUMBERS OF PRICES AT PRINCIPAL MARKETS, AUSTRALIA.

(REVISED SERIES (1952); *see* REMARKS PRECEDING TABLE.)
(*Base : Average* 1936–37 *to* 1938–39 = 100.)

(*a*) Year ended previous December. (*b*) Not available for previous years. (*c*) *See* remarks preceding table. (*d*) Subject to revision. (*e*) Based on the price fixed by the Commonwealth Bank; no allowance has been made for gold sold on oversea premium markets.

2. **Primary Production Quantity Index-Numbers.**—The Primary Production Quantity Index-Numbers shown in the following table relate to gross output of farm products and minerals. They have been calculated by the fixed-base weighted aggregative method, the weights used being weighted average unit values obtained by dividing total gross value by total quantity produced for each commodity for the base period.

In the original published series of Primary Production Quantity Index-Numbers, the period 1923–24 to 1927–28 was adopted as the base for weighting purposes. This series has been retained for years up to 1935–36 in the case of the Farming Quantity

Indexes and for all years for the Mining Quantity Indexes, but for all groups the index-numbers have been recomputed to the base, average 1936–37 to 1938–39 = 100. For 1936–37 and later years, the original series of Farming Quantity Index-Numbers was replaced in December, 1952 with a revised series in which average unit values for the period 1936–37 to 1938–39 are used as fixed weights. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All Farming Index, of quantities of crops fed to live-stock in Australia.

PRIMARY PRODUCTION: INDEX-NUMBERS OF QUANTITY PRODUCTION, AUSTRALIA.

(REVISED SERIES (1952); *see* REMARKS PRECEDING TABLE.)

§ 24. Retail Trade.

1. **General.**—The statistics in this section relate to the operations of all types of retail establishments throughout the Commonwealth.

Information of this nature was first collected in respect of the year ended 30th June, 1948 by a full Census of all retail establishments. As this was the first Census of its type in Australia its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods and a simple commodity dissection together with a record of the value of certain services provided. This Census was followed by a further Census of all retail establishments trading during the year ended 30th June, 1949. The data sought in each Census were almost identical, but certain minor refinements were made to the second Census in the light of experience gained from the first. A more extensive dissection of retail sales into commodity groups was obtained.

In general terms, the Censuses covered those establishments which normally sell goods at retail in shops, rooms, kiosks, and yards. Certain types of establishments which sell services at retail (including repairs and materials therein) were also included, e.g., boot repairers, hairdressers, motor garages and service stations. The Censuses included the retail sales of those factories or wholesalers who conducted a *regular* retail business, but excluded those who only occasionally sold goods at retail. Both new and second-hand goods were included in sales recorded by relevant retail establishments.

The following lists show how certain types of establishments, dealers, etc., were treated :—

Included—

Hotels, wine saloons, refreshment rooms, milk bars.

Bakers, ice-works, tailors (when selling from shop premises to consumers).

Excluded—

Clubs, guest houses, theatres, picture-shows.

Dry cleaners, laundries.

Agents (except in respect of goods sold from retail shop premises).

Gas and electricity suppliers (except for sales of appliances).

Direct selling (either on site or from delivery vehicles) from market gardens, flower gardens, nurseries, dairies, poultry farms, chick hatcheries, etc. (except where a shop or road-side stall is conducted).

Hawkers, street barrows, casual stalls, street sellers.

Timber yards, trade services such as monumental masonry, electrical contracting, plumbing, upholstery, etc.

Real estate agents, stock and station agents, pastoral supply companies.

Newspaper publishers and printers (except in respect of goods sold in a retail shop).

Retail establishments (excluding restaurants, hairdressers, boot repairers, garages and libraries in which the retail sales of goods were less than £50) numbered 101,426 in 1947–48 and 105,614 in 1948–49.

In order to maintain up to date records of retail trade conducted in Australia, it is proposed to take Censuses of retail establishments periodically. During the periods intervening between Censuses, the nature, extent and periodic variations in retail trade are being measured by means of sample surveys. Consequently, for the year ended 30th June, 1950 and subsequent quarterly periods, collections have been made on a sample basis whereby approximately 6,500 establishments have been chosen from the total of over 100,000 retail businesses. By the use of sampling techniques, including the scientific selection of these 6,500 establishments of representative size and type, estimated figures of the total sales of all retail businesses have been calculated for each period. The sales of businesses from which these totals have been calculated represent approximately 40 per cent. of all retail sales in Australia.

2. **Value of Retail Sales, 1947–48 to 1950–51 and quarters ended 30th September, 1950 to 31st December, 1951.**—(i) *States.* The following table shows the total value of goods sold by retail establishments in each State during the years 1947–48 to 1950–51 and the quarters ended 30th September, 1950 to 31st December, 1951.

TOTAL VALUE OF RETAIL SALES : STATES.

(£ million.)

Period.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Total. (a)
1947–48	385.5	270.3	130.5	80.4	65.1	29.8	961.6
1948–49	458.2	320.1	154.2	97.9	79.3	35.4	1,145.1
1949–50	533.4	387.5	183.1	121.2	96.7	41.2	1,363.1
1950–51	668.9	475.4	226.1	148.6	118.6	51.7	1,689.3
Quarter ended—							
30th September, 1950	152.3	108.1	51.8	33.1	26.3	11.6	383.2
31st December, 1950	171.3	122.6	58.3	37.6	30.5	13.3	433.6
31st March, 1951	164.1	117.1	55.8	36.9	29.9	12.7	416.5
30th June, 1951	181.2	127.6	60.2	41.0	31.9	14.1	456.0
30th September, 1951	182.3	126.8	62.7	41.0	32.3	14.4	459.5
31st December, 1951	206.4	147.2	69.2	46.0	37.2	16.5	522.5

(a) Excludes Australian Capital Territory and Northern Territory for which the latest available information is in respect of the year ended 30th June, 1949. In that year retail sales in the Australian Capital Territory were £2.4 million and in the Northern Territory £2.0 million.

(ii) *Commodity Groups.* In the following table the total value of retail sales for the years 1948–49 to 1950–51 and the quarters ended 30th September, 1950 to 31st December, 1951 are classified according to commodity groups. Completely comparable figures are not available for the year 1947–48, which has therefore been omitted from the table.

VALUE OF RETAIL SALES BY COMMODITY GROUPS : AUSTRALIA. (a)

(£ million.)

Commodity Group.	Year ended 30th June—			Quarter ended—

(a) Excludes Australian Capital Territory and Northern Territory. (b) Includes tobacco, cigarettes, etc., newspapers, books and stationery, chemist's goods, etc.

3. **Commodity Groups, Census of Retail Establishments, 1948–49.**—The number of retail establishments and the total value of retail sales for the year 1948–49 are classified in the following table according to the seventeen broad groups into which retailers were asked to dissect their retail sales. As it was impossible to define or list in detail the types of goods to be included under each commodity group, retailers were asked to show figures for each group in accordance with ordinary trade groupings as understood by them. The commodity group totals are therefore subject to this qualification.

The first part of the table shows the number of retail establishments which recorded retail sales in each commodity group. Many establishments showed sales in more than one group, so that the aggregate of the total number of establishments in all commodity groups is greater than the total number of individual establishments and has little significance. The value of retail sales is classified by commodity groups in the second part of the table.

NUMBER OF RETAIL ESTABLISHMENTS AND VALUE OF RETAIL SALES CLASSIFIED BY COMMODITY GROUPS : STATES, 1948–49.

4. **Types of Business, Census of Retail Establishments, 1948–49.**—The following tables show, for the year 1948–49, the number of retail establishments and the total value of retail sales classified according to the main types of business. This is a classification of each business according to the principal type of goods sold, and is based on the description given by the proprietor or manager concerned. Where the description given embraced two or more classifications (e.g. "grocer and confectioner"), or where the description did not indicate the types of goods sold (in the cases of department stores, variety stores, general stores and mixed businesses), the type of business was determined by the commodity group in which the largest sales were recorded. The first table shows the number of establishments and the total value of retail sales in each State and Territory, while in the second table the details for Australia are further classified according to turnover size. This is a classification of establishments according to the value of retail sale of goods.

NUMBER OF RETAIL ESTABLISHMENTS AND VALUE OF RETAIL SALES CLASSIFIED BY MAIN TYPE OF BUSINESS : STATES, 1948–49.

§ 25. The United Nations.

1. **General.**—The Moscow Declaration of 1943 concerning a new international organization for the maintenance of international peace and security marked the end of the League of Nations. The dissolution of the League, and the transfer of certain of its functions to the new body, the United Nations, took place over subsequent years. Information concerning the League of Nations was given in issue No. 35 and earlier issues of the Official Year Book.

The Charter of the United Nations was drawn up by the delegates of fifty nations at the United Nations Conference on International Organization at San Francisco from 25th April to 26th June, 1945. Australia's ratification was deposited on 1st November, 1945. There are now* 60 member states: Afghanistan, Argentina, Australia, Belgium, Bolivia, Brazil, Burma, Byelorussia, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Indonesia, Iran, Iraq, Israel, Lebanon, Liberia, Luxembourg, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Paraguay, Peru, Philippine Commonwealth, Poland, Saudi Arabia, Siam, Sweden, Syria, Turkey, Ukraine, Union of South Africa, Union of Soviet Socialist Republics, United Kingdom, United States of America, Uruguay, Venezuela, Yemen, Yugoslavia.

The full record of the Conference is contained in the Report by the Australian Delegates on the United Nations Conference on International Organization held at San Francisco, United States of America, from 25th April to 26th June, 1945.

The Australian delegates to the Conference were the Rt. Hon. F. M. Forde, M.P., and the Rt. Hon. H. V. Evatt, K.C., M.P.

At San Francisco an Executive Committee and a Preparatory Commission were established, and when these bodies had completed their work of preparation for the first meeting of the United Nations, the General Assembly met in London on 10th January, 1946.

The principal organs of the United Nations are the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice, and the Secretariat.

2. **General Assembly.**—This is the forum of the United Nations. In it each member state is represented and has one vote. It meets in regular annual sessions and has provision for special sessions. It has power to discuss any matter within the scope of the Charter and to make recommendations upon it; an exception to this is provided by disputes which are before the Security Council. The Assembly elects the non-permanent members of the other major organs and considers annual reports from them. Upon the recommendation of the Security Council, it may expel a member which has persistently violated the principles of the Charter.

3. **The Security Council.**—This has the primary responsibility for the maintenance of international peace and security. It is composed of five permanent members, namely China, France, the United Kingdom, the Union of Soviet Socialist Republics and the United States of America, and six non-permanent members with two-year periods of office, of whom three retire at the end of each year. The following are the non-permanent members of the Security Council at present*: Ecuador, India, Yugoslavia (retiring at the end of 1951), and Brazil, Netherlands and Turkey (retiring at the end of 1952). On procedural matters, decisions are taken by an affirmative vote of any seven members. But on all other matters, decisions can only be made on the affirmative vote of seven members, including the concurring votes of all the permanent members. However, the powers which are parties to a dispute for peaceful settlement do not vote.

At the first election, three non-permanent seats were filled for one year only. Member states elected for this period were Egypt, Mexico and the Netherlands. Australia, Brazil and Poland were elected for two-year periods.

---

* November, 1951.

The Security Council is assisted by a Military Staff Committee consisting of the Chiefs of Staff of the permanent members of the Council. In the event of measures other than armed force failing to remove a threat to peace, plans for the application of armed force are made by the Security Council with the assistance of this committee. The forces required are to be drawn from the member states as a result of particular agreements between those states and the Security Council.

4. **The Economic and Social Council.**—This body consists of eighteen members, each elected for a period of three years. Its main functions are to make, or initiate, studies and reports, and to make recommendations to the General Assembly or to members of the United Nations, upon international, economic, social, cultural, educational, health and related matters. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

The present* members of the Economic and Social Council are: Belgium, China, Chile, France, India, Peru (retiring at the end of 1951), Mexico, Iran, United States, Pakistan, Canada, Czechoslovakia (retiring at the end of 1952), United Kingdom, U.S.S.R., Poland, Uruguay, Philippines, Sweden (retiring at the end of 1953).

5. **The Trusteeship Council.**—The Charter declares the political, social, cultural and economic advancement of the non-self-governing territories to be a sacred trust. A Trusteeship Council has been set up composed of those members of the United Nations who are administering trust territories and an equal number of members who are not administering trust territories (including any permanent members of the Security Council who are not administering trust territories). Territories which may be placed under trusteeship in accord with individual trusteeship agreements are those previously held under mandate, those detached from enemy states as a result of the second World War and those dependent territories placed under the system by the states responsible for their administration. Australia is automatically a member of the Trusteeship Council, as an administering Power. The present* members of the Trusteeship Council are: Australia, Belgium, France, New Zealand, United Kingdom and the United States of America (administering States), and China, the Dominican Republic, U.S.S.R., Argentine, Iraq and Thailand (non-administering states). China and the U.S.S.R. are eligible for permanent membership of the Trusteeship Council by virtue of their permanent membership of the Security Council.

The Council has among its duties the consideration of annual reports submitted by the trustee state, the carrying out of periodic inspections by agreement with it, and the formulation of questionnaires on the welfare and advancement of the dependent peoples.

6. **The International Court of Justice.**—This consists of fifteen judges, no two of whom may be nationals of the same state. Its jurisdiction comprises all cases which the parties refer to it, and all matters especially provided for in the Charter or in treaties and conventions in force. Provision exists in the Statute of the Court whereby States parties to the Statute may accept the jurisdiction of the Court as compulsory, either conditionally, or unconditionally in certain international disputes.

The present* members of the Court are: Judges Alfaro (Mexico), G. H. Hackworth (United States of America), H. Klaestad (Norway), S. B. Krylov (Union of Soviet Socialist Republics), C. de Visscher (Belgium)—all retiring in 1951; Judges Alejandro Alvarey (Chile), Jules Basdevant (France), Jose Gustavo Guerrero (El Salvador), Sir Arnold Duncan McNair (United Kingdom)—all retiring in 1955; and Judges Abdel Hamid Badawi Pasha (Egypt), Hsu Mo (China), John E. Read (Canada), Bohdan Winiarksi (Poland) and Rilovan Zoricic (Yugoslavia). Judge J. de Barros e Azevedo (Brazil), who was to have retired in 1955, died on 7th May, 1951, necessitating a special election for the appointment of a successor.

---

* November, 1951.

7. **The Secretariat.**—The Secretary-General is the head of the Secretariat of the organization. He is appointed by the General Assembly upon the recommendation of the Security Council, and he appoints his staff in accordance with the rules approved by the General Assembly. M. Trygve Lie (Norway) was appointed first Secretary-General, and at the Sixth Session of the General Assembly in 1950 was re-appointed for three further years as from 1st February, 1951.

8. **Specialized Agencies.**—In addition to these organs of the United Nations there are thirteen specialized agencies which co-operate closely with the United Nations in many fields on economic and social questions.

Those already in operation are: The International Labour Organization; Food and Agricultural Organization; United Nations Educational, Scientific and Cultural Organization; International Civil Aviation Organization; International Bank for Reconstruction and Development; International Monetary Fund; Universal Postal Union; World Health Organization; International Telecommunications Union; International Refugee Organization.

To enable co-ordination of the work of the specialized agencies, arrangements have been made for them to submit reports on their activities and budgets to the United Nations where they are discussed by the Economic and Social Council and the General Assembly.

§ 26. Diplomatic and other Representatives Overseas and in Australia.

1. **General.**—The following statements show particulars of the various diplomatic and other representatives overseas and in Australia in December, 1952. Full details of British and foreign representation in Australia—diplomatic and consular—and of permanent Australian missions overseas may be obtained from publications issued by the Department of External Affairs, Canberra.

2. **Australian Representation Overseas.**—

AUSTRALIAN DIPLOMATIC AND OTHER REPRESENTATIVES OVERSEAS.

Her Majesty's Australian Ambassador Extraordinary and Plenipotentiary to—

France—Sir Keith Officer, O.B.E., M.C.
German Federal Republic—J. D. L. Hood.
Indonesia—(Vacant); Minister, J. Plimsoll (Chargé d'Affaires *ad interim*).
Ireland—W. T. Doig (Chargé d'Affaires *ad interim*).
Japan—Dr. E. R. Walker.
Netherlands—A. T. Stirling, O.B.E.
Union of Soviet Socialist Republics—(Vacant); J. M. McMillan (Chargé d'Affaires *ad interim*).
United States of America—The Hon. Sir Percy Spender, K.B.E., Q.C.

Her Majesty's Australian Envoy Extraordinary and Minister Plenipotentiary to—

Brazil—P. R. Heydon.
Burma—(Vacant); M. R. Booker (Chargé d'Affaires *ad interim*).
Egypt—C. Massey.
Indo-China—J. P. Quinn.
Israel—O. C. W. Fuhrman, O.B.E.
Italy—C. V. Kellway.
Philippines—Rear-Admiral G. D. Moore, C.B.E.
Thailand—B. C. Ballard.

High Commissioners for Australia in—

Canada—The Rt. Hon. F. M. Forde.
Ceylon—A. R. Cutler, V.C.
India—W. R. Crocker.
New Zealand—(Vacant); Official Secretary, Dr. J. S. Cumpston.
Pakistan—L. E. Beavis, C.B., C.B.E., D.S.O.
Union of South Africa—Lieut.-Colonel W. R. Hodgson, C.M.G., O.B.E.
United Kingdom of Great Britain and Northern Ireland—The Hon. Sir Thomas White, K.B.E., D.F.C., V.D.

Australian Mission—

United Nations (New York)—Minister, W. D. Forsyth.
United Nations (Geneva)—Counsellor, P. Shaw.

Australian Commissioner for—

Malaya—L. R. McIntyre.

Consuls-General—

Switzerland—P. Shaw.
United States of America, (New York)—Lieut-General E. K. Smart, D.S.O., M.C.
United States of America (San Francisco)—S. Jamieson.

Consuls—

New Caledonia—H. D. Anderson.

Trade Commissioners for the Commonwealth of Australia—

Canada—C. L. Steele (Ottawa); J. Payne (Vancouver).

Ceylon—K. W. Ward (Acting) (Colombo).

Egypt and Middle East—S. D. Shubart (Cairo).

France—A. N. Wootton, Commercial Secretary (Paris).

Hong Kong—H. C. Menzies (Hong Kong).

India—W. R. Hudspeth (Calcutta); R. J. Dunlop (Bombay).

Indonesia—G. S. Anderson (Djakarta).

Japan—C. J. Carne (Tokyo).

New Zealand—S. F. Lynch (Wellington).

Pakistan—H. W. Goodger (Karachi).

Singapore—A. J. S. Day, Commercial Counsellor and Trade Commissioner (Singapore).

Southern Europe—A. L. Senger, Commercial Counsellor and Trade Commissioner, (Rome).

Union of South Africa—G. R. B. Patterson (Johannesburg).

United Kingdom of Great Britain and Northern Ireland—C. E. Critchley, M.B.E. (London).

United States of America—Trade Commissioners—R. Hazzard (New York); R. B. Hines (Assistant) (San Francisco).
Commercial Counsellor—A. C. B. Maiden (Acting) (Washington, D.C.).

3. **Oversea Representation in Australia.**—Consular representatives are not included in the following statement. Particulars of these are contained in a publication *Consular Representatives and Trade Commissioners in Australia*, issued by the Department of External Affairs, Canberra. There are more than 150 such representatives in Australia, and 39 countries are represented.

DIPLOMATIC REPRESENTATIVES IN AUSTRALIA.

Ambassador Extraordinary and Plenipotentiary of—

China—(Vacant); Dr. Chen Tai-chu (Chargé d'Affaires *ad interim*) (Canberra U 1319).
France—L. Roche (Canberra F 345).
German Federal Republic—Dr. Walther Hess (Sydney FM 1401).
Indonesia—Dr. Oetoyo (Canberra B 199).
Ireland—Dr. the Hon. T. J. Kiernan (Canberra F 275).
Netherlands—E. Teixeira De Mattos (Canberra X 1236).
Union of Soviet Socialist Republics—N. M. Lifanov (Canberra B 803).
United States of America—Pete Jarman (Canberra 655).

Envoy Extraordinary and Minister Plenipotentiary of—

Belgium—F. F. A. Jansen (Sydney BW 6121).
Brazil—J. Cochrane de Alencar, O.B.E. (Canberra F 380).
Denmark—(Vacant); F. H. Hergel (Chargé d'Affaires *ad interim*) (Sydney BW 3547).
Finland—P. I. Simelius (Chargé d'Affaires) (Sydney FM 3116).
Israel—(Vacant); A. Lapid (Chargé d'Affaires *ad interim*) (Sydney BW 2082).
Italy—Silvio Daneo (Sydney FB 3639).
Philippines—Dr. R. Regala (Sydney FA 1938).
Sweden—J. M. Kastengren (Canberra F 306).

High Commissioner for—

Canada—C. Fraser Elliot, C.M.G., Q.C. (Canberra 665).
Ceylon—J. A. Martensz, C.B.E. (Canberra F 623).
India—Maharaj Shri Duleepsinhji (Canberra F 383).
New Zealand—G. E. L. Alderton (Canberra B 953).
Pakistan—Y. A. Haroon (Sydney BL 3395).
Union of South Africa—(Vacant); G. C. Nel (Acting) (Canberra F 927).
United Kingdom of Great Britain and Northern Ireland—Sir Stephen Holmes, K.C.M.G., M.C. (Canberra 523).

Commissioner for—

Malta—Captain G. F. L. Stivala (Melbourne MU 1291).

TRADE COMMISSIONERS OF OVERSEA GOVERNMENTS IN AUSTRALIA.

Canada—Senior Canadian Government Trade Commissioner—C. M. Croft (Sydney BW 9351).
Canadian Government Trade Commissioner—R. W. Blake (Melbourne MU 4716).
Assistant Canadian Government Trade Commissioner—C. M. Forsyth-Smith (Sydney BW 9351).
New Zealand—Senior New Zealand Government Trade Commissioner—J. A. Malcolm (Sydney BL 3941).
New Zealand Government Trade Commissioner—R. Inglis (Melbourne MU 8111).
Assistant New Zealand Government Trade Commissioners—E. J. Sutch (Sydney BL 3941); G. F. Knowles (Melbourne MU 8111).
United Kingdom of Great Britain and Northern Ireland—United Kingdom Senior Trade Commissioner—J. B. Greaves, C.M.G., O.B.E. (Canberra F 188).
United Kingdom Trade Commissioners—G. R. MacDonald (Canberra F 188); J. R. Adams, C.B.E., A. Hartland (Sydney BW 8086); A. W. Burton, M.B.E., J. D. Leithead (Melbourne MU 5556); P. Ingleson, C.M.G., M.B.E., M.C. (Brisbane B 8588).
Assistant United Kingdom Trade Commissioners—G. A. F. Drummond-Hay, W. Johnston (Sydney BW 8086); E. J. E. Newbold (Melbourne MU 5556).

CHAPTER XXX.

STATISTICAL ORGANIZATION AND SOURCES OF INFORMATION.

§ 1. Statistical Organization in Australia.

1. **Development of Australian Statistics.**—(i) *Crown Colony Blue Books.* Statistical organization in Australia was founded in the "Blue Books" which, in the Crown Colony days, were prepared annually for the information of the Colonial Office. Although primarily intended for administrative purposes, these documents have been important sources of statistical data, even though some important matters are not covered, and others only partially so. These Blue Books form the basis from which later statistical publications were developed. This led to an element of uniformity in statistical compilation within the British Empire.

(ii) *Statistical Registers.* Following the advent of Responsible Government which was granted during the period 1851–1890 to all Australian States except Western Australia—and to that State in 1890—the "Blue Book" was succeeded in all Australian States by "Statistical Registers". These were in many respects the old Blue Books in a new form, and were largely confined to summaries of the "by-product" statistics of Government administrative departments.

The first example of extensive Governmental organization for purely statistical purposes was the taking of periodic population censuses, which were initiated in all States under the Crown Colony régime. The growing need for quantitative data concerning the progress of the several young communities of Australia eventually led to the appointment of official Statisticians commissioned to prepare and publish such data.

(iii) *Statistical Conferences.* To enable the interchange of ideas between States, and to obtain uniform State Statistics which could be aggregated to Australian totals, conferences were held in the several States from as early as 1861. Altogether, six conferences were held prior to the formation of the Commonwealth Bureau of Census and Statistics in 1906. These were held in 1861, 1875, 1890, 1900, 1902 and 1903. The holding of these conferences was continued subsequently to the formation of the Commonwealth Bureau, and a representative from New Zealand attended up to 1928. The most recent conference of Australian Statisticians was held in November, 1950.

2. **Commonwealth Bureau of Census and Statistics.**—(i) *Origin and Aims.* Under the provisions of section 51 of the Commonwealth Constitution, power is conferred on the Commonwealth Parliament "to make laws for the peace, order and good government of the Commonwealth with respect to—" (*inter alia*) "(XI.) Census and statistics". In compliance with this provision, the Census and Statistics Act 1905 was passed, and in 1906 the Commonwealth Bureau of Census and Statistics was created. A conference of Statisticians in 1906 defined the relations between the Commonwealth and State Bureaux, and in each case the State Statistician became the representative in his own State of the Commonwealth Statistician for the purpose of administering the Commonwealth Act. In addition, each State has its own "Statistics Act", and although these are not identical in all States, they embody common principles. With the establishment of the Commonwealth Bureau, the movement towards uniformity in information collected and statistical methods employed received a great stimulus. The Commonwealth Bureau did not attempt to duplicate the existing statistical organization, but endeavoured to use the services of the State statistical offices whenever possible, and to undertake the initial collection of statistics only in fields not already occupied by the States, or in which efficiency demanded complete centralization. Frequent statistical conferences (*see* above) have assisted the uniform development of existing statistics, and have facilitated expansion into new fields.

The scope of the Commonwealth Bureau has constantly been widened, more particularly during the 1939–45 War, when the Bureau responded to the urgent demands of administration for immediate and accurate statistical information in various fields. Since the war, requirements in the administrative, industrial, financial and scientific spheres have led to the development of many new statistical collections. All the activities of the Bureau are covered by the Census and Statistics Act, which confers authority to collect information and contains stringent provisions to ensure that the information obtained is treated in strictest secrecy.

(ii) *Organization.* For administrative purposes the Commonwealth Bureau is divided into a number of Divisions. These are:—Census and Mechanical Tabulation, Compiling, Publications, Research and Analysis, and Administrative.

(*a*) *Census and Mechanical Tabulation Division.* This Division of the Bureau is responsible for the taking of Population Censuses, and for all machine tabulation work required by other Divisions of the Bureau.

(*b*) *Compiling Division.* The Compiling Division is responsible for the compilation of all statistics other than those relating to the Census of Population. It is divided into the following Branches which deal with specific fields of statistical activity:—

Trade and Transport Branch—Responsible for the original compilation, tabulation and analysis of statistics relating to imports and exports, and for the compilation of statistics relating to road and rail transport, aviation, shipping, posts and telegraphs, telephones and wireless.

Prices Branch—Deals with the collection of retail and wholesale prices and the compilation of retail and wholesale price index-numbers. A staff of trained field officers is maintained in the several States to facilitate the collection of accurate information.

Employment and Labour Branch—Compiles all employment estimates, wage and labour statistics.

Primary Production Branch—Deals with statistics relating to agricultural and pastoral activities, mining, forestry and fishing. Original data are largely supplied by State Statisticians.

Secondary Production Branch—Compiles all factory statistics, both annual and monthly. Collates on a Commonwealth basis original annual data supplied by State Statisticians.

Finance and Taxation Branch—Compiles statistics of private finance (banking, insurance, exchange rates, etc.), public finance (Commonwealth, State and Local and Semi-Governmental authorities), and statistics relating to all aspects of Commonwealth taxation.

Demography Branch—Concerned with statistics of births, deaths, marriages and migration, and is responsible for periodic estimates of population.

Social Statistics Branch—Compiles all statistics relating to education, unemployment and sickness benefits, public health and welfare, and public justice.

Development Branch—This Branch was created in 1947 in order to develop new statistical collections to meet post-war demands for more adequate and up-to-date statistics, and also to examine current collections in the light of such requirements. To date the activities of the Branch have been concerned with three major projects, quarterly building statistics, retail sales statistics and all new monthly production statistics. In addition, research is undertaken into the applicability of sampling methods to statistical collections.

(c) *Publications Division.* This Division is responsible for the scrutiny, editing and graphical illustration of all Bureau publications, and, in collaboration with other Divisions, for the initiation, development and co-ordination of statistical publications. It also maintains a regular flow of statistical series to certain international organizations, and revises statistical material in certain oversea and local publications.

(d) *Research and Analysis Division.* This Division undertakes research into the theoretical and practical problems of statistical collection and interpretation. With the Development Branch, it is responsible for the development of new statistical series. Statistics on Australia's balance of international payments and estimates of national income and expenditure are two important fields of its work. In this Division is the Bureau's own specialized library of official and unofficial publications on statistics and economics.

(e) *Administrative Division.* The Administrative Division is responsible for all aspects of staff recruitment and direction, supplies, payment of accounts, etc. The Reproduction Section of the Division is equipped with multilith and duplicating machines for processing statistical statements for more immediate requirements. In addition, a special section of this Division is responsible for the examination of statistical methods and systems and the co-ordination of all statistics in Commonwealth Departments (*see* par. 3 below).

3. **Relation of the Bureau to other Commonwealth Departments.** In October, 1950 the Commonwealth Public Service Board issued a circular relative to the compilation of statistics in other Commonwealth Departments, in which it stated that the Commonwealth Statistician should be the co-ordinating authority on all statistics in Commonwealth Departments, and that, as a general principle, where any new statistical field is to be established involving the regular collection of statistics, the Commonwealth Statistician should be consulted to ensure that they are necessary and that they are based on sound statistical methods; furthermore, that the Commonwealth Statistician should make a regular inspection, at least once every twelve months, of all statistical work done by Departments to ensure that their needs are met by the most economical means and without duplication of effort.

This project of co-ordination is being implemented as time and circumstances permit.

§ 2. Statistical Publications of Australia.

1. **General.**—The official statistical publications of Australia may be divided bibliographically into two main divisions, namely:—(1) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (2) State publications dealing with individual States only.

2. **Commonwealth Publications.**—Commonwealth publications may be grouped under two heads, namely:—(i) Publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers.

(i) *Publications issued by the Commonwealth Statistician.* The following is a list of the principal statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration to January, 1953:—

Australian Balance of Payments.—Statements, Nos. 1 and 2, 1928–29 to 1949–50.
Australian Life Tables, 1901–1910. *Australian Joint Life Tables*, 1901–1910.
Australian Life Tables, 1920–1922.
Australian Life Tables, 1932–1934. *Australian Joint Life Tables*, 1932–1934.
Australian Life Tables, 1946–1948.
Australian Primary Industries.—Report prepared for the Empire Producers Conference, Sydney, March, 1938.
Census (1911) *Results.*—Bulletins. Vols. I. (Statistician's Report), II., and III., with Appendix "Mathematical Theory of Population."
Census (1921) *Results.*—Bulletins, Nos. 1 to 26. Parts I. to XVI., forming Vol. I., and Parts XVII. to XXIX., forming, with the Statistician's Report, Vol. II.
NOTE.—Part XXVII., Life Tables.

Census (1933) *Results.*—Bulletins, Nos. 1 to 25. Parts I. to XIV., forming Vol. I., Parts XV. to XXVIII., forming Vol. II., and Parts XXIX. to XXXVII., forming, with Statistician's Report and Australian Life Tables 1932–1934, Vol. III.

Census (1947) *Results.*—Bulletins, Nos. 1 to 25. Parts I. to XX. Australian Life Tables, 1946–1948. For details regarding Bulletins and Parts *see* back page of this volume.

**Census of Retail Establishments* (1947–48) *Results.*—Bulletins, Nos. 1 to 7.

**Census of Retail Establishments* (1948–49) *Results.*—Bulletins, Nos. 1 to 7.

**Dairying Industry* (formerly Summary of Dairying Industry).—Statistical Bulletin, monthly; first issue, September, 1937.

**Factories, Principal Statistics, Summary.*—Annually, 1948–49 to 1950–51.

Finance.—Bulletins, 1907 to 1916–17 annually; 1917–18 and 1918–19 (one vol.); 1919–20 and 1920–21 (one vol.); 1922–23 to 1950–51 annually.

**Food Production and the Consumption of Foodstuffs and Nutrients in Australia, Report.* Half-yearly, 1946–47 to 1947–48; annually, 1948–49 to 1950–51.

**Fruit Growing Industry Summary.*—Annually, 1944–45 to 1950–51.

Labour and Industrial Statistics.—Memoranda and Reports, various, to 1913.

Labour Report.—Annually, 1913 to 1950.

**Live-stock Numbers* (formerly Summary of Live-stock Statistics).—Statistical Bulletin, annually, 1943 to 1952.

Local Government in Australia.—July, 1919.

**Manufacturing Industries.*—Bulletins on Individual Industries, annually, 1936–37 to 1939–40, 1940–41 (issue incomplete), and 1944–45 to 1950–51.

**Monthly Review of Business Statistics.*—First issue, October, 1937.

**Occupation Survey* (1945) *Results.*—Detailed tables.

Official Year Book of the Commonwealth of Australia.—Annually, 1907 to present issue (No. 39).

Oversea Trade.—Bulletins, annually, 1906 to 1950–51.

**Oversea Trade.*—Preliminary Bulletin, 1951–52.

**Oversea Trade Statistics: Imports Cleared for Home Consumption classified according to Individual Items of the Customs Tariff,* 1950–51 *to* 1951–52.

Pocket Compendium of Australian Statistics (formerly Statistical Digest).—1913, 1914, 1916, and 1918 to 1952 annually.

Population and Vital Statistics.—Bulletins and Reports, various, 1906–1910. *Demography,* 1911 to 1949 annually.

Primary Industries.—Bulletin, 1950–51 first issue in two parts: Part I. Rural Industries; Part II. Non-Rural Industries and Value of Production (not yet published).

Production.—Bulletin, annually, 1906 to 1947–48. From 1936–37 to 1949–50 issued in two parts: Part I. Secondary Industries; Part II. Primary Industries (including Total Recorded Production).

Professional Papers.—Various. A full list appears in Official Year Book No. 13, p. 3.

Quarterly Summary of Australian Statistics.—First issue, No. 70, December, 1917, replacing *Monthly Summary of Australian Statistics* (Bulletins Nos. 1 to 69).

**Report of Proceedings of the Conference of British Commonwealth Statisticians*, 1951.

**Rural Land Use and Crop Statistics Summary* (formerly Summary of Crop Statistics).—Annually, 1943–44 to 1950–51.

Social Insurance.—Report to the Hon. the Minister of Trade and Customs, 1910.

Social Statistics.—Bulletins, 1907 to 1915 annually, and 1918.

Superannuation for the Commonwealth Public Service.—Report to the Hon. the Minister for Home Affairs, 1910.

**Survey of Motor Vehicles* (1947–48) *Results.*—Bulletins Nos. 1 to 7.

Transport and Communication.—Bulletins, 1906, 1908 to 1916 annually, 1919 to 1930 annually, and 1932 to 1949–50 annually.

---

* Obtainable from Commonwealth Statistician—for methods of obtaining other publications still in print *see* back page of this volume.

**Vegetables Grown on Farms for Human Consumption, Summary.*—Annually, 1942–43 to 1950–51.

Wages and Prices.—January, 1932.

Wealth.—The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.

**Wheat Industry* (formerly Summary of the Wheat Situation).—Statistical Bulletin, periodically; first issue, July, 1936.

The foregoing list includes all the printed publications issued from the Bureau, and certain more important mimeographed publications issued for the most part annually. Other mimeographed statements, obtainable on application to the Commonwealth Statistician and dealing with a wide variety of subjects, are issued as follows :—

Annually—Bee Farming; Commonwealth and State Taxation Collections; Companies with Oversea Affiliations; Factory Statistics (Preliminary); Meat Production and Utilization; Milking Machines on Rural Holdings; Oversea Trade between Australia and Eastern Countries; Social Services, Expenditure by States; Tractors on Rural Holdings; University Statistics; Value of Production; Wheat Forecast and Estimate.

Half-yearly—Australian Balance of Payments; Trade of Australia with United Kingdom.

Quarterly—Building; Minerals and Metals; Quarterly Business Survey; Retail Sales of Goods; Retail Price Variations—All Items (" C " Series) Index.

Monthly—Banking; Demographic Review; Employment; Exports of Wool from Australia; Export Prices Index; Gold Mining Industry; Life Assurance; Oversea Trade; Production Statistics; Registrations of New Motor Vehicles; Savings Bank Deposits and Savings Certificates.

(ii) *Commonwealth Parliamentary and Departmental Reports and Papers.* Lists of the principal official reports and other documents containing statistical information issued from the inauguration of the Commonwealth appear in the Official Year Books up to No. 13, but it is not now practicable to undertake the preparation of such lists.

3. **State Publications.**—The chief statistical publications of each State are set out hereunder. As with the Commonwealth Parliamentary and Departmental Reports and Papers, it is not practicable to enumerate the various Departmental Reports, statements of accounts, etc., issued by officials, boards, local and semi-governmental authorities, etc., in each State.

(*a*) New South Wales—Statistical Register (annual); Official Year Book of New South Wales (annual); Pocket Year Book (annual); Statistical Bulletin (monthly to December, 1919, quarterly to June, 1943, then discontinued to September, 1948); Monthly Summary of Business Statistics.

(*b*) Victoria—Statistical Register (annual to 1916, then discontinued); Victorian Year-book (annual); Statistical Abstracts (quarterly to 1917, then discontinued to December, 1946).

(*c*) Queensland—Statistical Register (annual); Official Year Book, 1901; A.B.C. of Queensland Statistics (annual to 1936, then discontinued); the Queensland Year Book (annual 1937 to 1941, then discontinued to 1945); Queensland Pocket Year Book (annual).

(*d*) South Australia—Statistical Register (annual); Official Year Book, 1912 and 1913; Statesman's Pocket Year Book of South Australia (annual); Quarterly Summary of Statistics.

(*e*) Western Australia—Statistical Register (annual); Statistical Abstracts (quarterly, previously issued monthly to July, 1917); Pocket Year Book of Western Australia (annual).

(*f*) Tasmania—Statistical Register (annual); Pocket Year Book of Tasmania (annual); Monthly Review of Business Statistics.

---

* Obtainable from Commonwealth Statistician—for methods of obtaining other publications still in print *see* back page of this volume.

§ 3. The Third Conference of British Commonwealth Statisticians, Canberra, 1951.

Conferences of the Government Statisticians of the British Commonwealth were held first in London in 1920 and then in Ottawa in 1935. The Third Conference was held in Canberra from 12th to 23rd November, 1951. Delegates were present from Australia, Canada, Ceylon, India, New Zealand and the United Kingdom (including a representative of the Colonial Office). Ireland, the Commonwealth Economic Committee and the United Nations were represented by observers, and the Australian State Government Statisticians were also present. Unfortunately, urgent internal statistical problems prevented the Governments of Pakistan, South Africa and Southern Rhodesia from being represented.

Matters for discussion were decided in advance by the participating countries, which were also invited to prepare and circulate papers on agenda items before delegates left for Australia. When the Conference opened, extensive documentation was available on many items for discussion, including an historical summary of relevant recommendations by previous Commonwealth and recent International conferences.

The Conference reviewed statistical requirements and modern practice on many aspects of the following matters :—

Labour Statistics
Production Statistics
Agricultural Statistics
External Trade Statistics
Retail Trade and Census of Distribution
Application of Sampling Methods
Statistical Co-ordination
National Income
Indexes of Prices
Family Budget Inquiries
Road Transport Statistics
Recent Developments in Census Taking
Mineral Statistics.

Whereas the earlier conferences prepared reports and passed series of resolutions aiming at improving and co-ordinating statistics throughout the Commonwealth, the report prepared by the Third Conference aimed at reaching as firm an expression of views as was consistent with unanimity, whilst at the same time mentioning different views which were expressed if unanimous conclusions were not possible.

The Report concludes with a General Review in which is expressed the realization by the Conference that complete uniformity in statistical practice could not be expected in a Commonwealth which included countries and territories in all parts of the world, and in which there was a great variety of geographical conditions and differing forms of economic and social organization. While aiming at general agreement on the best methods of achieving particular results, the Conference recognized that on many subjects different practices must perforce be followed in the different countries to meet their special needs. In Government affairs, in business and in all discussions of public policy the use of statistics was much more extensive now than at the time of the Second Conference, and during the intervening period important developments had occurred in the theory and application of statistical methods. Greater need existed for an exchange of views on technical matters between the Statisticians of the Commonwealth countries. In view of the advantages to be gained from meetings of these Statisticians, Conference decided that Commonwealth conferences should be held every five years and a co-ordinating committee was appointed to make plans for the Fourth Conference.

The Conference provided an opportunity for an exchange of views which should lead to statistical improvements in all countries represented, and its report should be of assistance to the Statistical Office of the United Nations and other organizations in their work of improving statistics on an international scale. While the tangible results of the Conference would be evident from the Report, the Statisticians felt that the intangible results of personal contact and discussion outside the sessions would be of inestimable value.

§ 4. Select List of Works about, or published in, Australia.

(Compiled by the Librarian of the Commonwealth National Library.)

Under most headings a list is first given of the principal standard books which are still in print. This is followed by lists of selected books published during the current period and of official publications, excluding annual reports, of the same period. In the present list the period covered is 1st January, 1950 to 31st December, 1951. A few books which, though published earlier, were received after the compilation of the last ssue are also included.

Where known, the retail price in the country of publication is given, but this is subject to fluctuation.

A copy of each of the works mentioned is available in the Library.

The Library also publishes the Annual Catalogue of Australian Publications, official papers and books on Australia published overseas, obtainable from the Government Printer at a price of 2s.; Australian Public Affairs Information Service, a monthly subject index to current literature, available gratis from the library; Books Published in Australia, a monthly list of books supplied under copyright, also available gratis from the Library; Monthly list of Australian Government publications.

DIARY OF PRINCIPAL ECONOMIC EVENTS, 1948 to 1951.

The principal economic events for the years 1931 to 1938 were shown on pp. 968 to 977 of the Official Year Book No. 33, those for the years 1939 to 1944 on pp. 1129 to 1141 of the Official Year Book No. 36 and those for the years 1945 to 1947 were included in the range of years—1945 to 1949—covered by the two Official Year Books following (Nos. 37 and 38). For reasons of space some of the items originally shown for the years 1948 and 1949 have been omitted from this issue. Previous issues should be consulted for additional information for these years.

1948.

Employment continued to increase during 1948, the total increase (excluding rural and household domestic) being about 88,000 (63,000 males and 25,000 females). The number on unemployment benefit remained negligible during the whole year and labour shortages continued fairly generally. The migration programme was carried on during the year with increasing vigour and permanent arrivals exceeded permanent departures by 48,000.

Although black coal production for the whole of Australia reached 14,800,000 tons, there were at times serious shortages resulting in restrictions in electricity and gas supplies and in transport services. Seasonal conditions continued favourable, the 1948-49 wool clip being slightly larger than in the previous year, and the wheat crop considerably above average although well below the previous year. There were about 48,000 new houses completed during 1948.

Exports rose to more than £500,000,000, an increase of 60 per cent. over 1947, and imports to about £380,000,000, an increase of 40 per cent. over 1947. Export prices increased more than 25 per cent. during the year and import prices by 6 per cent. Retail prices increased about 10 per cent. during the year, wholesale prices about 14 per cent. Average factory earnings in the last quarter were 13 per cent. above the last quarter of 1947.

Partly as a result of increasing prices, national income continued to rise, and gross private investment continued at about 20 per cent. of gross national product.

1st January.—Forty-hour week became effective throughout Australia.

23rd January.—Secretary to the Treasury (Mr. S. G. McFarlane) appointed fourteenth director of the International Monetary Fund and Bank of World Reconstruction and Development. The Commonwealth Statistician (Dr. Roland Wilson) to be alternate director.

2nd February.—Railway dispute on wages awards in Queensland involving about 19,000 railwaymen. (Lasted till 4th April.)

20th February.—Major water conservation works in £25,000,000 plan for "Drought proofing" Victoria, involving, amongst other works, the enlargement of Eildon reservoir, commenced.

20th April.—Minister for Defence announced five-year defence programme of £250,000,000 including £33,500,000 for scientific research.

5th May.—Minister for Housing in New South Wales announced scheme for £8,000,000 housing project to meet industrial expansion, involving 5,000 homes in the Wollongong-Port Kembla district.

29th May.—Constitution Alteration (Rents and Prices) Referendum resulted in majorities in all States against proposal.

3rd June.—Australian Iron and Steel Ltd. plans to spend £20,000,000 in the next ten years on extensions to its Port Kembla works to include a new tinplate mill and blast furnaces on an area of more than two square miles.

22nd June.—Meat and clothes rationing ceased throughout Australia.

3rd July.—Prime Minister left for London to discuss empire trade and other problems.

12th July.—Announcement of modified wheat stabilization plan guaranteeing a price of 6s. 3d. per bushel f.o.r. ports for bulk wheat. (Subsequently adopted by majority of growers in four main wheat producing States and ratified by Commonwealth—Wheat Industry Stabilization Act assented to 25th November—and State Governments, the plan will operate for the five years 1948-49 to 1952-53.)

11th August.—Judgment delivered by Full High Court declaring invalid certain vital sections of Banking Act 1947.

16th August.—Control of rents passed from Commonwealth to States.

19th August.—New Zealand currency restored to parity with sterling.

24th August.—Announcement of increase from £360,000,000 to £569,000,000 in national works programme to cushion a possible depression during the next five years, covering 6,245 works projects throughout Australia.

2nd September.—Minister for Commerce and Agriculture announced that, under terms of a seven-year agreement operating from June, 1948, Australia will ship to United Kingdom the total exportable surplus of butter and cheese, less agreed quantities for other markets.

8th September.—Commonwealth Budget for 1948-49 introduced, providing for expenditure of £511,000,000 and revenue of £493,000,000. Estimated expenditure on Defence and Post-war Charges was £199,000,000 (including £10,000,000 United Kingdom Grant, £38,000,000 for re-establishment and repatriation, and £23,000,000 to be set aside for war gratuities), on social services £88,500,000, and on capital works and services £38,000,000. Reductions in Income Tax, Social Services Contribution, Sales Tax and Excise Duty were expected to reduce the yield from taxation by about £29,000,000 a year.

20th September.—Control of prices taken over by individual States from Commonwealth. Thirty thousand items released from price control, but control continued on essential commodities and services, and house and agricultural land sales (about 20,000 items).

30th September.—Bill introduced into House of Representatives providing for acceptance by Australia of the Havana Charter for an International Trade Organization and a General Agreement on Tariffs and Trade. (Act assented to 17th December. Actual acceptance, however, conditional on that of United Kingdom and United States of America.)

6th October.—Coal miners' dispute in Southern coal-fields, New South Wales (Kemira Tunnel Dispute), resulting in general stoppage of coal production. (Settled 8th November.)

24th October.—Announced that Joint Coal Board would spend £16,000,000 on mechanizing and modernizing Australian coal mines.

12th November.—Announcement of new agreement under which Britain will buy more than half of Australia's dried fruit production for the next five years.

22nd November.—Legislation approved to establish and constitute an Australian Shipping Board to run a Commonwealth line of ships. (Shipping Bill introduced in Senate 9th December; Act assented to 25th March, 1949.)

29th November.—New Australian made car, the "Holden", displayed publicly for first time.

1949.

A general black-coal strike lasting seven weeks in July and August, together with heavy flooding in the northern coal-fields of New South Wales, seriously disrupted productive activity, large coal consumers such as the steel and cement-producing industries being particularly affected. During this period of industrial dislocation the numbers of persons unemployed rose sharply to more than 100,000, but otherwise conditions of labour shortage continued throughout the year. Employment (excluding rural and household domestic) increased by about 80,000 (60,000 males and 20,000 females). Most of this increase was due to immigration, which was about three times as great as in 1948. Permanent arrivals exceeded permanent departures by about 150,000.

Following the black-coal strike, secondary industry revived rapidly, and during the last three or four months of 1949, production of basic essentials such as coal, gas, electricity, iron and steel, and cement was well above the level of the previous year. There were about 53,000 new houses completed during 1949.

For the third year in succession seasonal conditions were exceptionally favorable, although heavy rains and floodings did considerable damage in the northern and eastern areas of Australia. Wool production in 1949–50 was about 10 per cent. higher than in the previous year and wheat production was very close to the all-time record established in 1947–48. With increases in wool prices more than balancing falls in wheat and metal prices, exports continued to rise in value. The value of imports rose even faster, the main increases being in motor vehicles and machinery of all kinds.

Retail and wholesale prices increased by about 10 per cent. during the year.

31st January.—National Savings Campaign launched by the Prime Minister on termination of Savings Certificate Scheme.

8th February.—Sydney storemen and packers decided to refuse to deliver wool, skins, tallow and hides from stores unless claim for 30s. a week increase granted within seven days. (Ban came into force on 16th February. Dispute settled 30th March.)

12th February.—Completion of sowing of 30,500 acres of sorghum on the Peak Downs for the Queensland-British Food Corporation.

13th February.—The Commonwealth to build hostels in Newcastle, Port Kembla, Adelaide and Melbourne to accommodate 100,000 European migrants to arrive in the next 18 months.

16th February.—Decision of Commonwealth to admit women to clerical and professional grades of Commonwealth Public Service.

24th February.—Bills introduced to reduce rates of Income Tax and Social Services Contributions payable by individuals—to take effect from 1st July. (Acts assented to 12th March.)

16th March.—Bill authorizing construction of dams and weirs at Menindee, New South Wales at estimated cost of £2,300,000 introduced in New South Wales Lower House. Storage capacity of project is approximately 2,000,000 acre feet of water. Scheme will supply water to more than 1,000,000 acres of pastures. (Act assented to 18th April, 1949. Works commenced 12th October, 1949.)

21st March.—Agreement of wheat importing nations to purchase 450,000,000 bushels of wheat a year, mainly from United States of America, Australia and Canada—Russia and Argentine not partners to agreement. Australia's share 80,000,000 bushels a year. (Bill to approve acceptance of agreement by Australia introduced 19th May. Act assented to 30th June.)

15th April.—Agreement between Australia and New Zealand to give citizens of each country full Social Service benefits when resident in the other.

28th April.—Australian Prime Minister and British Minister of Food announced agreement to arrangements for increasing meat exports from Australia to United Kingdom. (Bill introduced 18th October for grant of financial assistance to Queensland and Western Australia for development of meat production by improving roads and other facilities for movement of live-stock. Act assented to 28th October.)

11th May.—Representatives of Australia, New Zealand and South Africa met in London to discuss promotion of use of wool in all countries, possible co-operation with South American countries, future development in other regions, and scientific research.

16th May.—New South Wales State Cabinet approved restrictions on use of electricity by industry and commercial and domestic users. Industry in County of Cumberland to reduce consumption of electricity by 30 per cent. as from 1st June.

Victorian State Cabinet ratified Murray River Agreement which, *inter alia*, provides for enlargement of Hume Weir and installation of hydro-electric plant. Agreement already ratified by Governments of Commonwealth, New South Wales and South Australia.

17th May.—Rural Finance Corporation Bill introduced in Victorian Legislative Assembly, providing for an institution to afford additional and more effective credit facilities for primary producers and those conducting or desirous of establishing secondary industries in country districts. (Assented to 8th November.)

Governor of Commonwealth Bank announced current advances policy to be observed by banks, designed to limit excessive demand for goods generally, and for capital goods in particular, in relation to supplies available.

20th May.—Bill introduced, providing for establishment of Australian Whaling Commission to carry on whaling activities in or near Australian waters. (Act assented to 12th July.)

26th May.—Federal Cabinet decided to make joint purchase with New Zealand Government of Christmas Island phosphate deposits. Deposits, estimated at 25 to 30 million tons, will cost £2,750,000. (Christmas Island Agreement Bill introduced 26th October; Act assented to 29th October.)

6th June.—Full High Court unanimously declared invalid National Security (Liquid Fuel) Regulations, thus restoring free retailing of petrol.

10th June.—Announced that Victorian State and Municipal authorities plan to spend £46,000,000 in the next eight years in order to expand electricity generation and make it less dependent on supplies of black coal.

17th June.—Following threat of general coal strike over dispute about claims for 35-hour week, 30s. a week wage increase and long-service leave, the Joint Coal Board announced most drastic coal rationing ever imposed in Australia. Floods on northern New South Wales coal-fields stopped delivery of coal.

22nd June.—Construction work on Dumaresq River marked the beginning of the Border River Scheme, designed to harness the waters of the Barwon, Macintyre and Dumaresq Rivers, separating New South Wales and Queensland.

27th June.—All Australian black coal mines idle (*see* 17th). Transport, power, lighting and gas supplies severely restricted in all States; much unemployment caused, especially in New South Wales. (Work resumed 15th August.)

28th June.—Following abolition of Stevedoring Industry Commission, Stevedoring Industry Bill introduced to establish Australian Stevedoring Industry Board. (Assented to 18th July.)

30th June.—Bill introduced to enable Commonwealth Government to require liquid fuel importers to hold stocks at specified places for defence requirements. (Act assented to 12th July.)

11*th July.*—Air transport agreement between Australia and India signed, to prevent uneconomic competition, for collaboration on fares and freights, and for reciprocal traffic rights.

12*th July.*—Prime Minister stated that Commonwealth Government would increase subsidy paid to certain gold mines. Rate of assistance to be raised from 4 to 6 per cent. of paid-up capital.

19*th July.*—Commonwealth Finance Minister's Conference in London recommended 25 per cent. cut in dollar imports. (Approved 3rd August by Federal Cabinet sub-committee.)

26*th July.*—Privy Council dismissed Commonwealth Government's appeal against High Court's invalidation of Commonwealth's bank nationalization legislation (Banking Act 1947).

15*th August.*—Announced that experiments in air-freighting beef carcasses in north-western Australia had proved successful.

18*th August.*—Federal Government agreed to waive all duties on essential materials which States find necessary to import, mainly building materials, steel products and locomotives, because they are unobtainable in Australia.

Prime Minister stated that he would recommend to Cabinet a special grant of £8,000,000 to State Governments, to relieve losses incurred in coal strike. (Bill introduced 7th September, assented to 27th October.)

Introduction of Land Settlement (Development Leases) Bill to enable South Australian Government to grant development leases to the Australian Mutual Provident Society and other approved persons or associations. (Act assented to 13th October.) The Society plans to transform a large tract of the Ninety Mile Desert, South Australia, into rich agricultural land, by the application of modern scientific methods, for ultimate sub-division for closer settlement.

7*th September.*—Introduction of 1949–50 Commonwealth Budget, providing for expenditure of £541,300,000 and revenue of £532,600,000 on basis of existing legislation and commitments. Estimated expenditure on War and Repatriation (1939–45) Services was £101,000,000 and on Defence Services £64,000,000—less estimated credits of £11,000,000; on statutory payments to National Welfare Fund £121,000,000; and on Capital Works and Services £53,200,000. Proposals for Income Tax extensions of depreciation allowances and of life assurance and superannuation concessional rebates, Sales Tax reductions and exemptions, a reduction in Entertainments Tax, and remissions in Customs, Excise and Primage Duties will reduce revenue by £9,600,000 a year. Expenditure proposals included a further grant of £10,000,000 to the United Kingdom, additional payments of £9,000,000 to the States and a payment of £6,700,000 from Trust Fund balances to the War Gratuity Reserve. Taking these proposals into account, net revenue for 1949–50 was estimated at £532,000,000 and expenditure at £567,000,000, leaving £35,000,000 to be financed from Loan Fund.

Coal Industry Tribunal granted long-service leave to miners throughout Australia. New award provides for thirteen weeks' leave on full pay after a minimum of ten years' service. No miners to commence long-service leave before June, 1954, owing to present manpower shortage in the coal industry. (In October, 1952, the commencement date was advanced to January, 1953.)

19*th September.*—Prime Minister announced devaluation of sterling against American dollar, and commensurate devaluation, as from commencement of business to-day, of Australian pound to 2 dollars 24 cents; new gold price announced—£A.15 9s. 10d. per fine ounce.

2*nd October.*—Prime Minister announced establishment of Immigration Planning Council, to assist in smooth and speedy assimilation of migrants into industry and the community.

17*th October.*—Official opening by Governor-General of Snowy River project for the generation of hydro-electric power for defence purposes and for consumption in the Australian Capital Territory.

20th October.—Agreement on rail standardization (replacing original agreement—*see* 2nd August, 1946) signed by Commonwealth and South Australian Governments. (Ratifying Acts assented to later in year.)

Announced that Australian Government had arranged with International Monetary Fund for an initial drawing from fund of $20,000,000.

15th November.—Re-introduction of petrol rationing in all States except Tasmania (*see* 6th June).

8th December.—Announcement of new sugar agreement with United Kingdom. In conformity with existing arrangements United Kingdom would buy all of Australia's exportable sugar surplus up to end of 1952; from 1953 to 1957 arrangements to be made to find a market for 500,000 tons of Australian sugar annually in British Commonwealth preferential market—300,000 tons to be absorbed in United Kingdom market at a guaranteed price to be negotiated annually.

12th December.—Coal Industry Tribunal rejected Miners' Federation claim for reduction of working hours from 40 to 35 per week in coal industry in five States

1950.

Favorable economic conditions were maintained throughout the year. Employment rose every month with the exception of October, when a railway dispute started in Victoria, later extending to South Australia. The total increase in employment (other than rural, household domestic, and defence forces) was approximately 100,000 (70,000 males and 30,000 females). Again the bulk of the increase was due to immigration. Permanent arrivals exceeded permanent departures by about 154,000, 4,000 more than in the previous year. Average earnings per head continued to increase and in December quarter were approximately 15 per cent. higher than in the corresponding quarter of the previous year. Towards the end of the year the Commonwealth Court of Conciliation and Arbitration gave a judgment which brought about an increase of £1 per week in the male basic wage. This operated from the beginning of December, and so had little effect on conditions in 1950. Retail prices increased by about 12 per cent. and wholesale prices by about 16 per cent. during the year.

Secondary production continued to expand during the year, and increases in production as compared with 1949 (affected by the coal strike) were recorded in such basic materials as coal (17 per cent.), pig-iron (29 per cent.), cement (22 per cent.), electricity (14 per cent.). Home production, however, was inadequate and imports of the first three commodities increased. In the case of electricity, black-outs and other restrictions continued, particularly in New South Wales. House building activity continued to increase, with 76,000 houses started, and 62,000 finished. Substantial orders for prefabricated houses were placed overseas by various governmental authorities.

The run of good seasons continued, although exceptionally heavy rainfall several times caused serious flooding in parts of eastern Australia with damage to farm properties, particularly dairy and vegetable farms in coastal areas. Average export prices of wheat remained above the maximum under the International Wheat Agreement (16s. 1d.), ensuring a high return from the large 1949–50 crop, and the year closed with the harvesting of a crop which was well above average although less than the previous year. The 1949–50 wool selling season closed with firm prices, giving an average for the year of more than 63d. The 1950–51 season opened with prices about 50 per cent. higher than at the end of the previous season, and the year closed with prices still tending to rise. Production for 1950–51 was slightly lower than in 1949–50. Meat production in 1950, also, was about 5 per cent. lower, but the production of milk and butter was well maintained.

2nd January.—Uranium production to commence in South Australia. Mining operations already in progress at Radium Hill.

8th February.—Petrol rationing abolished for second time since the end of war. (*See* 6th June and 15th November, 1949.)

Committee of experts appointed to review Commonwealth taxation legislation, particularly in relation to income tax.

4th March.—Loan of £625,000 granted by Commonwealth Government to Burma.

7th March.—Bill introduced in New South Wales Legislative Assembly to create a Transport and Highways Commission to control all State transport services. (Act assented to 27th April.)

15th March.—Social Services Consolidation Bill introduced into Senate, providing for the endowment of the first or only child in each family under 16 years of age, at the rate of 5s. per week. (Act assented to 28th June).

16th March.—Commonwealth Bank Bill introduced in House of Representatives to amend Banking Act 1945, to repeal Banking Act 1947, and to re-establish Commonwealth Bank Board. (Houses failed to agree on measure—*see* 4th October.)

22nd March.—Severest floodings for twenty-five years in south-east corner of New South Wales.

An Australian oversea housing mission, including the Commonwealth Director of Housing and representatives of New South Wales and Victoria, left for Europe to investigate possibility of importing pre-fabricated houses.

30th March.—Electricity Commission Bill, to acquire major electricity organizations in State, introduced in New South Wales Legislative Assembly. (Act assented to 12th July.)

31st March.—Decision at London Wool Conference to continue Joint Wool Organization scheme on present basis for time being. Principle of reserve price plan to replace Joint Organization accepted.

12th April.—Announcement of trade agreement with Argentine.

13th April.—Coal Industry Tribunal, after three months' hearing, granted permission to colliery proprietors in New South Wales, Victoria and Queensland to remove pillar coal by mechanical means.

22nd April.—Commonwealth Government to admit, duty free, all types of prefabricated houses and accessories imported during 1950, irrespective of country of origin.

15th-19th May.—British Consultative Committee meeting in Sydney to consider ways of assisting development of south and south-east Asia in co-operation with other interested countries.

22nd May.—Announcement of British Government's approval of plan to recruit 4,500 British migrants, including 1,000 tradesmen, to serve six years in Australian Regular Army, and then settle in Australia.

13th June.—Bills introduced into House of Representatives providing for a scheme of reserve prices for wool to replace present Joint Organization system—to be financed by a levy on wool. (Act assented to 1st July. Validity challenged in High Court on 24th August, but hearing postponed pending result of referendum of wool-growers on wool levy. *See* 23rd August, 1951.)

16th June.—Abolition of butter rationing.

25th June.—Disastrous floods on north coast of New South Wales.

Attacks by North Korean forces on forces of Republic of Korea.

30th June.—Australian forces in vicinity of Korea placed at disposal of United Nations in Korean conflict.

3rd July.—Tea rationing abolished—end of retail rationing in Australia. Retail price of tea increased by 7d. to 3s. 4d. per pound.

6th July.—Queensland Government to proceed with plans to build Burdekin Dam (to cost £30,000,000) and the Tully Falls Hydro-electric Scheme (£7,000,000).

9th July-23rd August.—Prime Minister visited Malaya, Egypt, Italy, Britain, United States of America, Canada, Japan and New Zealand. In Britain he had informal talks on defence, finance, and foreign policy and Commonwealth co-operation in these fields.

In America he negotiated a $100,000,000 loan for Australia with the International Bank for Reconstruction and Development. Loan will be used to finance capital goods and equipment to enable expansion of specific development projects.

2nd August.—Operations of Snowy Mountains Hydro-electric Scheme for first year have cost £2,500,000. Staff numbered 1,400 and progress up to expectations.

22nd August.—Contract with American company to construct Eildon Dam on Goulburn River, Victoria, at a cost of £11,400,000.

29th August.—Bill introduced in Victorian Legislative Assembly to constitute a Gas and Fuel Corporation to establish, purchase, acquire and operate gas undertakings and to co-ordinate gas production and distribution in Victoria. (Act assented to 6th December.)

7th September.—Loan programme approved by Loan Council for 1950–51 comprised Government loans, £175,400,000, and Local and Semi-Governmental loans, £70,700,000.

Trade agreement with Indonesia announced.

28th September.—Commonwealth Government to pay subsidy of £300 on each prefabricated house imported by State Governments. Orders have been placed by Commonwealth and States for 10,440 houses, the United Kingdom to supply 45 per cent., and, in addition, 4,000 other types of buildings.

4th October.—Commonwealth Bank Bill 1950 (No. 2) introduced in House of Representatives. (Referred by Senate to Select Committee on 14th March, 1951. Double dissolution of Parliament granted 17th March on grounds that Senate had failed to pass Bill. *See* 16th March, 1950.)

12th October.—Commonwealth Court of Conciliation and Arbitration ruled that male basic wage should be increased by £1 and female basic wage from 54 per cent. to 75 per cent. of male rate. Applications must be made to Court for new awards or alterations to existing awards.

Introduction of 1950–51 Budget, providing for expenditure of £691,000,000 and revenue of £631,000,000 on basis of existing legislation, commitments and rates of taxation. Estimated expenditure on Defence Services was £83,000,000, on War and Repatriation (1939–45) Services, £106,000,000 (including £30,600,000 for War Gratuity) and on Capital Works and Services (excluding Defence), £69,000,000. Loan Fund is to provide £25,000,000 for War Service Homes. The Budget included proposals for increased payments to the States, increases in War Pensions, the establishment of a Strategic Stores and Equipment Reserve Trust Account (£50,000,000), a subsidy of £20,000,000 for woollen goods produced in Australia for local use, increases in certain social services benefits, the merging of Income Tax and Social Services Contribution into a single levy, simplification of the method of expression of the rates of Income Tax, concessions to Income Tax payers, etc. Proposals for increased revenue included a scheme for deductions from the proceeds of wool sales to be applied in payment of Income Tax payable (£103,000,000), increases in postal charges and in the rates of sales tax on certain goods. Taking all these proposals into account, revenue for 1950–51 was estimated at £738,700,000, and expenditure at £738,300,000. Loan Fund expenditure for 1950–51 was estimated at £55,100,000.

Death of J. B. Brigden, M.A., distinguished Australian economist.

16th October.—Railway services in Victoria ceased following breakdown in discussions on abolition of passive time and payment of overtime on a daily basis. (Dispute extended to South Australia 23rd October; services resumed in South Australia 20th November; and in Victoria 9th December, after A.C.T.U. Disputes Committee had called off the stoppage.)

26th October.—Completion of trade agreement between Australia and Brazil.

27th October.—Agreement announced for Britain to buy all surplus meat produced in Australia for next fifteen years.

13th November.—Agreement between Australia and Netherlands to bring 25,000 Dutch migrants to Australia in 1951 and larger numbers in future years.

28th November.—Melbourne conference to consider scheme for pre-emption of 100,000,000 lb. of wool for a military reserve for the United States of America decided that scheme was not at present practicable.

20th November.—Australia allocated trade with Japan to value of £40,000,000 in 1950-51 under trade agreement with a number of sterling area countries and Japan. Governor of Commonwealth Bank announced that Banks will be required to adopt a more selective advance policy in order to limit the inflationary effect of expenditure financed from bank advances.

6th December.—Defence (Transitional Provisions) Bill to extend for one year a a number of national security regulations and orders introduced in Senate (Act assented to 16th December).

8th December.—Announcement of functions and personnel of National Security Resources Board, to advise Government on best use of Australia's resources in interests of national security.

20th December.—Commonwealth Government to contribute £31,250,000 to Colombo Plan for Co-operative Economic Development in South and South-East Asia, and £3,500,000 to technical assistance programme.

22nd December.—Five-year migration agreement with Italy under which not more than 15,000 Italians will enter Australia in initial period of operation.

1951.

The year opened with exceedingly favorable economic conditions, with wool prices rising to an all-time record of about 17s. per lb. in March. Towards the end of the season, prices fell sharply from this extreme but the average for the season was 12s. per lb. Prices were still lower at the beginning of the 1951–52 selling season, but even so maintained the high average of 7s. per lb. over the first half of the season. Export prices for wheat remained steady at the high level of more than 16s. throughout the year. Weather conditions generally were favorable, except in Queensland and northern New South Wales, where droughts and, towards the end of the year, fires caused damage to pastures and losses of stock. The average wheat yield (1951–52) was estimated at about 15.5 bushels per acre, but the total crop was considerably lower than in the previous year, owing to the reduced acreages sown. Milk production in 1951 declined by about 10 per cent. Beef production increased slightly, but there was a further sharp reduction in mutton and lamb production, which was below the pre-war level. Total meat production fell very slightly.

These trends in primary production and the general inflationary conditions were reflected in the balance of payments. The trade year 1950–51 ended with an excess of exports of about £240,000,000 (imports, £740,000,000, exports, £980,000,000), but the succeeding trade year opened with the usual excess of imports of the early months continuing, until by December the trend in the balance of payments showed imports running at more than £1,000,000,000 per year and exports at only about £700,000,000. Oversea reserves had been reduced by about £300,000,000 during the last six months.

To help counter inflation, a rigid control of new capital issues was re-imposed in February. A slight increase in bond rate was brought about in May by the issue of a loan at a discount of 1 per cent.; and in August a further increase was made to 3¾ per cent. The Commonwealth Budget was designed to counter inflation and provided for increases in direct and indirect taxes and a surplus of £115,000,000, although at the same time the Commonwealth undertook to provide money out of this surplus to finance State works if sufficient loan money was not forthcoming. Despite the instructions issued late in 1950 about a more restrictive advance policy (*see* 20th November, 1950) bank advances increased by about 25 per cent. during the year.

The increase in employment slowed down during the first half of the year and practically ceased in the second half, despite continued net permanent migration of about 110,000 for the whole year. Prices and earnings, however, continued to increase.

Wholesale and retail prices both increased by about 25 per cent. and cost of living adjustments added 38s. to the basic wage in addition to the increase of £1 at the end of 1950. Average earnings per head rose 30 per cent.

A series of one-day stoppages in the coal mines early in the year caused some temporary falling off in production in industries heavily dependent on coal, such as iron and steel and cement, but over the year production of these commodities was higher than, or up to, the level of the previous year, and black coal production was an all-time record of 17,500,000 tons. Eighty-four thousand houses were started, and 72,000 completed, 10 per cent. and 16 per cent., respectively, higher than in the previous year. About 9,000 imported pre-fabricated houses were delivered out of total orders for 21,000 placed by governmental authorities.

8th January.—Commonwealth Government decision to close down shale oil plant at Glen Davis, New South Wales; production to continue temporarily. (Tenders were called on 14th February, 1952 for the purchase of assets, in whole or part.)

2nd February.—Control of capital issues re-introduced in an effort to reduce inflationary pressure. (*See* 28th May and 2nd August.)

5th February.—Coal miners in eastern States began one day per week stoppages in protest against provisions of the Coal Industry Tribunal's award (20th December, 1950) for payments over and above the ordinary wage rate to employees who worked the full ten days of a pay-period. (Stoppages were discontinued in mid-March, *see* 3rd May.)

Meeting of Governors of central banks of Australia, Ceylon, Ireland, New Zealand, Pakistan, South Africa and the United Kingdom to discuss general banking problems and the international economic situation.

2nd March.—Death of Professor L. F. Giblin, D.S.O., M.C., noted Australian economist.

3rd March.—Commonwealth War Gratuities amounting to £52,800,000 paid to ex-service personnel of the 1939–45 War.

8th March.—Abandonment of Shell (Queensland) Development Pty. Ltd., search for oil in Queensland, which had extended over ten years.

15th March.—Commonwealth Government to grant to States special financial assistance of £15,000,000 for 1950–51.

4th April.—Victorian Government acquired land in Gippsland as the site for the Lurgi Brown Coal Gasification Plant to supply Melbourne with gas.

9th April.—Appreciable drop in wool prices at Sydney after post-war rise to record levels.

30th April.—Electricity zoning commenced in New South Wales, a complete ban on the use of electricity for commerce and industry to apply between 7 a.m. and 9 p.m. on one day each week in five zones. (Subsequently modified, in general, to blackouts within previously specified zones.)

3rd May.—The Coal Industry Tribunal, in a review of certain portions of its decisions on a log of claims covering members of the Australian Coal and Shale Employees' Federation, rejected a claim for a wage increase, and directed that the "attendance allowance" was to stand. (*See* 5th February.)

15th May.—Industrial Arbitration (Amendment) Bill 1951 introduced into New South Wales Legislative Assembly providing for the inclusion in New South Wales industrial awards of three months' long-service leave on full pay after 20 years' continuous service. (Act assented to 12th September.)

17th May.—First wool from Hallstrom Livestock Experimental Station in New Guinea auctioned at Sydney wool sales.

28th May.—Capital Issues Control Regulations (*see* 2nd February) challenged in High Court. (On 12th September, 1952 the High Court declared the Regulations valid.)

17th June.—Announcement of signing of a trade agreement with Western Germany.

21st June.—Commonwealth Bank Bill 1951 providing for the restoration of the Commonwealth Bank Board, introduced into the House of Representatives. (Act assented to 16th July; operated from 21st August.)

29th June.—Conciliation and Arbitration Bill 1951, providing for secret union ballots in elections and on strike issues, greater control by the Arbitration Court, etc., introduced into House of Representatives. (Act assented to 19th July.)

5th July.—Defence Preparations Bill, providing authority until 31st December, 1953 for the Government to make regulations necessary for defence preparations and to adjust the economy to meet the threat of war, introduced into House of Representatives. (Act assented to 19th July.)

17th July.—Large upward cost of living adjustments in the basic wage announced by Commonwealth Court of Conciliation and Arbitration—increase of 13s. in the average weekly wage for the six capital cities.

19th July.—All states except Queensland fixed prices of controlled goods and services at levels ruling on 18th July. (The order was extended in New South Wales on 24th July to cover a wide variety of goods and services, but was relaxed on 20th August and removed on 9th October.)

20th July.—Final liquidation of the stock of the United Kingdom Dominion Wool Disposals Ltd. (Joint Organization) at London Wool Sales.

24th July.—Announcement of letting to a Norwegian firm of the first contract for the design and construction of a dam in the Snowy Mountains Hydro-electric Scheme. (The project, at Guthega, is to cost £5,800,000 and is to be completed by June, 1954.)

28th July.—Commonwealth Government to sell its holdings of 803,596 ordinary shares in Amalgamated Wireless (Australasia) Ltd., comprising 51 per cent. of the issued capital, for 45s. per share.

30th July.—Conference of representatives of Commonwealth and State Governments, employers and trade unions, and other sections of the community, called by the Prime Minister, met in Sydney to discuss means of combating inflation.

First youths to receive call-up notices under National Service Act 1951 commenced training.

2nd August.—New Capital Issues Control Regulations gazetted under the Defence Preparations Act 1951 to replace those operating under the Defence (Transitional Provisions) Act. (*See* 2nd February and 28th May.)

9th August.—The Prime Minister called a conference in Canberra of the Governor of the Commonwealth Bank, the heads of commercial banks, and the Secretary to the Treasury, to discuss bank credit policy.

10th August.—Conference in Canberra between the Government and representatives of insurance companies to consider general financial and investment policy.

14th August.—Announcement by Vacuum Oil Co. Pty. Ltd. that it will build a new oil refinery at Altona, near Melbourne, to be completed in about three years at a cost of £7,500,000.

15th August.—A new company to be formed to develop deposits of pyrites at Nairne, South Australia, for the production of sulphur.

16th–17th August.—The Loan Council approved a rise in the long-term bond rate from $3\frac{1}{8}$ per cent. to $3\frac{3}{4}$ per cent., to apply to the Thirteenth Security Loan for £40,000,000 to be opened on 22nd August. The loan programme for 1951–52, after State works programmes had been reduced by approximately 25 per cent., was decided as follows:—Commonwealth, £23,000,000; States, £202,000,000; Local Authorities, £96,000,000.

21st August.—The Commonwealth Government issued instructions for the reduction of the staff of Commonwealth Departments by 10,000 (5 per cent.).

The Victorian State Electricity Commission's loan, calling for £6,000,000 at $3\frac{1}{2}$ per cent. interest, was closed, under-subscribed by £3,350,000.

23rd August.—Wool-growers rejected by referendum the proposal for a reserve price plan for wool. (*See* 13th June, 1950.)

27th–30th August.—New season's wool auctions in Sydney realize prices about 25 per cent. below those of June.

1st September.—Major hire purchase finance companies in New South Wales and South Australia announced new conditions for hire purchase agreements, increasing deposit rates and reducing repayment periods. (*See also* 8th November.)

3rd September.—Arrival at Port Kembla of first shipment of iron ore from Yampi Sound, Western Australia.

11th September.—Interest rates on loans to local and semi-governmental authorities raised from 3½ per cent. to 4⅛ per cent.

26th September.—Commonwealth Budget for 1951–52 introduced into the House of Representatives, providing for estimated expenditure in 1951–52 of £927,000,000 and revenue of £1,041,500,000, allowing an estimated surplus of £114,500,000 to be paid to the National Debt Sinking Fund. Estimated expenditure from Consolidated Revenue Fund included:—Defence Services, £182,000,000 (including £32,500,000 to be transferred to Strategic Stores and Equipment Reserve); War and Repatriation Services, £107,000,000; Capital Works and Services (excluding Defence), £102,000,000 (including £25,000,000 for War Service Homes). In addition, £4,000,000 from Loan Fund was provided for Capital Works and Services. The Budget included proposals for payments to the States of £161,000,000; discontinuance of the bounty on woollen goods; a total estimated expenditure on subsidies of £33,000,000; and increases in pensions and repatriation benefits. Proposals for increased revenue included a special levy on individual taxpayers equal to 10 per cent. of income tax assessed (expected to yield an extra £25,000,000); modifications to the averaging system of taxing primary producers (£47,000,000); increases in Company Taxation (£28,000,000), Sales Tax (£35,000,000) and Customs and Excise Duties (£24,000,000); discontinuation of the special depreciation allowance on plant to income tax payers.

—October.—Extensive bush fires in Queensland, Northern Territory and northern New South Wales damaged wide areas of country.

7th October.—Announced that Australia is to spend about £700,000,000 on defence during next three years.

12th October.—Details announced of a fifteen-year meat agreement with the United Kingdom to commence on 18th July, 1952.

18th October.—The Victorian Industrial Appeals Court ruled that dairy farm employees would work a 48-hour week instead of the 40-hour week granted in August by the Dairy Farm Workers' Wages Board. The Court increased the basic rates of pay by 10s. to £10 19s. per week, and increased the annual leave granted by the Board from two to three weeks.

Australia signed the Torquay Protocol to the General Agreement on Trade and Tariffs.

Further large upward adjustments in the basic wage announced by the Arbitration Court—average weekly wage for the six capitals increased by 11s. (*See* 17th July.)

8th November.—The Commonwealth Bank ceased to make credit available for the purchase of cars other than new cars for commerce. Private hire purchase firms also restricted credit and shortened repayment periods. (*See also* 1st September.)

12th–23rd November.—The Third Conference of Government Statisticians of the British Commonwealth held in Canberra.

20th November.—Announcement that current Australian gold output may be sold on "premium markets overseas", providing that it is sold for dollars.

—December.—Serious bush fires in the Blue Mountains area of New South Wales.

21st December.—British Commonwealth Sugar Agreement signed in London; Australian export quota fixed at 600,000 tons of raw sugar per annum. The agreement is to operate until 31st December, 1959, prices to be negotiated annually.

APPENDIX.

(Some recent information which has come to hand since the various chapters were sent to press is given hereunder. Much of this information is of a preliminary nature and is therefore subject to revision. For revised and for more advanced information, reference should be made to other publications issued by this Bureau (*see* pages 1317–9), notably the *Monthly Review of Business Statistics* and the *Quarterly Summary of Australian Statistics*.)

CHAPTER II.—PHYSIOGRAPHY.

§ 2. Climate and Meteorology of Australia.

Rainfall : Australian Capital Cities, p. 53.—Rainfall recorded in Australian capital cities during 1951 was as follows :—Canberra, 22.00 ins. ; Perth, 34.14 ins. ; Adelaide, 25.44 ins. ; Brisbane, 33.89 ins. ; Sydney, 53.15 ins. ; Melbourne, 29.85 ins. ; Hobart, 24.57 ins.

CHAPTER III.—GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

Number and Salary of Members of the Legislatures, p. 68 (*see also* pp. 14 and 18).—From 1st January, 1952, the Commonwealth Parliamentary Allowance paid to members of both Houses was increased to £1,750 per annum. At the same time new and increased additional allowances ranging from £275 to £1,750 were provided for members holding office (other than Ministers of State), and additional annual allowances ranging from £400 to £900, free of income tax, were provided for all members of both Houses, in respect of the expenses of discharging their duties. Furthermore, the annual appropriation for Ministers was increased to £41,000, the additional allowance of the Prime Minister was increased to £3,500, and an additional allowance of £1,000 was made to each other Minister.

From 1st January, 1952, the annual salary of members of the New South Wales Legislature was increased to £500 (Upper House) and £1,875 (Lower House). From 1st July, 1951, the annual salary of members of the South Australian Legislature was increased to £1,150–£1,225 for both Houses, according to distance of electorate from Adelaide.

§ 2. Parliaments and Elections.

Commonwealth Referenda, p. 71.—*Constitution Alteration (Powers to deal with Communists and Communism) Referendum, 22nd September,* 1951. Details of the voting in this referendum, which resulted in an overall majority and majorities in three States against the proposed amendment, were as follows :—

CONSTITUTION ALTERATION (POWERS TO DEAL WITH COMMUNISTS AND COMMUNISM) REFERENDUM, 22nd SEPTEMBER, 1951.

State.	Votes Recorded in Favour of Proposed Law.		Votes Recorded Against Proposed Law.		Number of Informal Ballot-papers.	Total.
	Number.	Percentage.	Number.	Percentage.		
New South Wales	865,838	47.2	969,868	52.8	25,441	1,861,147
Victoria	636,819	48.7	670,513	51.3	18,692	1,326,024
Queensland	373,156	55.8	296,019	44.2	6,741	675,916
South Australia	198,971	47.3	221,763	52.7	6,519	427,253
Western Australia	164,989	55.1	134,497	44.9	6,167	305,653
Tasmania	78,154	50.3	77,349	49.7	3,093	158,596
Total ..	2,317,927	49.4	2,370,009	50.6	66,653	4,754,589

State Elections, p. 72.—On 21st June, 1952 the first election for the Victorian Legislative Council on the basis of adult suffrage took place. Particulars of electors concerned are as follows :—Electors enrolled, whole State, 1,395,650 ; electors in contested electorates who voted—number, 994,190, proportion, 92.14 per cent.

An election for the Victorian Legislative Assembly took place on 6th December, 1952 (*see* Ministry on p. 1343).

§ 4. Administration and Legislation.

The Sovereign.—On 7th February, 1952 the Prime Minister announced that the Governor-General had directed the notification, for general information, of the intelligence of the death of His Majesty King George the Sixth on 6th February, 1952.

On 7th February, 1952 the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia.

Governors-General and Commonwealth Ministries, pp. 78 and 88.—On 3rd September, 1952 the Prime Minister announced the approval by Her Majesty the Queen to the appointment of Field-Marshal Sir William Slim, G.C.B., G.B.E., D.S.O., M.C., as Governor-General of the Commonwealth of Australia, and that the present Governor-General (the Right Honorable Sir William John McKell, G.C.M.G.) would continue in office until Sir William Slim is sworn in.

At 24th September, 1952 the Menzies Ministry, as shown on p. 88, remained unaltered, except for the change in designation on 4th June, 1952 of the Hon. Wilfred Selwyn Kent Hughes, M.V.O., O.B.E., M.C., E.D., from the Minister for the Interior and Minister for Works and Housing to the Minister for the Interior and Minister for Works.

Governors and State Ministers, pp. 89–91.—The Governor and the composition of the Ministry in each State in December, 1952 were as shown on pp. 89–91, with the following exceptions :—

Governors.—South Australia—The Hon. Sir John Mellis Napier, K.C.M.G., Lieutenant-Governor. (Sir John Napier assumed the administration on 19th June, 1952 following the departure of Sir Charles Norrie.)

Ministries.

New South Wales (3rd April, 1952).

Premier, Colonial Treasurer and Minister for Local Government—

The Hon. J. J. Cahill.

Deputy Premier and Minister for Education—

The Hon. R. J. Heffron.

Minister for Housing, Minister for Co-operative Societies and Assistant Treasurer—

The Hon. Clive R. Evatt, Q.C.

Attorney-General—

The Hon. C. E. Martin, Q.C.

Minister of Justice and Vice-President of the Executive Council—

The Hon. R. R. Downing, M.L.C.

Chief Secretary—

The Hon. C. A. Kelly.

Minister for Health—

The Hon. M. O'Sullivan.

Minister for Agriculture—

The Hon. E. H. Graham.

Minister without Portfolio—

The Hon. G. Weir.

Minister for Labour and Industry and Minister for Social Welfare—

The Hon. F. J. Finnan.

Minister for Transport—

The Hon. W. F. Sheahan.

Secretary for Mines and Minister for Immigration—

The Hon. J. G. Arthur.

Secretary for Lands—

The Hon. F. H. Hawkins.

Secretary for Public Works and Assistant Minister for Local Government—

The Hon. J. B. Renshaw.

Minister for Conservation—

The Hon. A. G. Enticknap.

Victoria (17th December, 1952).

Premier and Treasurer—

The Hon. J. Cain.

Chief Secretary—

The Hon. L. W. Galvin.

Minister of Transport and a Vice-President of the Board of Land and Works—

The Hon. P. L. Coleman, M.L.C.

Attorney-General, Minister-in-charge of Prices and Minister-in-charge of Immigration—

The Hon. W. Slater, M.L.C.

Minister of Health—

The Hon. W. P. Barry.

Minister of Agriculture, Minister of State Development and Decentralization, Minister of Water Supply and a Vice-President of the Board of Land and Works—

The Hon. C. P. Stoneham.

Minister-in-charge of Housing and Minister-in-charge of Materials—

The Hon. T. Hayes.

Minister of Labour and Minister of Mines—

The Hon. A. McD. Fraser, M.L.C.

Minister of Education—

The Hon. A. E. Shepherd.

Commissioner of Crown Lands and Survey, Minister of Soldier Settlement, Minister for Conservation and President of the Board of Land and Works—

The Hon. R. W. Holt.

Commissioner of Public Works and a Vice-President of the Board of Land and Works—

The Hon. S. Merrifield.

Minister-in-charge of Electrical Undertakings and Minister of Forests—

The Hon. J. W. Galbally, M.L.C.

Ministers without Portfolio—

The Hon. J. H. Smith.
The Hon. F. R. Scully.

QUEENSLAND (17th January, 1952).

Premier and Chief Secretary; and Vice-President of the Executive Council—

THE HON. V. C. GAIR.

Minister for Transport—

THE HON. J. E. DUGGAN.

Secretary for Public Lands and Irrigation—

THE HON. T. A. FOLEY.

Secretary for Agriculture and Stock—

THE HON. H. H. COLLINS.

Secretary for Labour and Industry—

THE HON. A. JONES.

Attorney-General—

THE HON. W. POWER.

Secretary for Public Instruction—

THE HON. G. H. DEVRIES.

Secretary for Health and Home Affairs—

THE HON. W. M. MOORE.

Secretary for Public Works and Housing—

THE HON. P. J. REMIGIUS HILTON.

Treasurer—

THE HON. E. J. WALSH.

Secretary for Mines and Immigration—

THE HON. E. J. RIORDAN.

The foregoing lists show the complete ministries as reconstituted following the retirement of the Hon. J. McGirr, the Victorian Legislative Assembly election on 6th December, 1952, and the death of the Hon. E. M. Hanlon, respectively. The following particulars refer to changes in the Western Australian Ministry following the death of the Hon. G. B. Wood, M.L.C. :—

WESTERN AUSTRALIA.

Premier, Treasurer and Minister for the North-West—The Hon. D. R. McLarty, M.M.
Minister for Agriculture.—The Hon. Sir Charles Latham, M.L.C. (The latter portfolio now follows that of Housing and Forests and is last on the list.)

§ 6. Cost of Parliamentary Government, pp. 102–3.

The cost of Parliamentary Government, Commonwealth and individual States, for the year 1950–51 was as follows :—

Commonwealth, £1,624,998 (3s. 11d. per head); New South Wales, £430,814 (2s. 8d.); Victoria, £303,417 (2s. 8d.); Queensland, £246,941 (4s. 2d.); South Australia, £181,758 (5s. 1d.); Western Australia, £212,933 (7s. 5d.); Tasmania, £117,208 (8s. 2d.); and total, £3,118,069 (7s. 6d.).

The amounts expended under the major headings for all Governments during 1950–51 were :—Governor-General or Governor, £219,616; Ministry, £187,143; Parliament, £1,998,977; Electoral, £694,321.

§ 7. Government Employees.

Australia, 1952, pp. 103–4.—The number of Government employees in Australia in June, 1952 (1951 in parentheses) was as follows :—

Commonwealth Government: Males, 157,900 (160,700); Females, 45,100 (48,100); Persons, 203,000 (208,800).
State Government and Semi-Government Bodies; Males, 358,300 (347,600); Females, 65,000 (61,000); Persons, 423,300 (408,600).
Local Government Authorities: Males, 61,200 (62,100); Females, 5,100 (4,700); Persons, 66,300 (66,800).
Total: Males, 577,400 (570,400); Females, 115,200 (113,800); Persons, 692,600 (684,200).

CHAPTER IV.—LAND TENURE AND SETTLEMENT.

§ 9. Settlement of Returned Service Personnel : 1939-45 War.

War Service Land Settlement Scheme, pp. 120–3.—At 30th June, 1952 an area of 12,665,660 acres had been submitted by the several States for land settlement. Of this, 10,353,256 acres had been approved by the Commonwealth as suitable for soldier settlement and 8,645,531 acres had actually been acquired by the States. The acreages and holdings allotted to ex-servicemen by the States at 30th June, 1952 were as follows: New South Wales, 5,477,211 (1,856); Victoria, 775,247 (1,822); Queensland, 229,668 (427); South Australia, 186,322 (475); Western Australia, 1,011,224 (639); Tasmania, 75,885 (98); total, 7,755,557 (5,317).

The total expenditure of the War Service Land Settlement Division to 30th June, 1952, £35,780,683, includes War Service Land Settlement, £25,216,987; agricultural loans, £6,200,144; agricultural allowances, £2,255,051; administrative expenses, £725,488; rural training, £1,383,013. Aggregate expenditure in the States and Territories to 30th June, 1952, was as follows:—New South Wales, £4,585,965; Victoria, £2,323,183; Queensland, £1,407,478; South Australia, £9,116,897; Western Australia, £14,216,205; Tasmania, £4,115,660; Northern Territory, £10,748; New Guinea, £4,547.

After deducting repayments of expenditure to 30th June, 1952, £3,577,402 and miscellaneous receipts, £1,972,521, the net expenditure to 30th June, 1952 was £30,230,700.

§ 11. Alienation and Occupation of Crown Lands.

Summary, p. 132.—The alienation and occupation of Crown lands in Australia at 31st December, 1951, were as follows:—

Private Lands—147,984,000 acres (7.77 per cent.) alienated; 34,052,000 acres (1.79 per cent.) in process of alienation.

Crown Lands—1,039,092,000 acres (54.58 per cent.) leased or licensed; 682,604,000 acres (35.86 per cent.) other Crown lands.

CHAPTER V.—TRANSPORT AND COMMUNICATION.

A. SHIPPING.

§ 2. Oversea Shipping and § 5. Interstate Shipping.

Summary of Movements, pp. 135, 142–3.—The following table summarizes the entrances of oversea and interstate shipping in the several States during the year 1950–51:—

OVERSEA AND INTERSTATE SHIPPING: ENTRANCES OF VESSELS, 1950–51.

State of Entry.	Steam.						Sailing.

(a) Includes Commonwealth proportion of Grafton-South Brisbane Line. (b) Estimated.

C. TRAMWAYS.

Summary of Operations, p. 167.—The following is a summary of the operations of all electric tramways in Australia during the year 1950–51 :—Route mileage open for traffic, 30th June, 567 ; gross revenue, £13,765,000 ; working expenses, £13,940,000 ; net revenue, −£175,000 ; interest, £491,000 ; car-miles run, 71,746,000 ; passenger-journeys, 745,034,000.

D. MOTOR OMNIBUS SERVICES.

Government and Municipal Services, p. 174.—The following is a summary of the operations of government and municipal motor omnibus services in Australia during 1950–51 :—Length of route, 3,994 miles ; gross revenue, £7,717,000 ; working expenses £8,099,000 ; bus-mileage run, 53,895,000 ; passenger-journeys, 339,657,000.

Private Services, p. 175.—The following is a summary of the operations of motor omnibus services under the control of private operators during 1950–51 in the States of New South Wales, Victoria, South Australia and Western Australia, respectively :—Gross revenue, £1,995,000, £1,414,000, £573,000, £1,106,000 ; bus-mileage run, 18,221,000, 19,292,000, 6,031,000, 12,645,000 ; passenger-journeys, 99,740,000, 83,628,000, 12,470,000, 34,346,000.

F. MOTOR VEHICLES.

Motor Vehicle Registrations, pp. 177–9.—Motor vehicles registered at 30th June, 1952 and new motor vehicles registered during 1951–52 were as follows :—

MOTOR VEHICLES : REGISTRATIONS, 1951–52.

(Excluding Defence Service Vehicles.)

State or Territory.	Number of Motor Vehicles Registered at 30th June, 1952.(*a*)				Number of New Motor Vehicles Registered, 1951–52.			
	Motor Cars.(*b*)	Commercial Vehicles. (*c*)	Motor Cycles.	Total.	Motor Cars.(*b*)	Commercial Vehicles. (*c*)	Motor Cycles.	Total.

Total	1,032,358	583,247	154,579	1,770,184	*f* 125,319	*f* 73,461	*f* 22,155	*f* 220,935

(*a*) Excludes trailers, road tractors, etc., dealers' plates. (*b*) Includes taxis and hire cars. (*c*) Includes lorries, vans, buses and utility trucks. (*d*) Includes vehicles registered as primary producers' vehicles. (*e*) Not available. (*f*) Excludes Northern Territory.

Drivers' and riders' licences in force at 30th June, 1952 numbered 2,194,167.

Gross revenue derived during 1951–52 from vehicles' registration and motor tax amounted to £15,995,554, from licences, etc., £1,336,530, from miscellaneous receipts, £3,607,266—total, £20,939,350.

At 30th June, 1951 there were 883,610 motor cars on Australian registers, 551,057 commercial vehicles, 145,684 motor cycles—a total of 1,580,351 vehicles. New vehicles registered in Australia during 1950–51 numbered :—Motor cars, 127,670 ; commercial vehicles, 77,934 ; motor cycles, 27,151 ; total, 232,755.

Revised figures for vehicles on the register at 30th June, 1950 are :—Motor cars, 768.558 ; commercial vehicles, 501,721 ; motor cycles, 133,979 ; total, 1,404,258.

During 1950–51 gross revenue derived from vehicles' registration and motor tax amounted to £12,333.075, from licences, etc., £1,141,318, from miscellaneous receipts, £2,403,767—total, £15,878,160.

At 30th June, 1951 drivers' and riders' licences in force numbered 1,985,821.

G. TRAFFIC ACCIDENTS.

Total Accidents Reported, 1950–51, p. 180.—The following table is a summary of the total number of accidents (known to the police) which occurred in public thoroughfares during 1950–51, the number involving casualties and the number of persons killed or injured, in each State and the Commonwealth excluding Northern Territory.

ACCIDENTS (KNOWN TO THE POLICE) WHICH OCCURRED IN PUBLIC THOROUGHFARES : ACCIDENTS RECORDED AND CASUALTIES, 1950–51.

State or Territory.	Total Accidents Reported.(*a*)	Accidents Involving Casualties.	Casualties.	
			Persons Killed.	Persons Injured.(*b*)
New South Wales	19,878	9,694	699	11,817
Victoria	14,861	9,274	581	11,364
Queensland	9,599	4,557	218	5,512
South Australia	6,325	2,001	197	2,332
Western Australia(*c*)	3,580	2,084	167	2,686
Tasmania	2,724	1,013	57	1,212
Australian Capital Territory	294	137	7	172
Total	57,261	28,760	1,926	35,095

(*a*) Total accidents causing death or injury to persons or damage exceeding £10 to property.
(*b*) Persons injured to an extent requiring surgical or medical treatment.
(*c*) Includes for the Metropolitan Area all accidents causing death or injury to persons or damage exceeding £10 to property, and, for the remainder of the State, only those accidents causing fatal or "near-fatal" injuries.

H. AVIATION.

Statistical Summaries, pp. 187–8.—The following is a summary of civil aviation for Australia in 1950–51 :—At 30th June, 1951—Registered aircraft owners, 351 ; registered aircraft, 838 ; pilots' licences—private 1,065, commercial 441, student 1,840, 1st Class airline transport 475, 2nd Class 35, 3rd Class 377 ; flight navigators, 139 ; during 1950–51 —Accidents—persons killed, 13 ; persons injured, 36.

Regular internal services' operations during 1950–51 showed the following results :—Hours flown, 252.333 ; miles flown, 40,680.000 ; paying passengers, 1,685,089 ; paying passenger-miles, 669,087,000. Freight—Actual tons, 53,002 ; ton-miles, 24,198.000. Mail—Actual tons, 2,887 ; ton-miles, 1,333,000.

The operations of services between Australia and oversea countries during 1950–51 were as follows :—Route-miles, 43,633 ; hours flown, 48,947 ; miles flown, 10,500,000 ; paying passengers, 87,599 ; paying passenger-miles, 241,817,000. Freight—Actual tons, 1,976 ; ton-miles, 6,214,000. Mail—Actual tons, 842 ; ton-miles, 4,792,000.

I. POSTS, TELEGRAPHS, TELEPHONES AND WIRELESS.

§ 1. General to § 5. Telephones.

Summary of Operations, pp. 189–203.—The following table is a summary of the operations of the Postmaster-General's Department during the year 1950–51 :—

POSTMASTER-GENERAL'S DEPARTMENT : SUMMARY OF OPERATIONS, 1950–51.

State.	Gross Revenue.	Expenditure.	Total Postal Matter Dealt with. (a)	Money Orders Issued, value.	Postal Notes Issued, value.	Telegrams Dispatched.	Telephones.			
							Lines Connected. (b)	Instruments Connected. (b)	Local Calls.	Trunk Line Calls.
	£'000.	£'000.	mil.	£'000.	£'000.	'000.	'000.	'000.	mil.	mil.
New South Wales	17,836	28,075	611.3	20,929	5,152	12,458	330	466	403	25

Total	50	103	1,884,834	224,826	2,866	1,961,044

(a) Includes short-wave stations : New South Wales, 1 ; Victoria, 3 ; Queensland, 2 ; Papua, 1 (also 1 medium wave) ; Western Australia, 2. (b) Includes Papua. (c) *See* below.

Broadcasting.—*Broadcast Listeners' Licences, p.* 209. The fees payable for broadcast listeners' licences up to 31st December, 1951 are shown on page 209 of this volume. Consequent upon an amendment to the Broadcasting Act which was proclaimed to take effect from 1st January, 1952, the fee payable for a broadcast listener's licence or a renewal thereof is :—Zone 1, £2 ; Zone 2, £1 8s. That portion of the Act relating to the payment of additional fees for radio receivers in excess of one has been repealed and the licence now applies to every broadcast receiver which is in possession of the holder of a licence or of a member of his family at the address specified in the licence and/or ordinarily kept at that address or installed in a vehicle which is ordinarily kept at that address while not in use.

Free licences are granted to blind persons and to schools. Invalid and age pensioners who live alone or with another such pensioner are required to pay only one quarter the ordinary fee.

CHAPTER VI.—EDUCATION.

§ 3. State Schools, § 4. Private Schools and § 9. Technical Education.

Returns for Year 1950, pp. 211-12, 215-17, and 239.—The following table gives a summary of State, Private and Technical schools in each State for the year 1950 :—

§ 3. Melbourne Wholesale Price Index.

Index-numbers, p. 398.—The following are the index-numbers for each group, and for all groups combined, of those commodities included in the series for the year 1951 :—

Index-numbers—Melbourne Wholesale Prices (Base of each Group : Year 1911 = 1,000), Year 1951 ; Metals and Coal, 5,080 ; Wool, Cotton, Leather, etc., 7,943 ; Agricultural Produce, etc., 4,512 ; Dairy Produce, 2,930 ; Groceries, 2,850 ; Meat, 6,438 ; Building Materials, 7,074 ; Chemicals, 3,294 ; All Groups, 5,098.

D. WAGES.

The Commonwealth Conciliation and Arbitration Tribunal.

Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to " conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State ". The Parliament has made such a law, viz., the Conciliation and Arbitration Act.

This Act defines "an industrial dispute" as a "dispute (including a threatened, impending or probable dispute) as to industrial matters, which extends beyond the limits of any one State and a situation which is likely to give rise to a dispute as to industrial matters which so extends.". Such disputes are dealt with, in part, by a Court constituted under the Act, and otherwise by Conciliation Commissioners appointed under the Act. At the present time, the Court comprises a Chief Judge and six other Judges, whilst there is a Chief Conciliation Commissioner and fifteen other Conciliation Commissioners.

The Court deals with industrial disputes insofar as they concern the standard hours of work in an industry, the basic wage for both adult males and adult females and questions relating to long service leave with pay, but all other matters in dispute are dealt with by a Conciliation Commissioner. There is, however, provision for a Conciliation Commissioner to refer any dispute or any part of a dispute to the Court for determination, but a Conciliation Commissioner is only entitled to so refer a matter if he is of the opinion, and if the Chief Judge concurs in that opinion, that the matter is one of such importance that, in the public interest, it should be dealt with by the Court.

In addition to the functions outlined above, the Act empowers the Court to make orders concerning the interpretation, and relating to the enforcement, of orders and awards. The Act also makes provision for the registration of associations of employees and employers, and certain powers in connexion therewith are, by the Act, given to the Court.

Although, in certain circumstances, there is a right of approach to the High Court with respect to decisions of the Court, the circumstances are very limited, and, for practical purposes, it can be said that decisions given by the Court are final. Decisions given by a Conciliation Commissioner, however, may be made the subject of appeal to the Court (i.e., the Arbitration Court) provided the party desiring to appeal can satisfy the Chief Judge, by way of application for leave to appeal, that the order or award the subject of the application deals with a matter of such importance that leave to appeal should, in the public interest, be granted.

Whilst many of the minor powers of the Court may be exercised by a Court constituted by one Judge, in all major matters, e.g., questions relating to the basic wage, standard hours of work, long service leave, applications concerning registered organizations and also appeals from orders or awards made by Conciliation Commissioners, the Court must be constituted by at least three Judges one of whom may be the Chief Judge. In the 1952 Basic Wage and Standard Hours Inquiry, six Judges sat together to hear the matter.

Prior to 1947, there was no division of work as between the Court and Conciliation Commissioners, a dispute being dealt with by either one or other part of the Tribunal, with the exception that questions relating to the basic wage and standard hours could only be dealt with by at least three Judges of the Court sitting together. There was also, at that time, a right of appeal to the Court against a decision of a Conciliation Commissioner. The amending Act of 1947 brought about the division of work between the two parts of the Tribunal, and, at the same time, made decisions of Conciliation Commissioners final. However, a further amending Act passed in 1952 altered the position regarding finality of decisions of Conciliation Commissioners, and provided a right of appeal, in the circumstances set out above, to the Court against any such decision.

§ 2. Rates of Wage and Hours of Labour.

Weekly Rates of Wage, pp. 400 and 404.—The following table shows for each State and Australia the weighted average nominal weekly rates of wage payable, and the index-numbers based thereon, for adult males and for adult females at 31st December, 1951, 30th June, 1952 and 30th September, 1952.

Tasmania(b)	(a)	222 0	166 6	(a)	230 0	172 6

(a) Operative from beginning of first pay period commencing in month shown. (b) None declared but rates (Capital City) shown are those of Commonwealth Court which are followed to a large extent. (c) Allowances added for other areas:—Males—Southern Division (Western District), 7s. 4d.; Mackay Division, 5s. 6d.; Northern Division (Eastern District), 10s.; Northern Division (Western District), 17s. 4d.; Females—Half of these allowances.

Average Weekly Total Wages paid and Average Earnings.—The following figures are derived from employment and wages recorded on Pay-roll Tax Returns (which cover approximately 80 per cent. of the total employment for Australia) and from estimates of the unrecorded balance. The figures relate to civilian wages and salaries only, pay and allowances of members of the armed forces being excluded. Quarterly figures, also, are published in the *Quarterly Summary of Australian Statistics* and in the *Monthly Review of Business Statistics*, which contains, in addition, an index of average weekly wage earnings, seasonally adjusted.

§ 9. Classified Summary of Australian Oversea Trade.

Imports and Exports in Statistical Classes, pp. 490–3.—The following table shows the values of total imports and total exports in statistical classes for the year 1951–52 :—

TOTAL OVERSEA TRADE, AUSTRALIA : CLASSES, 1951–52.

(£'000.)

Class.	Imports.	Exports.
I. Foodstuffs of Animal Origin	6,724	60,745
II. Foodstuffs of Vegetable Origin, Non-alcoholic Beverages	24,978	149,103
III. Spirituous and Alcoholic Liquors	2,355	1,395
IV. Tobacco, etc.	18,826	344
V. Live Animals	616	774
VI. Animal Substances, not Foodstuffs	4,817	342,162
VII. Vegetable Substances and Fibres; Cork and Manutures; Plastic Moulding Materials and Synthetic Fibres	30,269	1,760
VIII. Manufactured Fibres, Textiles and Apparel—		
(*a*) Yarns and Manufactured Fibres	47,197	1,373
(*b*) Textiles	136,249	1,947
(*c*) Apparel	20,123	657
IX. Oils, Fats and Waxes	87,469	4,283
X. Pigments, Paints and Varnishes	3,953	1,072
XI. Rocks, Minerals and Hydrocarbons	5,650	21,463
XII. Metals, Metal Manufactures and Machinery—		
(*a*) Metals and Metal Manufactures	231,801	42,063
(*b*) Dynamo Electrical Machinery, Appliances and Equipment	34,947	1,764
(*c*) Machines and Machinery	126,163	8,390
XIII. Rubber and Leather and Manufactures thereof—		
(*a*) Rubber and Rubber Manufactures	33,976	454
(*b*) Leather and Leather Manufactures	1,108	1,621
XIV. Wood and Wicker	28,029	2,367
XV. Earthenware, Cement, China, Glass and Stoneware	19,667	1,111
XVI. Paper and Stationery—		
(*a*) Pulp, Paper and Board	60,194	460
(*b*) Paper Manufactures and Stationery	8,564	1,659
XVII. Sporting Materials, Toys, Fancy Goods, Jewellery and Timepieces	9,281	752
XVIII. Optical, Surgical and Scientific Instruments and Appliances and Photographic Goods, n.e.i.	10,416	1,735
XIX. Drugs, Fertilizers and Chemicals	28,999	5,677
XX. Miscellaneous	67,380	10,109
XXI. Gold and Silver; Bronze Specie	3,672	9,768
Total	1,053,423	675,008

The following table shows the total quantities of some of the principal commodities exported from Australia during 1951–52 :—

TOTAL OVERSEA TRADE, AUSTRALIA : PRINCIPAL EXPORTS, 1951–52.

Item.	Unit of Quantity.	Quantity.	Item.	Unit of Quantity.	Quantity.
Butter ..	'000 lb.	22,898	Fruits preserved in		
Cheese ..	,,	42,787	Liquid ..	'000 lb.	110,461
Milk and Cream ..	,,	99,718	Wheat ..	'000 tons(*a*)	1,685
Eggs—			Barley ..	,,	269
In shell ..	'000 doz.	13,832	Oats ..	,,	232
Not in shell ..	'000 lb.	11,016	Flour (Wheaten)	,,	704
Meats preserved by			Sugar (Cane) ..	,,	167
Cold Process—			Sheep and Lamb		
Beef and Veal	,,	95,876	Skins ..	No. '000	12,065
Lamb ..	,,	25,246	Wool—		
Mutton ..	,,	5,907	Greasy ..	'000 lb.	823,963
Pork ..	,,	3,898	Scoured, etc. ..	,,	97,768
Meats preserved in			Silver, Silver-lead,		
Tins, etc. ..	,,	121,864	Lead and Zinc,		
Currants ..	,,	11,208	Ores and Concen-		
Raisins ..	,,	73,178	trates.. ..	'000 tons(*a*)	234
Apples ..	'000 bus.	3,263	Pig lead ..	,,	107
Citrus Fruit ..	,,	432			

(*a*) Ton = 2,240 lb.

§ 13. Australian Index of Export Prices.

Monthly Index (Fixed Weights), p. 502.—The following are the export price index-numbers for the year 1951–52 :—

EXPORT PRICE INDEXES : AUSTRALIA.

SIMPLE AGGREGATIVE INDEX : FIXED WEIGHTS.

INDIVIDUAL COMMODITIES, GROUPS OF COMMODITIES AND ALL GROUPS (COMBINED).

(*Base of each section : Average of three years ended June*, 1939 = 100.)

Period.	Wool.	Wheat.	Butter.	Metals. (*a*)	Meats. (*b*)	Sugar.	Dried Fruits. (*c*)	Tallow.	Hides. (*d*)	Gold.	All Groups.	
											Excluding Gold.	Including Gold.
1951–52—

CHAPTER XVI.—PRIVATE FINANCE.

A. CURRENCY.

§ 2. Coinage.

Issues of Australian Coins, p. 698.—The net issues of Australian coins to 30th June, 1952 were :—silver, £31,679,000 ; bronze, £2,306,000 ; total, £33,985,000.

§ 3. Notes.

The Australian Note Issue, p. 702.—The average value of notes in circulation for the year 1951–52 was £295,117,000. This amount was distributed in denominations as follows :—10s., £9,454,000 ; £1, £69,399,000 ; £5, £132,432,000 ; £10, £83,131,000 ; £20, £7,000 ; £50, £59,000 ; £100, £63,000 ; and £1,000, £572,000. The amount held by the banks was £37,745,000 and by the public, £257,372,000.

B. BANKING.

§ 1. Cheque-Paying Banks.

Commonwealth Bank, pp. 711–13.—Particulars of the average liabilities and assets of the Central Banking Business and General Banking Division, etc., of the Commonwealth Bank for the year 1951–52 appear below :—

The average liabilities of the Central Banking Business (including Note Issue Department) of the Commonwealth Bank for the year ended June, 1952 amounted to £1,074,938,000. Capital and Reserve Funds amounted to £10,450,000 ; Notes on Issue to £293,639,000 ; Special Accounts of Trading Banks to £468,800,000 ; Other Deposits of Trading Banks to £31,112,000 ; Other Liabilities to £270,937,000.

Particulars of the average assets are as follows :—Gold and Balances held abroad, £470,644,000 ; Australian Coin, £2,164,000 ; Cheques and Bills of Other Banks, £6,321,000 ; Government and Other Securities (including Treasury Bills), £503,089,000 ; Bills Receivable and Remittances in Transit, £85,000 ; and Other Assets, £92,635,000.

The average liabilities in Australia of the General Banking Division and the Rural Credits, Industrial Finance and Mortgage Bank Departments for the year ended June, 1952 were £161,942,000. Of this amount Deposits not Bearing Interest amounted to £98,555,000 ; Deposits bearing interest to £20,092,000 ; Balances due to other Banks to £17,428,000 ; Other Liabilities to £25,867,000.

The average assets in Australia, £179,980,000, included Cash and Cash Balances, £10,754,000 ; Balances with Other Banks, £1,021,000 ; Treasury Bills, £26,452,000 ; Other Australian Public Securities, £13,744,000 ; Other Securities, £212,000 ; Loans, Advances and Bills Discounted, £124,629,000 ; Other Assets, £3,168,000.

Private Trading Banks, p. 713.—Average liabilities in Australia of the Private Trading Banks for the year ended June, 1952 were £1,279,125,000. Interminable Deposits or Deposit Stock amounted to £729,000 ; Deposits not Bearing Interest to £963,524,000 ; Deposits Bearing Interest to £238,217,000 ; Notes in Circulation to £158,000 ; Balances due to Other Banks to £61,527,000 ; Other Liabilities to £14,970,000.

Average Assets in Australia amounted to £1,312,248,000. These comprised Cash and Cash Balances, £60,589,000 ; Special Accounts with Commonwealth Bank £465,991,000 ; Balances with Other Banks, £29,140,000 ; Treasury Bills, £32,402,000 ; Other Australian Public Securities, £68,416,000 ; Other Securities, £1,124,000 ; Loans, Advances and Bills Discounted, £621,435,000 ; All Other Assets, £33,151,000.

Classification of Advances within Australia, Commonwealth Bank and Private Trading Banks, p. 717.—Advances within Australia at the end of June, 1952 dissected by industries were :—Business advances—Agriculture. Dairying and Grazing, £148,356,000 ; Manufacturing, £200,931,000 ; Transport, Storage and Communication, £14,229,000 ; Finance and Property, £84,939,000 ; Commerce, £143.341,000 ; Miscellaneous, £41,109,000 ; Not elsewhere specified, £7,310,000 ; Total Business advances, £640,215,000 ; Advances to Public Authorities, £51,565.000 ; Personal advances, £127,845,000 ; total £819,625.000.

Clearing House Returns, p. 720.—The average weekly bank clearings in each capital city for the year ended June, 1952 were as follows :—Sydney, £92,557,000 ; Melbourne. £86.022,000 ; Brisbane. £17,478,000 ; Adelaide. £17,226.000 ; Perth, £11,425,000 ; Hobart, £2,980,000 ; Total, £227,688,000.

Debits to Customers' Accounts, All Cheque-Paying Banks, p. 720.—The average weekly debits to customers' accounts in each State for the year 1951–52 for all cheque-paying banks (excluding debits to accounts of Australian Governments in capital cities) were as follows :—New South Wales, £156,603,000 ; Victoria, £142,358,000 ; Queensland, £41,516,000 ; South Australia, £30,791,000 ; Western Australia, £21.810,000 ; Tasmania, £8.856,000 ; Australian Capital Territory. £471,000 ; Total, £402,405,900.

§ 2. Savings Banks.

All Savings Banks, p. 723.—The amounts on deposit in the several States at 30th June, 1952 were :—New South Wales, £304,532,000 ; Victoria, £300,832,000 ; Queensland, £102,661,000 ; South Australia, £103.726.000 ; Western Australia, £47,171,000 ; Tasmania, £30,119,000 ; Northern Territory, £1,036,000 ; Australian Capital Territory, £1,821,000 ; Total, £891,898.000. Total excess of deposits over withdrawals during 1951–52 was £40,381,000, and interest added was £14,073,000.

The number of operative accounts in the several States at 30th June, 1952 was :—New South Wales, 2,247,000 ; Victoria, 2,038,000 ; Queensland, 817,000 ; South Australia, 702,000 ; Western Australia, 404,000 ; Tasmania, 262.000 ; Northern Territory, 8,000 ; Australian Capital Territory, 16,000 ; Total, 6,494,000.

D. INSURANCE.

§ 2. Life Assurance.

Life Assurance, pp. 738–44.—The following is a summary of the life assurance business transacted in Australia during 1951, compiled from monthly returns collected from the 21 companies registered under the Life Insurance Act 1945–1950, and excluding the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office which operate only within their respective States. Particulars shown are therefore not entirely comparable with those in Chapter XVI., which are derived from annual returns and include business of the State Government Offices.

Ordinary Department and Industrial Department, respectively :—New Policies Issued in Australia—Number, 278,524, 267,931 ; Sum assured, £214,557,000, £30,885,000 ; Policies Matured or Otherwise Discontinued in Australia—Number, 105,359, 221,224 ; Sum Assured. £54,006,000, £15,827,000. Particulars of Annuities are excluded.

Premium Receipts in Australia in 1951 amounted to £40,993,000 and £12,865,000, Ordinary and Industrial Departments, respectively. Claims, etc., paid amounted to £16.312,000 and £6,076,000, respectively. Particulars of Annuities are included.

CHAPTER XVII.—PUBLIC FINANCE.

A. COMMONWEALTH FINANCE.

Consolidated Revenue Fund, p. 760–774.—The table below shows details of revenue and expenditure for the year 1951–52 :—

COMMONWEALTH CONSOLIDATED REVENUE FUND: REVENUE AND EXPENDITURE, 1951–52.

(£'000.)

Revenue.		Expenditure.	
Item.	Amount.	Item.	Amount.
Taxation—		Defence Services	125,586
Customs	113,936	War and Repatriation Services	105,931
Excise	99,981	Subsidies and Bounties ..	31,341
Sales Tax	95,459	Departmental	(a)168,952
Land Tax	6,199	National Welfare Fund—	
Income Taxes	537,503	Expenditure on Social Services	137,608
Social Services Contribution	7,676	Balance remaining in Fund	34,101
Wool Deduction	5,963	Business Undertakings—	
Pay-roll Tax	37,170	Postmaster-General's Department	64,291
Estate Duty	7,778	Broadcasting Services ..	4,135

§ 4. Commonwealth Loan Raisings.

Loans Raised, pp. 834–5.—Particulars of loans raised by the Commonwealth between 1st July, 1951 and 30th June, 1952 are given in the following table.

COMMONWEALTH LOANS RAISED, 1951–52.

Month of Raising.	Where Raised.	Amount Invited.	Amount Subscribed.	Rate of Interest.	Year of Maturity.	Purpose.
		£'000.	£'000.	%		
August, 1951 ..	Australia	40,000	8,911 23,589	2 3¾	1954 1962–65	Advances to States for Housing, £3,840,000 State purposes, £28,660,000
November, 1951 ..	Australia	40,000	7,871 32,442	2 3¾	1954 1962–65	Conversion and redemption loan, £26,767,000 Advances to States for Housing, £1,470,000 State purposes, £12,076,000
March, 1952 ..	Australia	75,000	39,020 23,210	2 3¾	1955 1962–65	Conversion and redemption loan, £44,467,000 Advances to States for Housing, £1,901,000 State purposes, £15,862,000
June, 1952 ..	Australia	160,000	160,000	2	1955	War (1939–45) and Repatriation Services, £7,135,000 Advances to States for Housing, £16,367,000 State purposes, £136,498,000

NOTE.—During 1951–52 $53,380,000 were drawn against the loan made available by the International Bank for Reconstruction and Development. All loans in 1951–52 were issued at par.

E. TAXES ON INCOME.

General, p. 840.—The major revisions in Income Tax and Social Services Contribution legislation included in the 1952–53 Budget proposals are set out below.

Taxes on Individuals, p. 840.—For 1952–53 income year an aged person will be exempt from Income Tax and Social Services Contribution if his net income does not exceed £254 or, if he or she contributes to the maintenance of a spouse, £507.

Concessional Deductions, p. 841.—A concessional deduction in respect of education expenses incurred to a maximum of £50 for each student child was introduced for income derived during the year 1952–53.

Rates of Income Tax and Social Services Contribution on Individuals, p. 843.—In the 1952–53 taxation proposals the additional tax and contribution of 10 per cent imposed on 1951–52 income was removed. The tax payable on 1952–53 income is therefore at the same rates as that payable on 1950–51 income.

Company Income Taxes, p. 846.—For 1952–53 the rate of ordinary Income Tax and Social Services Contribution payable by companies on the first £5,000 of taxable income was reduced by 24d. in £1 and the provision requiring an advance payment of Income Tax and Social Services Contribution, introduced in 1951–52, was removed. The rates of tax payable by companies in 1952–53 (on 1951–52 income) are as follows :—

(*a*) Companies (other than life assurance companies)—(i) On the first £5,000 of taxable income—60d. per £1 ; (ii) On the remainder of taxable income—84d. per £1.

(*b*) Life Assurance Companies.—Taxable income of mutual life assurance companies and mutual income of other life assurance companies—(i) On first £5,000 of taxable income—48d. per £1 ; (ii) On remainder of taxable income—72d. per £1 ; (iii) On taxable income other than mutual income the rates as for other companies apply.

(*c*) In addition, a special levy (payable by companies other than private, co-operative or mutual life assurance companies) of 24d. per £1 on taxable income. On the undistributed income of private companies a flat rate of 10s. in the £1 was imposed in lieu of the graduated rates of the shareholders.

CHAPTER XVIII.—MINERAL INDUSTRY.

§ 1. The Mineral Wealth of Australia.

Quantity and Value of Production, pp. 850-1.—In the table hereunder particulars are given of the quantity and value of production in Australia of the principal minerals during the years 1950 and 1951. It should be noted that, because of revised methods adopted in the collection and presentation of mineral statistics, the data shown below for the years 1950 and 1951 are not strictly comparable with those published for previous years:—

MINERAL PRODUCTION: QUANTITIES AND VALUES, AUSTRALIA.

METALLIC MINERALS.

Year.	Principal Contents of Metallic Minerals Produced.								Total Value of Metallic Minerals.
	Copper.	Gold.	Iron.	Lead.	Silver.	Tin.	Zinc.	Sulphur. (a)	
	Tons.	Fine oz.	Tons.	Tons.	'000 fine oz.	Tons.	Tons.	Tons.	£'000.
1950	17,481	869,537	1,417,608	225,367	11,105,544	1,854	198,125	179,243	56,566
1951(b) ..	18,009	895,536	1,459,179	211,717	10,393,735	1,556	189,763	182,915	75,143

NON-METALLIC AND FUEL MINERALS.

Year.	Quantities Produced.						Total Value of Non-Metallic and Fuel Minerals. (d)
	Coal.		Gypsum.	Limestone. (c)	Mica.	Salt.	
	Black.	Brown.					
	'000 tons.	'000 tons.	Tons.	Tons.	lb.	Tons.	£'000.
1950	16,543	7,327	329,721	2,617,041	118,953	272,700	32,984
1951(b)	17,608	7,836	371,447	2,524,186	133,548	300,000	44,048

(a) Includes sulphur content of spent oxide roasted. (b) Subject to revision. (c) Excludes limestone used as a construction material. (d) As recorded.

The total value of all minerals produced was £80,550,000 in 1950, and £119,191,000 in 1951.

CHAPTER XIX.—PASTORAL PRODUCTION.

Live-stock, Meat and Wool Produced.—The following table shows, for each State, the numbers of live-stock at 31st March, 1952, and the amounts of meat and wool produced during 1950–51 and 1951–52:—

(*a*) Subject to revision.

The area, production and average yield per acre of other principal crops in Australia during 1950–51 and 1951–52 are set out hereunder. Statistics for the latter year are subject to revision.

Area ('000 acres) : Oats, 1,757, 2,365 ; Maize, 169, 170 ; Hay, 1,377, 1,549 ; Sugar-cane, 397, 403 ; Total Crops, 19,917, 19,802.

Production ('000) : Oats, 25,128 bush., 34,506 bush. ; Maize, 4,729 bush., 4,022 bush. ; Hay, 2,063 tons, 2,345 tons ; Sugar-cane crushed, 7,052 tons, 5,327 tons ; Cane sugar, 921 tons, 745 tons.

Average Yield per Acre : Oats, 14.30 bush., 14.59 bush. , Maize, 27.93 bush., 23.66 bush. ; Hay, 1.50 tons, 1.51 tons ; Sugar-cane, 25.94 tons, 18.91 tons ; Cane Sugar, 3.39 tons, 2.65 tons. (Sugar-cane and Cane sugar yields are per acre of productive crop).

CHAPTER XXI.—FARMYARD, DAIRY AND BEE PRODUCTS.

Principal Farmyard, Dairy and Bee Products.—Particulars of the total production of these products in each State during 1950–51 and 1951–52 are shown below :—

PRODUCTION OF PRINCIPAL FARMYARD, DAIRY AND BEE PRODUCTS.

CHAPTER XXIV.—MANUFACTURING INDUSTRY.

Summary.—The table following gives a summary of the operations in manufacturing industries during 1950–51 :—

FACTORIES : SUMMARY, 1950–51.

Particulars.		N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1. Factories	No.	17,129	13,504	4,776	3,141	3,111	1,486	43,147
2. Hands employed(*a*) ..	,,	406,965	316,792	94,579	83,169	43,761	23,827	969,093
3. Salaries and wages paid(*b*)	£'000	211,339	163,207	42,837	43,079	19,658	11,737	491,857
4. Value of power, fuel, light, etc. used ..	£'000	35,381	17,371	6,295	7,267	3,759	1,609	71,682
5. ,, materials used	£'000	522,422	382,002	134,457	117,547	46,452	32,401	1,235,281
6. ,, production (*c*) ..	£'000	366,109	275,660	75,460	67,542	34,220	24,614	843,605
7. ,, output of factories	£'000	923,912	675,033	216,212	192,356	84,431	58,624	2,150,568
8. ,, land and buildings	£'000	130,468	101,326	23,958	23,303	13,380	10,971	303,406
9. ,, plant and machinery	£'000	136,492	107,261	34,235	26,759	14,713	19,577	339,037

(*a*) Average over whole year ; includes working proprietors. (*b*) Excludes amounts drawn by working proprietors. (*c*) Value of production equals figures in line 7 *less* totals of figures in lines 4 and 5.

Value of Production in Classes of Industry, p. 1112.—The following table shows, for the year 1950–51, the value of production in Australia for the various classes of factories :—

FACTORIES : VALUE OF PRODUCTION, AUSTRALIA, 1950–51.

(£.)

Class of Industry.	Value of Production.
I. Treatment of Non-metalliferous Mine and Quarry Products	17,325,010
II. Bricks, Pottery, Glass, etc. ..	16,666,705
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	52,703,009
IV. Industrial Metals, Machines, Implements and Conveyances	326,993,082
V. Precious Metals, Jewellery and Plate	4,978,181

Vegetables, preserved(*g*)	,,	76.4	96.8
Wool, Scoured ..	,,	153	119
Yarn, Woollen and Worsted	,,	46.8	37.0

(*a*) Subject to revision. (*b*) Includes waste beer. (*c*) Other than Diesel type. (*d*) Excludes motor car, motor cycle, truck, tractor and aero engines. (*e*) Includes all types of preserved apples. (*f*) Made in gas-works only. (*g*) Includes preserved tomatoes. (*h*) Not available.

CHAPTER XXV.—ELECTRIC POWER GENERATION AND DISTRIBUTION.

E. STATISTICAL SUMMARY, 1950–51, pp. 1197–1200.

The following tables present summaries, for the year 1950–51, relating to the numbers and capacity of central electric generating stations, the amount of electricity generated, the number of consumers, and the values of production and output and the numbers of persons employed in the electric supply industry.

CENTRAL ELECTRIC STATIONS, 1950–51.

State.	Number.	Installed Capacity (kW.).							
		According to Ownership.				According to Source of Energy.			
		Government.	Local Authority.	Other.	Total.	Steam.	Hydro.	Internal Combustion.	Total.
New South Wales	90	399,350	431,874	210,815	1,042,039	945,424	32,655	63,960	1,042,039

(a) Not available for publication. (b) Government, 46; Local Authority, 161; Other, 147.

ELECTRICITY GENERATION AND CONSUMPTION, 1950–51.

State.	Electricity Generated.	Ultimate Consumers.
	Mil. kWh.	No.
New South Wales	4,251	818,000
Victoria	2,876	588,000
Queensland	1,115	243,000
South Australia	713	171,000
Western Australia	470	112,000
Tasmania	1,078	83,000
Total	10,503	2,015,000

ELECTRICITY SUPPLY INDUSTRY, 1950–51.

State.	Value of Production.(a)	Value of Output.	Persons Employed.
	£	£	No.
New South Wales	7,762,553	18,948,721	4,076
Victoria	3,140,519	8,301,206	2,453
Queensland	1,207,388	4,447,849	1,023
South Australia	964,571	3,349,451	1,290
Western Australia	858,885	2,827,501	1,023
Tasmania	588,646	618,686	125
Total	14,522,562	38,493,414	9,990

(a) Value of production is the value added in the process of generation.

CHAPTER XXVIII.—REPATRIATION.

§ 2. War Pensions and § 3. Service Pensions.

Pension Rates, pp. 1262–3 and 1267.—Under Act No. 58 of 1952, rates of war and service pensions were increased. The amended rates, which operated from 2nd October, 1952, are as follows :—

War Pensions.—The general rate of pension for a totally incapacitated member of the Forces ranges, according to member's rank, from £8 to £9 16s. per fortnight. The wife of such a member receives a pension of £3 11s. and each child under 16 years of age £1 7s. 6d. per fortnight. For those who have been totally blinded as the result of war service and those who are permanently totally incapacitated, the attendant's allowance is £3 10s. per fortnight. For a war-blinded member who is also affected with total loss of speech or total deafness, the attendant's allowance is £7 per fortnight. Amounts payable for specified disabilities range from 15s. to £9 10s. per fortnight in addition to the statutory rate of pension. In certain double amputation cases additional allowances of either £3 10s. or £7 per fortnight are payable. The rates for children of deceased members are :—first child, £2 13s. per fortnight ; other children, £1 17s. per fortnight ; where both parents are dead, £4 16s. per fortnight for each child.

Service Pensions.—The rate of pension for a member is £6 15s. per fortnight and the maximum rate for the wife of a member £3 10s. per fortnight. Where a service pension is payable in addition to a war pension and civil pension, the service pension is reduced by the amount by which the total pension payable exceeds—for an unmarried pensioner, £8 15s. per fortnight ; for husband and wife, where both are service pensioners, £16 per fortnight ; and where the spouse is not a service pensioner, £12 10s. per fortnight.

Number of Pensioners and Expenditure, pp. 1265 and 1269.—The following table shows the number of war and service pensions in force at 30th June, 1952, and expenditure for the year 1951–52 :—

WAR AND SERVICE PENSIONS : NUMBER AND PAYMENTS, 1951–52.

Particulars.	Place of Payment.							Total.

Commenced	1,055	432	38	60	200	16	10	1,811
Completed	1,225	416	29	..	215	21	100	2,006
Under construction(*a*)	2,145	917	27	112	167	12	46	3,426
Persons engaged in new building(*a*)	39,779	31,653	17,037	10,371	8,654	5,267	2,229	114,990

(*a*) At 30th June, 1952.

NOTE.—For definitions and other explanatory matter regarding data presented, *see* Chapter XXIX., pp. 1291 and 1293.

The value of new buildings completed during 1951–52 comprised :—Houses, £171,362,000 ; Flats, £4,297,000 ; Shops with Dwellings, £1,735,000 ; Shops without Dwellings, £1,233,000 ; Hotels, Guest Houses, Boarding Houses, etc., £568,000 ; Factories, £9,813,000 ; Other New Buildings, £25,857,000.

The number of new houses completed during 1951–52 comprised :—Brick, brick veneer, concrete and stone, 23,311 ; Wood (weatherboard, etc.), 32,922 ; Fibro cement, 19,825 ; Other, 1,357.

§ 22. Valuation of Australian Production.

Net Value of Production, p. 1301.—The following table shows particulars of the net value of production in each State of the various industry groups during the year 1950–51:—

NET VALUE OF RECORDED PRODUCTION, 1950–51.
(£'000.)

Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.

1951–52	754.7	540.8	256.1	175.3	141.1	61.8	1,929.8
Quarter ended—							
31st March, 1952	180.7	132.9	61.4	44.0	35.3	15.4	469.7
30th June, 1952	185.3	133.9	62.8	44.3	36.3	15.5	478.1
30th September, 1952	179.5	127.7	62.6	41.0	34.3	14.9	460.0

(*a*) Excludes Australian Capital Territory and Northern Territory, for which the latest available information is in respect of the year ended 30th June, 1949. In that year retail sales in the Australian Capital Territory were £2.4 million and in the Northern Territory, £2.0 million.

(ii) *Commodity Groups.* In the following table the total value of retail sales for the year 1951–52 and the quarters ended 31st March to 30th September, 1952 are classified according to commodity groups.

VALUE OF RETAIL SALES BY COMMODITY GROUPS : AUSTRALIA.(*a*)
(£ million.)

Commodity Group.	Year ended—	Quarter ended—		
	30th June, 1952.	31st March, 1952.	30th June, 1952.	30th September, 1952.
Groceries	229.7	57.2	60.9	61.9
Butcher's Meat	113.2	28.7	29.6	30.1
Other Food	188.5	48.7	47.5	48.7
Total Foodstuffs	531.4	134.6	138.0	140.7
Beer, Wine and Spirits	150.8	40.3	37.8	37.9
Clothing, Drapery, Piecegoods and Footwear	342.7	75.8	89.8	78.0
Hardware	128.0	30.8	31.2	30.2
Electrical Goods	66.1	15.3	13.9	13.9
Furniture	72.3	16.4	16.6	16.4
Motor Vehicles, Parts, Petrol, etc. ..	357.5	89.0	83.3	75.8
Other Goods(*b*)	281.0	67.5	67.5	67.1
Total(*a*)	1,929.8	469.7	478.1	460.0

(*a*) Excludes Australian Capital Territory and Northern Territory. (*b*) Includes tobacco, cigarettes, etc., newspapers, books and stationery, chemist's goods, etc.

GENERAL INDEX.*

NOTE.—This index is followed by an index of maps, graphs and diagrams, also a list of special articles, etc., in previous issues of the Official Year Book. Area, population, etc., of particular localities are indexed under the locality concerned. Where the subject matter extends continuously over more than one page the first page only is indexed. *Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject so indicated signify major, and approximately equal, importance.*

LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES.

This list refers to the special articles and other more or less important miscellaneous matters which have appeared in previous issues of the Official Year Book, but which are either not included, or are included in abbreviated form only, in the present issue. The list is, in the main, restricted to articles, etc., to which references are not given in the various chapters of this issue.

The Roman figures indicate the number of the Official Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.
